CUMULATIVE

**Index
to
NASA Tech Briefs**

1963-1969

February 1970

National Aeronautics and Space Administration

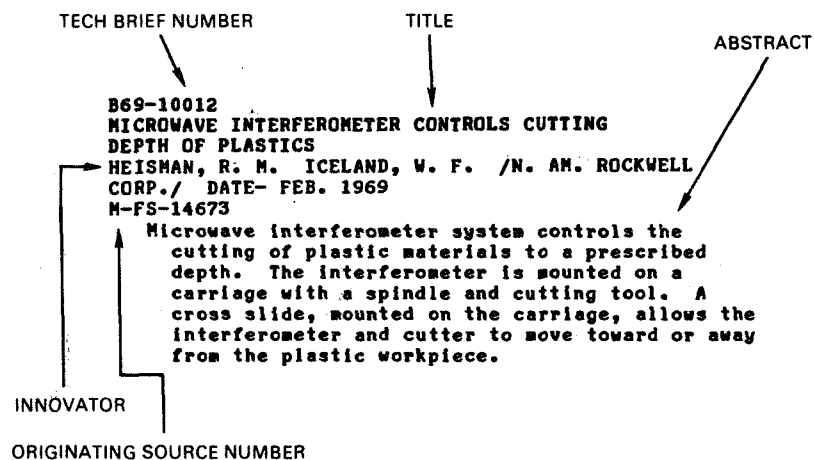

This document is available from the Clearinghouse for Federal Scientific and Technical Information (CFSTI), Springfield, Virginia 22151, for \$10.00.

Introduction

Tech Briefs are short announcements of new technology derived from the research and development activities of the National Aeronautics and Space Administration. These briefs emphasize information considered likely to be transferrable across industrial, regional, or disciplinary lines and are issued to encourage commercial application.

This *Cumulative Index to NASA Tech Briefs* lists those published from 1963 through 1969. The main listing is divided into six categories: Electrical (Electronic), Physical Sciences (Energy Sources), Materials (Chemistry), Life Sciences, Mechanical, and Computer Programs.

A typical entry has these elements:

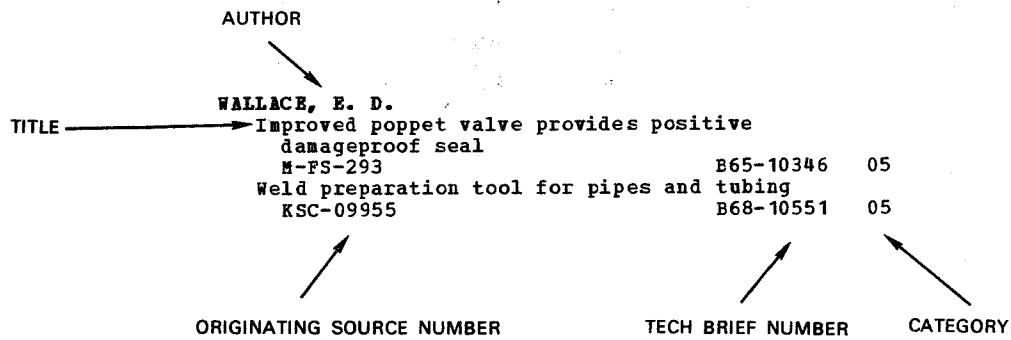

To help users locate information of value, four indexes are provided. The first is a subject index, arranged alphabetically:

Note that in this index several routes are opened for obtaining further information. If the title seems promising, the Tech Brief number and category may be used to locate the abstract, which will be found in the main section arranged sequentially by Tech Brief number within each category. Further, the Tech Brief number can of course be used for obtaining a copy of the original Tech Brief.

The second index is a personal author index arranged alphabetically.

The third index relates all items by the originating source and number to the Tech Brief number and category.

The fourth index relates all items by the Tech Brief number and category to the originating source and number.

Availability of Tech Briefs

Subscriptions to Tech Briefs may be purchased from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151 (Attention: Code 410.4).

This index lists six categories of Tech Briefs. The Tech Briefs issued in 1970 will be divided into nine categories. The charge for an annual subscription to all nine categories is \$20. Subscription rates for single categories are:

Electronics/Electrical	\$6.00
Electronic/Electrical Systems	3.00
Physical Sciences	4.00
Materials/Chemistry	5.00
Life Sciences	2.50
Mechanics	3.00
Machinery, Equipment, and Tools	2.50
Fabrication Technology	2.50
Computer Programs	3.00

A complete set of Tech Briefs issued prior to 1970 may be purchased for \$110. All Tech Briefs issued in 1963 or 1964 may be purchased for \$10; and all Tech Briefs issued in each year since then for \$20 per year.

Requests for individual copies of Tech Briefs, and questions regarding the Tech Brief program, should be directed to:

TECHNOLOGY UTILIZATION DIVISION (Code UT),
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
Washington, D.C. 20546

This cumulative index replaces all previous issues of the *Index to NASA Tech Briefs* (NASA SP-5021). It was prepared by the Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by Informatics Tisco, Inc.

TABLE OF CONTENTS

Category 01	Electrical (Electronic)	1
Category 02	Physical Sciences (Energy Sources)	86
Category 03	Materials (Chemistry)	113
Category 04	Life Sciences	151
Category 05	Mechanical	157
Category 06	Computer Programs	213
Subject Index		I-1
Personal Author Index		I-745
Originator/Tech Brief Number Index		I-839
Tech Brief/Originator Number Index		I-859

01 ELECTRICAL (ELECTRONIC)

B63-10006

SETTING OF ANGLES ON MACHINE TOOLS SPEEDED BY
MAGNETIC PROTRACTOR

VALE, L. B. DATE- MAY 1964

ARC-5

An adjustable protractor facilitates transference of angles to remote machine tools. It has a magnetic base incorporating a beam which can be adjusted until its shadow coincides with an image on the screen of a projector.

B63-10024

SOLENOID PERMITS REMOTE CONTROL OF STOP WATCH
AND ASSURES RESTARTING

KODAL, C. DATE- JUN. 1964

PRC-17

Stop watch which may be remotely controlled by the use of a solenoid mechanism is described. When the solenoid is energized, the coil spring pulls the lever arm and starts the balance wheel. When it is not energized, the spring pulls the lever and stops the watch.

B63-10027

INCREASED PERFORMANCE RELIABILITY OBTAINED
WITH DUAL /REDUNDANT/ OSCILLATOR SYSTEM

NOLIS, W. M. /IBM/ DATE- MAR. 1964

GSFC-36

Two crystal-controlled oscillators, each with an associated buffer stage, provide an output at a common point. The circuit design gives high reliability control of output frequency and amplitude.

B63-10033

INDIUM FOIL WITH BERYLLIA WASHER IMPROVES
TRANSISTOR HEAT DISSIPATION

HILLIARD, J. JOHN, J. E. A. DATE- APR. 1964

REAN- SEE ALSO NASA-TN-D-1753

GSFC-42

Indium foil, used as an interface material in transistor mountings, greatly reduces the thermal resistance of beryllia washers. This method improves the heat dissipation of power transistors in a vacuum environment.

B63-10091

MODIFIED FILTER PREVENTS CONDUCTION OF
MICROWAVE SIGNALS ALONG HIGH-VOLTAGE POWER
SUPPLY LEADS

MATHISON, R. P. DATE- MAY 1964

JPL-63

Very lossy powdered iron material, in the lining of a polyester resin, replaces the dielectric material in the short coaxial transmission line of a simple filter. The lossy material absorbs microwave signals along high voltage power supply leads.

B63-10118

STEPPING SWITCH WITH SIMPLE ACTUATOR PROVIDES
MANY CONTACTS IN SMALL SPACE

MILLER, J. V. DATE- MAY 1964

JPL-122

To reduce the space required for a stepping switch with many contacts, a simple electromechanical actuator with a maximum number of wipers has been incorporated into a compact assembly. This small sized unit is inexpensive to fabricate.

B63-10174

MODULAR CHASSIS SIMPLIFIES PACKAGING AND
INTERCONNECTING OF CIRCUIT BOARDS

ARENS, W. E. BOLINE, K. G. DATE- MAY 1964

JPL-236A

A system of modular chassis structures has simplified the design for mounting a number of printed circuit boards. This design is structurally adaptable to computer and industrial control system applications.

B63-10193

REMOVABLE PREHEATER ELEMENTS IMPROVE OXIDE
INDUCTION FURNACE

LEIPOLD, M. H. DATE- JAN. 1964

JPL-288

Heat and corrosion resistant preheater elements are used in oxide induction furnaces to raise the temperature to the level for conducting electricity. These preheater elements are then removed and the induction coil energized.

B63-10227

ELECTROMECHANICALLY OPERATED CAMERA SHUTTER
PROVIDES UNIFORM EXPOSURE

FORD, A. G. DATE- MAR. 1964

JPL-357

A unidirectional camera shutter employing a solenoid and mechanical linkages permits uniform exposure and minimizes distortion of the image formed in the camera.

B63-10229

FLANGE ON MICROWAVE ANTENNA SUBREFLECTOR CUTS
GROUND NOISE

POTTER, P. D. DATE- MAY 1964

JPL-362

The subreflector of a microwave antenna has been redesigned so that its outer edge has a conical flange. This reduces noise by causing ground energy radiation to cancel out before entering the antenna.

B63-10238

SHAPED SUPERCONDUCTOR CYLINDER RETAINS INTENSE
MAGNETIC FIELD

HILDEBRANDT, A. F. WAHLQUIST, H. DATE- MAY 1964

JPL-381

The curve of the inner walls of a superconducting cylinder is plotted from the flux lines of the magnetic field to be contained. This shaping reduces maximum flux densities and permits a stronger and more uniform magnetic field.

B63-10250

LEVEL OF SUPER-COLD LIQUIDS AUTOMATICALLY
MAINTAINED BY LEVELOMETER

TENER, W. M. DATE- MAR. 1964

JPL-397

A levelometer system, in which the level of cryogenic liquid to be controlled affects the level of an electrolyte, automatically switches a pump on and off. A pressure sensitive diaphragm can also throw a microswitch to start or stop the pump.

B63-10255

TRANSFLUXOR CIRCUIT AMPLIFIES SENSING CURRENT
FOR COMPUTER MEMORIES

MILLIGAN, G. C. DATE- MAR. 1964

JPL-406

To transfer data from the magnetic memory core to an independent core, a reliable sensing amplifier has been developed. Later the data in the independent core is transferred to the arithmetical section of the computer.

B63-10258

DOUBLE-THROW MICROWAVE DEVICE SWITCHES TWO
LINES QUICKLY

CLAUSS, R. STELZRIED, C. T. DATE- FEB. 1964

JPL-410

By combining a single-throw microwave switch with a microwave circulator in a circuit, two input lines can be switched quickly. There is only a brief transition time when both /or neither/ of the two lines are connected to an output line.

B63-10262

IGNITING SYSTEM FOR MERCURY LAMPS
PROTECTS TRANSISTORIZED SUSTAINING SUPPLY

GUISINGER, J. E. DATE- JUL. 1964

JPL-421

01 ELECTRICAL(ELECTRONIC)

A current from a sustaining power supply flows through the mercury vapor lamp and, as there are no resistors in series with this supply, the power is efficiently used. This high voltage igniting device protects the transistorized high current, low voltage power supply.

B63-10264
NOVEL HORN ANTENNA REDUCES SIDE LOBES,
IMPROVES RADIATION PATTERN
POTTER, P. D. DATE- APR. 1964
JPL-425

A horn antenna, combining two propagation modes at selected power ratios, reduces side lobes, and improves the radiation characteristics. Noise and unwanted signals are considerably suppressed.

B63-10280
METER ACCURATELY MEASURES FLOW OF
LOW-CONDUCTIVITY FLUIDS
LOVE, E. G. DATE- MAY 1964
JPL-0021

An electromagnetic flowmeter has been adjusted to minimize the errors inherent in measuring the flow of low conductivity fluids. This is done through use of a direct-coupled, differential cathode follower, whose grid potential is adjustable with respect to ground levels.

B63-10284
SMALL DIGITAL RECORDING HEAD HAS PARALLEL BIT
CHANNELS, MINIMIZES CROSS TALK
ELLER, E. E. LAUE, E. G. DATE- MAY 1964
JPL-0029

A small digital recording head consists of closely spaced parallel wires, imbedded in a ferrite block to concentrate the magnetic flux. Parallel-recorded information bits are converted into serial bits on moving magnetic tape and cross talk is suppressed.

B63-10321
IMPROVED VARIABLE-RELUCTANCE TRANSDUCER
MEASURES TRANSIENT PRESSURES
MORTON, R. W. PATTERSON, J. L. DATE- MAY 1964
LANGLEY-10

A flush-diaphragm pickup and a feedback stabilized carrier amplifier are among the features incorporated into an improved variable-reluctance transducer. This low impedance device responds to steady-state as well as transient pressures.

B63-10338
OPTICS USED TO MEASURE TORQUE AT HIGH
ROTATIONAL SPEEDS
KRSEK, A., JR. TIEFERMAN, M. DATE- DEC. 1964
LEWIS-13

In measuring torque transmitted by a high speed rotation shaft, an apparatus has been devised which includes a shaft, an optical system and readout servomechanism. This highly accurate method uses only optical contact with moving part and is statically calibrated.

B63-10342
RADIANT HEATER FOR VACUUM FURNACES OFFERS HIGH
STRUCTURAL RIGIDITY, LOW HEAT LOSS
VARY, A. DATE- MAY 1964
LEWIS-39

Some problems associated with high temperature heaters for vacuum furnaces have been eliminated by the use of shaped filaments of refractory metal. These filaments, supported in cylindrical array by ceramic spacers, operate with high voltage, low current power.

B63-10440
NEW APPARATUS INCREASES ION BEAM POWER DENSITY
BALDWIN, L. V. SANDBORN, V. A. DATE- JUN. 1964
LEWIS-73

To increase ion engine or rocket power, an ion source and emitter, an ion beam focusing electrode, and an ion accelerator are incorporated into the system. In operation the space charge surrounding the ion emitter decreases, the ion beam density accelerates, and engine power increases.

B63-10443
IMPROVED SENSOR COUNTS MICROMETEOROID
PENETRATIONS
DAVISON, E. H. DATE- MAY 1964
LEWIS-76

A sensor, consisting of a thin dual-capacitor assembly with an outer film of thermal-control material, is used to detect micrometeoroid particles. A coincidence counting circuit is used to count the penetrations.

B63-10493
TWO-STAGE EMITTER FOLLOWER IS TEMPERATURE
STABILIZED
SCHMIDT, M. H. /MCDONNELL AIRCRAFT CORP./ DATE-
MAY 1964
MSC-20

Two-stage temperature stabilized circuit using two transistors is described. Increase in temperature causes the base-to-emitter voltage of n-p-n transistor to become less positive whereas the base-to-emitter voltage of p-n-p transistor becomes less negative, so the temperature-induced variation in $V_{sub 1}$ and $V_{sub 2}$ cancel out.

B63-10508
CIRCUIT SWITCHES LATCHING RELAY IN RESPONSE TO
SIGNALS OF DIFFERENT POLARITY
SMITH, L. S. /ELECTRO-OPTICAL SYSTEMS/ DATE- MAY
1964
WOO-055

A circuit using one power supply and two storage capacitors, which may be separately discharged in opposite directions through a relay in response to change in polarity of a signal, is described.

B63-10511
FREQUENCY-SHIFT-KEYER CIRCUIT IMPROVES PCM
CONVERSION FOR RADIO TRANSMISSION
MKSZAN, D. P. /WESTINGHOUSE ELEC. CORP./ DATE-
JUN. 1964
GSFC-80

A data logic circuit employing a fixed frequency, square-wave oscillator and flip-flop gates allows for the shifting from one frequency to the other at the end of a whole number of cycles of one shift frequency and at the beginning of a cycle of the second shift frequency.

B63-10512
LOW-COST TAPE SYSTEM MEASURES VELOCITY OF
ACCELERATION
HARTENSTEIN, R. DATE- JUN. 1964
GSFC-85

By affixing perforated magnetic recording tape to the falling end of a body, acceleration and velocity were measured. The measurement was made by allowing the tape to pass between a light source and a photoelectric sensor. Data was obtained from a readout device.

B63-10514
COMPUTER CIRCUIT WILL FIT ON SINGLE SILICON
CHIP
SMITH, C. DATE- JUN. 1964
JPL-513

A simplified computer logic circuit of two NAND/NOR gates and three additional inputs to accomplish the count and shift function is described. The circuit has capacity for parallel read-in, counting, serial shiftout, complement input and set and reset.

B63-10529
CONNECTOR FOR THERMOCOUPLE LEADS SAVES COSTLY
WIRE, MAKES RELIABLE CONNECTORS
MILLER, H. B. DATE- APR. 1964
LANGLEY-26

A connector for use in the thermocouple circuits which is silver-brazed to the metal thermocouple sheath on one end and crimped over the insulation of the flexible lead on the other, assures protection against breakage and abrasion. A moisture-proof insulating material is used to encapsulate the wire junctions.

B63-10536
HOT-AIR SOLDERING TECHNIQUE PREVENTS
OVERHEATING OF ELECTRICAL COMPONENTS

SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./
DATE- FEB. 1964
GSFC-91

By using a hot-air gun with a small orifice, heat may be localized to the soldering area of the chassis. The solder is placed around the capacitor which is inserted in the mounting hole so the ring is in contact with the chassis.

B63-10537
SIMPLE CIRCUIT PROVIDES ADJUSTABLE VOLTAGE
WITH LINEAR TEMPERATURE VARIATION
MOEDE, L. W. /DATAMETRICS CORP./ DATE- MAR. 1964
JPL-W00-029

A bridge circuit giving an adjustable output voltage that varies linearly with temperature is formed with temperature compensating diodes in one leg. A resistor voltage divider adjusts to temperature range across the bridge. The circuit is satisfactory over the temperature range of minus 20 degrees centigrade to plus 80 degrees centigrade.

B63-10551
UNMANNED SEISMOMETER LEVELS SELF, CORRECTS
DRIFT ERRORS
SUTTON, G. /COLUMBIA UNIV./ DATE- MAY 1964
GSFC-100

Four-component, three-axis, feedback-controlled seismograph incorporates electronic circuitry for leveling and for monitoring the feedback signal required for servo-centering. Viscous damping of the earth-motion signal, compensation of the residual long-term drift, and centering of the seismometers are provided by automatic mechanisms.

B63-10553
TRANSISTORIZED TRIGGER CIRCUIT IS
FREQUENCY-CONTROLLABLE
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- JUN. 1964
GSFC-111

A trigger circuit employing two unijunction transistor oscillators, whose frequency is varied by changing the base-to-base voltage, provides variable electrical control of the frequency.

B63-10554
HIGH EFFICIENT SQUARE-WAVE OSCILLATOR
OPERATOR AT HIGH POWER LEVELS
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- JUN. 1964
GSFC-112

A square-wave oscillator circuit containing only simple resistor-capacitor combinations and transistors operates with high efficiency at relatively high power levels.

B63-10555
COMPUTER DETERMINES HIGH-FREQUENCY PHASE
STABILITY
NICHOLS, G. B. DATE- JUL. 1964
GSFC-113

Determination of phase stability of a high frequency signal using a computer is accomplished by a circuit using two auxiliary oscillators, multipliers and low-pass filters in cross correlation with the oscillator producing the signal of interest.

B63-10561
TINY SENSOR-TRANSMITTER CAN WITHSTAND EXTREME
ACCELERATION, GIVES DIGITAL OUTPUT
MOSSINO, R. L. ROBINSON, G. DATE- NOV. 1964
ARC-22

A self-pulsing oscillator transmits a pulsed signal. The time between pulses and the frequency are controlled by two networks. Variations in the component values in each of the two networks, due to environmental changes, appear as changes in frequency and time between pulses in the transmitted signal. Such a sensor is used to measure physical magnitudes.

B63-10567
SIMPLE CIRCUIT CONTINUOUSLY MONITORS
THERMOCOUPLE SENSOR
GREENWOOD, T. L. DATE- AUG. 1964
M-FS-61

A series circuit was developed to check the

continuity in thermocouple sensors. This method may be used in monitoring continuity in any dc voltage-operated control circuit.

B63-10572
DEVICE CALIBRATES VIBRATION TRANSDUCER AT
AMPLITUDES UP TO 20 G
GREENWOOD, T. L. DATE- AUG. 1964
M-FS-86

A piezoelectric transducer provides accurate calibration of vibration amplitudes to 20 g. The calibration system uses an electromagnetically driven resonant beam to generate mechanical vibrations at a fixed frequency.

B63-10579
SMALL FOAMED POLYSTYRENE SHIELD PROTECTS
LOW-FREQUENCY MICROPHONES FROM WIND NOISE
TEDRICK, R. N. DATE- MAY 1964
M-FS-123

A foamed polystyrene noise shield for microphones has been designed in teardrop shape to minimize air turbulence. The shield slips on and off the microphone head easily and is very effective in low-frequency sound intensity measurements.

B63-10596
FRONT AND BACK PRINTED CIRCUIT LAYOUTS
PRESENTED ON SINGLE SHEET
PERRY, J. DATE- OCT. 1964
GSFC-93

A diazo photographic process of clear plastic masters is used in reproducing front and back printed circuit layouts of differing intensity on a single sheet.

B63-10597
PRECISION GAGE MEASURES ULTRAHIGH VACUUM
LEVELS
HUDSON, J. B. SEARS, G. W. /GEN. DYN. CORP./
DATE- JUN. 1964
GSFC-114

Ionization gage in which internally generated X-rays are minimized is described. This gage permits the measurement of gas pressures in ultrahigh systems of micro-pico torr.

B63-10599
LIQUID SWITCH IS REMOTELY OPERATED BY LOW DC
VOLTAGE
MOORE, E. T. /DUKE UNIV./ DATE- MAY 1964
GSFC-119

A liquid switch which does not depend on any mechanical, gravitational, or inertial actuation is developed for use in space environments. It may be remotely operated on low dc voltage.

B63-10600
CIRCUIT CONTROLS TRANSIENTS IN SCR INVERTERS
MOORE, E. T. WILSON, T. G. /DUKE UNIV./ DATE-
JUN. 1964
GSFC-120

Elimination of starting difficulties in SCR inverters is accomplished by the addition of two taps of the output winding of the inverter. On starting or under transient loads, the two additional taps deliver power through diodes without requiring quenching of SCR currents in excess of normal starting load.

B63-10603
MONOSTABLE CIRCUIT WITH TUNNEL DIODE HAS FAST
RECOVERY
HEFFNER, P. DATE- MAY 1964
GSFC-132

A monostable multivibrator circuit using a tunnel diode makes it possible for the MSNV to exceed the performance of present multivibrators in two respects. The rise time of the output voltage is faster and the duty cycle is raised to approximately 95 percent.

B63-10606
NEW SINTERING PROCESS ADJUSTS MAGNETIC VALUE
OF FERRITE CORES
VINAL, A. W. /IBM/ DATE- MAY 1964
GSFC-129

A two-phase sintering technique based on time and temperature permits reversible control of the

01 ELECTRICAL (ELECTRONIC)

coercive threshold of sintered ferrite cores. Threshold coercivity may be controlled over a substantial range of values by selective control of the cooling rate.

B63-10609

TEMPERATURE-SENSITIVE NETWORK DRIVES ASTABLE MULTIVIBRATOR

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- OCT. 1964 GSFC-137

Development of a simple circuit using two Zener diodes and five resistors, which provides a temperature-sensitive voltage to drive the astable multivibrator, is described.

B63-10613

CRYOGENIC WAVEGUIDE WINDOW IS SEALED WITH PLASTIC FOAM

CLAUSS, R. STELZRIED, C. T. DATE- JUN. 1964 JPL-559

Waveguide windows made with polystyrene preformed plastic and sealed with foamed-in-place plastic are useful in any microwave waveguide system using cryogenic cooling.

B64-10002

CIRCUIT RELIABILITY BOOSTED BY SOLDERING PINS OF DISCONNECT PLUGS TO SOCKETS

PIERCE, W. B. DATE- MAR. 1964 JPL-447

Where disconnect pins must be used for wiring and testing a circuit, improved system reliability is obtained by making a permanent joint between pins and sockets of the disconnect plug. After the circuit has been tested, contact points may be fused through soldering, brazing, or welding.

B64-10004

ULTRA-SENSITIVE TRANSDUCER ADVANCES MICRO-MEASUREMENT RANGE

ROGALLO, V. L. DATE- MAY 1964 ARC-26

An ultrasensitive piezoelectric transducer, that converts minute mechanical forces into electrical impulses, measures the impact of micrometeoroids against space vehicles. It has uniform sensitivity over the entire target area and a high degree of stability.

B64-10007

LOW-POWER TRANSISTORIZED CIRCUIT PROVIDES STAIRCASE WAVEFORM

BREEN, G. D. DATE- JUL. 1964 GSFC-48

A low input power transistorized circuit is used to generate a staircase waveform of high step uniformity. Other characteristics are low step droop, fast transition time, and no feedback.

B64-10010

MODIFIED RF COAXIAL CONNECTOR ENDS VACUUM CHAMBER WIRING PROBLEM

WEINER, D. DATE- MAY 1964 GSFC-150

A standard radio frequency coaxial connector is modified so that a plastic insulating sleeve can be mounted in the wall of a vacuum chamber. This eliminates ground loops and interference from cable connections.

B64-10016

COMPACT COAXIAL CONNECTOR FOR PRINTED CIRCUIT ADDS RELIABILITY

RADECKE, T. F. DATE- MAY 1964 MSC-57

Soldering and welding techniques are used to connect a coaxial cable to a printed circuit board. This device aids reliability control of equipment as standard connectors are bulky and heavy.

B64-10017

BLOCKING OSCILLATOR USES LOW TRIGGERING VOLTAGE

SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1964 MSC-58

To prevent premature triggering of a blocking oscillator, a smaller magnetic core is added to

the conventional oscillator circuit. This serves as a second blocking oscillator and has a lower triggering threshold.

B64-10019

NEW METHOD USED TO FABRICATE GALLIUM ARSENIDE PHOTOVOLTAIC DEVICE

ELLIS, S. G. /RCA/ DATE- JUN. 1964 WOO-062

A new method for fabricating photocells, or solar cells, substitutes copper iodide for zinc diffusion. This produces a p-type surface layer and a photovoltaic junction.

B64-10024

EFFICIENT CIRCUIT TRIGGERS HIGH-CURRENT, HIGH-VOLTAGE PULSES

GREEN, E. D. /WESTINGHOUSE ELEC. CORP./ DATE- JUN. 1964 MSC-14

Modified circuit uses diodes to effectively disconnect the charging resistors from the circuit during the discharge cycle. Result is an efficient parallel charging, high voltage pulse modulator with low voltage rating of components.

B64-10042

OHMMETER SENSES DEPLETION OF LUBRICANT IN JOURNAL BEARINGS

ROSS, A. O. DATE- DEC. 1964 LEWIS-37

An ohmmeter is used as a sensor to determine when the lubricating oil in a high speed journal bearing becomes depleted.

B64-10064

DIGITAL LOGIC ELEMENTS PROVIDE ADDITIONAL FUNCTIONS FROM ANALOG INPUT

MATTY, T. C. /MCDONNELL AIRCRAFT CORP./ DATE- JUN. 1964 MSC-64

A dc analog input can be used to produce an integrator with high dynamic range or a position servo with inherent stability. This is done by a switching system using digital-to-analog converters and an electronic switch to obtain the desired outputs.

B64-10065

CONTINUITY TESTER SCREENS OUT FAULTY SOCKET CONNECTIONS

GOLDING, G. DATE- MAY 1964 JPL-596

A device, used before and after assembly, tests the continuity of an electrical circuit through each pin and socket of multiple connector sockets. Electrically insulated except at the contact area, a test probe is dimensioned to make contact only in properly formed sockets.

B64-10080

IMPROVED INSERTION-LOSS TESTER

FINNIE, C. J. SCHUSTER, D. DATE- JUN. 1964 JPL-358

An improved test method accurately measures the insertion loss of RF components while avoiding amplifier drift. Currents are balanced across a bridge transformer with shorted probes and then with each component to be tested. Differences in adjustments indicate the loss.

B64-10109

ANALOG DEVICE SIMULATES PHYSIOLOGICAL WAVEFORMS

HICKMAN, D. M. DATE- NOV. 1964 MSC-51

An analog physiological simulator generates representative waveforms for a wide range of physiological conditions. Direct comparison of these waveforms with those from telemetric inputs permits quick detection of signal parameter degradation.

B64-10114

AUXILIARY SILVER ELECTRODE ELIMINATES TWO-STEP VOLTAGE DISCHARGE CHARACTERISTIC OF SILVER-ZINC CELLS

CHREITZBERG, A. M. /ELEC. STORAGE BATTERY CO./ DATE- JUN. 1964

GSFC-169

In silver-zinc cells, an auxiliary silver electrode is electrically connected to the positive terminal only during discharge. This eliminates the two-step discharge characteristic of such cells.

B64-10118

USE OF PHOTOGRAPHS SPEEDS INSPECTION OF PRINTED-CIRCUIT BOARDS

STARK, E. /IBM/ DATE- JUL. 1964

MSC-72

Projected images of a printed circuit board and the engineering drawing are superimposed on a screen for visual comparison. This technique speeds inspection and reduces the incidence of error.

B64-10122

SIMPLE TRANSDUCER MEASURES LOW HEAT-TRANSFER RATES

LAUMANN, E. A. DATE- OCT. 1964

JPL-466

A simple transducer is used to measure low rates of convective and conductive heat transfer from a fluid to a cooled surface under steady-state conditions. Temperature drop is measured by two thermocouples imbedded in a rod of low thermal conductivity.

B64-10143

FIELD-EFFECT TRANSISTOR IMPROVES ELECTROMETER AMPLIFIER

MUNOZ, R. DATE- NOV. 1964

ARC-36

An electrometer amplifier uses a field effect transistor to measure currents of low amperage. The circuit, developed as an ac amplifier, is used with an external filter which limits bandwidth to achieve optimum noise performance.

B64-10144

RING COUNTER MAY BE ADVANCED OR RETARDED BY COMMAND SIGNAL

LIBBY, J. N. MOORE, H. D. DATE- JUL. 1964

GSFC-101

A power logic circuit, with bidirectional capability, is used to drive small loads in planned sequence. This is designed in the form of a shift register, with a reversible ring counter.

B64-10150

NOVEL CIRCUIT COMBINES PULSE STRETCHER WITH NOR GATE

CLIFF, R. A. DATE- OCT. 1964

GSFC-187

A pulse-stretching circuit added to a conventional NOR gate circuit detects a preselected state and produces a pulse that the pulse stretcher maintains for a long enough period to reset all counter stages.

B64-10158

EMISSION TESTER FOR HIGH-POWER VACUUM TUBES

LUNDY, C. DATE- OCT. 1964

JPL-628

A simple emission-testing circuit for high power vacuum tubes to check their output stability is described. With modification it may be useful in testing mercury-arc rectifiers.

B64-10163

FIELD EFFECT TRANSISTORS USED AS VOLTAGE CONTROLLED RESISTORS

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- NOV. 1964

M-FS-174

Two new methods of incorporating field effect transistors into circuit designs have resulted in linear response of this type transistor over a wide range of controlled voltage levels. This increases its usefulness as a voltage-controlled resistor.

B64-10171

SUBMINIATURE BIOTELEMETRY UNIT PERMITS REMOTE PHYSIOLOGICAL INVESTIGATIONS

SPON- INNOVATOR NOT GIVEN /AMES/ DATE- OCT. 1964

ARC-39

A subminiature biotelemetry transmitter permits the measurement of biopotential response in humans or animals to controlled environmental stimuli without discomfort while engaged in normal activities.

B64-10173

HIGH-PASS RF COAXIAL FILTER REJECTS DC AND LOW FREQUENCY SIGNALS

BAILEY, J. W. MC AFEE, D. F. DATE- OCT. 1964

GSFC-73

A low-loss RF filter element for coaxial transmission provides dc isolation and eliminates low frequency signals. The characteristic impedance of the transmission line is not affected, as the design permits direct connection of the filter to the line.

B64-10200

BINARY SYSTEM GENERATES SIDEREAL RATE FROM STANDARD SOLAR RATE

GRANATA, R. MC CAUL, P. DATE- OCT. 1964

GSFC-190

A sidereal rate output from mean solar rate input is derived from a sidereal generator that uses digital division and multiplication techniques.

B64-10209

RASTER LINEARITY OF VIDEO CAMERAS CALIBRATED WITH PRECISION TESTER

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- DEC. 1964

GSFC-200

The time between transitions in the video output of a camera is measured when registered at reticle marks on the vidicon faceplate. This device permits precision calibration of raster linearity of television camera tubes.

B64-10222

COMPACT CARTRIDGE DRIVES CODED TAPE AT CONSTANT READOUT SPEED

AUSTIN, D. C. DATE- OCT. 1964

JPL-472

To facilitate storage and repetitive reading of short-program coded tape, a cartridge case, containing mechanical drive and readout assemblies, has been fabricated. The drive transports the tape past a conventional pickup device during the reading function.

B64-10226

TEMPERATURE-COMPENSATION CIRCUIT STABILIZES PERFORMANCE OF VIDICONS

SPON- INNOVATOR NOT GIVEN /JET PROPULSION LAB./

DATE- NOV. 1964

JPL-486

A simple transistor circuit uses a thermistor to change the vidicon target potential in relation to temperature differences.

B64-10237

APPARATUS MEASURES CONCENTRATION OF SUSPENDED DROPLETS IN GAS STREAMS

BOOTH, F. W. DATE- DEC. 1964

LANGLEY-31

An apparatus, operating on the principle of wet and dry bulb thermometry, permits intermittent or continuous measurement of the concentration of droplets dispersed in a gas stream over a wide range of gas pressure.

B64-10255

ELECTRONIC DEVICE SIMULATES RESPIRATION RATE AND DEPTH

THOMAS, J. A. DATE- NOV. 1964

MSC-89

An oscillator circuit and a thermistor, in close proximity to a light bulb, periodically alter the heat output of the bulb by varying the voltage across its filament. Use of this simulator permits checkout tests on pneumographs.

B64-10258

DIGITAL CARDIOMETER COMPUTES AND DISPLAYS HEARTBEAT RATE

MITCHELL, V. M. DATE- NOV. 1964

MSC-93

To compute the heartbeat rate from the waveform output of an electrocardiogram, a digital

01 ELECTRICAL (ELECTRONIC)

- cardiometer with solid state circuit elements has been developed. This computes the beat every 15 seconds and visually presents the data on numerical display tubes.
- B64-10259**
PNEUMOTACHOMETER COUNTS RESPIRATION RATE OF HUMAN SUBJECT
GRAHAM, O. DATE- NOV. 1964
MSC-92
To monitor breaths per minute, two rate-to-analog converters are alternately used to read and count the respiratory rate from an impedance pneumograph sequentially displayed numerically on electroluminescent matrices.
- B64-10271**
IMPROVED TECHNIQUE FOR LOCALIZING ELECTROPOLISHING FEATURES NOVEL NOZZLES
SPON- INNOVATOR NOT GIVEN /GEN. DYN.
/ASTRONAUTICS/ DATE- NOV. 1964
WOO-101
Impingement electropolishing is accomplished by use of an electrolyte film, which is evenly distributed by an insulated nozzle designed to match the contour of the workpiece to be treated. The workpiece is connected to the positive terminal of a generator and the nozzle to the negative terminal.
- B64-10280**
SERVO SYSTEM FACILITATES PHOTOELASTIC STRAIN MEASUREMENTS ON RESINS
OTTS, J. W. DATE- NOV. 1964
JPL-504
To facilitate photoelastic measurements of the strains developed by stresses applied to birefringent resins, a servomechanism is employed.
- B64-10281**
PTC THERMISTOR PROTECTS MULTILOADED POWER SUPPLIES
LEVERONE, H. MANDELL, N. DATE- NOV. 1964
GSFC-236
A PTC /Positive-Temperature-Coefficient/ thermistor placed in series with each branch load of a multiloading circuit prevents power loss in parallel branches. This thermistor may be used in any circuit requiring current limiting or intended overload resetting.
- B64-10283**
MOUNTING FOR DIODES PROVIDES EFFICIENT HEAT SINK
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- NOV. 1964
M-PS-197
Efficient heat sink is provided by soldering diodes to metal support bars which are brazed to a ceramic base. Electrical connections between diodes on adjacent bars are made flexible by metal strips which aid in heat dissipation.
- B64-10299**
RADIATION-DETECTOR OPTICAL-IMAGING DEVICE IS OF SIMPLIFIED CONSTRUCTION
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- JAN. 1965
GSFC-251
A simplified radiation detector was designed which employs an activated continuous front surface consisting of either the diffused or barrier type of semiconducting material with a grid structure on the nonactivated side of the detector. Its form may be either a rectangular coordinate or a polar coordinate system.
- B64-10305**
TRANSISTORIZED CONVERTER PROVIDES NONDISSIPATIVE REGULATION
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- DEC. 1964
GSFC-238
A transistorized regulator converter efficiently converts fluctuating input voltages to a constant output voltage, avoiding the use of saturable reactors. It is nondissipative in operation and functions in an open loop through variable duty cycles.
- B64-10309**
WELDING PROCEDURES IMPROVES QUALITY OF WELDS, OFFERS OTHER ADVANTAGES
SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- DEC. 1964
M-PS-32
An improved procedure for arc spot welding uses the SIGMA /Submerged Inert Gas Metallic Arc/ method. This has resulted in welds of higher quality than are obtainable by conventional means.
- B64-10320**
VOLTAGE GENERATOR SWEEPS OSCILLATOR FREQUENCY LINEARLY WITH TIME
SPON- INNOVATOR NOT GIVEN /HELPER, INC./ DATE- JAN. 1965
M-PS-219
A voltage-tuned oscillator circuit is described which sweeps the output signal frequency linearly exponentially varying with time.
- B64-10330**
ECONOMICAL FABRICATION PROCESS PRODUCES HIGH QUALITY JUNCTION TRANSISTORS
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- DEC. 1964
JPL-SC-065
A convenient, three-step fabrication process, with a p-type layer of gallium arsenide vapor deposited on a starting wafer of germanium, is used to produce heterojunction-homojunction p-n-p transistors. These are of high quality with good injection efficiency and low capacitance.
- B64-10349**
BANDWIDTH SWITCHING IS TRANSIENT-FREE, AVOIDS LOSS OF LOOP LOCK
SPON- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DATE- DEC. 1964
WOO-054
A circuit, in a wide bandwidth mode, overcomes transient-producing capacitance switching by maintaining an equivalent voltage at all times. Bandwidth switching may be done at any time, and integrity of the loop lock is maintained.
- B65-10001**
CIRCUIT CONVERTS AM SIGNALS TO FM FOR MAGNETIC RECORDING
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
GSFC-227
Convert AM signals to FM for magnetic recording by relaxation-type voltage-controlled oscillator /VCO/. This circuit may be used in radar, telemetry, and test equipment.
- B65-10002**
TUNNEL-DIODE CIRCUIT FEATURES ZERO-LEVEL CLIPPING
BUSH, E. G. DATE- JAN. 1965
GSFC-241
Tunnel-diode circuit starts clipping action as input voltage crosses zero axis. This clipper circuit is effective as limiter in FM receiver.
- B65-10005**
COMPUTER MODIFICATION REDUCES TIME OF PERFORMING ITERATIVE DIVISION
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965
M-PS-166
Time reduction in performing iterative division results from using a serial-by-parallel divider employing a look-ahead feature that predetermines the sign relationships of several iterations before the computer cycle begins. This method can be employed in any data handling system performing high-speed division.
- B65-10006**
MODIFICATION INCREASES LIGHT OUTPUT OF INJECTION-LUMINESCENT DIODES
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
REAN- SEE ALSO B64-10283
M-PS-192
Removing a section of the electrode area from the N-face of injection-luminescent diodes for pumping lasers substantially increases light output. Light is emitted from the N-face as well as from the four edges of the diode.

B65-10010

INEXPENSIVE, STABLE CIRCUIT MEASURES HEART RATE
VICK, H. A. DATE- JAN. 1965
MSC-95

Inexpensive transistorized circuit provides reliable analog indications of heart rate in response to preamplified electrocardiograph signal applied to its input.

B65-10011

CIRCUIT IMPROVEMENT PRODUCES MONOSTABLE MULTIVIBRATOR WITH LOAD-CARRYING CAPABILITY
GOLDMAN, N. E. SCHAFFERT, J. C. DATE- JAN. 1965
GSFC-34A

Improved circuit provides greater reliability and load-carrying capabilities for monostable multivibrator.

B65-10012

HELICAL COAXIAL-RESONATOR MAKES EXCELLENT RF FILTER

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
GSFC-243

Isolation of closely spaced transmitting and receiving frequencies of an antenna without insertion loss by filtering the receiver input is accomplished by an inner conductor with two winding helices and an outer conductor of aluminum. A tuning slug is at either end of the inner conductor form.

B65-10013

ZENER DIODE FUNCTION GENERATOR REQUIRES NO EXTERNAL REFERENCE VOLTAGE

BOLTE, G. BURNS, R. DATE- JAN. 1965
JPL-0031

Function generator utilizing parallel impedance networks with zener diodes produces functions which are discontinuous in slope. The function generated appears at the output of the parallel network in the form of a voltage varying in time.

B65-10018

CARBON ARC IGNITION IMPROVED BY SIMPLE AUXILIARY CIRCUIT

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
MSC-103

High voltage, low current pulse in series with arc power supply efficiently ignites a carbon arc. The easily and economically produced circuit is useful with arc burners and searchlights and with plasma jets.

B65-10023

MINIATURE STRESS TRANSDUCER HAS DIRECTIONAL CAPABILITY

SAN MIGUEL, A. SILVER, R. H. DATE- JAN. 1965
JPL-591

Miniature stress transducer uses a semiconductive piezoresistive element to detect stress only on specific axes. Measurement of internal mass stress is based on the compressive deformation of the transducer. The device is applicable to constant stress monitoring in building and dam structural parts.

B65-10025

LOGIC REDUNDANCY IMPROVES DIGITAL SYSTEM RELIABILITY

SPON- INNOVATOR NOT GIVEN /STANFORD RES. INST./
DATE- FEB. 1965
JPL-SC-069

Redundant-channel system automatically corrects any single error in a set of three binary signal channels. This system is especially applicable to digital computers where data is transmitted in parallel channels.

B65-10026

STEPPING MOTOR DRIVE CIRCUIT DESIGNED FOR LOW POWER DRAIN

SPON- INNOVATOR NOT GIVEN /HARVARD COLL./ DATE- FEB. 1965
GSFC-198

High power drain is eliminated by a circuit consisting of a divide-by-two stage, two identical inputs, a wiggle amplifier, driver, and power output stages to drive the step motor.

B65-10028

TRANSISTOR VOLTAGE COMPARATOR PERFORMS OWN SENSING

CLIFF, R. A. DATE- FEB. 1965
GSFC-228

Detection of the highest voltage input among a group of varying voltage inputs is accomplished by a transistorized voltage comparison circuit. The collector circuits of the transistors perform the sensing function. Input voltage levels are governed by the transistors.

B65-10030

LIBRARY OF DOCUMENTS COMPRESSED INTO LAP-HELD DISPLAY KIT

SPON- INNOVATOR NOT GIVEN /NATL. CASH REGISTER CO./ DATE- FEB. 1965
MSC-125

A lightweight Apollo flight kit containing microfilmed data is packaged in a hinged box with a viewing screen cover, and a writing surface. It is secured to the users lap.

B65-10033

PHOTOELECTRIC SEMICONDUCTOR SWITCH OPERATES WITH LOW LEVEL INPUTS

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965
JPL-SC-068

Photoelectric semiconductor switch with a buried emitter region avoids high-leakage currents across the emitter. It exhibits high emitter to collector transport efficiency beta at low signal levels.

B65-10041

PULSE HEIGHT ANALYZER OPERATES AT HIGH REPETITION RATES, LOW POWER

SPON- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS., INC./ DATE- FEB. 1965
WOO-046

Simple multistage transistor gating circuit provides a pulse height analyzer that operates at high repetition rates and low power. The circuit compares the input pulse heights to discrete reference voltages.

B65-10045

THERMISTOR CONNECTOR ASSEMBLY INCREASES ACCURACY OF MEASUREMENTS

SPON- INNOVATOR NOT GIVEN /ATLANTIC RES. CORP./
DATE- FEB. 1965
LANGLEY-62

Isolation of the thermistor from spurious heat transfer for accurately measuring ambient air temperatures is accomplished by a mounting consisting of a transparent plastic film bonded to a U-shaped phenolic board with depositions of aluminum on each face and upper edge, and a variable capacitor for fine tuning.

B65-10047

CIRCUIT DETECTS ERRORS IN ADDRESS CURRENTS FOR MAGNETIC CORE ARRAYS

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965
M-FS-234

Address current error detector generates a signal whenever any error producing conditions arise in magnetic core arrays. Can be used with test equipment and memory storage units.

B65-10048

MICROPARTICLE IMPACT SENSOR MEASURES ENERGY DIRECTLY

ALEXANDER, W. M. BERG, O. E. DATE- FEB. 1965
GSFC-252

Construction of a capacitor sensor consisting of a dielectric layer between two conductive surface layers and connected across a potential source through a sensing resistor permits measurement of energy of impinging particles without degradation of sensitivity. A measurable response is produced without penetration of the dielectric layer.

B65-10050

NULLING PYROMETER USES KERR CELL SHUTTER FOR FAST RESPONSE

SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1965

01 ELECTRICAL (ELECTRONIC)

NU-0010

Conventional pyrometer, in which Kerr cell replaces mechanical shutter and polarizers are added to filters, yields rapid shutter response.

B65-10051

METAL SHEATH IMPROVES THERMOCOUPLE USING GRAPHITE IN ONE LEG
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1965
NU-0011

Thermocouple using graphite in one leg is sealed in a moistureproof metal sheath which permits high emf output and good mechanical strength.

B65-10052

ZENER DIODE IS STARTER FOR TRANSISTOR REGULATED POWER SUPPLY
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1965
NU-0015

Zener diode in parallel with a silicon transistor supplies the starting current for a transistor-regulated power supply.

B65-10054

PULSE GENERATOR PERMITS NONDESTRUCTIVE TESTING OF COMPONENT BREAKDOWN VOLTAGE
SPON- INNOVATOR NOT GIVEN /HONEYWELL/ DATE- MAR. 1965
MSC-122

Nondestructive testing of the breakdown voltage of transistors and other electronic components is achieved by a simple relay circuit. The circuit operates by applying low-energy, high-voltage microsecond pulses to the components under test.

B65-10055

F M OSCILLATOR USES TETRODE TRANSISTOR
BOENSEL, D. W. DATE- MAR. 1965
JPL-82

Tetrode-driven crystal oscillator achieves large frequency variations for a given input signal. Frequency control is obtained by variation of the second base current of the tetrode.

B65-10056

VIBRATING-MEMBRANE ELECTROMETER HAS HIGH CONVERSION GAIN
COON, G. W. DIMEFF, J. DATE- APR. 1965
ARC-38

Vibrating-membrane transducer in a circuit can measure current below 10 to-the-minus 17 ampere. This electrometer has a high conversion gain and a minimum internal power consumption.

B65-10057

FEED-THROUGH HAS POLYTERMINAL FEATURE
SANDERS, L. H. DATE- MAR. 1965
M-PS-25

Feed-through connector with individual solder pots in the polyterminal side provides good connections with small amounts of solder and permits visual inspection of bonds. Polyterminal also provides a friction mechanical bond to position conductors prior to soldering.

B65-10059

METAL DIAPHRAGM USED TO CALIBRATE MINIATURE TRANSDUCERS
SPON- INNOVATOR NOT GIVEN /ASTRO-SPACE LABS./ DATE- MAR. 1965
M-PS-207

Dynamic comparative calibration system measures response of miniature pressure transducers. The system is composed of an electromechanically driven metal diaphragm, a calibrated and an uncalibrated transducer and an oscillator.

B65-10061

SIMPLE CONTROL DEVICE SENSES SOLAR POSITION
LONBORG, J. O. RANDALL, J. C. DATE- MAR. 1965
JPL-638

The amount of solar radiation incident on a specially prepared bimetallic strip is simply and reliably controlled by a light valve. This device is valuable for systems requiring temperature regulation.

B65-10062

PULSED PLASMA ACCELERATOR OPERATES REPETITIVELY WITHOUT COMPLEX CONTROLS
SABOL, A. P. DATE- MAR. 1965
LANGLEY-48

Self-repeating pulsed plasma accelerator operates with a wide variety of gases over a large range of pressures without complex control equipment. The accelerator combines a circular channel with a tangential channel at the entrance way of a high-velocity gas.

B65-10066

FUEL CELL SERVES AS OXYGEN LEVEL DETECTOR
SPON- INNOVATOR NOT GIVEN /GE/ DATE- MAR. 1965
JPL-SC-072

Monitoring the oxygen level in the air is accomplished by a fuel cell detector whose voltage output is proportional to the partial pressure of oxygen in the sampled gas. The relationship between output voltage and partial pressure of oxygen can be calibrated.

B65-10067

SENSITIVE LEVEL SENSOR MADE WITH SPIRIT LEVEL, GIVES ELECTRICAL OUTPUT
BRYANT, E. L. DATE- MAR. 1965
LANGLEY-49

Sensor incorporating a circular spirit level, electrical lamp and two pairs of photocells, provides an electrical indication of flat surface level deviation.

B65-10068

AUTOMATIC THERMAL SWITCH ACCELERATES COOLING-DOWN OF CRYOGENIC SYSTEM
WIEBE, E. R. DATE- MAR. 1965
JPL-655

Automatic switch uses short stainless steel tube with copper heat sinks to accelerate helium gas cooling and provides good thermal conductivity and good thermal insulation.

B65-10069

FEEDBACK OSCILLATOR FUNCTIONS AS LOW-LEVEL PULSE STRETCHER
SPON- INNOVATOR NOT GIVEN /SPERRY RAND CORP./ DATE- MAR. 1965
GSFC-261

Low trigger pulses of the pulse stretcher circuit are obtained by forward biasing the transistor oscillator. The loop gain is kept below unity and prevents free-running oscillation. Two parallel feedback loops improve the stretching capabilities.

B65-10072

SYNCHRONIZED PULSE GENERATOR NEEDS NO EXTERNAL POWER
CANCRO, C. A. JANNICHE, P. J., JR. DATE- MAR. 1965
GSFC-274

Simple circuit with high input and low output impedance generates a fast rise-time pulse synchronized with an input pulse of slower rise and fall times. Circuit requires no external power.

B65-10073

SYSTEM MEASURES ANGULAR DISPLACEMENT WITHOUT CONTACT
DAVIS, W. T. DATE- MAR. 1965
LANGLEY-46

Optic system coupled to an electronic detection and measuring system converts angular movement of reflected light to a direct readout, without any direct contact with the object.

B65-10076

LIGHT-SENSITIVE POTENTIOMETER MEASURES PRODUCT OF TWO VARIABLES
HAERTSCH, O. C. DATE- MAR. 1965
GSFC-240

The output voltage from a photoconductive potentiometer circuit using a galvanometer mirror reflecting the light beam is directly proportional to the product of the input voltage.

B65-10079

PHOTOELECTRIC SENSOR OUTPUT CONTROLLED BY
EYEBALL MOVEMENTSSPON- INNOVATOR NOT GIVEN /SPACO/ DATE- MAR. 1965
M-PS-274

The difference between the infrared absorption of the iris and infrared reflectivity of the eyeball controls the operation of a device consisting of an infrared source and amplifier, a cadmium selenide infrared sensor, and an infrared filter.

B65-10080

PHASE DETECTOR CIRCUIT SYNTHESIZES OWN
REFERENCE SIGNALSPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS
CORP./ DATE- MAR. 1965
M-PS-247

Circuit with isolation amplifier connected to a frequency multiplier and synchronous phase detector synthesizes the phase reference signal from the phase modulated input signal.

B65-10085

TRANSDUCER SENSES DISPLACEMENTS OF PANELS
SUBJECTED TO VIBRATIONPEA, R. O. DATE- MAR. 1965
ARC-37

Inductive vibration sensor measures the surface displacement of nonferrous metal panels subjected to vibration or flutter. This transducer does not make any physical contact with the test panel when measuring.

B65-10086

SYSTEM SELECTS FRAMING RATE FOR SPECTROGRAPH
CAMERASPON- INNOVATOR NOT GIVEN /AM. OPT. CO./ DATE-
MAR. 1965
LANGLEY-55

Circuit using zero-order light is reflected to a photomultiplier in the incoming radiation of a spectrograph monitor to provide an error signal which controls the advancing and driving rate of the film through the camera.

B65-10087

APPARATUS MEASURES SWELLING OF MEMBRANES IN
ELECTROCHEMICAL CELLSHENNIGAN, T. J. DATE- APR. 1965
GSFC-280

Apparatus consisting of a pressure plate unit, four springs of known spring constant and a micrometer measures the swelling and force exerted by the polymer membranes of alkaline electrochemical cells.

B65-10089

TRANSDUCER MEASURES TEMPERATURE DIFFERENTIALS
IN PRESENCE OF STRONG ELECTROMAGNETIC FIELDSSPON- INNOVATOR NOT GIVEN /AMES/ DATE- APR. 1965
ARC-27

Measurement of temperature rise of cooling water under pressure and in strong electromagnetic fields is accomplished by a transducer using a magnetically shielded thermocouple arrangement. The thermocouple junctions are immersed in oil to isolate them from electric currents in the water.

B65-10091

SIMULATOR PRODUCES PHYSIOLOGICAL WAVEFORMS

EKEROOT, S. DATE- MAR. 1965
MSC-94

Physiological waveform simulator is capable of producing signals to simulate an axillary and a sternal electrocardiogram, blood pressure, respiratory rate and body temperature. This may be used to check out bioinstrumentation.

B65-10093

COMPUTER PROGRAMS SIMPLIFY OPTICAL SYSTEM
ANALYSISSPON- INNOVATOR NOT GIVEN /HONEYWELL/ DATE- APR.
1965
GSFC-306

The optical ray-trace computer program performs geometrical ray tracing. The energy-trace program calculates the relative monochromatic flux density on a specific target area. This program uses the ray-trace program as a subroutine to

generate a representation of the optical system.

B65-10096

DIGITAL SYSTEM ACCURATELY CONTROLS VELOCITY
OF ELECTROMECHANICAL DRIVENICHOLS, G. B. DATE- APR. 1965
GSFC-287

Digital circuit accurately regulates electromechanical drive mechanism velocity. The gain and phase characteristics of digital circuits are relatively unimportant. Control accuracy depends only on the stability of the input signal frequency.

B65-10097

VARIABLE VOLTAGE SUPPLY USES ZENER DIODE AS
REFERENCEKLEINBERG, L. L. LAVIGNE, R. C. DATE- APR. 1965
GSFC-262

Using a zener diode as the reference element, a simple transistorized circuit provides a stable variable reference voltage.

B65-10102

SIMPLE CIRCUIT FUNCTIONS AS FREQUENCY
DISCRIMINATOR FOR PFM SIGNALSBILLINGSLEY, J. DATE- APR. 1965
GSFC-267

Simple circuit monitors the frequency of PFM /Pulse Frequency Modulated/ telemetry signals. This discriminator can be used as a constant current integrator in such circuits as linear sweep and time delay.

B65-10103

IMPROVED MAGNETOMETER USES TOROIDAL GATING
COILSPON- INNOVATOR NOT GIVEN /CORNELL UNIV./ DATE-
APR. 1965
GSFC-249

Improved magnetometer employs a cylindrical, high permeability magnetic core with a toroidal gating coil and a solenoid pickup coil. Flux interaction can be reduced by electrostatically shielding the pickup coil from the gating coil. The magnetometer principle can be applied to navigation devices.

B65-10105

VARIABLE LOAD AUTOMATICALLY TESTS DC POWER
SUPPLIESBURKE, R. C., JR. SULLIVAN, R. M. DATE- APR.
1965
GSFC-291

Continuously variable load automatically tests dc power supplies over an extended current range. External meters monitor current and voltage, and multipliers at the outputs facilitate plotting the power curve of the unit.

B65-10108

MAGNETIC FIELD CONTROLS CARBON ARC TAIL FLAME

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- APR. 1965
MSC-139

Polarity of two electromagnets placed near the exhaust flue cancels out a high carbon-arc field. The arc tail flame is correctly drawn to the exhaust flue and contamination is diverted. This device should reduce maintenance cycles on any arc-powered illuminator.

B65-10112

UNIJUNCTION FREQUENCY DIVIDER IS FREE OF
BACKWARD LOADINGFAIRBANKS, A. F. DATE- APR. 1965
JPL-WOO-010

Simple frequency divider composed of relaxation oscillators uses unijunction transistors to reduce backward loading to a minimum. This circuit design is applicable in timing devices and sync generators for television systems.

B65-10118

TRANSISTORIZED CIRCUIT CLAMPS VOLTAGE WITH
0.1 PERCENT ERRORSPON- INNOVATOR NOT GIVEN /RCA/ DATE- APR. 1965
GSFC-196

Transistorized clamping circuit clamps either of two voltage levels to input of digital-to-analog

01 ELECTRICAL (ELECTRONIC)

resistive matrix with 0.1 percent error. Clamping circuit technique has analog, digital, and hybrid circuit applications.

B65-10119
VARIABLE FREQUENCY TRANSISTOR INVERTERS USE
MULTIPLE CORE TRANSFORMERS
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- APR.
1965
GSFC-183

Magnetic-coupled multivibrators containing two or more square-loop cores with multiple windings in a single transformer package, provide indirect frequency control and improved operational characteristics. This multivibrator can be used for power oscillators, nonlinear magnetic circuitry and telemetry circuits.

B65-10120
MULTIPLE TEST TUBES STIRRED MECHANICALLY
LEON, R. J. STRONG, I. J. DATE- APR. 1965
ABC-42

Mechanical device simultaneously stirs multiple test tubes under controlled laboratory conditions. The invention provides a variable stirring rate, minimal amount of contamination of tube contents, unattended and simple operation, and easy maintenance and cleaning.

B65-10123
EFFICIENT THIN FILM HEATING ELEMENT TAKES
MINIMUM SPACE
BUSCH, A. H. DATE- APR. 1965
GSFC-289

Light, thin-film heating element is formed by vacuum deposition of metal onto a nonconductive surface to be heated. This small-sized heater has a very fast response time.

B65-10124
VARIABLE FREQUENCY MAGNETIC MULTIVIBRATOR
GENERATES STABLE SQUARE-WAVE OUTPUT
PAULL, S. DATE- MAY 1965
GSFC-AE-21

Variable frequency magnetic multivibrator operates in a full wave fashion to provide a stable square wave output over wide variations in temperature and power supply potential. This invention is applicable in clocks and control devices.

B65-10125
SIMPLIFIED ELECTROMETER HAS EXCELLENT
OPERATING CHARACTERISTICS
BRANTNER, R. E. DATE- MAY 1965
JPL-413

Simplified and improved electrometer circuit provides high-input impedance, stability of gain and operating point, linear response, and low power requirements.

B65-10127
TRAVELING-WAVE TUBE CIRCUIT SIMPLIFIES
MICROWAVE RELAY
ALLEN, W. K. IPPOLITO, L. J. NACE, D. A. DATE-
MAY 1965
GSFC-299

Circuit with a sawtooth-modulated traveling-wave tube, which acts as a frequency converter and as an amplifier, simplifies microwave transmission. Lower power losses and reduced size and weight are also realized in this circuit.

B65-10128
PIEZORESISTIVE GAGE TESTS PIN-CONNECTOR
SOCKETS
BOND, W. W. DATE- MAY 1965
JPL-675

Connector pin consisting of a piezoresistive crystal, retainer spring and a bridge circuit with voltmeter is used to test connector sockets and may be adapted for multiple socket testing.

B65-10137
INSTRUMENT CALIBRATES LOW GAS-RATE FLOWMETERS
COPELAND, A. C. FULTON, W. C. SMITHER, M. A.
DATE- MAY 1965
MSC-134

Electronically measuring the transit time of a soap bubble carried by the gas stream between two

fixed points in a burette calibrates flowmeters used for measuring low gas-flow rates.

B65-10138
HIGH-GAIN AMPLIFIER HAS EXCELLENT STABILITY
AND LOW POWER CONSUMPTION
KLEINBERG, L. I. DATE- MAY 1965
GSFC-272

Transistorized amplifier, in which an external reference voltage controls gain, combines high gain with stability and low power consumption. This circuit is useful in electronic servo and portable audio equipment.

B65-10139
SPHERICAL ELECTRODE ELIMINATES HIGH-VOLTAGE
BREAKDOWN
FINKE, R. C. VETRONE, R. H. DATE- MAY 1965
LEWIS-155

Spherical electrodes surrounding electrode-dielectric junctions eliminate high-voltage breakdown. The gap between the spherical electrode and the dielectric must be of an optimum size for proper operation. Modified, this electrode should be suitable as a high-voltage feedthrough between various liquid and gaseous media.

B65-10142
AUXILIARY CIRCUIT ENABLES AUTOMATIC MONITORING
OF EKG'S
SPON- INNOVATOR NOT GIVEN /TEX. INST. FOR
REHABILITATION AND RES./ DATE- MAY 1965 REAN-
SEE ALSO B65-10143 AND B65-10010
MSC-106

Auxiliary circuits allow direct, automatic monitoring of electrocardiograms by digital computers. One noiseless square-wave output signal for each trigger pulse from an electrocardiogram preamplifier is produced. The circuit also permits automatic processing of cardiovascular data from analog tapes.

B65-10143
DIGITAL-OUTPUT CARDIOTACHOMETER MEASURES RAPID
CHANGES IN HEARTBEAT RATE
VICK, H. DATE- MAY 1965 REAN- SEE ALSO B65-10010
AND B65-10142
MSC-133

Cardiotachometer circuits produce an output voltage proportional to the heartbeat rate on a beat-by-beat basis. This is less complex and less costly than the digital cardiometers.

B65-10145
LOGARITHMIC AMPLIFIER USES FIELD EFFECT
TRANSISTORS
STEWART, J. L. DATE- MAY 1965
JPL-509

Solid-state amplifier utilizes field effect transistors and planar junction diodes to provide a logarithmic response to a wide range of input signals.

B65-10146
FREQUENCY OFFSET IN LINEAR FM/CW TRANSPONDER
ELIMINATES CLUTTER
SPON- INNOVATOR NOT GIVEN /MELPAR/ DATE- MAY
1965
M-FS-249

Clutter is eliminated by offsetting the frequency of a transponder signal with respect to an interrogation signal. This improves the tracking of aircraft and spacecraft by FM/CW transponders.

B65-10151
ROTOR POSITION SENSOR SWITCHES CURRENTS IN
BRUSHLESS DC MOTORS
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- MAY 1965
GSFC-315

Reluctance switch incorporated in an induction motor is used for sensing rotor position and switching armature circuits in a brushless dc motor. This device drives the solar array system of an unmanned space satellite.

B65-10152
CIRCUIT REDUCES DISTORTION OF FM MODULATOR

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- MAY 1965
GSFC-257

Correction circuit improves the linearity of a voltage-variable capacitor used to modulate a free-running oscillator. This improvement only applies to audio frequency modulation and will not correct for slowly varying dc input in some telemetry systems.

B65-10158

LASER BEAM TRANSMITS ELECTRIC POWER

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JUN. 1965
GSFC-293

Semiconductor laser beam supplies sustained level of electrical power to remote location not served by conventional conductors. This system would be useful where transmission of energy is critical, such as in nuclear reactors, or other hazardous environments.

B65-10159

SOLID-STATE SWITCHING USED TO SPEED UP CAPACITIVE INTEGRATOR

NEWCOMB, A. L., JR. DATE- JUN. 1965

LANGLEY-104

Capacitive integrator circuit using Silicon Controlled Switches /SCS/ insures output voltage linearly proportional to input pulse width. This circuit provides high input impedance and relatively low output impedance.

B65-10161

INTERFEROMETER COMBINES LASER LIGHT SOURCE AND DIGITAL COUNTING SYSTEM

SPON- INNOVATOR NOT GIVEN /MIT/ DATE- JUN. 1965
MSC-151

Measurement of small linear displacements in digital readouts with extreme accuracy and sensitivity is achieved by an interferometer. The instrument combines a digital electro-optical fringe-counting system and a laser light source.

B65-10165

SUPERCONDUCTOR MAGNETS USED FOR STAGGER-TUNING TRAVELING-WAVE MASER

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JUN. 1965
GSFC-292

Superconducting materials reduce size and weight of magnets used for stagger-tuning individual traveling-wave maser crystals. The invention is useful in microwave communication systems requiring a high information rate.

B65-10169

PHASE SHIFT FREQUENCY SYNTHESIZER IS EFFICIENT, SMALL IN SIZE

SPON- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DATE- JUN. 1965

M-FS-250

Phase shift frequency synthesizer produces suppressed-carrier signals at the sum and difference frequencies. All unwanted frequencies are suppressed by this small-sized synthesizer.

B65-10178

DC TO AC CONVERTER OPERATES EFFICIENTLY AT LOW INPUT VOLTAGES

SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- JUN. 1965

GSFC-130

Self-oscillating dc to ac converter with transistor switching to produce a square wave output is used for low and high voltage power sources. The converter has a high efficiency throughout a wide range of loads.

B65-10182

FORCE CONTROLLED SOLENOID DRIVES MICROWELD TESTER

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUN. 1965

WOO-125

Solenoid-driven device tests the integrity of a microweld joint between an electronic component lead wire and a wire ribbon by applying tension stress to the joint. Variable measured force is provided when either destructive or nondestructive testing is performed.

B65-10183

MODIFIED INTERELEMENT SPACING IMPROVES YAGI ANTENNA ARRAY

BECK, F. B. DATE- JUN. 1965

LANGLEY-130

Symmetrical antenna array is designed by adjusting the Yagi disk interelement spacing so that the grating lobe of the array factor coincides with the first sidelobe of the element pattern.

B65-10184

PRESSURE SENSOR RESPONDS ONLY TO SHOCK WAVE

SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- JUN. 1965

M-FS-238

Pressure sensor responds only to high pressure crest of a shock wave, and will not respond to conditions of overpressure. The sensor uses plates of a battery to produce voltage output used to actuate an alarm signal or crew escape system.

B65-10187

CRYSTAL MEASURES-SHORT TERM, LARGE-MAGNITUDE FORCES

PFEIFFER, C. G. DATE- JUN. 1965

JPL-77

By using the magnitude of piezoelectric crystal response to distortion and compression, this device measures transient accelerations and their rate of change. The invention could be used in a servo control system by supplementing the accelerometer and taking over its function when its range was exceeded.

B65-10193

LOGIC CIRCUIT EXHIBITS OPTIMUM PERFORMANCE

HUSSON, C. DATE- JUN. 1965

LANGLEY-129

Performance of circuits are compared to determine the optimum circuit configuration for implementation into microelectronic functions. Comparison is made in terms of power drain, propagation time, and component variations with temperature and load.

B65-10194

ANALOG-TO-DIGITAL CONVERTER HAS INCREASED RELIABILITY AND REDUCED POWER CONSUMPTION

THORNWALL, J. C. DATE- JUN. 1965

GSFC-246

Eight-bit analog-to-digital converter decreases average power consumption and increases component reliability. The converter uses solid-state components in pulse operation and magnetic core components for minimizing power consumption. The magnetic core components also increase reliability.

B65-10195

DEVICE MEASURES FLUID DRAG ON TEST VEHICLES

FREEMAN, R. JUDD, J. H. LEISS, A. DATE- JUN. 1965

LANGLEY-34

Electromechanical drag balance device measures the aerodynamic drag force acting on a vehicle as it moves through the atmosphere and telemeters the data to a remote receiving station. This device is also used for testing the hydrodynamic drag characteristics of underwater vehicles.

B65-10196

INEXPENSIVE ELECTRICAL CONNECTOR IS MOISTURE AND CORROSION PROOF

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUN. 1965

MSC-164

Compression-sealed electrical connector made principally of plastic components is used in a corrosive atmosphere. This inexpensive and moistureproof connector can be modified to provide a multiple-pin connector.

B65-10197

IMPROVED SOLDERLESS CONNECTOR IS EASILY DISCONNECTED

SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- JUN. 1965

JPL-SC-060

Compression type solderless connector is easily

01 ELECTRICAL (ELECTRONIC)

disconnected and reassembled and resists vibration. The connector, which uses a tapered split sleeve that is tightened by a nut into a mating bug, is used in place of standard solder lugs and to connect unsolderable wire.

B65-10199
MODULAR THERMOELECTRIC CELL IS EASILY PACKAGED
IN VARIOUS ARRAYS
 EPSTEIN, J. DATE- JUN. 1965
 GSFC-339

Modular thermoelectric cells are easily packaged in various arrays to form power supplies and have desirable voltage and current output characteristics. The cells employ two pairs of thermoelectric elements, each pair being connected in parallel between two sets of aluminum plates. They can be used as solar energy conversion devices.

B65-10200
DENSITY TRACE MADE WITH COMPUTER PRINTOUT
 WILSON, M. DATE- JUN. 1965
 GSFC-322

Special drum for a computer-controlled printer improves density trace of scientific data. The drum provides uniformly shaped characters and evenly spaced variations of print density that precisely reflect data magnitude. This device plots temperature profiles, geographic contours, pressure gradients, electric potential gradients, and magnetic field configurations.

B65-10202
QUICK-DISCONNECT COUPLING PROVIDES SAFE
TRANSFER OF HAZARDOUS FLUIDS
 DE WITT, R. L. SCHMIDT, H. W. DATE- JUN. 1965
 LEWIS-125

Quick-disconnect coupling is used for uncoupling of plumbing during ground-to-vehicle transfer of cryogenic and hazardous fluids. The coupling allows remote positive control of liquid pressure and flow during the transfer operation, remote connection and separation capabilities, and negligible liquid spillage upon disconnection.

B65-10203
TINY BIOMEDICAL AMPLIFIER COMBINES HIGH
PERFORMANCE, LOW POWER DRAIN
 DEBOO, G. J. DATE- JUL. 1965
 ARC-41

Transistorized, portable, high performance amplifier with low power drain facilitates biomedical studies on mobile subjects. This device, which utilizes a differential input to obtain a common-mode rejection, is used for amplifying electrocardiogram and electromyogram signals.

B65-10204
VOLTAGE VARIABLE OSCILLATOR HAS HIGH PHASE
STABILITY
 HEARN, C. P. DATE- JUL. 1965
 LANGLEY-123

Two or more series RLC circuits are used with a negative feedback amplifier to make a voltage variable oscillator. This combination results in high phase stability and optimum frequency modulation.

B65-10206
SENSITIVE ELECTROMETER FEATURES DIGITAL
OUTPUT
 DOONG, H. DATE- JUL. 1965
 GSFC-288

Four-stage transistorized electrometer eliminates the need for a logarithmic compression network. It measures very low currents and produces a digital output directly indicative of the input current magnitude.

B65-10208
HYBRID COMPUTER TECHNIQUE YIELDS RANDOM
SIGNAL PROBABILITY DISTRIBUTIONS
 CAMEBON, W. D. DATE- JUL. 1965
 ABC-34

Hybrid computer determines the probability distributions of instantaneous and peak amplitudes of random signals. This combined digital and

analog computer system reduces the errors and delays of manual data analysis.

B65-10209
OSCILLATOR CIRCUIT MEASURES LIQUID LEVEL IN
TANKS
 SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JUL. 1965
 M-FS-245

Oscillator circuits automatically measure the liquid level in tanks. The circuit employs a twin transmission line as a liquid level probe.

B65-10212
DETECTOR CIRCUIT COMPENSATES FOR VIDICON BEAM
CURRENT VARIATIONS
 SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JUL. 1965
 GSFC-310

Signal detector circuit compensates for black level shifts in vidicons by dark current cancellation. It clamps the video signal to the dark current component of the signal. The device also compensates for background noise variation or transducer bias fluctuations in other repetitive pulse systems.

B65-10213
MULTIAXIAL ANALYZER DETECTS LOW-ENERGY
ELECTRONS
 LIND, D. L. OGILVIE, K. W. WILKERSON, T. D.
 DATE- JUL. 1965
 GSFC-329

Three curved plate energy analyzers coupled with three electron multiplier tubes detect and measure low energy electron flux in several directions simultaneously.

B65-10215
ELECTRICAL PROBE ENSURES RELIABLE CONTACT IN
SOCKET
 SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JUL. 1965
 M-FS-315

Spring-loaded probe makes a reliable electrical contact by producing a circular wiping motion at the tip when inserted into a mating socket.

B65-10218
GRAPHITE ELEMENT SERVES AS RADIANT HEAT SOURCE
 DATE- JUL. 1965
 M-FS-105

Radiators using a graphite heating element as a radiant heat source have high heat flux and long operational lives. They are used to test the thermal resistance of materials.

B65-10221
INSTRUMENT ACCURATELY MEASURES EXTREMELY LOW
AIR DENSITIES
 SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL
 SYSTEMS/ DATE- AUG. 1965
 M-FS-193

Gauge accurately measures low air densities in high-vacuum systems. It relies on the detection of near-visible light radiated from nitrogen molecules present in the system.

B65-10223
VOLTAGE CONTROLLED OSCILLATOR IS EASILY
ALIGNED, HAS LOW PHASE NOISE
 SYDNOR, R. L. DATE- AUG. 1965
 JPL-510

Voltage Controlled Oscillator /VCO/, represented by an equivalent RF circuit, is easily adjusted for optimum performance by varying the circuit parameter. It contains a crystal drive level which is also easily adjusted to obtain minimum phase noise.

B65-10225
SIMPLE BCD CIRCUIT ACCURATELY COUNTS TO 24
 SPAFFORD, M. L. DATE- AUG. 1965
 GSFC-317

Ripple-through counter with divide-by-24 output pulse is used in digital control clocks to register hours and give a daily output signal. It uses commercially available digital modules that incorporate and/gates with flip-flops.

B65-10226
MAGNETIC-SHIFT-REGISTER CIRCUIT CONTROLS STEP

MOTOR OPERATION

VEILLETTE, L. J. DATE- AUG. 1965
GSFC-340

Magnetic-shift-register circuit controls bidirectional operations of a phase-pulsed step motor. The circuit draws no power in standby, is nonregenerative, and is insensitive to switching transients.

B65-10228

SIMPLE CIRCUIT PRODUCES HIGH-SPEED, FIXED DURATION PULSES

GARRAHAN, N. M. DATE- AUG. 1965
GSFC-285

Circuit generates an output pulse of fixed width from a variable width input pulse. The circuit consists of a tunnel diode in parallel with an inductance driven by a constant current generator. It is used for pulsed communication equipment design.

B65-10232

FIELD EFFECT TRANSISTOR PRESENTS HIGH INPUT IMPEDANCE IN AC AMPLIFIER

MARSHALL, J. H. DATE- AUG. 1965
JPL-500

Four-stage transistorized ac amplifier provides high input impedance and operates at low intrinsic noise levels. It is suited to carrier or narrow band sine wave applications.

B65-10233

HIGH-SPEED SQUARE-WAVE CURRENT LIMITER OPERATES EFFICIENTLY

SPON- INNOVATOR NOT GIVEN /LABKO SCI./ DATE- AUG. 1965

JPL-SC-073

Transistorized high speed circuit limits currents from a square-wave ac power supply. The current limiter resets after each half cycle of the square wave and thus minimizes power losses.

B65-10234

SIMPLE CIRCUIT REDUCES TRANSISTOR SWITCHING TIME

SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
GSFC-314

Silicon-Controlled Rectifier /SCR/, gated by a voltage divider, controls the potentiometer in transistorized switching circuits. The SCR acts as a gate to trigger the switching transistor only when the input signal reaches an amplitude that will switch the transistor rapidly.

B65-10237

BRUSHLESS DC MOTOR USES ELECTRON BEAM SWITCHING TUBE AS COMMUTATOR

STUDER, P. DATE- AUG. 1965
GSFC-345

Electron beam switching tube eliminates physical contact between rotor and stator in brushless dc motor. The tube and associated circuitry control the output of a dc source to sequentially energize the motor stator windings.

B65-10238

SOLID-STATE LASER TRANSMITTER IS AMPLITUDE MODULATED

BILDERBACK, R. DATE- AUG. 1965
MSC-121

Amplitude modulated laser transmitter affords radio frequencies unlimited bandwidth. The system, which is solid state and compact, uses a gallium arsenide diode that emits in the near infrared.

B65-10242

ELECTROMETER HAS AUTOMATIC ZERO BIAS CONTROL

SPON- INNOVATOR NOT GIVEN /APPLIED PHYSICS CORP./ DATE- AUG. 1965
GSFC-350

Zero biasing circuit in a vibrating reed type electrometer counterbalances residual potential. It charges a capacitor to the residual potential and connects that capacitor in series with the vibrating reed so that the voltages cancel. This enables the electrometer to read zero output potential in the absence of an input current.

B65-10243

NOVEL PROBE SIMPLIFIES ELECTRONIC COMPONENT TESTING

SYNER, W. F. DATE- AUG. 1965
GSFC-342

Test probe, in conjunction with standard equipment, tests axial-lead electronic components in their original packages. The probe can be modified to test any electronic component with automatic or nonautomatic equipment.

B65-10244

LIGHTWEIGHT COAXIAL CABLE CONNECTOR REDUCES SIGNAL LOSS

BREJCHA, A. G., JR. DATE- AUG. 1965
JPL-720

Connectors with milled interface surfaces for perfect electrical contact eliminate secondary-emission discharge and low signal loss in RF coaxial cables. The connectors which contain alignment and centering components for proper joint concentricity are used in communications systems designs.

B65-10247

SERVO CALORIMETER MEASURES MATERIAL HEATING RATE

GILMOUR, G. WILSON, J. H. /WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
NU-0024

Servo calorimeter accurately measures the heating rate of a material exposed to nuclear radiation independently of the specific heat thermal conductivity of the material. The electrical power used is a direct measure of the nuclear heating rate.

B65-10249

MANUAL-FEED ADAPTER PERMITS MICROFILMING OF CONTINUOUS OSCILLOGRAPH OUTPUT

BENNETT, J. /WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
NU-0029

A manual-feed adapter used with a microfilm recording unit permits continuous filming and reduces oscillograph output to manageable dimensions.

B65-10255

BORON TRIFLUORIDE NUCLEAR DETECTOR

PREAMPLIFIER USES SINGLE-CABLE CONNECTION

HECKELMAN, J. D. SHUMAKER, R. E. DATE- AUG. 1965
LEWIS-178

Preamplifier for a nuclear particle detector operates with a single interconnecting cable. Isolating and bypass networks permit this single cable operation.

B65-10257

INDUCTOR FLYBACK CHARACTERISTIC GIVES VOLTAGE

REGULATOR FAST RESPONSE

SMITH, G. D. DATE- AUG. 1965
GSFC-361

Voltage regulator alternately connects an inductor in parallel and in series with the input voltage source. This flyback voltage regulator provides a regulated dc voltage to varying loads from a varying dc supply and gives fast response to load and supply changes.

B65-10258

GAPPED TOROID PROVIDES INFINITE RESOLUTION

OF DELAY-LINE PICKUP

ROBINSON, G. B. DATE- AUG. 1965
GSFC-370

Gapped toroid magnetically coupled to a delay line provides continuous adjustment of the time delay line signal retrieval. A rotating screw moves the toroid pickup parallel to the delay line. This device can be used in signal detection devices and instrumentation equipment.

B65-10259

INCREASED JUNCTION LEAD INDUCTANCE BALLASTS

HIGH-FREQUENCY TRANSISTORS

GILBERT, G. J. /RCA/ DATE- SEP. 1965
GSFC-387

Segmentation of transistor bonding stripes and the inherent inductance of individual leads provides

01 ELECTRICAL (ELECTRONIC)

ballast for even current distribution across the junction of a high-frequency transistor.

B65-10260
SIMPLE PULSE COUNTING CIRCUIT COMPUTES SUM OF SQUARES
SCHAEFER, D. H. DATE- SEP. 1965
GSFC-391

Pulse counting circuit with an extra chain of flip-flops, delay lines, and gates computes the sum of the squares of the pulse sequences. A pulse train and the sum of the squares of the pulses are simultaneously completed.

B65-10263
INDEXING DEVICE ENSURES PROPER MATING OF ELECTRICAL CONNECTORS
JENKINS, L. M. SIMMONS, W. H. DATE- SEP. 1965
MSC-155

Indexing splines with modified standard male and female connectors eliminates the possibility of incorrect mating. Large stock quantities of differently indexed connectors are unnecessary since connectors from a single stock can be indexed as desired at installation time.

B65-10264
PLASTIC BAGS IN EVACUATED CHAMBER MAKE LIGHTWEIGHT GAS SAMPLING SYSTEM
SHAFFERNOCKER, W. M. /GE/ DATE- SEP. 1965
PRC-31

Portable, lightweight system collects the exhaust gas of an aircraft during flight for use in analyzing combustion efficiency. The system uses an evacuated chamber and plastic bags.

B65-10265
WELD LEAKS RAPIDLY AND SAFELY DETECTED
SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- SEP. 1965
M-FS-362

Test method detects leaks that occur during hydrostatic pressure testing of welded joints in metal tanks. A strip of aluminum foil and a strip of water-soluble paper are placed over the weld. A voltage applied between the tank wall and the foil strip is monitored to detect a decrease in ohmic resistance caused by water leakage into the paper layer.

B65-10267
ELECTROMETER PREAMPLIFIER HAS DRIFT CORRECTION FEEDBACK
LABARTHE, L. C. /LABKO SCI./ DATE- SEP. 1965
JPL-SC-074

Negative feedback circuit corrects output drift in an electrometer. The negative feedback is used in the no signal state to maintain the output level at zero reference. Drift voltage storage in the signal on state is also used to provide a drift-free readout.

B65-10268
MULTIPLE TEST CHAMBER EXPOSES MATERIALS TO VARIOUS ENVIRONMENTS
JOHNSTON, R. L. DATE- SEP. 1965
MSC-179

Multiple compartment test chamber exposes several material specimens to various environmental conditions for prolonged periods. The specimens are individually mounted in chamber compartments, rotated to various positions, and measured through optical windows to determine progressive changes in the material properties.

B65-10269
SAMPLE DEVICE PRODUCES ACCELEROMETER CALIBRATION PULSE
SPON- INNOVATOR NOT GIVEN /LOCKHEED MISSILES AND SPACE CO./ DATE- SEP. 1965
M-FS-363

Shock-impulse exciter produces a remote checkout of the amplitude calibration and frequency response of a piezoelectric vibration accelerometer. The exciter employs a bimetal spring to apply a mechanical acceleration pulse of a known amplitude and frequency to the accelerometer.

B65-10271
COMPOSITE SEAL REDUCES ALKALINE BATTERY LEAKAGE
CLATTERBUCK, C. H. PLITT, K. P. DATE- SEP. 1965
GSFC-337

Composite seal consisting of rubber or plastic washers and a metal washer reduces alkaline battery leakage. Adhesive is applied to each washer interface, and the washers are held together mechanically.

B65-10273
ELECTROMECHANICAL FLOWMETER ACCURATELY MONITORS FLUID FLOW
GRANT, D. J. DATE- SEP. 1965
GSFC-357

Electromechanical flowmeter remotely and accurately monitors the flow rate and total volume of a transparent liquid discharged from a dispensing system. A dual dispensing tube system provides a relative reference level which permits compensation for temperature variations.

B65-10274
ELECTRONIC OHMMETER PROVIDES DIRECT DIGITAL OUTPUT
SEMYAN, J. DATE- SEP. 1965
GSFC-363

Self-balancing wheatstone bridge acts as all-electronic digital readout ohmmeter.

B65-10275
IMPROVED CIRCUIT MINIMIZES GENERATION TIME OF PSEUDONOISE CHECK BITS
ANDERSON, T. O. LUSBAUGH, W. A. DATE- SEP. 1965
JPL-698

Computer switching network consists of parallel and series combinations of mod 2 adders using the minimum number of gating levels. This network minimizes the propagation time in which a sequence of pseudonoise check bits are generated.

B65-10276
ADDED DIOXIDES INCREASE OUTPUT OF BALANCED MIXER CIRCUIT
ROBINSON, G. B. DATE- SEP. 1965
GSFC-354

Two diodes added to a conventional balanced mixer circuit increase the output signal level. The resulting half-wave carrier switch balanced modulator is used in radio equipment.

B65-10277
NONLINEAR FEEDBACK REDUCES ANALOG-TO-DIGITAL CONVERTER ERROR
MUNOZ, R. M. DATE- SEP. 1965
ARC-46

Nonlinear analog-to-digital converter measures the analog input level and continuously adjusts the digital readout scale sensitivity to effectively increase the accuracy. It is able to acquire more accurate low-level data.

B65-10278
MODIFIED DEVELOPER INCREASES LINE RESOLUTION IN PHOTSENSITIVE RESIST
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- SEP. 1965
GSFC-386

Standard developer solution is mixed with dipropyl carbonate. This reduces swelling in the photosensitive resist and permits application of relatively thick films with minimal pinhole formation and increased line resolution.

B65-10279
INFLATABLE BLADDER PROVIDES ACCURATE CALIBRATION OF PRESSURE SWITCH
SMITH, N. J. /BOEING CO./ DATE- SEP. 1965
M-FS-367

Calibration of a pressure switch is accurately checked by a thin-walled circular bladder. It is placed in the pressure switch and applies force to the switch diaphragm when expanded by an external pressure source. The disturbance to the normal operation of the switch is minimal.

B65-10281
CIRCUIT MAINTAINS DIGITAL DECISION THRESHOLD

AT PRESET LEVEL

SPON- INNOVATOR NOT GIVEN /AVCO CORP./ DATE- SEP. 1965

M-PS-331

Optimum decision-level circuit maintains the decision threshold at any preselected percentage of the input-signal amplitude. Communications equipment involving recognition of transmitted digital information can benefit from this circuit.

B65-10282

CONSTANT-CURRENT REGULATOR IMPROVES TUNNEL DIODE THRESHOLD-DETECTOR PERFORMANCE

CANCRO, C. A. DATE- SEP. 1965

GSFC-239

Grounded-base transistor is placed in a tunnel diode threshold detector circuit, and a bias voltage is applied to the tunnel diode. This provides the threshold detector with maximum voltage output and overload protection.

B65-10284

FIELD-EFFECT TRANSISTOR REPLACES BULKY TRANSFORMER IN ANALOG-GATE CIRCUIT

SPON- INNOVATOR NOT GIVEN /RADIATION, INC./ DATE- SEP. 1965

GSFC-351

Metal-Oxide Semiconductor Field-Effect Transistor /MOSFET/ analog-gate circuit adapts well to integrated circuits. It provides better system isolation than a transformer, while size and weight are appreciably reduced.

B65-10286

UPPERCASE AND LOWERCASE COMPUTER PRINTOUT INCREASES READABILITY

HAND, W. W. /DOC., INC./ JONSBURG, M. B. DATE- SEP. 1965

HQ-12

Print chain of 120 characters facilitates production of computer printout in both uppercase and lowercase characters. Although the output speed is reduced, the use of the print chain increases the computer printout readability.

B65-10287

PHOTORESISTANCE ANALOG MULTIPLIER HAS WIDE RANGE

HARTENSTEIN, R. G. DATE- SEP. 1965

GSFC-360

Photoactivated bridge facilitates equal performance of analog multipliers over a wide frequency range. The multiplier operates from direct current to an upper frequency limited by either the light source or the closed-loop amplifier.

B65-10289

BORON NITRIDE HOUSING COOLS TRANSISTORS

SPON- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DATE- SEP. 1965 REAN- SEE ALSO B63-10033 AND

B65-10186

WOO-079

Boron nitride ceramic heat sink cools transistors in r-f transmitter and receiver circuits. Heat dissipated by the transistor is conducted by the boron nitride housing to the metal chassis on which it is mounted.

B65-10290

FM/CW SYSTEM MEASURES AIRCRAFT ATTITUDE

SPON- INNOVATOR NOT GIVEN /MELPAR/ DATE- SEP. 1965

M-PS-276

FM/CW radar system measures attitude of an approaching aircraft relative to a ground station. The FM/CW transmitter on board the aircraft transmits through two antennas to a ground-based receiver.

B65-10293

ELECTROSTATICALLY DRIVEN DYNAMIC CAPACITOR EMPLOYS CAPACITIVE FEEDBACK

LONBORG, J. O. DATE- OCT. 1965

JPL-771

Three-part signal electrode provides capacitive feedback to an oscillator driven dynamic capacitor in an electrometer circuit.

B65-10298

TITANIUM DIAPHRAGM MAKES EXCELLENT AMPLITRON CATHODE SUPPORT

TEICH, W. W. /RAYTHEON CO./ DATE- OCT. 1965

GSFC-394

Cathode support structure designed around a titanium diaphragm prevents radial misalignment between the cathode and anode in amplitrons. The titanium exhibits low thermal conductivity, tolerates lateral thermal expansion of the cathode, and is a poor primary and secondary emission medium.

B65-10299

ELECTROPNEUMATIC RHEOSTAT REGULATES HIGH CURRENT

HAACKER, J. P. JEDLICKA, J. R. WAGONER, C. B. DATE- OCT. 1965

ARC-44

Electropneumatic rheostat maintains a constant direct current in each of several high-power parallel loads, of variable resistance, across a single source. It provides current regulation at any preset value by dissipating the proper amount of energy thermally, and uses a column of mercury to vary the effective length of a resistance element.

B65-10300

IMPURITY DIFFUSION PROCESS FOR SILICON SEMICONDUCTORS IS FAST AND PRECISE

MC LOUSKI, R. M. MC LOUSKI, R. M. SKOUSON, G. W. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1965

GSFC-397

Impurity diffusion process produces precision silicon semiconductor junctions economically and fast. Oxide is deposited on a silicon wafer and a controlled concentration of impurity atoms in gaseous form is simultaneously introduced into the reaction.

B65-10301

REMOTE RAPIDLY VARYING PRESSURES ACCURATELY MEASURED

SPON- INNOVATOR NOT GIVEN /GE/ DATE- OCT. 1965

FRC-28

Transmitting-damping tube with one end closed, the other open to a pressure source, has a pressure sensor connected to a port close to the pressure source. This accurately measures transient or rapidly varying fluid pressures.

B65-10304

IMPROVED STRAIN-WIRE FLOWMETER HAS FAST RESPONSE TIME

DILLON, R. C. DUNBAR, W. R. DATE- OCT. 1965

LEWIS-241

Strain-sensitive resistance wires in a Wheatstone bridge arrangement form the sensing element of a flowmeter. The change in resistance of the wires is measured as a function of stream velocity. Thus the electrical output is a measure of both rapidly varying and steady fluid-flow rates.

B65-10305

THIN-FILM RESISTORS USED IN FUNCTIONAL ELECTRONIC BLOCKS

SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1965

GSFC-380

Vapor-deposited thin-film resistors replace diffused resistors in R-C tank circuits in a solid state electronic block. This allows an optimum parallel capacitance to be obtained for circuit applications requiring a high resistance and a low capacitance.

B65-10306

OPAQUE MICROFICHE MASTHEAD PERMITS EASY READING

LOWE, E. M. /DOC., INC./ DATE- OCT. 1965

HQ-7

White-pigmented backing applied to the reverse side of microfiche mastheads makes the area opaque and easily readable. This technique is of value for organizations involved in large volume information storage and retrieval.

01 ELECTRICAL (ELECTRONIC)

B65-10307

FREQUENCY CORRECTION DEVICE USES DIGITAL CIRCUITRY
SCHAEFER, D. DATE- OCT. 1965
GSFC-268

Signal acquisition and tracking system covering a wide range of frequencies uses a digital circuit to sample the frequency of an incoming signal and provide correction pulses to the voltage-controlled oscillator. The circuit can also sense the presence of a signal on any one of the input lines.

B65-10308

ELECTRONIC AMPERE-HOUR INTEGRATOR IS ACCURATE TO ONE PERCENT
PAULKOVICH, J. DATE- OCT. 1965
GSFC-203

Electronic ampere-hour integrator is based on current-to-frequency conversion. It operates on low power and is accurate to one percent. This device can measure the ampere-hour capacity of batteries and can be adapted for other functions.

B65-10309

THERMOELECTRIC ELEMENTS DIFFUSION-BONDED TO TUNGSTEN ELECTRODES
SPON- INNOVATOR NOT GIVEN /TYCO LABS./ DATE- OCT. 1965 REAN- SEE ALSO B65-10220
GSFC-346

Solid-state diffusion process bonds lead telluride and lead telluride-tin telluride thermoelectric elements to tungsten electrodes. The resulting bond is nonmagnetic and has high strength and low electrical and thermal resistance. This method is also used with tantalum electrodes.

B65-10310

THRESHOLD DETECTOR PRODUCES NARROW PULSES AT HIGH REPETITION RATES
GARRAHAN, N. M. DATE- OCT. 1965
GSFC-383

Solid state device generates fixed width output pulses from variable width input pulses in the nanosecond range. The circuit produces pulse repetition rates in the megacycle range and exhibits low power drain.

B65-10311

PCM MAGNETIC TAPE SYSTEM EFFICIENTLY RECORDS AND REPRODUCES DATA
COLE, P. T. DATE- OCT. 1965
GSFC-375

Split-phase PCM technique consists of data and clock signal recording and reproduction systems. This PCM magnetic tape system achieves a high packing density on the tape and provides a symmetrical reproduction of the recorded signal.

B65-10313

PLANETARY CAMERA CONTROL IMPROVES MICROFICHE PRODUCTION
CHESTERTON, W. L. LEWIS, E. B. /DOC., INC./ DATE- OCT. 1965
HQ-1 HQ-5

Microfiche is prepared using an automatic control system for a planetary camera. The system provides blank end-of-row exposures and signals card completion so the legend of the next card may be photographed.

B65-10314

HYBRID CIRCUIT ACHIEVES PULSE REGENERATION WITH LOW POWER DRAIN
CANCRO, C. A. DATE- OCT. 1965
GSFC-382

Hybrid tunnel diode-transistor circuit provides a solid-state, low power drain pulse regenerator, frequency limiter, or gated oscillator. When the feedback voltage exceeds the input voltage, the circuit functions as a pulse normalizer or a frequency limiter. If the circuit is direct coupled, it functions as a gated oscillator.

B65-10315

MAGNETOMETER MEASURES ORTHOGONAL COMPONENTS OF MAGNETIC FIELDS
SPON- INNOVATOR NOT GIVEN /SPECTRA PHYS./ DATE- OCT. 1965

GSFC-395

Driven magnetometer accurately measures the components of a low strength magnetic field in each of three mutually perpendicular directions. To accomplish this, it employs the principle of magnetic resonance in optically pumped rubidium vapor.

B65-10317

INSTRUMENT PERFORMS NONDESTRUCTIVE CHEMICAL ANALYSIS, DATA CAN BE TELEMETERED
TURKEVICH, A. /CHICAGO UNIV./ DATE- OCT. 1965
JPL-SC-078

Instrument automatically performs a nondestructive chemical analysis of surfaces and transmits the data in the form of electronic signals. It employs solid-state nuclear particle detectors with a charged nuclear particle source and an electronic pulse-height analyzer.

B65-10318

REMOTE CONTROL ELECTRICAL SWITCHING SYSTEM HAS 1000-OUTPUT CAPABILITY
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- OCT. 1965
M-FS-380

Electromechanical remote control system has a capacity of 1000 individual on-off functions yet uses only seven pairs of telephone-type lines for interconnection. Installation and maintenance costs are decreased by using this system.

B65-10320

RUGGED PRESSED DISK ELECTRODE HAS LOW CONTACT POTENTIAL
DAY, J. L. MOSIER, B. /INST. OF RES. AND INSTRUMENTATION/ DATE- OCT. 1965 REAN- SEE ALSO B64-10025
MSC-158

Pressed-disk electrode with low contact potential monitors physiological processes. It consists of silver and silver chloride combined with bentonitic clay. The clay affords a surface that permits use over extended periods without contact deterioration.

B65-10322

CAM-OPERATED LIMIT SWITCH FEATURES SAFE FUSE REPLACEMENT
WEBER, G. J. /MCDONNELL AIRCRAFT CORP./ DATE- OCT. 1965
MSC-218

Two hermetically sealed, short travel, limit switches permit fuse replacement without danger of a spark or arcing. The switches are wired in parallel circuits and actuated by manually operated cams containing the circuit fuses.

B65-10324

SELENIUM BOND DECREASES ON RESISTANCE OF LIGHT-ACTIVATED SWITCH
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- NOV. 1965
JPL-SC-101

Vitrified amorphous selenium bond decreases the ON resistance of a gallium arsenide-silicon light-activated, low-level switch. The switch is used under a pulse condition to prolong switch life and minimize errors due to heating, devitrification, and overdrawing.

B65-10325

DIRECT FORCE-MEASURING TRANSDUCER USED IN BLOOD PRESSURE RESEARCH
EIGE, J. J. /STANFORD RES. INST./ NEWGARD, P. M. PRESSMAN, G. L. DATE- NOV. 1965
ARC-53

Direct force measuring transducer acts as an arterial tonometer, gives a direct readout to instrumentation, and is unaffected by ambient noise. It uses a semiconductor strain gage which is deflected by pressure pulses in the artery. The deflection changes the resistance of the gage and alters the voltage reading on the associated instrumentation.

B65-10328

FEED-THROUGH CONNECTOR WITHSTANDS HIGH TEMPERATURES IN VACUUM ENVIRONMENT
KREISMAN, W. S. /GEOPHYS. CORP. OF AM./ DATE- NOV. 1965

GSFC-442

Feed-through connector with sealing action augmented by any temperature increase can be used through the wall of a vacuum device. It retains vacuum integrity through successive cycles of high temperature.

B65-10329

BAKING ENABLES MCLEOD GAUGE TO MEASURE IN ULTRAHIGH VACUUM RANGE
KREISMAN, W. S. /GEOPHYS. CORP. OF AM./ DATE- NOV. 1965

GSFC-440

Accurate measurements in the ultrahigh vacuum range by a conventional McLeod gage requires degassing of the gages-glass walls. A closed system, in which mercury is forced into the gage by gravity alone, and in which the gage components are baked out for long periods, is used to achieve this degassing.

B65-10333

COMMUNICATION SYSTEM USES MODULATED LASER BEAM
MINOTT, P. O. DATE- NOV. 1965

GSFC-377

Electro-optical system is placed on a satellite to effect communications between two remote stations. The system employs an essentially passive, retrodirective, laser beam modulator-reflector.

B65-10340

MINIATURE SERVO ACCELEROMETER IS FORCE-BALANCED
JOHNSTON, A. R. /CALIF. INST. RES. FOUND./ DATE- NOV. 1965

JPL-155

Miniature servo accelerometer measures unusually small forces of torques. The pendulous mass of the accelerometer is suspended by fused quartz torsion fibers in an electromagnetically force-balanced environment. It is used in gravity surveys for exploring mineral deposits.

B65-10343

DELAYED RIPPLE COUNTER SIMPLIFIES SQUARE-ROOT COMPUTATION
CLIFF, R. DATE- NOV. 1965

GSFC-398

Ripple subtract technique simplifies the logic circuitry required in a binary computing device to derive the square root of a number. Successively higher numbers are subtracted from a register containing the number out of which the square root is to be extracted. The last number subtracted will be the closest integer to the square root of the number.

B65-10345

VARIABLE WORD LENGTH ENCODER REDUCES TV BANDWIDTH REQUIREMENTS
SIVERTSON, W. E., JR. DATE- NOV. 1965

LANGLEY-87

Adaptive variable resolution encoding technique provides an adaptive compression pseudo-random noise signal processor for reducing television bandwidth requirements. Complementary processors are required in both the transmitting and receiving systems. The pretransmission processor is analog-to-digital, while the postreception processor is digital-to-analog.

B65-10347

COMPACT SCR TRIGGER CIRCUIT FOR IGNITRON SWITCH OPERATES EFFICIENTLY
FOSTER, L. E. DATE- NOV. 1965

M-FS-371

Trigger circuit with two series-connected SCR triggers an ignitron switch used to discharge high-energy capacitor banks. It does not require a warmup period and operates at relatively high efficiency.

B65-10349

FREQUENCY DISCRIMINATOR WITH BINARY OUTPUT ELIMINATES TUNED CIRCUITS
DE VELDE, E. /IBM/ DATE- NOV. 1965

M-FS-376

Frequency discriminator has a binary output and permits microminiaturized packaging techniques.

It uses a bandpass amplifier and standard logic elements that convert two input frequencies into two discrete logic pulses.

B65-10350

ZENER DIODE CONTROLS SWITCHING OF LARGE DIRECT CURRENTS
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- NOV. 1965

MSC-188

High-current zener diode is connected in series with the positive input terminal of a dc supply to block the flow of direct current until a high-frequency control signal is applied across the zener diode. This circuit controls the switching of large dc signals.

B65-10352

VIBRATING DIAPHRAGM MEASURES HIGH ELECTROSTATIC FIELD STRENGTHS
SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE- NOV. 1965

MSC-189

Meter with flexible conductive diaphragm measures electrostatic charge density on a conducting surface in a vacuum. The diaphragm is supported from an insulated conductive support ring rigidly attached to the conductive surface whose electrostatic charge density is to be measured.

B65-10353

MULTIPHASE CLOCK-PULSE GENERATOR USES SIMPLIFIED CIRCUITRY
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- NOV. 1965

M-FS-297

Multiphase clock-pulse generator converts a simple pulse train into nonoverlapping clock pulses. The generator employs multistable circuits to minimize the number of electronic components.

B65-10355

SIMPLE CIRCUIT PERFORMS BINARY ADDITION AND SUBTRACTION
CLIFF, R. A. SCHAEFER, D. H. DATE- NOV. 1965

GSFC-399

Ripple adder reduces the number of logic circuits required to perform binary addition and subtraction. The adder uses dual input and delayed output flip-flops in one register. The contents of this register are summed with those of a standard register through conventional AND/gates.

B65-10359

IMPROVED WIRE MEMORY MATRIX USES VERY LITTLE POWER
FEDDE, G. A. /SPERRY RAND CORP./ DATE- NOV. 1965

JPL-SC-167

Thin-film, plated-wire memory matrix for computer applications requires little power yet has higher speed and four times greater storage capacity than ferrite-core memories of the same size.

B65-10361

HIGH-INTENSITY FLASHING BEACON POWERED BY MERCURY CELLS
SPON- INNOVATOR NOT GIVEN /LANGLEY/ DATE- NOV. 1965

LANGLEY-80

Pair of xenon flashlamps powered by mercury batteries in a transistorized circuit provides a flashing beacon with an effective intensity of a second-magnitude star at a distance of ten statute miles. This beacon is lightweight, long lasting and it withstands shock and vibration.

B65-10362

TEMPERATURE TRANSDUCER HAS HIGH OUTPUT, IS TIME STABLE
FOLLETT, W. H. /BALL BROTHERS RES. CORP./ DATE- NOV. 1965

GSFC-446

Compact, lightweight temperature transducer requires no amplification of its output signal and is time stable. It uses the temperature-dependent characteristics of a silicon transistor to provide a zero-to-five-volt signal proportional to temperature.

01 ELECTRICAL (ELECTRONIC)

B65-10363

REGENERATIVE FUEL CELL COMBINES HIGH EFFICIENCY WITH LOW COST
DOYLE, H. FRANK, H. STEPHENS, C. W.
/ELECTRO-OPT. SYSTEMS/ DATE- DEC. 1965
WOO-090

Hydrogen/oxygen regenerative fuel cell stores electrical energy efficiently and inexpensively. The fuel cell has a high energy-to-weight ratio, and is adapted for a large number of cycles with deep discharge.

B65-10369

RESPIRATORY TRANSFER VALVE HAS FAIL-SAFE FEATURE
PUCCINELLI, A. A. SMITH, J. R., JR. DATE- DEC. 1965
ARC-1

Quick-acting, remote controlled valve connects either one of two oxygen or air supplies to a breathing tube. The valve, which is fail-safe, incorporates a cammed piston arrangement that is driven by a remote controlled reversible rotary solenoid or reversible electric motor.

B65-10376

THREE-POSITION ROCKER SWITCH ACTUATOR HAS POSITIVE CENTERING
BOGLEY, R. L. /N. AM. AVIATION/ DATE- DEC. 1965
MSC-261

Three-position rocker switch actuator provides positive center positioning to inhibit possible override. Switch position is visually identified by rocker position, and functions can be shown on tabs and bars.

B65-10377

BINARY COUNTER USES FLUID LOGIC ELEMENTS
SPON- INNOVATOR NOT GIVEN /RAND CORP./ DATE- DEC. 1965
M-FS-323

Binary counter with two fluid flip-flops in each stage has an output taken from the output of the second flip-flop. The flip-flops each contain three fluid logic elements.

B65-10379

THREE-DIMENSIONAL WIRE-MESH CAPACITOR SYSTEM MEASURES FLUID DENSITY
SPON- INNOVATOR NOT GIVEN /GARRETT CORP./ DATE- DEC. 1965
WOO-194

Gaging system automatically measures the bulk density of a stored, electrically nonconductive fluid containing varying portions of liquid and vapor. The system employs a three-dimensional wire-mesh capacitor whose capacitance varies with the bulk density of the fluid dielectric medium between the capacitor plates.

B65-10380

DEVICE DETECTS UNBONDED AREAS IN PLASTIC LAMINATES
SPON- INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1965
WOO-206

Device generates an acoustic signal whose frequency changes disclose the presence of delaminated or unbonded areas in plastic laminates. A microphone makes the frequency change audible.

B65-10381

KEYED PLUGS AND SOCKETS PREVENT IMPROPER CONNECTIONS
BUCKEY, D. L. LANKFORD, H. /MCDONNELL AIRCRAFT CORP./ DATE- DEC. 1965
MSC-231

Plugs and sockets individually keyed so that no plug can be mated with other than its proper socket facilitates multiple connection in electrical systems.

B65-10382

PHOTOELECTRIC SYSTEM CONTINUOUSLY MONITORS LIQUID LEVEL
SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- DEC. 1965
M-FS-417

Immersion probe presents a depth-sensitive optical transmission path between a light source and a photoelectric cell to continuously monitor the level of a transparent liquid in a tank. This system operates automatically, without moving parts, and provides output signals to a remote recorder.

B65-10387

SHRINKABLE SLEEVE ELIMINATES SHIELDING GAP IN RF CABLE
SPON- INNOVATOR NOT GIVEN /GEN. DYN./CONVAIR/ DATE- DEC. 1965
WOO-207

RF shielding gap between an RF cable and a multipin connector is eliminated by a sleeve assembly installed between the connector and the terminated portion of the shielding. The assembly is enclosed in a heat-shrinkable plastic sleeve which completes the continuous RF shield.

B65-10389

INSULATOR-HOLDER PROTECTS TRANSISTORS IN DENSE ELECTRONIC ASSEMBLIES
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1965
MSC-214

Molded insulating spacer with one or more cavities is used as an insulated holder for mounting metal-case transistors in a chassis containing densely packed electronic components. The transistors are mechanically supported on their bases and electrically isolated from each other by the holder.

B65-10392

NONCONTACTING VIBRATION TRANSDUCER HAS CONSTANT SENSITIVITY
FLAGGE, B. DATE- DEC. 1965
LANGLEY-99

Noncontacting transducer with constant sensitivity automatically measures the vibration amplitudes along the span of a vibrating structure of irregular contour. A system employing a feedback control positions the transducer at a constant height above the test surfaces. A differential transformer facilitates calibration and extends the amplitude range of the system.

B65-10396

ADHESIVE-BACKED TERMINAL BOARD ELIMINATES MOUNTING SCREWS
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- DEC. 1965
MSC-173

Low-profile terminal board is used in dense electronic circuits where mounting and working space is limited. The board has a thin layer of pressure-sensitive adhesive backing which eliminates the need for mounting screws.

B65-10399

BINARY COUNTER ACCUMULATES TIME BY COMPLEMENTARY PRESET
MARRINER, G. E. /N. AM. AVIATION/ DATE- DEC. 1965
MSC-242

Binary counter reduces the number of logic elements required to furnish electrical control functions. The counter is automatically preset to the complement of the desired time increments in milliseconds. An output pulse is produced each time it reaches its capacity.

B65-10400

ELECTRICALLY HEATED DIAPHRAGM ELIMINATES USE OF PYROTECHNICS
MATHEWSON, R. C. /N. AM. AVIATION/ DATE- DEC. 1965
MSC-241

Membrane-type diaphragm is used in systems where fluids are contained under pressure until a certain pressure threshold or point of time has been reached when the fluids are automatically released. The diaphragm is resistance heated until its strength is degraded to the point of rupture, thus releasing the contained fluids.

B66-10002
DUAL-VOLTAGE POWER SUPPLY HAS INCREASED
EFFICIENCY
STURMAN, J. C. DATE- JAN. 1966
LEWIS-107A

Simple circuit provides two different dc output voltages from an ac source. It employs a full-wave rectifier connected to two passive branches from which the separate dc voltages are taken. The outputs have low ripple and good voltage regulation.

B66-10006
COMPUTER CIRCUIT CALCULATES CARDIAC OUTPUT
MC CULLOUGH, C. E. /KAMAN AIRCRAFT CORP./ DATE-
JAN. 1966
MSC-274

Electronic circuitry automatically calculates cardiac output. This computer is used for basic research in physiology and as a diagnostic instrument by doctors.

B66-10012
THIN-FILM SEMICONDUCTOR RECTIFIER HAS IMPROVED
PROPERTIES
SPON- INNOVATOR NOT GIVEN /MELPAR/ DATE- JAN.
1966
MSC-207

Cadmium selenide-zinc selenide film is used as a thin film semiconductor rectifier. The film is vapor-deposited in a controlled concentration gradient into a glass substrate to form the required junctions between vapor-deposited gold electrodes.

B66-10013
REACTION HEAT USED IN STATIC WATER REMOVAL
FROM FUEL CELLS
PLATNER, J. L. /ALLIS-CHALMERS MFG. CO./ DATE-
JAN. 1966
M-FS-532

Reaction heat is used for removal of water formed at the hydrogen fuel electrode in a hydrogen-oxygen fuel cell. A portion of the heat inherent in the fuel cell current generation reaction is used to transfer excess water into water vapor and cause it to be exhausted from the cell by a porous vapor transport membrane adjoining a vapor cavity.

B66-10015
ELECTRODELESS DISCHARGE LAMP IS EASILY
STARTED, HAS HIGH STABILITY
BELL, W. E. BLOOM, A. L. /VARIAN ASSOCIATES/
DATE- JAN. 1966
WOO-030

Electrodeless discharge borosilicate glass lamp is used in various high-resolution optical systems. It is partially charged with krypton, contains small amounts of rubidium, and is enclosed in a hermetically sealed envelope that maintains the lamp at an optimum temperature during discharge. The lamp is quickly started by its excitation coil.

B66-10021
SPECIAL MOUNT IMPROVES REMOTE TRANSDUCER
ACCURACY
LAYTON, J. P. /PRINCETON UNIV./ DATE- JAN. 1966
LEWIS-269

Transducer-mounting device allows measurement of transient pressure in a hostile environment. The device provides free passage areas and a controlled environment for the measuring instrument.

B66-10025
CUPROUS SELENIDE AND SULFIDE FORM IMPROVED
PHOTOVOLTAIC BARRIERS
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1966
WOO-212

Photovoltaic barriers formed by depositing a layer of polycrystalline cuprous sulfide or cuprous selenide on gallium arsenide are chemically and electrically stable. The stability of these barrier materials is significantly greater than that of cuprous iodide.

B66-10026
IMPROVED CARBON ELECTRODE REDUCES ARC
SPUTTERING
SPON- INNOVATOR NOT GIVEN /UNION CARBIDE CORP./
DATE- JAN. 1966
MSC-219

Carbon rod cores with a smaller proportion of rare earth compounds than in standard cores reduce arc sputtering in optical equipment. This core is produced without additional cost or equipment.

B66-10028
PORTABLE SELF-POWERED DEVICE DETECTS INTERNAL
FLAWS IN TUBULAR STRUCTURES
GILMOUR, G. /WESTINGHOUSE ELEC. CORP./ DATE-
JAN. 1966
NU-0019

Portable probe and eddy-current-sensitive circuitry detects internal flaws or hard spot impurities in an electrically conductive tubular channel by recording the conductivity change at the defect point.

B66-10031
PRESSURE TRANSDUCERS DYNAMICALLY TESTED WITH
SINUSOIDAL PRESSURE GENERATOR
JONES, H. B., JR. /PRINCETON UNIV./ DATE- JAN.
1966
LEWIS-268

Sinusoidal pressure generator assembly dynamically tests and calibrates pressure transducers by using a chamber whose lowest resonant mode is above the audiofrequency range.

B66-10034
CIRCUIT EXHIBITS POWER EFFICIENCY GREATER
THAN 75 PERCENT
MANKOVITZ, R. J. /N. AM. AVIATION/ DATE- FEB.
1966
MSC-254

Variable duty cycle pulser increases circuit power efficiency by more than 75 percent when operating solenoid valves. The pulser provides a low-level holding current after a high-level current has actuated the solenoid valves.

B66-10036
FLOWMETER MEASURES LOW GAS-FLOW RATES
WELLS, F. E. DATE- FEB. 1966
M-FS-215

Positive-displacement flowmeter measures low gas-flow rates by gaging the time required for a slug of mercury to pass between two reference levels in a tube of known volume.

B66-10038
CIRCUIT OPERATES AS SINE FUNCTION GENERATOR
BOGART, T., JR. /N. AM. AVIATION/ DATE- FEB.
1966
MSC-255

Electronic circuit drives sine function generator using square wave and sawtooth sweep generators. The circuit replaces electromechanical driver and increases accuracy.

B66-10039
CONTROL SYSTEM MAINTAINS SELECTED LIQUID LEVEL
BERGESON, R. L. SCHUCK, J. W. /HONEYWELL/ DATE-
FEB. 1966
M-FS-470

Single-sensor control system maintains liquid hydrogen at a preselected desired level within a tank, regardless of boiloff. It calibrates output in percentage. Thus, when the fuel is at the desired level, the system output will indicate 100 percent regardless of what percent of tank capacity the fuel has reached.

B66-10041
COLD CATHODE IONIZATION GAUGE HAS RIGID METAL
HOUSING
HERZOG, R. KREISMAN, W. S. /GEOPHYS. CORP. OF
AM./ DATE- FEB. 1966
GSFC-445

Cold cathode ionization gage in a stainless steel housing accurately measures high pressures. The penning effect is used with a high voltage discharge in the presence of a magnetic field for an ion current proportional to the gas pressure in

01 ELECTRICAL (ELECTRONIC)

HONEYCOMB-CORE PANELS

DATE- MAR. 1966

LANGLEY-202

Overall thermal conductivity of honeycomb-core panels at elevated temperatures is measured by an apparatus with a heater assembly and a calibrated heat-rate transducer. The apparatus has space between the heater and transducer for insertion of a test panel and insulation.

B66-10128

OPTICAL GYRO PICKOFF OPERATES AT CRYOGENIC TEMPERATURES

SPON- INNOVATOR NOT GIVEN /GE/ DATE- MAR. 1966

M-FS-407

Two-axis pickoff for cryogenic gyros uses solid-state light sources and sensors. This compact system operates efficiently at cryogenic temperatures.

B66-10129

DIGITALLY CONTROLLED PULSE-LEVEL DISCRIMINATOR OPERATES OVER WIDE VOLTAGE RANGE

CANCRO, C. A. DATE- MAR. 1966

GSFC-324

Low power drain discriminator circuit generates an output pulse when an input pulse exceeds a discrete digitally controlled threshold voltage. The discriminator operates over a wide linear or nonlinear range of threshold levels. It uses several amplifier stages ahead of a fixed-reference threshold detector.

B66-10130

MATERIALS PHYSICALLY TESTED IN VARIABLE-ENVIRONMENT CHAMBER

KNOELL, A. C. DATE- MAR. 1966

JPL-789

Controlled environment chamber for physical tests of crushable materials encloses both the test specimen and the devices for performing the tests. The chamber may be stepped through a range of changing environment.

B66-10133

OMNIDIRECTIONAL ANTENNAS TRANSMIT AND RECEIVE OVER LARGE BANDWIDTH

WOODWARD, O. M., JR. /RCA/ DATE- MAR. 1966

GSFC-436

For exchanging wideband signals between two distant ground stations, low-gain antennas with wide angular coverage and circular polarization are mounted on a single mast extending from a satellite. The transmitting antenna has two decoupled ports or inputs for eliminating switching problems when using two transmitters on different frequencies.

B66-10134

HIGH TEMPERATURE THERMOCOUPLE OPERATES IN REDUCTION ATMOSPHERE

HOFF, R. G. /AEROJET-GEN. CORP./ DATE- MAR. 1966

NU-0046

Thermocouple continuously measures a flowing gas up to 4500 degrees F in a hazardous environment. The thermocouple combines rhodium and tungsten in the probe, housing, and swaged extension lead. The wires extend continuously from the cold junction to the probe tip to eliminate errors from secondary thermocouple effects.

B66-10141

OPTICALLY DRIVEN SWITCH TURN-OFF TIME REDUCED BY OPAQUE COATINGS

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- APR. 1966

JPL-SC-107

Turn-off response time of an optically driven switch is reduced by placing an opaque covering over the passivating silicon dioxide members. The coating prevents photon absorption so that carriers are not trapped or stored on the base region, thus shortening turn-off time.

B66-10142

DIFFUSION TECHNIQUE STABILIZES RESISTOR VALUES

GALLAGHER, R. C. GIULIANO, M. N. /WESTINGHOUSE ELEC. CORP./ DATE- APR. 1966

MSC-205

Reduction of the contact resistance stabilizes the values, over a broad temperature range, of resistors used in linear integrated circuits. This reduction is accomplished by p-plus diffusion under the alloyed aluminum contacts.

B66-10144

MOUNTING IMPROVES HEAT-SINK CONTACT WITH BERYLLIA WASHER

SPON- INNOVATOR NOT GIVEN /COLLINS RADIO CO./

DATE- APR. 1966 REAN- SEE ALSO B63-10033

MSC-194

To conduct heat away from electrical components that must be electrically insulated from a metal heat sink, a metal washer and a coil spring are placed between one end of the electrical component and the beryllia washer mounted on the heat sink. The thermal paths are formed by the component lead and base, the metal and beryllia washers, and the compressed spring.

B66-10147

POLYMER DEFORMATION GAUGE MEASURES THICKNESS CHANGE IN TENSILE TESTS

BROYLES, H. F. BROYLES, H. H. DATE- APR. 1966

JPL-745

Lightweight deformation gage attached to a polymer specimen determines the thickness changes undergone by the specimen during the testing of its tensile and elongation properties. Mechanical noise from outside sources is dampened when the assembly is hung on a light rubber band.

B66-10148

TESTER PERIODICALLY REGISTERS DC AMPLIFIER CHARACTERISTICS

CREE, D. WENZEL, G. E. DATE- APR. 1966

MSC-190

Motor-driven switcher-recorder periodically registers the zero drift and gain drift signals of a dc amplifier subjected to changes in environment. A time coding method is used since several measurements are shared on a single recorder trace.

B66-10158

SWITCHING MECHANISM SENSES ANGULAR ACCELERATION

SPON- INNOVATOR NOT GIVEN /BALL BROS. RES. CORP./

DATE APR. 1966

GSFC-462

Switching mechanism actuates an electrical circuit when a predetermined angular acceleration and displacement are reached. A rotor in the mechanism overcomes the restraint of a magnetic detent when the case in which the detent is mounted reaches the predetermined angular acceleration.

B66-10159

IMPROVED SYSTEM MEASURES OUTPUT ENERGY OF PYROTECHNIC DEVICES

SHORTLY, E. M. /N. AM. AVIATION/ DATE- APR. 1966

WOO-256

System for measuring the output energy of pyrotechnic devices discharges the reaction products into a test chamber. It measures the radiant heat output from a pinhole aperture as well as internal pressure changes on a common time base.

B66-10160

ELECTROPNEUMATIC TRANSDUCER AUTOMATICALLY LIMITS MOTOR CURRENT

LOVITT, T. F. DATE- APR. 1966

LEWIS-253

Pneumatic controller regulates the load on a centrifugal freon compressor in a water cooling system, thus limiting the current input to an electric motor driving it. An electromechanical transducer monitoring the motor input current sends out air signals which indicate changes in the current to the pneumatic controller.

B66-10161

TRANSDUCER MEASURES FORCE IN VACUUM ENVIRONMENT

GLENN, D. C. DATE- APR. 1966

LEWIS-218

Transducer assembly measures force in a vacuum environment. The assembly consists of a standard capacitance probe and a torque beam. This transducer can be used in high-pressure as well as in low-pressure environments for static and dynamic force measurements.

B66-10162

FIXTURE AIDS SOLDERING OF ELECTRONIC COMPONENTS ON CIRCUIT BOARD

ROSS, M. H. DATE- APR. 1966

ARC-56

Spring clamp fixture holds small electronic components in a desired position while they are being soldered on a circuit board. The spring clamp is clipped on the edge of the circuit board and an adjustable spring-steel boom holds components against the board. The felt pad at the end of the boom is replaced with different attachments for other holding tasks.

B66-10163

TWO-LIGHT CIRCUIT CONTINUOUSLY MONITORS AC GROUND, PHASE, AND NEUTRAL WIRES

MEE, R. W. /N. AM. AVIATION/ DATE- APR. 1966

MSC-36

Two-transformer, two-lamp circuit monitors the continuity of ac ground, neutral, and phase wires. The circuit gives different visual indications if any one of the three lines should become open circuited.

B66-10164

FATIGUE TESTER ACHIEVES TRUE AXIAL MOTION THROUGH FLEX PLATES AND BARS

HENGSTENBERG, T. F. /WESTINGHOUSE ASTRONUCLEAR LAB./ KURINKO, C. D. DATE- APR. 1966

NU-0021

Lever load-amplifying fatigue testing machine with a load cycle frequency of 100 to 900 cycles per minute applies the load through true axial motion. Pivot friction and bearing wear are eliminated by replacing these parts with flex plates and bars.

B66-10170

SCANNING PHOTOMETER SYSTEM AUTOMATICALLY DETERMINES ATMOSPHERIC LAYER HEIGHT

WOLFF, M. /MIT/ DATE- APR. 1966

MSC-245

Two photometers, placed a given distance apart, determine the height of nonuniform luminous layers in a synchronous manner. Photometer outputs are correlated by a simple analog correlation computer to automatically give the luminous layer height. This system is used to determine visibility ceilings at airports.

B66-10177

BINARY FLUID AMPLIFIER SOLVES STABILITY AND LOAD PROBLEMS

LARKIN, B. D. READER, T. D. /GIANNINI CONTROLS CORP./ DATE- MAY 1966

ERC-15

Digital fluid amplifier has load intensity, high stability, and operates at low Reynolds numbers. It contains specially designed nozzles to provide uniform exit-velocity profiles and to ensure jets of low turbulence.

B66-10179

COMPLEMENTARY MONOSTABLE CIRCUITS ACHIEVE LOW POWER DRAIN AND HIGH RELIABILITY

KLEINBERG, L. L. LAVIGNE, R. C. DATE- MAY 1966

GSFC-433

Two-transistor multivibrator has minimum power dissipation and maximum reliability. It minimizes the use of components that are subject to environmental changes or other unpredictable behavior.

B66-10180

THIN-FILM GAGE MEASURES LOW HEAT-TRANSFER RATES

SPITZER, C. R. DATE- MAY 1966

LANGLEY 205

Low heat-transfer gage facilitates determination of the transition between laminar and turbulent conditions, in the boundary layer surrounding slender and moderately slender cones under test in

a hypersonic blowdown helium tunnel. The gage consists of a thin layer of vacuum-evaporated platinum on a heat resistant glass substrate contoured to fit model surfaces.

B66-10182

SUBMINIATURIZED GAS CHROMATOGRAPH GIVES FAST, EFFICIENT ANALYSIS

WILHITE, W. F. DATE- MAY 1966

JPL-735 JPL-737 JPL-736 JPL-740

Space oriented, lightweight, subminiaturized gas chromatograph analyzes gas samples in a few seconds with a carrier gas flow of one milliliter per second. In extraterrestrial exploration, the system could be used with a mass spectrometer for detection of life-supporting compounds.

B66-10192

COATING PERMITS USE OF STRAIN GAGE IN WATER AND LIQUID HYDROGEN

BEEVEN, B. B. /N. AM. AVIATION/ DATE- MAY 1966

M-PS-594

Strain gage installation covered with a three-layer coating of commercial materials makes measurements in water and liquid hydrogen. It consists of a selected foil strain gage bonded with a modified commercial heat-curing epoxy cement. The outer protective layer of the gage installation may develop cracks when immersed in liquid hydrogen.

B66-10193

SOLID STATE THERMOSTAT HAS INTEGRAL PROBE AND CIRCUITRY

SPON- INNOVATOR NOT GIVEN /METRO PHYS., INC./ DATE- MAY 1966

M-PS-434

Compact, reliable thermostat provides a temperature readout signal and a continuous temperature-control output for temperature monitoring by automatic checkout equipment or telemetry systems. It employs a solid state circuit in a housing rigidly attached to a thermistor probe.

B66-10198

DEVICE WITHOUT ELECTRICAL CONNECTIONS IN TANK MEASURES LIQUID LEVEL

SHEKMAN, J. S. /V. K. C. AEROJET-GEN. CORP./ DATE- MAY 1966

WOO-235

Vertical static float in a tank measures the liquid level without the use of electrical connections in the tank. The float transmits the buoyant force of the liquid to an external force transducer. It is insensitive to tank pressure and temperature changes.

B66-10200

APPARATUS PRESENTS VISUAL DISPLAY OF SEMICONDUCTOR SURFACE CHARACTERISTICS

SUMMERS, R. A. DATE- MAY 1966

JPL-665

Apparatus provides a representation of the physicochemical condition of the surface layers of a semiconductor. It is based on the principle that the surface layers of a semiconductor will conduct an electric current when exposed to a beam of light.

B66-10203

SOLDERING IRON TEMPERATURE IS AUTOMATICALLY REDUCED

LUX, J. Y. DATE- MAY 1966

ARC-57

Hinged cradle-microswitch arrangement maintains a soldering iron at less than peak temperature when not in use. The microswitch introduces a voltage reducing element into the soldering iron power circuit when the iron is placed on the cradle. The iron, when removed from the cradle, returns to operating temperature in 15 to 30 seconds.

B66-10205

WIDE-RANGE INSTRUMENT MONITORS FLOW RATES OF CHEMICALLY ACTIVE FLUIDS

SPON- INNOVATOR NOT GIVEN /SPACELABS/ DATE- MAY 1966

MSC-186

01 ELECTRICAL (ELECTRONIC)

In-like transducers system measures flow rate of chemically active propellant fluids. The system uses one low-flow transducer and one high-flow transducer. Each consists of separate heater and temperature-sensing elements.

B66-10220
ULTRASONIC RECORDING SCANNER USED FOR
NONDESTRUCTIVE WELD INSPECTION
 SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- MAY 1966
 REAN- SEE ALSO B66-10178
 M-FS-284

Portable ultrasonic recording scanner is used for nondestructive inspection of welds. It is adaptable to continuous operation in one direction while maintaining oscillatory motion at a right angle to this direction. The scanning speed and oscillation frequency are independently adjustable.

B66-10223
MULTICOLOR STROBOSCOPE PINPOINTS RESONANCES IN
VIBRATING COMPONENTS
 SPON- INNOVATOR NOT GIVEN /CALIF. INST. RES.
 FOUND./ DATE- MAY 1966
 JPL-0033

Stroboscopic system, which uses three different colored lights, rapidly scans a multicomponent assembly and provides a visual indication of resonant components. The lights are pulsed at the same flash frequency but at different phases.

B66-10224
FET COMPARATOR DETECTS ANALOG SIGNAL LEVELS
WITHOUT LOADING ANALOG DEVICE
 WALLACE, H. L. /GE/ DATE- MAY 1966
 M-FS-503

FET comparator circuit detects discrete analog computer output levels without excessively loading the output amplifier of the computer. An FET common source amplifier is coupled by a differential amplifier to a bistable transistor flip-flop. This circuit provides a digital output for analog voltages above or below a predetermined level.

B66-10225
SINGLE-CRYSTAL SEMICONDUCTOR FILMS GROWN ON
FOREIGN SUBSTRATES
 VOHL, P. /RCA/ DATE- MAY 1966
 WOO-076

Intermediate alloy formed between foreign substrates and semiconductor material enable the growth of single crystal semiconductor films on the alloy layer. The melted film must not ball up on the surface of the substrate and neither chemically react nor alloy with the intermediate alloy formed on the substrate.

B66-10232
ELECTRONIC PHASE-LOCKED-LOOP SPEED CONTROL
SYSTEM IS STABLE
 STONE, P. A. /RAYMOND ENG. LAB./ DATE- JUN. 1966
 JPL-SC-084

Phase locked-loop circuit is used for playback motors in digital tape recorders where the reproducer output remains in exact synchronism with an external reference clock over extended periods. It removes the motor dynamics from the control loop so that the loop is stable without damping.

B66-10245
RUGGED MICROELECTRONIC MODULE PACKAGE SUPPORTS
CIRCUITRY ON HEAT SINK
 JOHNSON, A. L. /MINNEAPOLIS-HONEYWELL REGULATOR CO./ DATE- JUN. 1966
 MSC-81A

Rugged module package for thin film hybrid microcircuits incorporated a rigid, thermally conductive support structure, which serves as a heat sink, and a lead wire block in which T-shaped electrical connectors are potted. It protects the circuitry from shock and vibration loads, dissipates internal heat, and simplifies electrical connections between adjacent modules.

B66-10251
POLARIZING KEYS PREVENT MISMATCH OF CONNECTOR

PLUGS AND RECEPTACLES
 CHIAPUZZO, A. /N. AM. AVIATION/ DATE- JUN. 1966
 MSC-443

Keying prevents mismatching of plugs and receptacles in connector patching of instrumentation involving several thousand leads. Each receptacle and plug contains three polarizing keys that must mate in a complementary mode before the connector pins and sockets will engage.

B66-10260
MULTIPLE TEMPERATURES SAMPLED USING ONLY ONE
REFERENCE JUNCTION
 COPE, G. W. DATE- JUN. 1966
 GSFC-485

In a multitemperature sampling system where the reference thermocouples are a distance from the test thermocouples, an intermediate thermal junction block is placed between the sets of thermocouples permitting switching between a single reference and the test thermocouples. This reduces the amount of cabling, reference thermocouples, and cost of the sampling system.

B66-10261
SIMPLIFIED CIRCUIT CORRECTS FAULTS IN PARALLEL
BINARY INFORMATION CHANNELS
 GOLDBERG, J. /STANFORD RES. INST./ DATE- JUN. 1966
 REAN- SEE ALSO B65-10025
 JPL-SC-090

Corrective circuit prevents the appearance of erroneous output signals from the possible failure of any single-channel element interconnected in parallel binary information channels. The circuit is simplified and economical because it does not use redundant channels.

B66-10264
BINARY SEQUENCE DETECTOR USES MINIMUM NUMBER
OF DECISION ELEMENTS
 PERLMAN, M. DATE- JUN. 1966
 JPL-673

Detector of an n bit binary sequence code within a serial binary data system assigns states to memory elements of a code sequence detector by employing the same order of states for the sequence detector as that of the sequence generator when the linear recursion relationship employed by the sequence generator is given.

B66-10270
MAGNETICALLY OPERATED LIMIT SWITCH HAS
IMPROVED RELIABILITY, MINIMIZES ARCING
 STEINER, R. /N. AM. AVIATION/ DATE- JUN. 1966
 MSC-422

Limit switch for reliable, low-travel, snap action with negligible arcing uses an electrically nonconductive permanent magnet consisting of a ferrimagnetic ceramic and ferromagnetic pole shoes which form a magnetic and electrically conductive circuit with a ferrous-metal armature.

B66-10271
PN ACQUISITION DEMODULATOR ACHIEVES AUTOMATIC
SYNCHRONIZATION OF A TELEMETRY CHANNEL
 COUVILLON, L. DATE- JUN. 1966
 JPL-612

Data demodulator for automatic sync acquisition provides an automatic means for obtaining initial word and bit synchronization in a pulse-code-modulated/phase-shift-keyed digital communications system.

B66-10272
EXCLUSIVE-OR LOGIC CIRCUIT HAS USEFUL
PROPERTIES
 BATTE, W. G. DATE- JUN. 1966
 LANGLEY-214

Single, simple exclusive-or logic connective eliminates excessive hardware and the number of interconnections between logic modules. This circuit performs the necessary switching for the exclusive-or operation and amplifies, restores, and inverts the signal.

B66-10274
BRAZE ALLOYS USED AS TEMPERATURE INDICATORS
 RICE, R. E. /AEROJET-GEN. CORP./ SHURLEY, L. A.

DATE- JUN. 1966

NU-0063

Patches of braze alloys having known fusion are applied to portions of a metal surface where temperature indicators are required. This method is used to measure temperatures over the range of 175 degrees to 2100 degrees Fahrenheit where it is not feasible to employ conventional temperature detectors.

B66-10280

STRAIN GAGE NETWORK DISTINGUISHES BETWEEN THERMAL AND MECHANICAL DEFORMATIONS

CEPOLINA, F. J. DATE- JUN. 1966

GSFC-478

Strain gage network measures the thermal coefficient of linear expansion of composite metal structures. The network consists of a test gage and two dummy gages arranged to distinguish thermally induced deformation from mechanical strain.

B66-10282

SIMPLE CIRCUIT PROVIDES RELIABLE MULTIPLE SIGNAL AVERAGE AND REJECT CAPABILITY

OPENSHAW, R. L. /AEROJET-GEN. CORP./ DATE- JUN. 1966

NU-0069

Summation average and reject circuit based on diode clamping allows detection of individual functional deviations in a multiple signal system without shutting down the entire system.

B66-10286

VACUUM TEST FIXTURE IMPROVES LEAKAGE RATES MEASUREMENTS

MAYER, H. MARX, H. /GRUMMAN AIRCRAFT CORP./ DATE- JUN. 1966

MSC-271

Cylindrical chamber, consisting of two matching halves, forms a vacuum test fixture for measuring leakage rates of individual connections, brazed joints, and entrance ports used in closed fluid flow line systems. Once the chamber has been sufficiently evacuated, atmospheric pressure holds the two halves together.

B66-10287

DETECTION SYSTEM ENSURES POSITIVE ALARM ACTIVATION IN DIGITAL MESSAGE LOSS

BOKROS, P. BURSTEIN, A. HEWITT, E. D. /RCA/ DATE- JUN. 1966

WOO-208

Lost Word Detection System /LOWDS/ provides special identification for each error detection message transmitted from receiver to transmitter. The message is identified as an original message or an n-times retransmitted message so the receiver can detect where a retransmission request was not fulfilled and activate an alarm.

B66-10291

LARGE CAPACITOR PERFORMS AS A DISTRIBUTED PARAMETER PULSE LINE

GOODING, T. J. /GEN. DYN./ASTRONAUTICS/ DATE- JUL. 1966

LEWIS-176

Capacitor of extended foil construction performs as a distributed parameter pulse line in which current, amplitude, and period are readily controlled. The capacitor is used as the energy storage element in a pulsed plasma accelerator.

B66-10292

CIRCUIT PROTECTS REGULATED POWER SUPPLY AGAINST OVERLOAD CURRENT

AIRTH, H. B. /WESTINGHOUSE ELEC. CORP./ DATE- JUL. 1966

GSFC-453

Sensing circuit in which a tunnel diode controls a series regulator transistor protects a low voltage transistorized dc regulator from damage by excessive load currents. When a fault occurs, the faulty circuit is limited to a preset percentage of the current when limiting first occurs.

B66-10293

DAMPING TECHNIQUE GIVES ACCELEROMETER FLAT

FREQUENCY RESPONSE

WING, T. /GULTON IND./ DATE- JUL. 1966

M-PS-471

Piezoelectric accelerometer uses a viscous damping technique to achieve a flat frequency response over a wide frequency range in high acoustic environments. This eliminates the electrical overload on associated electronics and loss of useful data caused by oscillations of the accelerometer.

B66-10295

SUBSTITUTING TRANSISTOR FOR DIODE IMPROVES RECTIFYING MEANS

MULLER, R. M. DATE- JUL. 1966

GSFC-474

Unusual transistor connection that substitutes for a silicon diode and allows significantly higher repetition rates without increasing power loss rectifies an alternating current. Operation speed is improved by a factor of 10 or more when a given diode is replaced by this transistor circuit.

B66-10300

COMPUTER PROGRAM DETERMINES GAS FLOW RATES IN PIPING SYSTEMS

FRANKE, R. /BOEING CO./ DATE- JUL. 1966

M-PS-443

Computer program calculates the steady state flow characteristics of an ideal compressible gas in a complex piping system. The program calculates the stagnation and total temperature, static and total pressure, loss factor, and forces on each element in the piping system.

B66-10306

INSTRUMENT CALCULATES MOMENTS OF INERTIA OF COMPLEX PLANE FIGURES

MYERS, W. J. /N. AM. AVIATION/ DATE- JUL. 1966

MSC-628

Instrument consisting of a narrow field scanner coupled with a simple preprogrammed computer calculates distributive-area properties of complex or irregular plane figures representing cross sections of structural members. The calculator obtains the properties quickly and with a high degree of accuracy.

B66-10308

MICROPHONE MULTIPLEX SYSTEM PROVIDES MULTIPLE OUTLETS FROM SINGLE SOURCE

LAUVER, R. E. DATE- AUG. 1966

GSFC-426

Microphone multiplex system accepts an audio signal from a single source and provides any number of low impedance outputs at microphone level with complete isolation between output channels. Any input or output may be converted to high impedance by eliminating the associated transformer.

B66-10309

HIGH-PERFORMANCE RC BANDPASS FILTER IS ADAPTED TO MINIATURIZED CONSTRUCTION

SPON- INNOVATOR NOT GIVEN /AMES/ DATE- JUL. 1966

ARC-60

Miniaturized bandpass filter with RC networks is suitable for use in integrated circuits. The circuit consists of three stages of amplification with additional resistive and capacitive components to obtain the desired characteristics. The advantages of the active RC filter network are the reduction in size and weight and elimination of magnetic materials.

B66-10315

SYSTEM LOCATES RANDOMLY PLACED REMOTE OBJECTS

LOVELADY, R. W. MC FALL, J. C., JR. DATE- JUL. 1966

LANGLEY-209

System to locate objects submerged underwater uses active/passive sonar techniques in which a transmitter is attached to the object to be recovered and a receiver is used for search. The system is rugged, has a long term operating life, and furnishes a precise bearing on the object.

01 ELECTRICAL (ELECTRONIC)

B66-10320

SOLVENT RESIDUE CONTENT MEASURED BY LIGHT
SCATTERING TECHNIQUE

SALKOWSKI, M. J. WERLE, D. K. /IIT RES. INST./
DATE- JUL. 1966
M-FS-850

Photometric analyzer measures NVR /nonvolatile residue/ in trichloroethylene and other organic solvents. The analyzer converts the liquid solvent to aerosol and passes it between an optically focused light beam and a photodetector that is connected to standard amplifying and readout equipment.

B66-10324

INSTRUMENT TRANSMITS VANISHING POINT TO
ILLUSTRATION POINT

ALVAREZ, M. M. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-267A

Instrument transmits the vanishing point of an illustration to a point on the illustration on a diminishing scale that also serves as a straightedge.

B66-10328

CORK IS USED TO MAKE TOOLING PATTERNS AND
MOLDS

HOFFMAN, F. J. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-425

Sheet and waste cork are cemented together to provide a tooling pattern or mold. The cork form withstands moderately high temperatures under vacuum or pressure with minimum expansion, shrinkage, or distortion.

B66-10329

INSPECTION OF FINE WIRES SIMPLIFIED BY
CAPILLARY TUBE WIRE HOLDER

RAPHAEL, H. A. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-358

Capillary tube wire holder provides a mount for fine wires for photomicrographs. The holder is mounted in a stainless steel tube and cast in a transparent casting material. It protects and permits easy location of the wire.

B66-10333

VIBRATOR IMPROVES SPARK EROSION CUTTING
PROCESS

THRALL, L. R. /AEROJET-GEN. CORP./ DATE- JUL. 1966
NU-0071

Variable frequency mechanical vibrator improves spark erosion cutting process. The vibration of the cutting tip permits continual flushing away of residue around the cut area with nondestructive electric transformer oil during the cutting process.

B66-10334

STRIPPABLE GRID FACILITATES REMOVAL OF
GRID-SURFACED CONICAL WORKPIECE FROM DIE

RUPPE, E. P. /N. AM. AVIATION/ DATE- JUL. 1966
M-FS-716

Female die facilitates the removal of a sheet metal structure from a die used for explosive forming of the metal. The female die consists of a smooth conical frustum made of fiber glass with a cured epoxy-resin surface on which a molded grid pattern made of a polyurethane resin is overlaid.

B66-10341

ULTRASONIC EMISSION METHOD ENABLES TESTING OF
ADHESIVE BONDS

FRANK, L. SCHMITZ, G. /GEN. AM. TRANSPORTATION
CORP./ DATE- AUG. 1966
M-FS-799

Detection of acoustic energy emitted by adhesive bonds subjected to tensile stresses at frequencies above sixteen kilocycles per second is used as a method for determining bond strength. This method is used in measuring adhesive bond strengths on metal honeycomb core panels.

B66-10344

PHASE INVERTER PROVIDES VARIABLE REFERENCE
PUSH-PULL OUTPUT

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- AUG. 1966
HQ-23

Dual-transistor difference amplifier provides a push-pull output referenced to a dc potential which can be varied without affecting the signal levels. The amplifier is coupled with a feedback circuit which can vary the operating points of the transistors by equal amounts to provide the variable reference potentials.

B66-10347

DUST PARTICLE INJECTOR FOR HYPERVELOCITY
ACCELERATORS PROVIDES HIGH CHARGE-TO-MASS
RATIO

BERG, O. E. DATE- AUG. 1966
GSFC-509

Injector imparts a high charge-to-mass ratio to microparticles and injects them into an electrostatic accelerator so that the particles are accelerated to meteoric speeds. It employs relatively large masses in the anode and cathode structures with a relatively wide separation, thus permitting a large increase in the allowable injection voltages.

B66-10349

ELECTRICALLY CONDUCTIVE FIBERS THERMALLY
ISOLATE TEMPERATURE SENSOR

DE WAARD, E. NORTON, E. /BARNES ENG. CO./ DATE-
AUG. 1966
GSFC-456

Mounting assembly provides thermal isolation and an electrical path for an unbacked thermal sensor. The sensor is suspended in the center of a plastic mounting ring from four plastic fibers, two of which are coated with an electrically conductive material and connected to electrically conductive coatings on the ring.

B66-10350

TRANSISTOR CIRCUIT INCREASES RANGE OF
LOGARITHMIC CURRENT AMPLIFIER

GILHOUS, G. /WESTINGHOUSE ASTRONUCI. LAB./ DATE-
AUG. 1966
NU-0018

Circuit increases the range of a logarithmic current amplifier by combining a commercially available amplifier with a silicon epitaxial transistor. A temperature compensating network is provided for the transistor.

B66-10351

FUNCTION GENERATOR ELIMINATES NECESSITY
OF SERIES SUMMATION

CALLAN, J. D. MC CALL, A. J. MEAD, D. /HUGHES
AIRCRAFT CO./ DATE- AUG. 1966
GSFC-214

Diode generator using four building-block circuits produces complex waveforms without the necessity of series summation. This highly specialized method of producing complex waveforms requires less power than present methods and uses simpler circuitry.

B66-10353

ACCELERATION-COMPENSATED PRESSURE TRANSDUCER
HAS FAST RESPONSE

SPON- INNOVATOR NOT GIVEN /CORNELL AERON. LAB./
DATE- AUG. 1966
LANGLEY-113

Flush-diaphragm transducer accurately measures small dynamic pressures when it is subjected to high accelerations and severe temperature environments. The transducer uses piezoelectric crystals for measuring the pressure and balancing out acceleration forces.

B66-10355

BRUSHLESS DC MOTOR HAS HIGH EFFICIENCY, LONG
LIFE

STUDER, P. A. DATE- AUG. 1966
GSFC-181

Brushless dc motor operates as a commutator in a vacuum environment with high efficiency and long life. Because of its excellent response time, it can be used in the servomechanism field.

B66-10356

SNIPPER USED AS PORTABLE HYDROGEN LEAK
DETECTOR

DAYAN, V. H. ROMMEL, M. A. /N. AM. AVIATION/

DATE- AUG. 1966

M-FS-846 M-FS-806

Sniffer type portable monitor detects hydrogen in air, oxygen, nitrogen, or helium. It indicates the presence of hydrogen in contact with activated palladium black by a change in color of a thermochromic paint, and indicates the quantity of hydrogen by a sensor probe and continuous readout.

B66-10359

DEVICE SERVES AS HINGE AND ELECTRICAL CONNECTOR FOR CIRCUIT BOARDS

BETHEL, P. G. HARRIS, G. G. /CHRYSLER CORP./

DATE- AUG. 1966

M-FS-743

Hinge makes both sides of electrical circuit boards readily accessible for component checkout and servicing. The hinge permits mounting of two circuit boards and incorporates connectors to maintain continuous electrical contact between the components on both boards.

B66-10361

NEW COMPUTER SYSTEM SIMPLIFIES PROGRAMMING OF MATHEMATICAL EQUATIONS

REINFELDS, J. SEITZ, R. N. WOOD, L. H. DATE- AUG. 1966

M-FS-441

Automatic Mathematical Translator /AMSTRAN/ permits scientists or engineers to enter mathematical equations in their natural mathematical format and to obtain an immediate graphical display of the solution. This automatic-programming, on-line, multiterminal computer system allows experienced programmers to solve nonroutine problems.

B66-10362

AUTOMATED DRAFTING SYSTEM USES COMPUTER TECHNIQUES

MILLENSON, D. H. /N. AM. AVIATION/ DATE- AUG. 1966

M-FS-788

Automated drafting system produces schematic and block diagrams from the design engineers freehand sketches. This system codes conventional drafting symbols and their coordinate locations on standard size drawings for entry on tapes that are used to drive a high speed photocomposition machine.

B66-10363

INFRARED TELEVISION USED TO DETECT HYDROGEN FIRES

PROFFITT, R. T. /N. AM. AVIATION/ DATE- AUG. 1966

M-FS-654

Standard, commercially available closed circuit television system detects hydrogen fires in test facilities. It sees in the infrared and displays on a standard cathode ray monitor screen.

B66-10368

HYDROGEN FIRE DETECTION SYSTEM FEATURES SHARP DISCRIMINATION

BRIGHT, C. S. /N. AM. AVIATION/ DATE- AUG. 1966

M-FS-643

Hydrogen fire detection system discovers fires by detecting the flickering ultraviolet radiation emitted by the OH molecule, a short-lived intermediate combustion product found in hydrogen-air flames. In a space application, the system discriminates against false signals from sunlight and rocket engine exhaust plume radiation.

B66-10374

PNEUMATIC BINARY ENCODER REPLACES MULTIPLE SOLENOID SYSTEM

SPON- INNOVATOR NOT GIVEN /WESTON HYDRAULICS/ DATE- AUG. 1966

M-FS-665

Pneumatic binary encoder replaces solenoid system in the pilot stage of a digital actuator. The encoder operates in flip-flop manner to valve gas at either high or low pressures. By rotating the disk in a pinion-to-encoding gear ratio, six to eight adder circuits may be operated from single encoder.

B66-10376

EFFICIENT DC TO DC CONVERTER ELIMINATES LARGE STRAY MAGNETIC FIELDS

TUMS, E. O. /CHICAGO UNIV./ DATE- AUG. 1966

GSPC-463

Two-core nonsaturating dc to dc converter provides high switching efficiency without producing large stray magnetic fields. It uses one core to provide positive feedback and the combination of the two cores for the transformer.

B66-10377

SINGLE CHANNEL PULSE-HEIGHT ANALYZER OPERATES IN SUBNANOSECOND RANGE

SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- AUG. 1966

REAN- SEE ALSO NASA-TN-D-2673

LEWIS-267

Single-channel pulse-height analyzer measures nuclear state lifetimes shorter than one nanosecond. The customary logic arrangement is reversed to reduce timing errors.

B66-10379

HUMAN TRANSFER FUNCTIONS USED TO PREDICT SYSTEM PERFORMANCE PARAMETERS

SPON- INNOVATOR NOT GIVEN /LANGLEY/ DATE- AUG. 1966

REAN- SEE ALSO NASA-TN-D-1952, NASA-TN-D-2177, NASA-TN-D-2394, AND

NASA-TN-D-2569

LANGLEY-203

Automatic, parameter-tracking, model-matching technique compares the responses of a human operator with those of an analog computer model of a human operator to predict and analyze the performance of mechanical or electromechanical systems prior to construction. Transfer functions represent the input-output relation of an operator controlling a closed-loop system.

B66-10382

FEEDBACK LOOP COMPENSATES FOR RECTIFIER NONLINEARITY

SPON- INNOVATOR NOT GIVEN /SPERRY GYROSCOPE CO./ DATE- AUG. 1966

M-FS-384

Signal processing circuit with two negative feedback loops rectifies two sinusoidal signals which are 180 degrees out of phase and produces a single full-wave rectified output signal. Each feedback loop incorporates a feedback rectifier to compensate for the nonlinearity of the circuit.

B66-10386

PARALLEL LINE RASTER ELIMINATES AMBIGUITIES IN READING TIMING OF PULSES LESS THAN 500

MICROSECONDS APART

HORNE, A. P. DATE- SEP. 1966

JPL-805

Parallel horizontal line raster is used for precision timing of events occurring less than 500 microseconds apart for observation of hypervelocity phenomena. The raster uses a staircase vertical deflection and eliminates ambiguities in reading timing of pulses close to the end of each line.

B66-10389

SYSTEM MONITORS DISCRETE COMPUTER INPUTS

BURNS, J. J. /RCA/ DATE- AUG. 1966

M-FS-1021

Computer system monitors inputs from checkout devices. The comparing, addressing, and controlling functions are performed in the I/O unit. This leaves the computer main frame free to handle memory, access priority, and interrupt instructions.

B66-10391

JUNCTION CONNECTORS PERMIT STRATEGIC PLACEMENT OF TELEVISION CAMERAS

KEMPSON, A., JR. DATE- SEP. 1966

KSC-66-22

Cable run circuit with switching junction connectors at strategic locations enables television cameras to be plugged in with minimum effort wherever needed. Crimp-type contacts for mating connections reduce installation time and require a lesser level of technician skill than do soldered and potted connections.

01 ELECTRICAL (ELECTRONIC)

B66-10392

INDUCTIVE SYSTEM DETECTS LEVEL OF CONDUCTING FLUIDS

ROESKE, P. W. DATE- AUG. 1966
LEWIS-322

Inductive system monitors the liquid level of a conductive fluid that is at a high temperature in a fully closed opaque container. The system is useful in any high temperature liquid-metal system. It shows fast response and is relatively insensitive to temperature fluctuations.

B66-10393

COMPOSITE FILTER STEEPENS REJECTION SLOPES IN MICROWAVE APPLICATION

SPON- INNOVATOR NOT GIVEN /DORNE AND MARGOLIN/
DATE- AUG. 1966
GSPC-480

Composite filter is used to obtain sharp rejection slopes in microwave transmission by filtering techniques. It consists of a bandpass filter to shape the passband and a bandreject filter on each edge of the bandpass filter to steepen the rejection slopes.

B66-10394

HIGH PRESSURE CRYOGENIC LIQUID FLOW SIGHT ASSEMBLY PROVIDES STREAMLINED FLOW FOR EASY OBSERVATION

HOBART, H. E. MINKIN, H. L. DATE- AUG. 1966
LEWIS-310

Window assembly facilitates observation of cryogenic liquids flowing through a smooth pipe at pressures up to several hundred pounds per square inch. This high-pressure cryogenic observation assembly which houses a thin wall glass pipe held within a steel retainer can accommodate fluids under a wide range of pressures and temperatures.

B66-10396

SOLID STATE DETECTORS MONITOR RELAY CONTACTS

QUINN, J. D. DATE- SEP. 1966
JPL-785

Hand carried, solid state, 18-channel detector system constantly monitors contact conditions in relays. The system is relatively insensitive to external noise and is powered by standard 110 volt ac.

B66-10397

MINIMUM PERMISSIBLE LEAKAGE RESISTANCE ESTABLISHED FOR INSTRUMENTATION SYSTEMS

PERRIN, J. L. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-848

Mathematical formulas are used to determine if, and to what extent, an instrumentation system that has been exposed to the elements should be dried out to restore minimum permissible leakage resistance to ground. Formulas are also derived and used for an intermediate number of systems that are exposed to moisture penetration.

B66-10401

DIELECTROMETER DESIGN PERMITS MEASUREMENT IN VACUUM UNDER IRRADIATION

SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./
DATE- SEP. 1966
M-FS-359

Dielectrometer permits measurement of dielectric constant and dielectric losses in a vacuum environment exposed to radiation. It is not necessary to remove the sample from the chamber during testing.

B66-10404

NEW COMPUTER PROGRAM SOLVES WIDE VARIETY OF HEAT FLOW PROBLEMS

ALMOND, J. C. /BOEING CO./ DATE- SEP. 1966
M-FS-421

Boeing Engineering Thermal Analyzer /BETA/ computer program uses numerical methods to provide accurate heat transfer solutions to a wide variety of heat flow problems. The program solves steady-state and transient problems in almost any situation that can be represented by a resistance-capacitance network.

B66-10407

DIRECTION INDICATOR SYSTEM DOES NOT REQUIRE

COMPLICATED OPTICS

MILDICE, J. W. /GEN. DYN./CONVAIR/ DATE- SEP. 1966

WOO-305

Direction indicator which aligns a system relative to a light source uses two photocells as light sensors to form a set. Each set indicates one direction. This indicator has no moving parts and provides very fine vernier acquisition.

B66-10409

MODULAR POROUS PLATE SUBLIMATOR /MPPS/ REQUIRES ONLY WATER SUPPLY FOR COOLANT

RATHBUN, R. J. /IBM/ DATE- SEP. 1966
M-FS-1374

Modular porous plate sublimators, provided for each location where heat must be dissipated, conserve the battery power of a space vehicle by eliminating the coolant pump. The sublimator requires only a water supply for coolant.

B66-10412

LEAK LOCATOR FOR VACUUM JACKETED PIPELINES ELIMINATES NEED FOR REMOVAL OF OUTER JACKET

WELLS, G. H. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-888

Device for locating leaks in a vacuum-jacketed liquid-hydrogen transfer line consists of two Mylar discs, a source of nitrogen and helium gas, and a mass spectrometer. The outer jacket of the pipeline does not need to be removed for the locator to be used.

B66-10413

ANALOG SOLAR SYSTEM MODEL RELATES CELESTIAL BODIES SPATIALLY

BAERG, H. R. DATE- SEP. 1966
JPL-195

Portable analog planetarium indicates the relative time and space angular locations of the sun and planets. Distance measuring scales, angular direction indicators, and typical probe trajectories are included.

B66-10414

ELECTRICALLY CONTROLLED OPTICAL LATCH AND SWITCH REQUIRES LESS CURRENT

PIECZONKA, W. A. ROY, M. H. YEH, T. H. /IBM/
DATE- SEP. 1966

JPL-SC-111 JPL-SC-112

Electrically controlled optical latch consists of a sensitive phototransistor and a solid-state light source. This design requires less current to activate an optically activated switch than in prior art.

B66-10419

METAL OXIDE SILICON /MOS/ TRANSISTORS PROTECTED FROM DESTRUCTIVE DAMAGE BY WIRE DEVICE

DEBOO, G. J. DEVINE, E. J. DATE- SEP. 1966
ARC-65

Loop of flexible, small diameter, nickel wire protects metal oxide silicon /MOS/ transistors from a damaging electrostatic potential. The wire is attached to a music-wire spring, slipped over the MOS transistor case, and released so the spring tensions the wire loop around all the transistor leads, shorting them together. This allows handling without danger of damage.

B66-10420

ELECTRONIC BIDIRECTIONAL VALVE CIRCUIT PREVENTS CROSSOVER DISTORTION AND THRESHOLD EFFECT

KERNICK, A. /WESTINGHOUSE ELEC. CORP./ DATE- SEP. 1966

MSC-193

Four-terminal network forms a bidirectional valve which will switch or alternate an ac signal without crossover distortion or threshold effect. In this network, an isolated control signal is sufficient for circuit turn-on.

B66-10423

AN INVESTIGATION OF PHASE-LOCK LOOP SWEPT-FREQUENCY SYNCHRONIZATION

DYE, R. A. /LOCKHEED MISSILES AND SPACE CO./
DATE- SEP. 1966

M-FS-656

Rapid synchronization of phase-locked oscillators is best achieved by the swept-frequency acquisition technique, wherein the Voltage-Controlled Oscillator /VCO/ is linearly swept through the uncertainty band. The theoretically predicted sweep rates of this technique and the observed experimental results differ by less than seven percent.

B66-10426

COMPUTER SIMULATION PROGRAM IS ADAPTABLE TO INDUSTRIAL PROCESSES

SCHULTZ, F. E. /GE/ DATE- OCT. 1966
LEWIS-240

The reaction kinetics ablation program /REKAP/, developed to simulate ablation of various materials, provides mathematical formulations for computer programs which can simulate certain industrial processes. The programs are based on the use of nonsymmetrical difference equations that are employed to solve complex partial differential equation systems.

B66-10427

ELECTRICAL CABLING WITHSTANDS SEVERE ENVIRONMENTAL CONDITIONS

HATHAWAY, J. D. /N. AM. AVIATION/ DATE- SEP. 1966

M-FS-1585

Multiconductor electrical cables retain their circuit integrity and remain flexible and abrasion resistant in severe environmental conditions of heat, vibration, and water.

B66-10429

VIDEO SIGNAL PROCESSING SYSTEM USES GATED CURRENT MODE SWITCHES TO PERFORM HIGH SPEED MULTIPLICATION AND DIGITAL-TO-ANALOG CONVERSION

GILLILAND, M. G. ROUGELOT, R. S. SCHUMAKER, R. A. /GE/ DATE- OCT. 1966
MSC-781

Video signal processor uses special-purpose integrated circuits with nonsaturating current mode switching to accept texture and color information from a digital computer in a visual spaceflight simulator and to combine these, for display on color CRT with analog information concerning fading.

B66-10430

SOLID-STATE SWITCH INCREASES SWITCHING SPEED
MC GOWAN, G. F. /MARTIN CO./ DATE- OCT. 1966
WOO-298

Solid state switch for commutating capacitors in an RC commutated network increases switching speed and extends the filtering or commutating frequency spectrum well into the kilocycle region. The switch is equivalent to the standard double-pole double-throw /DPDT/ relay and is driven from digital micrologic circuits.

B66-10431

CONTROL CIRCUIT MAINTAINS UNITY POWER FACTOR OF REACTIVE LOAD

KRAMER, M. MARTINAGE, L. H. /IBM/ DATE- OCT. 1966
MSC-192

Circuit including feedback control elements automatically corrects the power factor of a reactive load. It maintains power supply efficiency where negative load reactance changes and varies by providing corrective error signals to the control windings of a power supply transformer.

B66-10432

REMOTE PREAMPLIFIER CIRCUIT MAINTAINS STABILITY OVER WIDE TEMPERATURE RANGE
MAC NAUGHTON, R. G. /VARIAN ASSOCIATES/ DATE- OCT. 1966
WOO-278

Circuit remains stable over a wide temperature range while preamplifying light signals falling on a photocell and transmitting them through a transmission line to a remote amplifier. The circuits preamplifier consists of a grounded emitter NPN stage followed by a PNF emitter.

B66-10433

LINEAR SIGNAL NOISE SUMMER ACCURATELY DETERMINES AND CONTROLS S/N RATIO
SUNDRY, J. L. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1966
JPL-SC-152

Linear signal noise summer precisely controls the relative power levels of signal and noise, and mixes them linearly in accurately known ratios. The S/N ratio accuracy and stability are greatly improved by this technique and are attained simultaneously.

B66-10436

SHAFT ENCODER PRESENTS DIGITAL OUTPUT
HILLIS, D. A. /HUGHES AIRCRAFT CO./ DATE- OCT. 1966

JPL-SC-191

Circuits that include compensation circuitry time a capacitance relative to a reference voltage so that a digital presentation occurs that is representative of the positional condition of the mechanical shaft being monitored. This circuitry may be employed in multiples to furnish binary encoding of a number of rotating devices simultaneously.

B66-10437

SINGLE-SIDEBAND MODULATOR ACCURATELY REPRODUCES PHASE INFORMATION IN 2-MC SIGNALS
STRENGLEIN, H. F. /SPERRY MICROWAVE ELECTRON. CO./ DATE- OCT. 1966
M-FS-664

Phase-locked oscillator system employing solid state components acts as a single-sideband modulator to accurately reproduce phase information in 2-Mc signals. This system is useful in telemetry, aircraft communications and position-finding stations, and VHF test circuitry.

B66-10438

DENSITOMETER SYSTEM FOR LIQUID HYDROGEN HAS HIGH ACCURACY, FAST RESPONSE
SPON- INNOVATOR NOT GIVEN /FRANKLIN GNO CORP./ DATE- OCT. 1966
M-FS-909

Developmental densitometer system for cryogenic liquids uses two balanced ionization chambers containing xenon gas, with X rays as the radiation source. The X rays are heavily filtered with a lead shield to make the energy spectrum much less dependent on the voltage applied to the X ray tube.

B66-10439

ION CHAMBERS SIMPLIFY ABSOLUTE INTENSITY MEASUREMENTS IN THE VACUUM ULTRAVIOLET
SAMPSON, J. A. R. /GEOPHYS. CORP. OF AM./ DATE- OCT. 1966
ERC-10

Single or double ion chamber technique measures absolute radiation intensities in the extreme vacuum ultraviolet region of the spectrum. The ion chambers use rare gases as the ion carrier. Photon absorbed by the gas creates one ion pair so a measure of these is a measure of the number of incident photons.

B66-10440

PHOTOELECTRIC SCANNER MAKES DETAILED WORK FUNCTION MAPS OF METAL SURFACE
RASOR, N. S. /THERMO ELECTRON ENG. CORP./ DATE- OCT. 1966
JPL-SC-176

Photoelectric scanning device maps the work function of a metal surface by scanning it with a light spot and measuring the resulting photocurrent. The device is capable of use over a range of surface temperatures.

B66-10441

STANDARD ARC WELDERS PROVIDE HIGH AMPERAGE DIRECT CURRENT SOURCE
BEASLEY, W. D. BROOKS, J. D. DATE- OCT. 1966
LANGLEY-267 LANGLEY-268

Standard arc welders or power supplies are hooked up in parallel or series connections to obtain an adequate supply of current or voltage for various

01 ELECTRICAL (ELECTRONIC)

purposes. This method provides maximum flexibility in a wide range of voltages and currents.

B66-10442
AN IMPROVED METHOD FOR TESTING PERFORMANCE OF
VIDICONS DURING VIBRATION
CORSON, B. R. /HUGHES AIRCRAFT CO./ DATE- OCT.
1966
JPL-SC-113

Vidicon electron beam modulation is used for checking the performance of vidicons in mechanical vibration tests. The vidicon electron beam is modulated with an external signal during the write period thereby storing the image on the vidicon face.

B66-10444
THERMIONIC SCANNER PINPOINTS WORK FUNCTION
OF EMITTER SURFACES
RASOR, N. S. /THERMO ELECTRON ENG. CORP./ DATE-
OCT. 1966
JPL-SC-177

In the electron tube testing, a thermionic scanner makes accurate spatial resolution measurements of the metallic surface work functions of emitters. The scanner determines the emitter function and its local departures from the mean value on a point-by-point basis for display on an oscilloscope.

B66-10447
SEMICONDUCTORS CAN BE TESTED WITHOUT
REMOVING THEM FROM CIRCUITRY
ALLEN, B. C. /N. AM. AVIATION/ DATE- NOV. 1966
M-FS-1163

Oscilloscope, with specially developed test circuitry, quickly checks semiconductors without removing them from the circuitry. For transistors, approximate gain and linearity, as well as PNP or NPN determinations are made. When testing diodes, open or short circuits, and reverse polarity show up plainly.

B66-10449
BASIC SUPPRESSION TECHNIQUES ARE EVALUATED
DAWIRS, H. N. /RECON, INC./ DATE- OCT. 1966
M-FS-867

Investigation of standard suppression methods facilitates switching of inductively loaded circuits which causes interference in adjacent electronic equipment. The data are reduced to tabular form and rapid selection of components by the designer can be made without lengthy calculations or trial and error manipulations.

B66-10452
RECTILINEAR ACCELEROMETER POSSESSES SELF-
CALIBRATION FEATURE
HENDERSON, R. B. /SAUNDERS ASSOC., INC./ DATE-
OCT. 1966
M-FS-1480

Rectilinear accelerometer operates from an ac source with a phase-sensitive ac voltage output proportional to the applied accelerations. The unit includes an independent circuit for self-test which provides a sensor output simulating an acceleration applied to the sensitive axis of the accelerometer.

B66-10456
PULSE GENERATOR USING TRANSISTORS AND SILICON
CONTROLLED RECTIFIERS PRODUCES HIGH CURRENT
PULSES WITH FAST RISE AND FALL TIMES
WOOLFSON, M. G. DATE- OCT. 1966
MSC-405

Electrical pulse generator uses power transistors and silicon controlled rectifiers for producing a high current pulse having fast rise and fall times. At quiescent conditions, the standby power consumption of the circuit is equal to zero.

B66-10461
MODIFIED THERMOCOUPLE IS EFFECTIVE FROM
MINUS 250 DEG TO 5000 DEG F
MOEN, W. K. /N. AM. AVIATION/ DATE- NOV. 1966
MSC-420

Modified, commercially available thermocouple which measures the temperature of a spacecraft

heat shield, is capable of continuous measurement in the range of minus 250 deg to 5000 deg F. The modified thermocouples may be used inside metal treating furnaces in high temperature technology, and in certain corrosive environments.

B66-10462
INSTRUMENT AUTOMATICALLY SELECTS PEAK
ACCELERATION SIGNAL FROM SEVERAL
ACCELEROMETERS
CHAPMAN, C. P. DATE- OCT. 1966
JPL-816

Solid state circuit selects the highest of several ac accelerometer signals and gates this signal to an output amplifier, preserving all the frequency information in the peak signal. If the amplitudes of the accelerometer signals change with time, the circuit will continually switch to the highest signal, rejecting the smaller signals.

B66-10465
SOLID STATE CIRCUIT SWITCHES AC LOAD
CHAPMAN, C. P. RUPNIK, D. R. DATE- OCT. 1966
JPL-798

Differential amplifier circuit switches ac signals with peak amplitudes greater than 5 volts. This solid state circuit biases a switching transistor on and off by a 0.1 to 5.0 dc control voltage.

B66-10466
STUDY COMPARES METHODS FOR THE NUMERICAL
SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS
SPON- INNOVATOR NOT GIVEN /GEORGIA INST. OF
TECHNOL./ DATE- OCT. 1966 REAN- SEE ALSO
NASA-CR-61060
M-FS-830

Study compares the use of five different methods for the computer solution of the restricted three-body problem. It describes the implementation of each method on a burroughs B-5000 computer and in terms of speed and accuracy.

B66-10469
BIPOLAR CURRENT DRIVER FOR MEMORY CIRCUITS
CHONG, C. F. NELSON, C. A. /SPERRY RAND CORP./
DATE- NOV. 1966
GSFC-213

Circuit which logically determines the state of a flip-flop and amplifies the current from a clock pulse provides a bipolar driving current to a memory circuit, the polarity of which is determined by the state of a flip-flop. This principle may be applied to various memory driving circuits where power dissipation must be minimized.

B66-10476
DEVICE TO COLOR MODULATE A STATIONARY LIGHT
BEAM GIVES HIGH INTENSITY
GANTZ, W. A. /CALIF. UNIV./ DATE- DEC. 1966
HQ-44

Signal controlled system color modulates a beam of light while also providing high intensity and a stationary beam, either collimated or focused. The color modulation acquired by the presented system can be compatible with any color film by employing color filters formed to provide a color wedge having a color distribution compatible with the films color sensitivity.

B66-10478
PLUG-IN CONNECTOR SOCKET ACCEPTS COAXIAL
CABLE END
MITCHELL, D. VAN LOON, J. A. DATE- NOV. 1966
ARG-9

Connector which includes a spring-loaded contact to receive a protruding center conductor and an internal collet to clamp against a collar attached to a woven outer conductor, is used as a receptacle for the end of a coaxial cable. This plug-in connector socket is used successfully with remote manipulators.

B66-10480
SIMPLE, ONE TRANSISTOR CIRCUIT BOOSTS PULSE
AMPLITUDE
KEON, T. MATCHETT, M. W. /CUTLER HAMMER/ DATE-
OCT. 1966

GSFC-501

Simple circuit that uses a single transistor to accomplish capacitor storage followed by common-base switching supplies a pulse voltage, higher than that normally available from emitter-follower circuits, to drive a 100-watt transmitter.

B66-10481

MODIFIED MCLEOD PRESSURE GAGE ELIMINATES MEASUREMENT ERRORS

KELLS, M. C. DATE- NOV. 1966

ARC-62

Modification of a McLeod gage eliminates errors in measuring absolute pressure of gases in the vacuum range. A valve which is internal to the gage and is magnetically actuated is positioned between the mercury reservoir and the sample gas chamber.

B66-10482

AUTOMATIC CRYOGENIC LIQUID LEVEL CONTROLLER IS SAFE FOR USE NEAR COMBUSTIBLE SUBSTANCES

KREJSA, M. DATE- OCT. 1966

LEWIS-195

Automatic mechanical liquid level controller that is independent of any external power sources is used with safety in the presence of combustibles. A gas filled capillary tube which leads from a pressurized chamber, is inserted into the cryogenic liquid reservoir and becomes a liquid level sensing element or probe.

B66-10486

SOLID STATE CIRCUIT CONTROLS DIRECTION, SPEED, AND BRAKING OF DC MOTOR

HANNA, M. F. DATE- OCT. 1966

JPL-757

Full-wave bridge rectifier circuit controls the direction, speed, and braking of a dc motor. Gating in the circuit of Silicon Controlled Rectifiers (SCRs) controls output polarity and braking is provided by an SCR that is gated to short circuit the reverse voltage generated by reversal of motor rotation.

B66-10488

SPIRAL SPRING/STRAIN GAGE COMBINATION

ACCURATELY MEASURES SHOCK INDUCED DEFLECTION

BERVEN, B. R. WALKER, R. R. /N. AM. AVIATION/ DATE- OCT. 1966

MSC-789

Spiral springs equipped with strain gages which are hard-wired to readout instrumentation, measure deflection between two relatively inaccessible surfaces in a drop test that causes them to close to near flatness. This technique has been successfully used on Apollo drop tests to measure deflection between aft bulkhead and heatshield.

B66-10490

SOLENOID MAGNETIC FIELDS CALCULATED FROM

SUPERPOSED SEMI-INFINITE SOLENOIDS

BROWN, G. V. FLAX, L. DATE- NOV. 1966 REAN- SEE ALSO NASA-TN-D-2494

LEWIS-184

Calculation of a thick solenoid coils magnetic field components is made by a superposition of the fields produced by four solenoids of infinite length and zero inner radius. The field produced by this semi-infinite solenoid is dependent on only two variables, the radial and axial field point coordinates.

B66-10491

MINIATURE CAPACITIVE ACCELEROMETER IS

ESPECIALLY APPLICABLE TO TELEMETRY

COON, G. W. HARRISON, D. R. DATE- NOV. 1966 REAN- SEE ALSO B63-10429

ARC-72

Capacitive accelerometer design enables the construction of highly miniaturized instruments having full-scale ranges from 1 g to several hundred g. This accelerometer is applicable to telemetry and can be tailored to cover any of a large number of acceleration ranges and frequency responses.

B66-10492

CIRCUIT PREVENTS OVERCHARGING OF SECONDARY CELL BATTERIES

HENNIGAN, T. J. POTTER, N. H. SIZEMORE, K. O. DATE- NOV. 1966

GSFC-454

Circuit prevents battery cell overcharging by detecting and reducing the charging voltage to the open-circuit voltage of the battery when this current falls to a predetermined value. The voltage control depends on the fact that the charging current falls significantly when the battery nears its fully charged state.

B66-10493

STUDY SHOWS EFFECT OF SURFACE PREPARATIONS ON IMPROVING THERMIONIC EMISSION

VAN SOMEREN, L. VAN SOMEREN, L./THERMO ELECTRON ENG. CORP./ DATE- NOV. 1966

JPL-SC-140

Specimen thermionic emitters were electropolished and electroetched to study the effect of surface preparations on improving thermionic emission. The best technique found was to electropolish the annealed rhenium surface and then electroetch it. The effect of electroetching was to remove other crystal planes faster than basal planes.

B66-10494

OPTICAL MONITOR PANEL PROVIDES FLEXIBLE TEST PANEL CONFIGURATIONS

GRIFFIN, F. D. DATE- NOV. 1966

KSC-66-18

Optical monitor panel projects a chosen panel configuration upon a translucent screen by using a master projector and appropriate slide to project panel board nomenclature and a series of smaller individual projectors to superimpose monitor indicators upon the projected panel board.

B66-10496

COMPUTER PROGRAM PERFORMS FLOW ANALYSIS THROUGH TURBINES

KATSANIS, T. DATE- NOV. 1966 REAN- SEE ALSO NASA-TN-D-2546 AND NASA-TN-D-2809

LEWIS-236

Computer program based on an equation for the velocity gradient along an arbitrary quasi-orthogonal analyzes flow through a turbomachine. The program obtains meridional solutions for a hub-to-shroud analysis and blade-to-blade analysis at the hub, mean, and shroud surfaces in a single computer run.

B66-10497

HIGH VOLTAGE POTENTIAL DIVIDER CALIBRATED BY SIMPLE DEVICE

LEWIS, R. N. DATE- NOV. 1966

ARG-83

Resistance bridge device incorporates a potentiometer, switches, and a null detector to calibrate high potential dividers under high voltage operation conditions. Calibration can be performed with this device in less than 1 minute at an accuracy of 0.001 percent.

B66-10500

DIGITAL SYSTEM PROVIDES SUPERREGULATION OF NANOSECOND AMPLIFIER-DISCRIMINATOR CIRCUIT

FORGES, K. G. DATE- NOV. 1966

ARG-61

Feedback system employing a digital logic comparator to detect and correct amplifier drift provides stable gain characteristics for nanosecond amplifiers used in counting applications. Additional anticoincidence logic enables application of the regulation circuit to the amplifier and discriminator while they are mounted in an operable circuit.

B66-10501

ELECTRONIC CIRCUIT DELIVERS PULSE OF HIGH INTERVAL STABILITY

FISHER, B. /N. AM. AVIATION/ DATE- NOV. 1966 MSC-673

Circuit generates a pulse of high interval stability with a complexity level considerably below systems of comparable stability. This circuit is being used as a linear frequency

01 ELECTRICAL (ELECTRONIC)

discriminator in the signal conditioner of the Apollo command module.

B66-10502
POINT-SOURCE LIGHT SENSOR CIRCUIT IS
INSENSITIVE TO BACKGROUND LIGHT
DAVIS, E. S. DATE- NOV. 1966
JPL-778

Circuit incorporating a bisynchronous demodulator for an electro-optical star-tracking sensor provides a signal proportional to star intensity without interference from background light in the field of view. The system works best on a sharply focused star image and requires a 50 percent duty cycle.

B66-10503
COMPUTER PROGRAM DETERMINES PERFORMANCE
EFFICIENCY OF REMOTE MEASURING SYSTEMS
MEREWETHER, E. K. /N. AM. AVIATION/ DATE- NOV.
1966
M-PS-1137

Computer programs control and evaluate instrumentation system performance for numerous rocket engine test facilities and prescribe calibration and maintenance techniques to maintain the systems within process specifications. Similar programs can be written for other test equipment in an industry such as the petrochemical industry.

B66-10504
SUBROUTINE ALLOWS EASY COMPUTATION IN
EXTENDED PRECISION ARITHMETIC
BERGGREN, R. L. GYSBERS, J. C. /N. AM. AVIATION/
DATE- NOV. 1966
M-PS-1136

Subroutine called NPREC allows relatively simple computation of very large numbers or very small fractions with extreme accuracy. This subroutine handles numbers that consist of 35 binary bits /1 word/ for the exponent and 70 bits /2 words/ for the fraction.

B66-10505
SOLID STATE ANNUNCIATOR FACILITATES COMPLEX
SYSTEM TROUBLESHOOTING
HOFFER, H. P. /N. AM. AVIATION/ DATE- NOV. 1966
M-PS-1258

Solid state annunciator monitors up to 60 parameters for a dc voltage change from zero to 28 volts in the testing of complex systems. This annunciator is presently being used for testing of the complex J-2 rocket engine.

B66-10506
COMPUTER PROGRAM DETERMINES INVENTORY SIZE
KASPAR, H. /N. AM. AVIATION/ DATE- NOV. 1966
M-PS-1135

FORTAN 4 computer program calculates optimum size of a small inventory of relatively complex or expensive items. This program can be used in situations where the initial cost of purchase is large or when there is a need for a balanced inventory on a short production run.

B66-10509
PULSE STRETCHER HAS IMPROVED DYNAMIC RANGE
AND LINEARITY
LARSEN, R. N. DATE- NOV. 1966
ARG-82

Current-switching pulse stretcher overcomes the diode nonlinearity and capacitive feedthrough of voltage switching diode-capacitor stretchers and lengthens nanosecond pulses so that their amplitude may be determined and extends the dynamic range of the pulse stretcher. The rise time of the output pulse in response to a step function is approximately 5 nanoseconds.

B66-10510
LOW LEVEL ACCELEROMETER TEST METHODS ARE
INVESTIGATED
NELSON, R. H., JR. FLOURDE, H. S. /DYN. RES.
CORP./ DATE- NOV. 1966
M-PS-908

Problems associated with testing accelerometers to an accuracy where the standard error is less than .0000001 g are centered around the elimination of

uncertainties in the acceleration input to the accelerometer. By placing a test rig in free fall, the uncertainty in the earth's gravity field can be eliminated.

B66-10511
COMPUTER ROUTINE ADDS PLOTTING CAPABILITIES
TO EXISTING PROGRAMS
HARRIS, J. C. LINNEKIN, J. S. /LITTON IND. /
DATE- NOV. 1966
GSFC-490

PLOTAN, a generalized plot analysis routine written for the IBM 7094 computer, minimizes the difficulties in adding plot capabilities to large existing programs. PLOTAN is used in conjunction with a binary tape writing routine and has the ability to plot any variable on the intermediate binary tape as a function of any other.

B66-10512
NIXIE TUBE DISPLAY UNIT EMPLOYS TIME-SHARED
LOGIC
GRAY, J. DATE- NOV. 1966
ARG-117

Cathodes of display tubes wired in parallel achieve input switching simplification of a Nixie tube display system. Use of time-shared logic energizes the appropriate anode and inhibits all unnecessary cathodes.

B66-10516
DIGITAL SYSTEM DETECTS BINARY CODE PATTERNS
CONTAINING ERRORS
MULLER, R. M. THARPE, H. M., JR. DATE- NOV. 1966
GSFC-541

System of square loop magnetic cores associated with code input registers to react to input code patterns by reference to a group of control cores in such a manner that errors are canceled and patterns containing errors are accepted for amplification and processing. This technique improves reception capabilities in PCM telemetry systems.

B66-10518
ANTENNA SIMULATOR PERMITS PREINSTALLATION
SYSTEM CHECKOUT
ELIA, A. D. SCHMIDT, R. F. DATE- NOV. 1966
GSFC-522

Antenna simulator provides for evaluation checkout of corporate feeds, monopulse sum-and-difference networks, etc., in a shielded environment prior to system checkout on an antenna pattern range. This technique is useful wherever simulation of monopulse antenna element characteristics is desired for checkout of ancillary equipment in a controlled environment.

B66-10520
PYROMETRY HANDBOOK DESCRIBES PRACTICAL
ASPECTS OF SURFACE TEMPERATURE MEASUREMENTS
OF OPAQUE MATERIALS
BRANSTETTER, J. R. BUCHELE, D. R. DATE- NOV.
1966 REAN- SEP ALSO NASA-TN-D-3604
LEWIS-349

Handbook contains extensive reference literature and results from pertinent experiments to provide a collection of applied technology and reference sources for engineers and technicians. Fundamental equations of radiation, off-design corrections, characteristics of pyrometers, and calibration apparatus and techniques are discussed.

B66-10521
FLOWMETER MEASURES FLOW RATES OF HIGH
TEMPERATURE FLUIDS
VARY, A. DATE- NOV. 1966
LEWIS-328

Flowmeter in which flow rate is determined by measuring the position and thus the displacement of an internal float acted upon by the flowing fluid determines the flow rates of various liquid metals at elevated temperatures. Viscous forces cause the float to move from its mounted position, affording several means for measuring this motion and the flow rate.

B66-10524

STUDY OF VORTEX VALVE FOR MEDIUM

TEMPERATURE SOLID PROPELLANTS

HOLT, W. D. RIVARD, J. G. /BENDIX CORP./ DATE-

DEC. 1966

LANGLEY-204

Fluid state vortex valve secondary injection control system shows considerable promise for future application to solid propellant rocket engine thrust vector control. The single axis injection system tested would be capable of providing secondary injection thrust vector control using 2000 deg F gas.

B66-10525

COMPUTER PROGRAM PERFORMS STATISTICAL

ANALYSIS FOR RANDOM PROCESSES

NEWBERRY, M. H. DATE- NOV. 1966 REAN- SEE ALSO

NASA-TM-X-53359

M-FS-723

Random Vibration Analysis Program /RAVAN/ performs statistical analysis on a number of phenomena associated with flight and captive tests, but can also be used in analyzing data from many other random processes.

B66-10526

IMPROVED DESIGN PROVIDES FASTER RESPONSE

TIME IN PHOTOMULTIPLIER

SPON- INNOVATOR NOT GIVEN /HALLCRAFTERS CO./

DATE- NOV. 1966

GSPC-451

Dynamic Crossed-Field Electron Multiplying /DCFEM/ light demodulator avoids the normal response time limitations inherent in static field devices by using time varying crossed electric and static magnetic fields. This eliminates the transit time spread that affects electrons as they proceed along the secondary emission stages of the tube.

B66-10529

COMPUTER PROGRAM SEARCHES CHARACTERISTIC

DATA OF DIODES AND TRANSISTORS

SPON- INNOVATOR NOT GIVEN /BOOZ-ALLEN APPL. RES.

CORP./ DATE- NOV. 1966

GSPC-493

Semiconductor information storage and retrieval system provides a comprehensive, accurate, and ready reference to characteristic data of diodes and transistors. The system can be used to supply a complete listing of technical component information necessary for circuit designers, reliability engineers, and quality assurance personnel.

B66-10531

HEAT FLUX SENSOR DESIGN REDUCES EXTRANEIOUS

SOURCE EFFECTS

CROFTS, E. D. ROBINSON, G. P. /MCDONNELL

AIRCRAFT CORP./ DATE- NOV. 1966

MSC-400

Heat flux sensor isolates the sensor and its transmitting thermocouple from undesirable heat sources by incorporating a radiator section that forms a radiation shield between counting cup and sensor. Bonding of the thermocouple cable to the underside of the radiator provides a conductive path to dissipate extraneous heat that might otherwise reach the sensor.

B66-10533

METHOD PERMITS MECHANICAL AND ELECTRICAL

CHECKOUT OF PIEZOELECTRIC TRANSDUCERS WHILE

INSTALLED IN A SYSTEM

JENKINS, R. S. ROGALLO, V. L. DATE- NOV. 1966

REAN- SEE ALSO B66-10534

ARC-73

Known dc voltage is applied and then removed suddenly in a method to permit checkout of the mechanical and electrical condition of piezoelectric transducers of the cantilever beam type, while installed in a system.

B66-10534

MINIATURE PIEZOELECTRIC TRIAXIAL

ACCELEROMETER MEASURES CRANIAL ACCELERATIONS

DEBOO, G. J. ROGALLO, V. L. DATE- NOV. 1966

REAN- SEE ALSO B64-10004 AND B66-10533

ARC-71

Tiny triaxial accelerometer whose sensing elements are piezoelectric ceramic beams measures human cranial accelerations when a subject is exposed to a centrifuge or other simulators of g environments. This device could be considered for application in dental, medical, and automotive safety research.

B66-10536

HELMET SYSTEM BROADCASTS

ELECTROENCEPHALOGRAMS OF WEARER

WESTBROOK, R. M. ZUCCARO, J. J. DATE- NOV. 1966

REAN- SEE ALSO B65-10203

ARC-70

EEG monitoring system consisting of nonirritating sponge-type electrodes, amplifiers, and a battery-powered wireless transmitter, all mounted in the subjects helmet, obtains electroencephalograms /EEGs/ of pilots and astronauts performing tasks under stress. After a quick initial fitting, the helmet can be removed and replaced without adjustments.

B66-10539

COMPUTER PROGRAMS PERFORM SPECTRAL

ANALYSES OF UP TO SEVEN TIME SERIES

BYARS, B. J. DUBMAN, M. R. /N. AM. AVIATION/

DATE- NOV. 1966

M-FS-1133 M-FS-1134

Computer programs perform statistical spectral analyses of up to seven time series. These programs should have applicability to a variety of engineering systems in the fields of geophysics, physiology, acoustics, and structural analysis.

B66-10541

COMPUTER USED TO PROGRAM NUMERICALLY

CONTROLLED MILLING MACHINE

HARRIS, T. C. /GE/ DATE- NOV. 1966

M-FS-1608

Computer program automatically directs a numerically controlled milling machine through a series of cutting and trimming actions. It accepts engineering data points, passes smooth curve segments through the points, breaks the resulting curves into a series of closely spaced points, and transforms these points into the form required by the mechanism.

B66-10542

PREREGULATOR FEEDBACK CIRCUIT UTILIZES

LIGHT ACTUATED SWITCH

HAYSER, T. P. /IBM/ DATE- NOV. 1966

M-FS-1180

Preregulator feedback circuit employing a Light Actuated Switch /LAS/ provides a simple and efficient feedback device in a power supply preregulator which maintains dc isolation between input and output grounds. The LAS consists of a diode PN junction infrared source close to, but electrically isolated from, a photodetector.

B66-10543

HIGH-RELUCTANCE ROTOR RINGS IMPROVE

HOMOPOLAR GENERATOR PERFORMANCE

MUSSET, E. E. DATE- NOV. 1966

ARG-104

Nonmagnetic metal rings imbedded in a homopolar generator rotor normal to its axis keep the induction flux entering the rotor in a radial path. Use of the rings permits optimum rotor design for any given set of operating requirements and simplifies the task of predicting the operation characteristics of the generator.

B66-10544

ULTRASONIC QUALITY INSPECTION OF BONDED

HONEYCOMB ASSEMBLIES IS AUTOMATED

KAMMERER, C. C. /N. AM. AVIATION/ DATE- NOV.

1966

MSC-859

Inspection system for bonded honeycomb assemblies is accurate, fast, and automated. The ultrasonic system consists of inner and outer transducer positioning assemblies with suitable motor controls, a centerless turntable assembly, water squirter assemblies, and an inspection program completely encoded on tape suitable for use on a

01 ELECTRICAL (ELECTRONIC)

high speed computer.

B66-10548
SECURITY WARNING SYSTEM MONITORS UP TO
FIFTEEN REMOTE AREAS SIMULTANEOUSLY
FUSCO, R. C. /RCA/ DATE- NOV. 1966
KSC-66-39

Security warning system consisting of 15 television cameras is capable of monitoring several remote or unoccupied areas simultaneously. The system uses a commutator and decommutator, allowing time-multiplexed video transmission. This security system could be used in industrial and retail establishments.

B66-10549
MINIATURE ELECTROMETER PREAMPLIFIER
EFFECTIVELY COMPENSATES FOR INPUT
CAPACITANCE
BURROUS, C. N. DE BOO, G. J. DATE- NOV. 1966
ARC-69

Negative capacitance preamplifier using a dual MOS /Metal Oxide Silicon/ transistor in conjunction with bipolar transistors is used with intracellular microelectrodes in recording bioelectric potentials. Applications would include use as a pickup plate video amplifier in storage tube tests and for pH and ionization chamber measurements.

B66-10552
NONELECTROLYTIC TANTALUM CAPACITORS DEVELOPED
SPON- INNOVATOR NOT GIVEN /CORNELL-DUBILIER ELEC.
CORP./ DATE- NOV. 1966
M-FS-1546

Large area, nonelectrolytic tantalum foil capacitor has capacitance of approximately 1 microfarad and is capable of operating at 125 deg C at 150 volts with an insulation resistance of at least 1 megohm. In tests at a potential of 100 volts, capacitors remained stable through a temperature range from 25 deg to 125 deg C.

B66-10553
COMPUTER PROGRAMS CALCULATE POTENTIAL AND
CHARGE DISTRIBUTIONS IN A PLASMA
JEFFRIES, N. P. PRINCE, D. C. /GE/ DATE- NOV.
1966
M-FS-871

Computer program determines the potential and charge distributions between two electrodes in a plasma. Solutions of the Vlasov equations for plane, cylindrical, and spherical geometries are determined and density distributions are found for each of these configurations over a range of conditions.

B66-10555
A FAST-NEUTRON SPECTROMETER OF ADVANCED
DESIGN
MOLER, R. B. PRESTON, C. C. /IIT RES. INST./
DATE- NOV. 1966
M-FS-1664

Fast neutron spectrometer combines helium filled proportional counters with solid-state detectors to achieve the properties of high efficiency, good resolution, rapid response, and effective gamma ray rejection.

B66-10556
SIMPLIFIED FIXTURE PERMITS PRECISION
ALIGNMENT OF AN OPTICAL TARGET
MAGURA, P. /IBM/ DATE- NOV. 1966
M-FS-1181

Optical target holder is permanently placed for instrument sighting, yet is adjustable and easily aligned.

B66-10557
TRISPHERE SPARK GAP ACTUATES OVERVOLTAGE
RELAY
CANACHO, S. L. DATE- DEC. 1966
ARC-68

Trisphere spark gap and high voltage relay provides a positive, fast response, high current capacity device that will sense an overvoltage condition and remove power from the circuit before insulation breakdown. When an overvoltage occurs, the spark gap breaks down and conducts an

actuating current to the relay which removes power from the circuit.

B66-10559
ONE-COUNT MEMORY CIRCUIT PREVENTS MACHINE
MODE INTERACTION
DE FOREST, B. DATE- DEC. 1966
ARG-90

One-count memory logic circuit used with electromechanical counter-printer machines operates in either count or print mode. The circuit advances the counter when the machine is in the count mode and provides storage for the count pulse when the machine is in the print mode.

B66-10561
PULSE TECHNIQUE PROVIDES MORE ACCURATE
CHECKOUT OF EXPLODING BRIDGE WIRE DEVICE
PETRICK, J. R. /GE/ DATE- DEC. 1966
HQ-62

Explosion Bridge Wire /EBW/ is treated as a transmission line system and pulse reflection techniques are used for checking the electrical integrity of an EBW cartridge. A step voltage is propagated into the system and the reflected voltage waves are monitored.

B66-10563
COLLECTOR/COLLECTOR GUARD RING BALANCING
CIRCUIT ELIMINATES EDGE EFFECTS
LIEB, D. P. /THERMO ELECTRON ENG. CORP./ DATE-
DEC. 1966
JPL-SC-143

Circuit in which an emitter is maintained opposite a concentric collector and guard structure is achieved by matching the temperature and potential of the guard with that of the collector over the operating range. This control system is capable of handling up to 100 amperes in the guard circuit and 200 amperes in the collectors circuit.

B66-10564
PHOTOCELL SHADOWING TECHNIQUE IMPROVES LIGHT
SOURCE DETECTOR
CARPENTER, D. G. HOOPER, G. E. DATE- DEC. 1966
JPL-809

Lightweight, compact modular system that includes an acquisition photodiode is used as a light source tracking detector that exhibits minimum scale factor change with increased light source angle. Photodiodes of various types, responsive to other portions of the spectrum, could be used to acquire and track infrared, ultraviolet, and other source fluxes.

B66-10566
COMPUTATIONAL PROCEDURE FOR FINITE DIFFERENCE
SOLUTION OF ONE-DIMENSIONAL HEAT CONDUCTION
PROBLEMS REDUCES COMPUTER TIME
IDA, H. T. /N. AM. AVIATION/ DATE- NOV. 1966
MSC-1120

Computational procedure reduces the numerical effort whenever the method of finite differences is used to solve ablation problems for which the surface recession is large relative to the initial slab thickness. The number of numerical operations required for a given maximum space mesh size is reduced.

B66-10568
MONITORING CIRCUIT ACCURATELY MEASURES
MOVEMENT OF SOLENOID VALVE
GILBERT, J. D. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1829

Solenoid operated valve in a control system powered by direct current issued to accurately measure the valve travel. This system is currently in operation with a 28-vdc power system used for control of fluids in liquid rocket motor test facilities.

B66-10569
DEVICE ACCURATELY MEASURES AND RECORDS LOW
GAS-FLOW RATES
BRANUM, L. W. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1077

Free-floating piston in a vertical column accurately measures and records low gas-flow rates. The system may be calibrated, using an

adjustable flow-rate gas supply, a low pressure gage, and a sequence recorder. From the calibration rates, a nomograph may be made for easy reduction. Temperature correction may be added for further accuracy.

B66-10574
NONDESTRUCTIVE TEST METHOD ACCURATELY SORTS MIXED BOLTS

DEZEIN, C. J. DATE- DEC. 1966
 M-FS-1426

Neutron activation analysis method sorts copper plated steel bolts from nickel plated steel bolts. Copper and nickel plated steel bolt specimens of the same configuration are irradiated with thermal neutrons in a test reactor for a short time. After thermal neutron irradiation, the bolts are analyzed using scintillation energy readout equipment.

B66-10576
A CONTINUOUSLY OPERATING SOURCE OF VACUUM ULTRAVIOLET BELOW 500 ANGSTROM
 SPON- INNOVATOR NOT GIVEN /SPACE SCI. INC./ DATE- DEC. 1966
 GSFC-545

Duo plasmatron type source of ultraviolet radiation operates in the wavelength region below 500 angstrom. Since the spectra produced are determined almost completely by the gas injected, and because the source operates continuously, this arrangement is beneficial in the development and calibration of filters and detectors within discrete wavelength ranges.

B66-10577
ULTRASONIC WATER COLUMN PROBE SPEEDS UP TESTING OF WELDS
 HOOP, J. M. MC DONALD, J. A. /GE/ DATE- DEC. 1966
 HQ-58

Ultrasonic device consisting of a coaxial rod and transducer enclosed in a cylindrical probe which is filled with deionized or distilled water speeds up the testing of welds. Rubber diaphragm is molded to produce the desired test beam angle.

B66-10579
AN ORTHONORMALIZATION PROCEDURE FOR MULTIVARIABLE FUNCTION APPROXIMATION
 INGRAM, H. L. DATE- DEC. 1966
 M-FS-1313

Where a function of several variables is given numerically in tabular form, an orthonormalization technique allows an approximation of the numerical data to be determined in a convenient functional form. In this technique, the speed and accuracy of coefficient computation are much improved.

B66-10580
RESISTOR MONITORS TRANSFER OF LIQUID HELIUM
 HESKETH, W. D. DATE- DEC. 1966
 LANGLEY-229

Large resistance change of a carbon resistor at the liquid helium temperature distinguishes between the transfer of liquid helium and gaseous helium into a closed Dewar. The resistor should be physically as small as possible to reduce the heat load to the helium.

B66-10581
DETECTOR MEASURES POWER IN 50 TO 30,000 GHZ RADIATION BAND
 ARAMS, F. R. WANG, M. T. /AIRBORNE INSTR. LAB./ DATE- DEC. 1966
 ERC-26

Broadband power detector assembly measures electromagnetic radiation in the 50 to 30,000 GHz band. The assembly includes a matched pair of detectors which incorporate thin-film radiation absorbers. The detector is effective with either coherent or incoherent radiation.

B66-10584
OPTICAL SUPERHETERODYNE RECEIVER USES LASER FOR LOCAL OSCILLATOR
 LUCY, R. F. /SYLVANIA ELECTRON. SYSTEMS/ DATE- DEC. 1966
 M-FS-1605

Optical superheterodyne receiver uses a laser coupled to a frequency translator to supply both the incident signal and local oscillator signal and thus permit reception of amplitude modulated video bandwidth signals through the atmosphere. This receiver is useful in scientific propagation experiments, tracking experiments, and communication experiments.

B66-10590
STUDY MADE OF APPLICATION OF STEREOSCOPIC DISPLAY SYSTEM TO ANALOG COMPUTER SIMULATION
 KENNEL, H. P. DATE- DEC. 1966 REAN- SEE ALSO NASA-CR-61116
 M-FS-1263

Stereoscopic visual display system provides both a qualitative and measurable presentation for functions of several variables. A primary application of such a display system is in analog computer simulation of sets of differential equations.

B66-10591
ELECTRONIC CIRCUIT PROVIDES ACCURATE SENSING AND CONTROL OF DC VOLTAGE
 LOFTUS, W. D. /WESTINGHOUSE ASTRONUCI. LAB./ DATE- DEC. 1966
 NU-0089

Electronic circuit used relay coil to sense and control dc voltage. The control relay is driven by a switching transistor that is biased to cutoff for all input up to slightly less than the threshold level.

B66-10592
SENSORS MEASURE SURFACE ABLATION RATE OF REENTRY VEHICLE HEAT SHIELD
 RUSSEL, J. M., III DATE- DEC. 1966 REAN- SEE ALSO NASA-TN-D-3686
 LANGLEY-287

Sensors measure surface erosion rate of ablating material in reentry vehicle heat shield. Each sensor, which is placed at precise depths in the heat shield is activated when the ablator surface erodes to the location of a sensing point. Sensor depth and activation time determine ablator surface erosion rate.

B66-10598
DESIGN CONCEPT FOR PRESSURE SWITCH CALIBRATOR
 SLINGERLAND, M. G. /GE/ DATE- DEC. 1966
 HQ-36

Calibrator and switch design enables pressure switches to operate under 150 g shock loads. The design employs a saturated liquid-to-vapor phase transition at constant pressure to produce a known force independent of displacement over a usable range.

B66-10599
PRESSURE PROBE COMPENSATES FOR DIMENSIONAL TOLERANCE VARIATIONS
 BIRNER, R. A. /AEROJET-GEN. CORP./ DATE- DEC. 1966
 LEWIS-302

Flexible, compressible spring-loaded pressure probe measures the static pressure between the rotor stages on an axial-flow fuel pump. This probe is used in installation where a drilled static pressure tap or a rigid impulse tube cannot be used. Its parameters must be specially determined for each installation.

B66-10600
HIGH FREQUENCY WIDE-BAND TRANSFORMER USES COAX TO ACHIEVE HIGH TURN RATIO AND FLAT RESPONSE
 DE PARRY, T. DATE- DEC. 1966
 ARG-107

Center-tap push-pull transformer with toroidal core helically wound with a single coaxial cable creates a high frequency wideband transformer. This transformer has a high-turn ratio, a high coupling coefficient, and a flat broadband response.

B66-10603
MOSFET ANALOG MEMORY CIRCUIT ACHIEVES LONG

01 ELECTRICAL (ELECTRONIC)

DURATION SIGNAL STORAGE

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- DEC. 1966
M-FS-860

Memory circuit maintains the signal voltage at the output of an analog signal amplifier when the input signal is interrupted or removed. The circuit uses MOSFET /Metal Oxide Semiconductor Field Effect Transistor/ devices as voltage-controlled switches, triggered by an external voltage-sensing device.

B66-10605

ELECTRICAL CONTINUITY SCANNER FACILITATES IDENTIFICATION OF WIRES FOR SOLDERING TO CONNECTORS

BOULTON, H. C. DICLEMENTE, R. A. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-626

Electrical continuity scanner automatically scans 50 wires in 2 seconds to correlate all wires in a circuit with their respective known ends. Modifications made to the basic plan provide circuitry for scanning up to 250 wires.

B66-10606

A RADIOMETER-PYROMETER

DATE- DEC. 1966 REAN- SEE ALSO NASA-TN-D-2405
LEWIS-284

Radiometer-pyrometer measures the spectral absorption, emission, and temperature of gases. The major problems involved in spectroradiometric measurements are nonuniform spectral sensitivity, nonlinearity, poor absolute accuracy, wide range of intensities, and wide range of wavelengths.

B66-10607

DEVELOPMENTAL INSTRUMENT SUPPLIES ACCURATE ATTITUDE AND ATTITUDE-RATE DATA

SPON- INNOVATOR NOT GIVEN /BOLT, BERANEK, AND NEWMAN, INC./ DATE- DEC. 1966
HQ-57

Three orthogonal-plane projection provides accuracy of readout of both attitude and attitude-rate information in an easily interpreted, uncluttered arrangement where blind navigation of a moving body is involved. The longitudinal length of the projection is constant, and independent of the pitch and roll attitudes of the moving body.

B66-10612

RESISTANCE THERMOMETER HAS LINEAR RESISTANCE-TEMPERATURE COEFFICIENT AT LOW TEMPERATURES

KUZYK, W. /GEN. DYN./ DATE- DEC. 1966
WOO-190

Resistance thermometer incorporating a germanium resistance element with a platinum resistance element in a wheatstone bridge circuit has a linear temperature-resistance coefficient over a range from approximately minus 140 deg C to approximately minus 253 deg C.

B66-10614

STUDY OF THEORY AND APPLICATION OF LONG DURATION HEAT FLUX TRANSDUCERS

HEAMAN, J. P. ROBERTSON, S. J. /HEAT TECHNOL. LAB./ DATE- DEC. 1966
M-FS-1265

Theory and application of transducers used to measure heat flux in tests of more than one second duration.

B66-10617

IMPROVED MEMORY WORD LINE CONFIGURATION ALLOWS HIGH STORAGE DENSITY

SPON- INNOVATOR NOT GIVEN /UNIVAC/ DATE- DEC. 1966
GSFC-559

Plated wire memory word drive line allows high storage density, good plated wire transmission and a simplified memory plane configuration. A half-turn word drive line with a magnetic keeper is used. The ground plane provides the return path for both the word current and the plated wire transmission line.

B66-10619

COMPUTER PROGRAM SIMPLIFIES TRANSIENT AND

STEADY-STATE TEMPERATURE PREDICTION FOR COMPLEX BODY SHAPES

GIEBLER, K. N. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-989

Computer program evaluates heat transfer modes and calculates either the transient or steady-state temperature distributions throughout an object of complex shape when heat sources are applied to specified points on the object. It uses an electrothermal model to simulate the conductance, heat capacity, and temperature potential of the object.

B66-10621

CONNECTOR ACTS AS QUICK COUPLING IN COAXIAL CABLE APPLICATION

BREJCHA, A. G., JR. DATE- DEC. 1966
JPL-803

Quick-coupling connector whose inner shells are threaded to the cable ends and whose outer shells have tracks that register in channels machined in the inner shells are rotated 45 deg to effect a locking of the coupling. This connector faithfully reproduces excellent electrical characteristics no matter how frequently assembled and disassembled.

B66-10622

POINT-SOURCE DETECTION SYSTEM REJECTS SPATIALLY EXTENDED RADIATION SOURCES

MAXWELL, R. F., JR. /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1966
GSFC-486

System employing digital space correlation to suppress false target signals in a point-target tracking device is a reliable method for discriminating a distant target from false targets in the field of view of an infrared detection system or tracking device.

B66-10623

THERMOCOUPLES ELECTRICALLY CHECKED WHILE CONNECTED TO DATA SYSTEM

SPON- INNOVATOR NOT GIVEN /REP. AVIATION CORP./ DATE- DEC. 1966
LANGLEY-182

Constant current source is connected across the input of the millivolt measuring system to monitor the electrical continuity and resistance of multiple thermocouple installations without disconnecting them from a data system. This technique monitored gage thermocouple leads during the assembly and preflight testing of the Project Fire reentry packages.

B66-10624

MINIATURE TELEMETRY SYSTEM ACCURATELY MEASURES PRESSURE

FRYER, T. B. DATE- DEC. 1966 REAN- SEE ALSO
B64-10171 AND B66-10057
ARC-74

Miniature, low power, telemetry system that can be used with commercially available strain gage pressure transducers accurately measures pressure with a small implantable pressure cell and transmitter. The system has been used to date only with pressure transducers, but the circuit is equally applicable to any measurement using a strain gage sensor.

B66-10625

COMPACT MICROWAVE MIXER HAS HIGH CONVERSION EFFICIENCY

PENQUE, N. J. ROSEN, H. A. /HUGHES AIRCRAFT CO./ DATE- DEC. 1966
GSFC-197

Compact, lightweight microwave mixer has a relatively high conversion efficiency and power output. The mixer employs a pair of back-to-back voltage-variable capacitors in a stripline network.

B66-10629

PRECISION CW LASER AUTOMATIC TRACKING SYSTEM INVESTIGATED

LANG, K. T. LUCY, R. F. MC GANN, E. J. PETERS, C. J. /SYLVANIA ELECTRON. SYSTEMS/ DATE- DEC. 1966
M-FS-1606

Precision laser tracker capable of tracking a low acceleration target to an accuracy of about 20 microradians rms is being constructed and tested. This laser tracking has the advantage of discriminating against other optical sources and the capability of simultaneously measuring range.

B66-10632

ACCURATE DEPTH CONTROL PROVIDED FOR THERMOCOUPLE JUNCTION LOCATIONS
RICHARDSON, N. R. DATE- DEC. 1966 REAN- SEE ALSO NASA-TN-364
LANGLEY-289

Flight reentry experiments define the total heating on a large blunt-nosed body by means of imbedded thermocouples. The thermocouples, installed in a beryllium layered forebody, were designed to provide minimum feasible disturbance of local heat flow with accurate depth control of the thermocouple junction locations.

B66-10636

AUTOMATIC SYSTEM DETERMINES MOMENTS OF INERTIA OF ASYMMETRICAL OBJECTS
SPON- INNOVATOR NOT GIVEN /SPACO, INC./ DATE- DEC. 1966
M-FS-1769

Automatic system rapidly and accurately determines moments and products of inertia of asymmetrical objects. The system combines a torsional pendulum arrangement and a precision rate table with simplified analog computers to determine the desired quantities directly, without the need for additional calculations.

B66-10637

INSTRUMENT ACCURATELY MEASURES SMALL TEMPERATURE CHANGES ON TEST SURFACE
HARVEY, W. D. MILLER, H. B. DATE- DEC. 1966
REAN- SEE ALSO NASA-TN-D-2846
LANGLEY-174

Calorimeter apparatus accurately measures very small temperature rises on a test surface subjected to aerodynamic heating. A continuous thin sheet of a sensing material is attached to a base support plate through which a series of holes of known diameter have been drilled for attaching thermocouples to the material.

B66-10640

VOLUME-RATIO CALIBRATION SYSTEM FOR VACUUM GAGES
SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- DEC. 1966
REAN- SEE ALSO NASA-TN-D-3100
LEWIS-303

Volume-ratio calibration system consists of a gas source, high pressure gauge, small volume tank, large volume chamber, plus appropriate piping, valves, and vacuum source. This system used in conjunction with commercial vacuum gauges evaluates its ability to accurately produce desired pressures in the .000001 to .01 torr range.

B66-10644

THREE-AXIS ATTITUDE AND DIRECTION REFERENCE INSTRUMENT HAS ONLY ONE MOVING PART
BOSSLER, F. B. /BELL AEROSPACE CORP./ DATE- DEC. 1966
M-FS-1819

Lunar vehicle instrument combines the functions of attitude reference, direction reference, and display in a unit having only one moving part. The device, using bubble levels and a calibrated dial, is used as a sextant prior to takeoff, and as a backup navigation system during flight.

B66-10645

CONCEPT FOR USING LASER BEAMS TO MEASURE ELECTRON DENSITY IN PLASMAS
LONGO, S. E. /BOEING CO./ DATE- DEC. 1966
M-FS-965

Concept is proposed for using laser beams as a means of measuring electron density at various points in flame or plasma exhausts. Measurement of the electron density is obtained by detecting reflected waves in the plasma that were activated by the laser.

B66-10650

MAGNETORESISTOR MONITORS RELAY PERFORMANCE
KREBS, D. Q. /BOEING CO./ DATE- DEC. 1966
M-FS-1754

Magnetoresistor monitors the action of relays without disturbing circuit parameters or degrading relay performance. The magnetoresistor measures the relay magnetic flux produced under transient conditions to establish the characteristic signature of the relay.

B66-10653

THERMOCOUPLES EASILY INSTALLED IN HARD-TO-GET-TO PLACES
GUENTHER, F. G. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1946

Thermocouple wires attached to charged capacitors are inserted in a drilled hole. An electric charge fuses the thermocouple wires to the host material. This method has shown excellent results in fusing nichrome, chromel, Inconel, and stainless steel wires to nickel, beryllium, iron, steel, Inconel, and stainless steel.

B66-10658

DIGITAL FREQUENCY COUNTER PERMITS READOUT WITHOUT DISTURBING COUNTING PROCESS
WINKELSTEIN, R. DATE- DEC. 1966
JPL-906

Digital frequency counter system enables readout accurately at one-second intervals without interrupting or disturbing the counting process. The system incorporates a master counter and a slave counter with novel logic interconnections. The counter can be readily adapted to provide frequency readouts at 0.1 second intervals.

B66-10659

LOGIC CIRCUITRY USED TO AUTOMATICALLY TEST SHIELDED CABLES
DIBB, G. /GE/ DATE- DEC. 1966
HQ-60

Automatic cable tester checks multiple shielded conductors assembly cable connections. The tester uses logic circuitry to sequentially test all conductors and their shields to reveal any connection error in a GO-NO GO test.

B66-10661

STUDY OF FAST RESPONSE THERMOCOUPLE MEASUREMENT OF TEMPERATURES IN CRYOGENIC GASES
BIELAWSKI, T. LOWRIE, A. R. ROBINSON, C. C. /BEECH AIRCRAFT CORP./ DATE- DEC. 1966
M-FS-1659

Thermocouples fabricated from uninsulated small diameter wire have fast reproducible response times. The thermocouple is thermally isolated from its supports by making the leads of sufficient length so that the heat conduction down the leads is small and assuming that the leads adjacent to the junction are subjected to the same thermal conditions.

B66-10664

PACKAGING OF ELECTRONIC MODULES
KATZIN, L. DATE- DEC. 1966
JPL-801

Study of design approaches that are taken toward optimizing the packaging of electronic modules with respect to size, shape, component orientation, interconnections, and structural support. The study does not present a solution to specific packaging problems, but rather the factors to be considered to achieve optimum packaging designs.

B66-10668

PHOTOGRAPHIC METHOD MEASURES PARTICLE SIZE AND VELOCITY IN FLUID STREAM
DICKERSON, R. A. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1536

Method employing a nonframing motion picture camera, a continuous front light source, and a strobe light determines the size and velocity of small particles in nonturbulent fluid streams. This method is used in the study of the motion of

01 ELECTRICAL (ELECTRONIC)

solid and liquid particles in research and industrial fluid flow systems.

B66-10669
GAS LEAK DETECTOR IS SIMPLE AND INEXPENSIVE
 MITCHELL, D. K. /BOEING CO./ DATE- DEC. 1966
 M-FS-1206

Pressure sensor monitors small gas leaks in piping and pressure vessels. A combination of a paper ribbon and adhesive plastic tape is used to cover the area to be monitored and the pressure sensor is placed over a hole in the tape and paper.

B66-10670
COMPUTER PROGRAM DETERMINES CHEMICAL COMPOSITION OF PHYSICAL SYSTEM AT EQUILIBRIUM
 KWONG, S. S. /N. AM. AVIATION/ DATE- DEC. 1966
 MSC-1119

FORTRAN 4 digital computer program calculates equilibrium composition of complex, multiphase chemical systems. This is a free energy minimization method with solution of the problem reduced to mathematical operations, without concern for the chemistry involved. Also certain thermodynamic properties are determined as byproducts of the main calculations.

B66-10671
COMPUTER PROGRAM DETERMINES CHEMICAL EQUILIBRIA IN COMPLEX SYSTEMS
 GORDON, S. ZELEZNIK, F. J. DATE- DEC. 1966
 REAN- SEE ALSO NASA-TN-D-1454
 LEWIS-281

Computer program numerically solves nonlinear algebraic equations for chemical equilibrium based on iteration equations independent of choice of components. This program calculates theoretical performance for frozen and equilibrium composition during expansion and Chapman-Jouguet flame properties, studies combustion, and designs hardware.

B66-10675
GAGE ACCURATELY CONTROLS FORCE FOR PLACING CHIPS ON SUBSTRATES
 BENZIE, W. P. /IBM/ DATE- DEC. 1966
 M-FS-1941

Device is developed to control the force used in manually placing chips on substrates. It controls the compression load between 2 small members at loads as low as 25 grams by means of a force control gage that is preset by varying the spring deflection.

B66-10679
BLACKBODY CAVITY RADIOMETER HAS RAPID RESPONSE
 HALEY, F. C. DATE- DEC. 1966
 JPL-521

Fast response, spectrally linear standard detector in the form of a blackbody cavity radiometer calibrates rapidly responding photodetectors against a calibrated standard detector. A power amplifier with maximum available gain reduces error signal without stability loss. It may be used as a blackbody radiator by manipulation of the bridge variable arm.

B66-10680
SLIDE RULE-TYPE COLOR CHART PREDICTS REPRODUCED PHOTO TONES
 GRIFFIN, J. D. /N. AM. AVIATION/ DATE- DEC. 1966
 MSC-1227

Slide rule-type color chart determines the final reproduced gray tones in the production of briefing charts that are photographed in black and white. The chart shows both the color by drafting paint manufacturers name and mixture number, and the gray tone resulting from black and white photographic reproduction.

B66-10685
PROCESS REDUCES SECONDARY RESONANT EMISSION IN ELECTRONIC COMPONENTS
 ERPENBACH, H. DATE- DEC. 1966
 JPL-934

Process reduces secondary electron emission in

coaxial connector and in waveguides in the atmosphere. The assembly is placed in a vacuum chamber and is gradually vented to the atmosphere. It is exposed to high voltage, argon gas, and a hydrocarbon gas during the process.

B66-10687
STUDY OF HOT WIRE TECHNIQUES IN LOW DENSITY FLOWS WITH HIGH TURBULENCE LEVELS
 HANSON, A. R. KRAUSE, F. R. LARSON, R. E. DATE- DEC. 1966
 M-FS-1269

Prediction of heat, mass, species, and momentum fluxes in a space vehicle and aerodynamic noise production by supersonic jet and rocket exhausts requires a predictability of the associated turbulence fields. The hot wire is a technique that will allow an experimental determination of turbulent properties.

B66-10689
LOW INPUT VOLTAGE CONVERTER/REGULATOR MINIMIZES EXTERNAL DISTURBANCES
 SPON- INNOVATOR NOT GIVEN /HONEYWELL, INC./ DATE- DEC. 1966
 GSFC-527

Low-input voltage converter/regulator constructed in a coaxial configuration minimizes external magnetic field disturbance, suppresses radio noise interference, and provides excellent heat transfer from power transistors. It converts the output of fuel and solar cells, thermionic diodes, thermoelectric generators, and electrochemical batteries to a 28 V dc output.

B66-10690
EQUIVALENT CIRCUIT FOR A FIELD EFFECT TRANSISTOR ESTABLISHED FOR COMPUTER SIMULATION
 MING, L. J. /IBM/ DATE- DEC. 1966
 M-FS-1752

Equivalent circuit for the field effect transistor made up of circuit elements can be simulated by existing computer programs.

B66-10691
SOLID-STATE RECOVERABLE FUSE FUNCTIONS AS CIRCUIT BREAKER
 THOMAS, E. F., JR. DATE- DEC. 1966
 GSFC-560

Molded, conductive-epoxy recoverable fuse protects electronic circuits during overload conditions, and then permits them to continue to function immediately after the overload condition is removed. It has low resistance at ambient temperature, and high resistance at an elevated temperature.

B66-10692
HERMETICALLY SEALED CELLS PROTECTED FROM INTERNAL GAS PRESSURE
 CARSON, W. N. /GE/ DATE- DEC. 1966
 GSFC-555

Manufacturing process prevents damage to hermetically sealed nickel-cadmium secondary cells by buildup of gas pressure during overcharging and reversed charging conditions. The cells are manufactured with less charge capacity in the positive electrode than in the negative electrode, and two additional electrodes are added.

B66-10696
LOW RATE FLOW SWITCH CAN BE USED FOR GAS OR LIQUID
 BATES, E. T., JR. DATE- DEC. 1966
 JPL-867

Flow switch operable at low flow rates is used for detecting the flow of a water coolant in a vacuum deposition apparatus. This switch utilizes one or more reed switches which are actuated by a sliding magnet.

B66-10699
MONITORING SYSTEM DETERMINES AMPLITUDE AND TIME OF VIBRATION CHANNEL PEAKS
 ANDERSON, T. O. DATE- DEC. 1966
 JPL-879

Adaptive scheme advocated in this innovation will reduce processing time and is applicable to

environmental testing and to space-borne or aircraft-borne vibration monitoring devices requiring a large number of channels.

B66-10706

LOGARITHMIC CURRENT SIMULATOR GENERATES ELECTRICAL CURRENTS ACCURATELY BETWEEN 10 TO THE MINUS 11 AMPERE TO 10 TO THE MINUS 3 AMPERE

WILSON, J. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966
NU-0087

Current generator accurately simulates electric currents in the range of 10 to the minus 11th power to 0.001 ampere. Compensation networks have been devised to improve the accuracy at the lower current levels.

B66-10709

THERMOCOUPLE-FLEXIBLE CABLE CONNECTOR INSULATOR IS HIGHLY RELIABLE

GRACEY, C. M. /AEROJET-GEN. CORP./ DATE- DEC. 1966

NU-0082

Plastic /polycarbonate/ insulator improves thermocouple reliability in test operations. The insulator is molded in half sections, assembled mechanically and eliminates electrical shorting.

B67-10001

PROGRAM COMPUTES SINGLE-POINT FAILURES IN CRITICAL SYSTEM DESIGNS

BROWN, W. R. /N. AM. AVIATION/ DATE- JAN. 1967
MSC-603

Computer program analyzes the designs of critical systems that will either prove the design is free of single-point failures or detect each member of the population of single-point failures inherent in a system design. This program should find application in the checkout of redundant circuits and digital systems.

B67-10002

COMPUTER PROGRAM DETECTS TRANSIENT MALFUNCTIONS IN SWITCHING CIRCUITS

CALVIN, E. L. /N. AM. AVIATION/ DATE- JAN. 1967
MSC-604

A program which accepts a system model in the form of Boolean equations and solves these equations using a ternary algebra will determine the response of large combinational and sequential switching circuits to given input changes, taking into account malfunctions due to races, hazards, and oscillations.

B67-10009

TESTER FOR STUDY OF ROLLING ELEMENT BEARINGS

ZARETSKY, E. V. DATE- FEB. 1967

LEWIS-305

Five-ball fatigue tester makes possible the study of rolling element phenomena. The device consists of a driven test ball pyramided upon four lower balls positioned by a separator and free to rotate in an angular contact raceway.

B67-10013

SELF-STARTING PROCEDURE SIMPLIFIES NUMERICAL INTEGRATION

DATE- JAN. 1967 REAN- SEE ALSO NASA-TN-D-2936
ARC-50

A self-starting, multistep procedure for the numerical integration of ordinary differential equations is devised to produce all the required backward differences directly from the initial equations. The self-starting element eliminates nonessential tallying to determine starting values.

B67-10015

ALUMINIZED THIN-WINDOW PROPORTIONAL-COUNTER TUBE IS STRONGER, MORE RESPONSIVE IN LONG WAVELENGTH REGION

SCHNOPPER, H. W. SHIELDS, R. A. /CORNELL UNIV./ DATE- JAN. 1967

JPL-689

A thin-window proportional counter tube of 0.25-mil Mylar with a thin aluminum coating on one side permits efficient detection of long wavelength X rays. It is sufficiently rugged

for long-term use in space or other demanding environments.

B67-10017

SHORTENED HORN-REFLECTOR ANTENNA

LANTZ, P. A. DATE- JAN. 1967

GSFC-502

A shortened horn-reflector antenna overcomes the mechanical disadvantages and complexity of the conventional horn-reflector antenna. The shortened antenna offers broadband performance, economic construction, very low antenna temperature, and excellent pattern performance.

B67-10020

MINIATURE CAPACITOR FUNCTIONS AS PRESSURE SENSOR

HARRISON, R. G. DATE- FEB. 1967

JPL-903

Miniature capacitor operates as a differential pressure telemetry sensor during free flight of test model in a hypersonic wind tunnel. The capacitor incorporates a beryllium copper diaphragm. It is also used as an absolute pressure sensor.

B67-10022

VARIABLE-PULSE SWITCHING CIRCUIT ACCURATELY CONTROLS SOLENOID-VALVE ACTUATIONS

GILLET, J. D. /N. AM. AVIATION/ DATE- FEB. 1967
M-PS-1895

Solid state circuit generating adjustable square wave pulses of sufficient power operates a 28 volt dc solenoid valve at precise time intervals. This circuit is used for precise time control of fluid flow in combustion experiments.

B67-10025

COMPUTER/PERT TECHNIQUE MONITORS ACTUAL VERSUS ALLOCATED COSTS

HOURY, E. WALKER, J. D. DATE- FEB. 1967
LEWIS-260

A computer method measures the users performance in cost-type contracts utilizing the existing nasa program evaluation review technique without imposing any additional reporting requirements. progress is measured by comparing actual costs with a value of work performed in a specific period.

B67-10027

FEED-THROUGH CONNECTOR COUPLES RF POWER INTO VACUUM CHAMBER

GRANDY, G. L. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- FEB. 1967

NU-0096

Feed-through device connects RF power to an RF coil in a vacuum chamber. The coil and leads are water cooled and vacuum tight seals are provided at the junctions. The device incorporates silver soldered copper tubes, polytetrafluoroethylene electrical insulators, and O-ring vacuum seals.

B67-10028

MONITOR ASSURES AVAILABILITY AND QUALITY OF COMMUNICATION CHANNELS

SMITH, G. P. /RCA/ DATE- FEB. 1967

KSC-66-38

System monitors a communication channel for proper circuit parameters and energizes an alarm if these parameters do not fall within allowable limits. It comprises a monitor-signal transmitter at the transmitting end of the channel and a monitor-signal receiver at the receiving end.

B67-10029

INSTRUMENT SEQUENTIALLY SAMPLES AC SIGNALS FROM SEVERAL ACCELEROMETERS

CHAPMAN, C. P. DATE- FEB. 1967 REAN- SEE ALSO B66-10462

JPL-884

Scanner circuit sequentially samples the ac signals from accelerometers used in conducting noise vibration tests, and provides a time-averaged output signal. The scanner is used in conjunction with other devices for random noise vibration tests.

01 ELECTRICAL (ELECTRONIC)

B67-10030

LOCAL MEASUREMENTS IN TURBULENT FLOWS
THROUGH CROSS CORRELATION OF OPTICAL SIGNALS
FISHER, M. J. DATE- FEB. 1967
M-FS-1268

Crossed beam correlation method measures turbulent fluctuations in transonic and supersonic flows. Two collimated beams of radiation are crossed at the point of interest in the flow, and the power loss of each beam is measured with two independent photodetectors, which yield information about the turbulent properties.

B67-10031

HIGH TRANSIENTS SUPPRESSED IN ELECTROMAGNETIC DEVICES
MARION, C. W. DATE- FEB. 1967
KSC-66-13

A bifilar winding around the magnetic core of electromagnetic devices suppresses high transient voltages. The winding is alternately spaced vertically and radially from the core to achieve a high coefficient of coupling.

B67-10035

THERMOELECTRIC METAL COMPARATOR DETERMINES COMPOSITION OF ALLOYS AND METALS
STONE, C. C. WALKER, D. E. DATE- FEB. 1967
ARG-235

Emf comparing device nondestructively inspects metals and alloys for conformance to a chemical specification. It uses the Seebeck effect to measure the difference in emf produced by the junction of a hot probe and the junction of a cold contact on the surface of an unknown metal.

B67-10038

RESIDUAL MAGNETISM HOLDS SOLENOID ARMATURE IN DESIRED POSITION
CRAWFORD, R. P. /GEN. DYN./ DATE- MAR. 1967
LEWIS-343

Holding solenoid uses residual magnetism to hold its armature in a desired position after excitation current is removed from the coil. Although no electrical power or mechanical devices are used, the solenoid has a low tolerance to armature displacement from the equilibrium position.

B67-10040

STUDY MADE OF EXPLOSIVE CUTTING IN SIMULATED SPACE ENVIRONMENTS
COLEMAN, E. R. HAMILTON, L. O. /HAYES INTERN. CORP./ DATE- MAR. 1967 REAN- SEE ALSO
NASA-TM-X-53440
M-FS-1597

Study indicates the feasibility of explosive cutting and establishes techniques applicable to in-space cutting operations. Results show no degradation of the explosive and that work hardening of the target material is limited to the cut edge.

B67-10041

ABSOLUTE VISCOSITY MEASURED USING INSTRUMENTED PARALLEL PLATE SYSTEM
BOYLES, R. H. DATE- MAR. 1967
JPL-874

An automatic system measures the true average shear viscosity of liquids and viscoelastic materials, using the parallel plate method and automatically displays the results on a graphic record. This eliminates apparatus setup and extensive calculations.

B67-10042

IMPROVED FLUID CONTROL CIRCUIT OPERATES ON LOW POWER INPUT
GEBBEN, V. DATE- MAR. 1967
LEWIS-325

Standard electromagnetic relay actuates fluid control circuits with low level electrical signals by switching a fluid amplifier that drives a spool valve.

B67-10046

MULTIPURPOSE INSTRUMENTATION CABLE PROVIDES INTEGRAL THERMOCOUPLE CIRCUIT
ZELLNER, G. /WESTINGHOUSE ASTRONUCL. LAB./ DATE-

MAR. 1967

NU-0108

Multipurpose cable with an integral thermocouple circuit measures strain, vibration, pressure, throughout a wide temperature range. This cable reduces bulky and complex circuitry by eliminating separate thermocouples for each transducer.

B67-10053

SOLID-STATE TIME-TO-PULSE-HEIGHT CONVERTER DEVELOPED
LYNCH, R. J. RODDICK, R. G. DATE- MAR. 1967
ARG-170

Solid-state circuit produces an output pulse with an amplitude directly proportional to the time interval between two input pulses. It uses selected circuit options to achieve variable mode operation and a tunnel diode controls the charging time of a capacitor in proportion to the time interval being measured.

B67-10055

CIRCUIT MULTIPLIES PULSE WIDTH MODULATION, EXHIBITS LINEAR TRANSFER FUNCTION
CARLSON, A. W. FURCINITI, A. DATE- MAR. 1967
HQ-56

Modulation multiplier provides a simple means of multiplying the width modulation of a pulse train by a constant factor. It operates directly on a pulse width modulated input signal to generate an output pulse train having a greater degree of width modulation than the input signal.

B67-10060

ELECTRON MULTIPLIER HAS IMPROVED PERFORMANCE AND STABILITY
SPON- INNOVATOR NOT GIVEN /G.C.A. CORP./ DATE- MAR. 1967
GSFC-546

Electron multiplier contains a series of massive metal dynodes, compactly secured with ceramic rods for operation in a metal housing. The housing is rigidly mounted within a soft steel vacuum enclosure which shields the multiplier from the effects of external electromagnetic fields.

B67-10061

CONTROL CIRCUIT ENSURES SOLAR CELL OPERATION AT MAXIMUM POWER
PAULKOVICH, J. DATE- MAR. 1967
GSFC-432

Control circuit enables a solar cell power supply to deliver maximum electrical power to a load. It senses the magnitude of the slope of the voltage-current characteristic curve and compares it to a reference voltage which represents the slope corresponding to the desired operating limits.

B67-10065

PORTABLE DETECTOR SET DISCLOSES HELIUM LEAK RATES
ANDERSON, G. E. /N. AM. AVIATION/ DATE- APR. 1967
M-FS-1733

Portable helium detector measuring helium leak rates makes possible the use of the inert gas helium as a tracer. This helps solve safety and contamination problems in detecting leaks in closed fluid systems.

B67-10074

FLOW-TEST DEVICE FITS INTO RESTRICTED ACCESS PASSAGES
FITZGERALD, J. J. OBERSCHEIDT, M. ROSENBAUM, B. J. DATE- APR. 1967
MSC-1078

Test device using a mandrel with a collapsible linkage assembly enables a fluid flow sensor to be properly positioned in a restricted passage by external manipulation. This device is applicable to the combustion chamber of a rocket motor.

B67-10076

CLEANROOM AIR SAMPLER COUNTS, CATEGORIZES, AND RECORDS PARTICLE DATA
NELSON, M. B. /IIT RES. INST./ DATE- JUN. 1967
M-FS-2221

Light scattering particle counter monitors

particles in a clean room. It categorizes and records the particles according to size and functions simultaneously in three separate areas. The counter uses a transducer head to transform light signals into electric signals.

B67-10077
COMPUTER PROGRAM SIMULATES DESIGN, TEST, AND ANALYSIS PHASES OF SENSITIVITY EXPERIMENTS
ALEXANDER, M. J. BOTHMAN, D. ZIMMERMAN, J. M.
/N. AM. AVIATION/ DATE- APR. 1967
M-FS-1496
Modular program with a small main program and several specialized subroutines provides a general purpose computer program to simulate the design, test and analysis phases of sensitivity experiments. This program allows a wide range of design-response function combinations and the addition, deletion, or modification of subroutines.

B67-10080
INSTRUMENT CONTINUOUSLY MEASURES DENSITY OF FLOWING FLUIDS
JACOBS, R. B. MACINKO, J. MILLER, C. E. /NBS/
DATE- APR. 1967
LEWIS-309
Electromechanical densitometer continuously measures the densities of either single-phase or two-phase flowing cryogenic fluids. Measurement is made on actual flow. The instrument operates on the principle that the mass of any vibrating system is a primary factor in determining the dynamic characteristics of the system.

B67-10084
CIRCUIT INCREASES CAPABILITY OF HYSTERESIS SYNCHRONOUS MOTOR
MARKOWITZ, I. N. /RCA/ DATE- APR. 1967
MSC-1080
Frequency and phase detector circuit enables a hysteresis synchronous motor to drive a load of given torque value at a precise speed determined by a stable reference. This technique permits driving larger torque loads with smaller motors and lower power drain.

B67-10085
TRIPLE MODULAR REDUNDANCY /TMR/ COMPUTER OPERATION IMPROVED
BALL, M. HARDIE, F. H. /IBM/ DATE- APR. 1967
MSC-831
Switching off a failed element plus one of the good elements in the TMR computer operation keeps the reliability curve from crossing the simplex curve. This method increases reliability and prevents system failure.

B67-10086
AUTOMATIC CHANNEL SWITCHING DEVICE
BALL, M. OLNCWICH, H. T. /IBM/ DATE- APR. 1967
MSC-832 MSC-834
Automatic channel switching device operates with all three triple modular redundant channels when there are no errors. When a failure occurs, channel and module switching isolate the failure to a specific channel. Since only one must operate correctly, reliability is increased.

B67-10087
TRANSLATOR PROGRAM CONVERTS COMPUTER PRINTOUT INTO BRAILLE LANGUAGE
POWELL, R. A. /BOEING CO./ DATE- APR. 1967
M-FS-2061
Computer program converts print image tape files into six dot Braille cells, enabling a blind computer programmer to monitor and evaluate data generated by his own programs. The Braille output is printed 8 lines per inch.

B67-10090
SYSTEM AUTOMATICALLY SUPPLIES PRECISE ANALYTICAL SAMPLES OF HIGH-PRESSURE GASES
LANGDON, W. M. /IIT RES. INST./ DATE- APR. 1967
M-FS-1814
High-pressure-reducing and flow-stabilization system delivers analytical gas samples from a gas supply. The system employs parallel capillary

restrictors for pressure reduction and downstream throttling valves for flow control. It is used in conjunction with a sampling valve and minimizes alterations of the sampled gas.

B67-10091
SYSTEM MAINTAINS CONSTANT PENETRATION DURING FUSION WELDING
COOK, G. /MERIK ENG./ MC CAMPBELL, W. M. DATE- APR. 1967
M-FS-937
Servo system senses variations in fusion welding process, and adjusts the control parameters to compensate for them. The system assumes a correlation between uniform weld penetration and temperature gradients near the molten puddle. It senses weld properties and makes adjustments to travel speed and weld current.

B67-10092
GREMEX-A NEW MANAGEMENT TRAINING CONCEPT
DENAUT, M. F. VACCARO, M. J. DATE- APR. 1967
GSFC-574
Goddard Research Engineering Management Exercise provides experience in R+D project decision making from a management rather than technological view. The participant directs a hypothetical project presented in the management simulation technique. He uses old or new methods without concern for rewards or penalties existing in real life.

B67-10093
STRAIN GAGE CIRCUITRY PROVIDES FATIGUE TESTING MACHINE WITH ACCURATE CYCLE COUNT
PARK, R. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- APR. 1967
NU-0114
Fatigue tester determines the number of cycles to fatigue failure of brittle specimens. A strain gage on the loading arm records the loading applied to the component. As the component starts to break, the load is reduced and the strain gage stops the cycle counter.

B67-10097
HEATER CONTROL CIRCUIT PROVIDES BOTH FAST AND PROPORTIONAL CONTROL
BASLOCK, R. W. /IBM/ DATE- APR. 1967
M-FS-906
Proportional control circuit supplies a heater with full current, from a pulsating dc source, to a present temperature and then switches to proportional control for fine temperature regulation. Two resistors and a diode are added to the existing circuit. The circuit can be adapted to control other functions.

B67-10099
SYSTEM ENABLES MORE COMPLETE CALIBRATIONS OF DYNAMIC-PRESSURE TRANSDUCERS
PERNET, D. F. /IIT RES. INST./ DATE- APR. 1967
M-FS-2063
Absolute pressure calibration system using a Michelson interferometer calibrates phase characteristics and pressure sensitivities of the transducers that monitor acoustic or aerodynamic pressure fields. The interferometer uses a helium-neon laser light source and interchangeable acoustic signal generators to produce acoustic waves.

B67-10101
DOUBLE EMITTER SUPPRESSED CARRIER MODULATOR USES COMMERCIALY AVAILABLE COMPONENTS
HAIST, C. F. FISCOPO, A. /IBM/ DATE- APR. 1967
M-FS-2494
Double emitter suppressed carrier modulator develops a signal-to-carrier minimum output ratio of 40 db and signal input of 2.5 volts. The circuit uses a commercially available double emitter chopper transistor. It eliminates tuning potentiometers and reduces sideband harmonics.

B67-10103
POLYNOMIAL MANIPULATOR AP-168
TUTT, G. E. /N. AM. AVIATION/ DATE- MAY 1967
MSC-1231
Linear Systems Design Evaluation Program,

01 ELECTRICAL (ELECTRONIC)

AP-168 combines the many different analysis techniques used to evaluate and manipulate polynomials. The single program is a pseudo instruction abstraction. It allows the user to enter polynomials of the laplace operators and to manipulate them freely.

B67-10104 PARAMETRIC UP-CONVERTER INCREASES FLEXIBILITY OF MASER

SUNNY, R. H. DATE- APR. 1967
KSC-67-98

Parametric up-converter translates a broad band of signals to the fixed tuned input frequency of a maser. This modified maser can operate in the 1700-2300 Mc range, eliminating the need to duplicate equipment. It may be applied in communications and radio astronomy.

B67-10106 RF INDUCTOR HAS HIGH Q, IS STABLE AT HIGHER TEMPERATURES

WILDER, E. M. DATE- MAY 1967
JPL-1019

Encapsulated RF inductor with an insulated coil has a high Q and remains stable for long periods of time at high temperatures. The coil is wound on a core and both are encapsulated in an epoxy resin. Two terminals are soldered to the coil.

B67-10108 COMPUTER PROGRAM REDUCES CALCULATION TIME OF NORMAL RESPONSE FUNCTIONS

ALEXANDER, M. J. ROTHMAN, D. ZIMMERMAN, J. M.
/N. AM. AVIATION/ DATE- MAY 1967
M-FS-1517

FORTRAN 2 computer program rapidly calculates parameters of maximum likelihood estimates from sensitivity experiment data populations. The program uses the Newton-Raphson iterative procedure to calculate the mean and standard deviation of portions of the cumulative normal response function.

B67-10111 FIXTURE TESTS BELLONS RELIABILITY THROUGH REPEITIVE PRESSURE/TEMPERATURE CYCLING

LEVINSON, C. /SPERRY GYROSCOPE CO./ DATE- MAY 1967
MSC-1176

Fixture explores the reliability of bellows used in precision in inertial systems. The fixture establishes the ability of the bellows to withstand repetitive over-stress pressure cycling at elevated temperatures. It is applicable in quality control and reliability programs.

B67-10115 LIQUID HYDROGEN DENSITOMETER UTILIZES OPEN-ENDED MICROWAVE CAVITY

SNETANA, J. WENGER, N. C. DATE- APR. 1967 REAN-
SEE ALSO NASA-TN-D-3680
LEWIS-390

Open-ended microwave cavity directly measures the density of flowing liquid, gaseous, or two-phase hydrogen. Its operation is based on derived relations between the cavity resonant frequency and the dielectric constant and density of hydrogen.

B67-10116 DETECTION OF ENTRAPPED MOISTURE IN HONEYCOMB SANDWICH STRUCTURES

HALLMARK, W. E. /N. AM. AVIATION/ DATE- MAY 1967
MSC-1103

Thermal neutron moisture detection system detects entrapped moisture in intercellular areas of bonded honeycomb sandwich structures. A radium/beryllium fast neutron source bombards a specimen. The emitted thermal neutrons from the target nucleus are detected and counted by a boron trifluoride thermal neutron detector.

B67-10118 TV SYNCHRONIZATION SYSTEM FEATURES STABILITY AND NOISE IMMUNITY

LANDAUER, F. P. DATE- MAY 1967
JPL-915

Horizontal jitter in the video presentation in

television systems is prevented by using an additional sync level. This circuitry uses simultaneous signals at both sync and porch frequencies, providing a sync identification from which a coincidence circuit can generate pulses having the required stability and noise immunity.

B67-10119 PERSONAL COMMUNICATION SYSTEM COMBINES HIGH PERFORMANCE WITH MINIATURIZATION

ATLAS, N. D. /N. AM. AVIATION/ DATE- MAY 1967
MSC-720 MSC-722

Personal communication system provides miniaturized components that incorporate high level signal characteristics plus noise rejection in both microphone and earphone circuitry. The microphone is designed to overcome such spacecraft flight problems as size, ambient noise level, and RF interference.

B67-10125 EDGE-TYPE CONNECTORS EVALUATED BY ELECTRICAL NOISE MEASUREMENT

BRUMMETT, S. L. /BOEING CO./ DATE- MAY 1967
M-FS-2243

Electrical noise measurement system measures noise generated by edge-type connectors and circuit cards when they are subjected to sinusoidal vibration. It provides a signal across the contact area and monitors the signal change during vibration. Noise measured can be expressed as a varying change in total contact resistance.

B67-10127 CALIBRATING ULTRASONIC TEST EQUIPMENT FOR CHECKING THIN METAL STRIP STOCK

PETERSON, R. M. /AEROJET-GEN. CORP./ DATE- JUN. 1967
NUC-10009

Calibration technique detects minute laminar-type discontinuities in thin metal strip stock. Patterns of plastic tape are preselected to include minutely calculated discontinuities and the tape is applied to the strip stock to intercept the incident sonic beam.

B67-10130 MODIFIED UNIVIBRATOR COMPENSATES FOR OUTPUT TIMING ERRORS

STRAUSS, M. G. DATE- MAY 1967
ARG-85

One-stage, delay compensation amplifier, added to conventional univibrator circuitry time-synchronizes the trailing edge of the output pulse with the origin of the input pulse. The trailing edge is independent of the amplitude of the input pulse.

B67-10135 INTEGRATOR CAN EASILY BE SET AND RESET WITH AN ELECTRONIC SWITCH

DEBOO, G. J. DATE- MAY 1967
ARC-10002

Electronic switch sets and resets integrator circuit to some initial condition using a grounded capacitor. This circuit also uses four equal resistors and an operational amplifier.

B67-10136 COMPUTER PROGRAM CALCULATES MONOTONIC MAXIMUM LIKELIHOOD ESTIMATES USING METHOD OF REVERSALS

ALEXANDER, M. J. ALEXANDER, N. J./N. AM. AVIATION/
DATE- MAY 1967
M-FS-1516

FORTRAN 2 computer program calculates maximum estimates of a monotonic non-decreasing response function. The program uses the method of reversals algorithm which applies to the analysis of univariate or multivariate sensitivity experiments.

B67-10137 VARIABLE RELUCTANCE SWITCH AVOIDS CONTACT CORROSION AND CONTACT BOUNCE

WATSON, P. C. /MIT/ DATE- MAY 1967
MSC-1178

Variable reluctance switch avoids contact corrosion and bounce in a hostile environment. It

consists of a wire-wound magnetic core and moveable bridge piece that alters the core flux pattern to produce an electrical output useful for switching control media.

B67-10139

RECORDING AND TIME EXPANSION TECHNIQUE FOR HIGH-SPEED, SINGLE-SHOT TRANSIENT VIDEO SIGNAL

HRUBY, R. J. SANDER, R. C. DATE- MAY 1967
ARC-10003

High-speed, single-shot, transient voltage is recorded on a video tape recorder, which, when played back, converts the single signal to a repetitive signal. This drives a sample data translator which lengthens the original transient production time, suiting it to an x-y plotter or computer tape recorder use.

B67-10140

CLAMP PROVIDES EFFICIENT CONNECTION FOR HIGH-DENSITY CURRENTS

MC CARTHY, J. R. TREBES, D. M. /N. AM. AVIATION/
DATE- MAY 1967

M-FS-2417

Electrical connector clamp /bus bar/ gives high contact-surface efficiency for providing a high current to thin wall stainless steel tubing containing hydrogen gas. It uses lead solder film to provide the electrical equivalent of a fusion bond without degrading the grain structure, permitting disassembly and reuse of the components.

B67-10142

THIN FILM PROCESS FORMS EFFECTIVE ELECTRICAL CONTACTS ON SEMICONDUCTOR CRYSTALS

FORMIGONI, N. P. ROBERTS, J. S. /WESTINGHOUSE
ELEC. CORP./ DATE- MAY 1967

M-FS-2343

Process makes microscopic, low-resistance electrical contacts on hexagonal n-type silicon carbide crystals used for microelectronic devices. A vacuum deposition of aluminum is etched to expose the bare silicon carbide where the electrical contacts are made. Sputtering alternating layers of tantalum and gold forms the alloy film.

B67-10143

DESIGN CONCEPTS USING RING LASERS FOR FREQUENCY STABILIZATION

MOCKER, H. /HONEYWELL INC./ DATE- MAY 1967
M-FS-2448

Laser frequency stabilization methods are based on a frequency discriminant which generates an unambiguous deviation signal used for automatic stabilization. Closed-loop control stabilizes cavity length at a null point. Some systems have a stabilized ring laser using a piezoelectric dither and others use a Doppler gain tube.

B67-10144

PROCESS FACILITATES PHOTORESIST MASK ALIGNMENT ON SIC CRYSTALS

FORMIGONI, N. P. ROBERTS, J. S. /WESTINGHOUSE
ELEC. CORP./ DATE- MAY 1967

M-FS-2394

Growth of silicon dioxide on a silicon carbide crystal ensures proper orientation of photoresist masks on the crystals used for semiconductor devices. The crystal is heated in a water vapor-saturated gas to delineate p-n junctions that intersect the crystal surface.

B67-10145

TEST INSTRUMENTATION EVALUATES ELECTROSTATIC HAZARDS IN FLUID SYSTEM

COLLINS, L. H. HENRY, R. KREBS, D. /ECCING CO./
DATE- MAY 1967

M-FS-2277

RJ-1 fuel surface potential is measured with a probe to determine the degree of hazard originating from static electricity buildup in the hydraulic fluid. The probe is mounted in contact with the fluid surface and connected to an electrostatic voltmeter.

B67-10146

HYDROGEN MASER AS A HIGHLY STABLE FREQUENCY REFERENCE

VANIER, J. VESSOT, R. /VARIAN ASSOC./ DATE- MAY 1967

M-FS-2437

Hydrogen maser is stable short-term and long-term frequency reference for precision tracking systems. Its resettability is expressed as the rms deviation from the mean.

B67-10150

MULTIPLEXING CONTROL DEVICE ENABLES HANDLING OF WIDE VARIATIONS IN SAMPLING RATES

SPON- INNOVATOR NOT GIVEN. /WESTINGHOUSE ELEC.
CORP./ DATE- JUN. 1967

M-FS-1871

ESS telecommunication system concept provides the ability to change according to needs indicated by the data without any change to the lunar experiment equipment. The system will include a magnetic core memory as the data multiplexing control device.

B67-10151

ELECTRONIC FREQUENCY DISCRIMINATOR

REID, W. J. /MOTOROLA, INC./ DATE- JUN. 1967
M-FS-2434

Digital comparator permits discrimination at accuracy of reference frequency. The compare circuit is a shift register element.

B67-10152

MEANS FOR IMPROVING APPARENT RESOLUTION OF TELEVISION

HILBORN, E. H. DATE- MAY 1967

ERC-65

Technique using short term temporal integration characteristics of the observers visual system improves the apparent resolution of television video presentations. The raster is displaced slightly on each frame so the eye can integrate the information in each raster grain. This phase shift uses a switching time delay.

B67-10153

STUDY OF YTTRIUM IRON GARNET RODS REVEALS NEW MAGNETOSTATIC ECHO MODE

KEDZIE, R. W. /SPERRY RAND RES. CENTER/ DATE-
JUN. 1967

ERC-37

Echo mode in YIG rods has different behavior in magnetic fields. This mode, discovered at 8.5 gigahertz, experiences a linear variation. The time delay exhibited is a linear function of the applied magnetic field and the input pulse frequency.

B67-10155

SUBMINIATURE DEFLECTION CIRCUIT OPERATES INTEGRATED SWEEP CIRCUITS IN TV CAMERA

SCHAFF, F. L. /WESTINGHOUSE ELEC. CORP./ DATE-
MAY 1967

MSC-1263

Small magnetic sweep deflection circuits operate a hand-held lunar television camera. They convert timing signals from the synchronizer into waveforms that provide a raster on the vidicon target. Faster size remains constant and linear during wide voltage and temperature fluctuations.

B67-10156

VOLTAGE REGULATOR/AMPLIFIER IS SELF-REGULATED

DAY, W. E. PHILLIPS, D. E. /COLLINS RADIO CO./
DATE- MAY 1967

MSC-1240

Signal modulated, self-regulating voltage regulator/amplifier controls the output b-plus voltage in modulated regulator systems. It uses self-oscillation with feedback to a control circuit with a discontinuous amplitude action feedback loop.

B67-10157

DESIGN CONCEPT FOR IMPROVED PHOTO-SCAN TUBE

MALLING, L. R. DATE- JUN. 1967

JPL-818

Conceptual photo-scan tube avoids complexity of internal beam scanning and beam-current adjustment

01 ELECTRICAL (ELECTRONIC)

by optical scan readout. It differs from a conventional image orthicon in its use of an external oscilloscope tube.

B67-10160
A POWER-SPECTRAL-DENSITY COMPUTER PROGRAM
CHAPMAN, C. P. DATE- JUN. 1967
NPO-10126

Computer program simplifies and clarifies random noise vibration test results. It also varies PSD test specifications, sets up automatic equalization equipment, and calculates an exact acceleration level for the random noise prior to the test.

B67-10161
SENSING DISKS FOR SLUG-TYPE CALORIMETERS
HAVE HIGHER TEMPERATURE STABILITY
SPON- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./
DATE- JUN. 1967
N-PS-1867

Graphite sensing disk for slug-type radiation calorimeters exhibits better performance at high temperatures than copper and nickel disks. The graphite is heat-soaked to stabilize its emittance and the thermocouple is protected from the graphite so repeated temperature cycling does not change its sensitivity.

B67-10162
CLOSED CIRCUIT TV SYSTEM MONITORS WELDING OPERATIONS
GILMAN, M. /N. AM. AVIATION/ DATE- JUN. 1967
MSC-11002

TV camera system that has a special vidicon tube with a gradient density filter is used in remote monitoring of TIG welding of stainless steel. The welding operations involve complex assembly welding tools and skates in areas of limited accessibility.

B67-10165
HYBRID SOLID STATE SWITCH REPLACES MOTOR-DRIVEN POWER SWITCH
BOOTH, R. A. SCHLOSS, A. I. DATE- JUN. 1967
JPL-931

Hybrid solid state switch replaces existing motor-driven power switches used on spacecraft. It uses a transistor circuit to limit the open circuit voltage and allow small relay contacts to handle high transient currents at reasonable cycle life.

B67-10166
EFFICIENT MILLIMETER WAVE /140 GHZ/ DIODE FOR HARMONIC POWER GENERATION
SPON- INNOVATOR NOT GIVEN /ADVAN. TECHNOL. CORP./
DATE- JUN. 1967
HQ-61

Epitaxial gallium arsenide diode junction formed in a crossed waveguide structure operates as a variable reactance harmonic generator. This varactor diode can generate power efficiently in the low-millimeter wavelength.

B67-10170
DATA RETRIEVAL SYSTEM PROVIDES UNLIMITED HARDWARE DESIGN INFORMATION
RAWSON, R. D. SWANSON, R. L. /N. AM. AVIATION/
DATE- JUN. 1967
MSC-1144

Data is input to magnetic tape on a single format card that specifies the system, location, and component, the test point identification number, the operators initial, the date, a data code, and the data itself. This method is efficient for large volume data storage and retrieval, and permits output variations without continuous program modifications.

B67-10171
STRUCTURAL ANALYSIS AND MATRIX INTERPRETIVE SYSTEM /SAMIS/
SPON- INNOVATOR NOT GIVEN /PHILCO CORP./ DATE- JUN. 1967
NPO-10130

Structural Analysis and Matrix Interpretive System eliminates high-speed digital computer restrictions of lack of generalization and lack of

flexibility. Programming concepts of the system are standardization, modularity, and programming for intermediate-size problems.

B67-10175
NUMERICAL DATA FRAME READOUT SYSTEM USED IN TESTING TELEMETRY SYSTEMS
COTE, C. E. CRESSEY, J. R. DATE- JUN. 1967
GSFC-551

Digital telemetry systems are treated by a display system that offers direct readout as high data rates. The rates appear in numerical format and are adaptable to photographic recording techniques. The system can show bit dropouts at a memory output or locate a malfunction in a system.

B67-10176
THERMAL AND BIAS CYCLING STABILIZES PLANAR SILICON DEVICES
HARRIS, R. E. MEINHARD, J. E. /N. AM. AVIATION/
DATE- JUN. 1967
ERC-48

Terminal burn-in or baking step time in the processing of planar silicon devices is extended to reduce their inversion tendencies. The collector-base junction of the device is also cyclically biased during the burn-in.

B67-10179
A THEORETICAL MODEL FOR DETERMINING TURBINE FLOWMETER SENSITIVITY
SMITH, R. L. /N. AM. AVIATION/ DATE- JUN. 1967
N-PS-1172

Analytical model of turbine-type flowmeter guides in the selection of valid extrapolation of available calibration data. An expression for flowmeter performance is developed to include the effects of fluid friction, bearing drag, and magnetic drag upon helical rotor design.

B67-10181
STUDY INDICATES FLUID DIGITAL COMPUTATION SYSTEMS ARE FEASIBLE
SPON- INNOVATOR NOT GIVEN /GE/ DATE- JUN. 1967
N-PS-520

Digital computation systems using fluid amplifiers are proven practical. The response speed is adequate for space applications and they are reliable in adverse environments. The systems may be feasible for satellite attitude controls and guidance computers for manned orbital stations.

B67-10190
SWITCHING-TYPE REGULATOR CIRCUIT HAS INCREASED EFFICIENCY
CLAPP, W. M. /SANDERS ASSOCIATES, INC./ DATE- JUN. 1967
MSC-1063

Switching series regulator circuit uses an inductive network to feed most of the current applied to the control circuit to the load. This circuit eliminates resistive losses and the need for heat sinks.

B67-10192
FAST-ACTING CALORIMETER MEASURES HEAT OUTPUT OF PLASMA GUN ACCELERATOR
DETHLEFSON, R. LARSON, A. V. LIEBING, L. /GEN. DYNAMICS/CONVAIR DIV./ DATE- JUN. 1967
LEWIS-388

Calorimeter measures the exhaust energy from a shot of a pulsed plasma gun accelerator. It has a fast response time and requires only one measurement to determine the total energy. It uses a long ribbon of copper foil wound around a glass frame to form a reentrant cavity.

B67-10196
TECHNIQUE FOR STRIP CHART RECORDER TIME NOTATION
SPON- INNOVATOR NOT GIVEN /ROBACK CORP./ DATE- JUN. 1967
GSFC-473

Single recorder channel helps determine the time an event is recorded on the readout of a strip chart recorder. It presents hours, tens of minutes, and minutes by a unique method of time

increment identification. This facilitates recording timing marks.

B67-10199

ELECTROMETER AMPLIFIER OPERATES OVER DYNAMIC RANGE OF FIVE ORDERS OF MAGNITUDE
KATZ, N. /MARSHALL LAB./ DATE- JUN. 1967
ARC-75

Special purpose electrometer amplifier is capable of operation over a dynamic range of five orders of magnitude. This is achieved by using a zener controlled attenuator in the feedback path for the amplifier.

B67-10201

ELECTRONIC CIRCUITRY USED TO AUTOMATE PAPER CHROMATOGRAPHY
STEFFENSEN, G. R. DATE- JUN. 1967
JPL-840

Electronic circuit is used in a paper chromatograph instrument that has excellent sensitivity and furnishes a printed record of each test. The circuit measures and records changes in conductivity in a strip of chromatographic paper as different solutions are placed on it.

B67-10203

AUTOMATED MICROSYRINGE IS HIGHLY ACCURATE AND RELIABLE
STUART, J. L. DATE- JUN. 1967
NPO-10142

Syringe meters small volumes of fluid used in chemical analysis. The standard body and plunger are adapted to fit with a motor driven micrometer, making a reliable and convenient device.

B67-10204

A CONCEPTUAL, PARALLEL OPERATING DATA COMPRESSION PROCESSOR
ANDERSON, T. O. DATE- JUN. 1967
NPO-10068

Data compressor processor concept envisions a simplified system for telemetry communications. It is simultaneously a zero-order processor and a floating aperture, a variable aperture, and a binary integer aperture with a decoded buffet fullness counter.

B67-10205

QUARTZ CRYSTALS DETECT GAS CONTAMINANTS DURING VACUUM CHAMBER EVACUATION
STEPHENS, J. B. DATE- JUN. 1967
NPO-10144

Piezoelectric quartz crystals detect condensable gas contaminants backstreaming into a vacuum chamber when a pump is evacuating the chamber. One crystal acts as a thermometer, the other detects mass change. They are energized by electronic equipment which records frequency changes.

B67-10206

PLOTTER DESIGN SIMPLIFIES DETERMINATION OF IMAGE SENSOR TRANSFER CHARACTERISTIC
BAKER, L. R. DATE- JUN. 1967
NPO-10164

Transfer characteristic of vidicons and other image sensors are measured by light from a calibrated electroluminescent panel as a function of the current output of the image sensor. The plot of current output versus the calibrated light output is the transfer characteristic.

B67-10213

FM CARRIER DEVIATION MEASURED BY DIFFERENTIAL PROBABILITY METHOD
DAQUIN, A. F., JR. HADDICAN, J. /BOEING CO./
DATE- JUN. 1967
M-FS-2166

Differential probability FM system measures deviation of a carrier modulated by a complex signal. The peak-to-peak amplitude is measured and related to the frequency shift of the carrier signal. The deviation is described in terms of a probability as well as a peak value.

B67-10215

RUN NUMBERING SYSTEM FOR USE WITH DATA RECORDERS

PEASE, L. L. /BOEING CO./
M-FS-2557

Run numbering identification system provides a permanent identification on the recorder traces of data runs. It automatically enters, by pulse coding, the number of the current data run on the recorder trace. The system uses a keyboard, registers, converters, amplifiers, and a pulse generator.

B67-10220

LOW SPEED, LONG TERM TRACKING ELECTRIC DRIVE SYSTEM HAS ZERO BACKLASH
RICHTER, H. L. STOLLER, F. W. DATE- JUL. 1967
NPO-10173

Electric drive system provides low speed, long term tracking of targets that move at a sidereal rate. It utilizes eddy-current energized actuators that are free from radio frequency interference generation and a solid state feedback amplifier with provisions for antibacklash biasing.

B67-10221

AMPLIFIER PROVIDES DUAL OUTPUTS FROM A SINGLE SOURCE WITH COMPLETE ISOLATION
DIPPLE, C. R. /WESTINGHOUSE ASTRONUC. LAB./
NEFF, G. A. /NEFF INSTR. CORP./ DATE- JUL. 1967
NUC-10056

Amplifier provides two amplified outputs from a single input signal with complete transformer isolation. It uses modulation techniques to obtain the separated output.

B67-10226

LABORATORY PULSE MODULATOR USES MINORITY CARRIER STORAGE DIODES
SPON- INNOVATOR NOT GIVEN /SYLVANIA ELECTRON. SYSTEMS/ DATE- JUL. 1967
M-FS-2442

Pulse modulator is capable of continuously variable pulse width over a 10 to 1 range of 1.0 microsecond to 0.1 microsecond and operates over a wide range of pulse repetition rates. Pulse width diversity is obtained by operating step-recovery diodes in the reverse conduction mode.

B67-10229

GLOW DISCHARGE DENSITY SENSOR PROBE LIFE IS EXTENDED
MAHUGH, R. A. /BOEING CO./ DATE- JUL. 1967
M-FS-1707

Excitation of the glow discharge probes with a high peak-to-peak voltage square wave reduces instability of density sensors. This results in good probe life plus output stability over a wide range.

B67-10230

FUSED DIODE PROVIDES VISUAL INDICATION OF FUSE CONDITION
JENKINS, K. H. DATE- JUL. 1967
KSC-67-16

Fused diode combines a semiconductor diode and a circuit protective fuse within a common transparent cartridge. It provides visual indication of fuse condition which precludes the necessity of making resistance checks with an ohmmeter.

B67-10231

IMPROVED ATMOSPHERIC PARTICLE ANALYZER
SPON- INNOVATOR NOT GIVEN /BLOCK ENG./ DATE- JUL. 1967
ERC-33

Nephelometer measures aerosol particles in wide concentration and size distribution ranges. It measures the light scattered from the aerosol particles at a controlled sampling rate to ensure laminar flow through the sample tube, and thereby eliminate the need for sheath air.

B67-10234

AN IMPROVED NUCLEAR MAGNETIC RESONANCE SPECTROMETER
ELLEMAN, D. D. MANATT, S. L. DATE- JUL. 1967
JPL-762

Cylindrical sample container provides a high

01 ELECTRICAL (ELECTRONIC)

degree of nuclear stabilization to a nuclear magnetic resonance /nmr/ spectrometer. It is placed coaxially about the nmr insert and contains reference sample that gives a signal suitable for locking the field and frequency of an nmr spectrometer with a simple audio modulation system.

B67-10239

A PHONOCARDIOGRAM SIMULATOR

KEEFER, J. M. DATE- JUL. 1967

KSC-67-94

Simulator calibrates and checks out phonocardiograms used in physiological monitoring of astronauts in flight and during flight simulation. It is also used to check out telemetry systems and instrumentation systems for phonocardiogram monitoring in hospitals and medical care centers, and in training personnel to use such systems.

B67-10242

WEB BELT LOAD MEASURING INSTRUMENT HAS

EXCELLENT STABILITY

WALKER, R. R. /N. AM. AVIATION/ DATE- JUL. 1967

MSC-921

Web belt system measures belt or strap load. It is partially disassembled and installed on an existing belt without cutting or re-threading the belt. A strain gage, installed on one of the support beams, eliminates errors due to uneven loading.

B67-10246

IMPROVED TELEVISION SIGNAL PROCESSING SYSTEM

WONG, R. Y. DATE- JUL. 1967 REAN- SEE ALSO

B67-10005

NPO-10140

Digital system processes spacecraft television pictures by converting images sensed on a photostorage vidicon to pulses which can be transmitted by telemetry. This system can be applied in the processing of medical X ray photographs and in electron microscopy.

B67-10248

RECTILINEAR DISPLAY GIVES ACCELERATION LOAD

FACTOR AND VELOCITY INFORMATION

FRANK, A. J. JOHNSON, B. C. /N. AM. AVIATION/

DATE- JUL. 1967

MSC-1045

Spacecraft entry monitoring system /EMS/ gives a rectilinear display of acceleration load factor and velocity information. This allows an astronaut to respond with manual spacecraft attitude corrective maneuver commands.

B67-10249

COMPUTER PROGRAM SAMPLES DIGITAL DATA FOR

CRT DISPLAY

DAY, D. J. WICKES, W. R. /N. AM. AVIATION/

DATE- JUL. 1967

MSC-999

High volume, multichannel data reduction computer program permits selection of the rates at which digital data is sampled. The program, written in FORTRAN 4 source language, also permits accessibility to the original mass of data.

B67-10250

EXPERIMENTAL COHERENT FRACTIONAL FREQUENCY

MULTIPLIER AT S-BAND

MOSTRUM, R. A. /SMITH ELECTRONICS CO./ DATE-

JUL. 1967

M-FS-2427

Experimental circuit produces an efficient fractional frequency multiplier that will operate on a 5.6 mw, 2101.8 MHz input signal to achieve an output-to-input frequency ratio of 240/221. Step-recovery diodes used in all frequency-changing stages result in a coherent offset frequency.

B67-10251

AN EFFICIENT, TEMPERATURE-COMPENSATED

SUBCARRIER OSCILLATOR

LAWRENCE, E. D. MEAD, D. C. /HUGHES AIRCRAFT

CO./ DATE- AUG. 1967

JPL-SC-091

Telemetry subcarrier oscillator has temperature stability, consumes a minimum of power, and has a high input impedance. Its output frequency is a linear function of the magnitude of an input signal. A circuit using an input buffer with a field effect transistor serves as the temperature-compensating element.

B67-10253

SOLID STATE PHASE DETECTOR REPLACES BULKY

TRANSFORMER CIRCUIT

MOBERLY, C. L. /MOTOROLA/ DATE- JUL. 1967

MSC-11007

Miniature solid state phase detector using MOSFETs is used in a phase lock loop with a sun-bit detector in an integrated data-link circuit. This replaces bulky transformer circuits. It uses an inverter amplifier, a modulator switch, and a buffer amplifier.

B67-10254

A CALIBRATION MEANS FOR SPECTRUM ANALYZERS

LARSON, M. S. DATE- JUL. 1967

MSC-10987

Spectrum analyzer calibration system is rapid and provides an accurate family of adjustable markers at any point in the spectrum. Pulse width controls determine the number of markers. The unit operates with a repetition rate from 300 cps to 40 kc at a center frequency from 10 kc to 2 Mc.

B67-10255

ABSOLUTE FREQUENCY STABILIZATION OF LASER

OSCILLATOR AGAINST LASER AMPLIFIER

SIEGMAN, A. E. /SYLVANIA ELECTRON. SYSTEMS/

DATE- JUL. 1967

M-FS-2559

Long-term absolute frequency stabilization of a laser oscillator is obtained when the lasers oscillation frequency is referenced to the exact center of an atomic transition. A laser amplifier acts as a discriminant to indicate when the laser frequency deviates from the center of its atomic transition.

B67-10257

FAST-RESPONSE FREQUENCY-TO-ANALOG CONVERTER

HAGIHARA, F. S. /N. AM. AVIATION/ DATE- JUL.

1967

M-FS-709

Frequency-to-analog converter has a fast response time and a low ripple. The circuit uses a frequency-to-pulse converter which provides two pulse trains, both at the same frequency as that of the input signal, but with a 10 microsecond difference between the trains.

B67-10258

MULTICHANNEL PULSE HEIGHT ANALYZER IS

INEXPENSIVE, FEATURES LOW POWER

REQUIREMENTS

EWALD, C. J. SARKADY, A. A. /NEW HAMPSHIRE

UNIV./ DATE- AUG. 1967

HQN-10020

Consumption multichannel pulse height analyzer performs balloon and rocket investigations of solar neutrons with energies greater than 10 Mev. The lightweight unit can operate in a temperature range of minus 30 degrees to plus 70 degrees C and withstand storage temperatures from minus 50 degrees to plus 90 degrees C.

B67-10259

A PIEZO-BAR PRESSURE PROBE

FRIEND, W. H. MURPHY, C. L. SHANFIELD, I. /MC

GILL UNIV./ DATE- JUL. 1967

LEWIS-393

Piezo-bar pressure type probe measures the impact velocity or pressure of a moving debris cloud. It measures pressures up to 200,000 psi and peak pressures may be recorded with a total pulse duration between 5 and 65 msec.

B67-10260

TESTER AUTOMATICALLY CHECKS INSULATION OF

INDIVIDUAL CONDUCTORS IN MULTIPLE-STRAND

CABLES

SHAW, J. VUCKOVICH, M. /WESTINGHOUSE ASTRONUCL.

LAB./ DATE- JUL. 1967
NUC-10068

Insulation tester checks multiple-strand electrical cables in nuclear rocket reactors. It has both manual and automatic capabilities and can check the insulation of a cable with 200 or more conductors in a few minutes.

B67-10262

SOLID STATE CIRCUIT AVERAGES MULTIPLE SIGNALS AND REJECTS THOSE VARYING SIGNIFICANTLY FROM THE AVERAGE

ELMIGER, R. A. /WESTINGHOUSE ASTRONUCL. LAB./
DATE- AUG. 1967
NUC-10066

Average and reject logic control system provides an average of the output signals of transducers measuring critical parameters. It uses a circuit that compares each signal against an average, rejects any signal that departs significantly from the average, and supplies an average of the acceptable signals.

B67-10263

AUTOMATED TESTER PERMITS PRECISE CALIBRATION OF PRESSURE TRANSDUCERS FROM 0 TO 1050 PSI
BRINDA, J. KRISTOFF, L. SHAW, J. VUCKOVICH, M.
/WESTINGHOUSE ASTRONUCL. LAB./ DATE- AUG. 1967
NUC-10067

Automated portable checker allows last-minute calibration of pressure transducers before testing. It uses a pressure console and equipment that can produce test pressures of 0-1050 psi. The console can be connected to other apparatus for measurement and visual display of the electrical output.

B67-10267

TESTER AUTOMATICALLY CHECKS PAPER TAPE PUNCH AND READER AFTER MAINTENANCE

MAZER, L. MC MURCHY, D. D. DATE- AUG. 1967
ARC-66

Device automatically bench tests paper tape punches and readers in a simulated operating environment following routine maintenance. The reader and punch operate back-to-back and the paper tape output feeds the reader. The tape leader is prepunched with an arbitrary pattern that is continuously reproduced during the check.

B67-10268

SELF-BALANCING LINE-REVERSAL PYROMETER AUTOMATICALLY MEASURES GAS TEMPERATURES
BUCHELE, D. DATE- AUG. 1967
LEWIS-348

Automatic line-reversal pyrometer measures gas temperatures from 2900 degrees to 4500 degrees R. The self-balancing device uses the sodium D-line but replaces the two conventional manual operations of the line-reversal method and can be used by semiskilled personnel.

B67-10269

OSCILLOSCOPE USED AS X-Y PLOTTER OR TWO-DIMENSIONAL ANALYZER
HANSEN, D. ROY, N. /THOMPSON-RAMO-WOOLDRIDGE/
DATE- AUG. 1967
LEWIS-311

Oscilloscope used as an X-Y plotter or two-dimensional analyzer tags each point with a yes or no, depending on a third parameter. The usual square-wave pulse is replaced on the scope by a single information-bearing dot which lengthens to a dash in response to a simultaneous event.

B67-10270

ELECTRONIC SHUTTER GATES IMAGE ORTHICON ON AND OFF
SENSING, W. A. /RCA/ DATE- AUG. 1967
HQ-96

TV camera system contains an electronic shutter that gates the image orthicon photocathode on during expose time and off at all other times. The system records image of diffuse light-scattering regions in the solar system.

B67-10274

HIGH IMPACT PRESSURE REGULATOR WITHSTANDS

IMPACTS OF OVER 15,000 G

BILES, J. E., JR. FLOYD, E. L. TOPITS, A. N., JR. DATE- AUG. 1967
NPO-10175

High impact pressure regulator used with a high impact gas scannograph withstands impacts of over 15,000 g. By the passage of fluid through the first and second chambers of the regulator, the pressure of the scannograph is regulated from a specific input valve to the desired output pressure valve.

B67-10275

PRIMARY CELL USES NEITHER LIQUID NOR FUSED ELECTROLYTES
GUTMANN, F. HERMAN, A. M. REMBAUM, A. DATE- AUG. 1967 REAN- SEE ALSO B66-10682
NPO-10001

Dry, solid state primary battery cell establishes an electrode reaction by a charge transfer mechanism without liquid phase ionization of electrolyte compounds. The charge transfer complex is sufficiently conductive to permit the passage of useful current.

B67-10276

SYSTEM PRECISELY CONTROLS OSCILLATION OF VIBRATING MASS

HANCOCK, D. J. /BUNKER-RAMO CORP./ DATE- AUG. 1967
M-FS-1875

System precisely controls the sinusoidal amplitude of a vibrating mechanical mass. Using two sets of coils, the system regulates the drive signal amplitude at the precise level to maintain the mechanical mass when it reaches the desired vibration amplitude.

B67-10277

IR VIDICON SCANNER MONITORS MANY TEST POINTS
FORTIER, R. J. /BOBING CO./ DATE- AUG. 1967
M-FS-1937

Infrared /IR/ scanners are used in test systems that involve many signal paths from transducers to a central evaluation point. The scanner, an IR-sensitive vidicon, looks at the indicator panels of each subsystem of the equipment being tested and picks up the level of radiation from each IR source mounted thereon.

B67-10284

VIBRATOR ELAPSED TIME IS AUTOMATICALLY CONTROLLED
BUROWICK, E. A. /N. AM. AVIATION/ DATE- AUG. 1967
M-FS-2573

Circuit determines elapsed operating time for vibrators when three vibrators are located in one room and are powered by two amplifiers through either of two control systems. It operates the control system elapsed time clocks only when voltage is applied to the vibrator armatures.

B67-10289

WIDEBAND, HIGH EFFICIENCY OPTICAL MODULATOR REQUIRES LESS THAN 10 WATTS DRIVE POWER
BECKNELL, W. E. BATTMAN, W. J. YAP, B. K. /SYLVANIA ELECTRON. SYSTEMS/ DATE- AUG. 1967
M-FS-12733

Wideband optical modulation system operates with less than 10-watts drive power. It consists of an optical modulator and transistorized driver that combines small cross-section potassium dideuterium phosphate crystals with laser beam-condensing optics. Optical modulation systems may serve importantly in future space wideband communication systems.

B67-10294

SENSITIVE BRIDGE CIRCUIT MEASURES CONDUCTANCE OF LOW-CONDUCTIVITY ELECTROLYTE SOLUTIONS
SCHMIDT, K. DATE- AUG. 1967
ARG-147

Compact bridge circuit measures sensitive and accurate conductance of low-conductivity electrolyte solutions. The bridge utilizes a phase sensitive detector to obtain a linear deflection of the null indicator relative to the

01 ELECTRICAL (ELECTRONIC)

measured conductance.

B67-10298

ELECTRONIC DUMMY FOR ACOUSTICAL TESTING

BAUER, B. B. DI HATTIA, A. L. ROSENHECK, A. J. STERN, M. TORICK, E. L. /CBS LABS./ DATE- AUG. 1967 REAN- SEE ALSO M66-25565

MSC-206 MSC-1164 MSC-1165 MSC-1166

Electronic Dummy /ED/ used for acoustical testing represents the average male torso from the Xiphoid process upward and includes an acoustic replica of the human head. This head simulates natural flesh, and has an artificial voice and artificial ears that measure sound pressures at the eardrum or the entrance to the ear canal.

B67-10300

CIRCUIT PROVIDES OVERCURRENT PROTECTION TO PUSH-PULL AMPLIFIER

SKORRA, D. J. /HONEYWELL/ DATE- AUG. 1967 MSC-12033

Circuit in push-pull amplifier limits the current flowing to a predetermined level and provides that overcurrent in one half of the amplifier turns off the other half.

B67-10303

PROCESS CONTROLS INTRODUCTION OF SELECTED IMPURITIES INTO SEMICONDUCTOR WAFERS

BARTHOLOMEY, W. C. TOPFER, A. R. /RCA/ DATE- AUG. 1967 GSFC-523

Modified three-step process controls the concentration of lithium diffused as a dopant into the base region of a diffused n-on-p silicon solar cell wafer. Part of the surface layer of the base region of the p-type silicon containing the diffused dopant is removed, prior to redistributing the remaining portion of the dopant into the bulk of the wafer.

B67-10311

TRANSISTOR BIASED AMPLIFIER MINIMIZES DIODE DISCRIMINATOR THRESHOLD ATTENUATION

LARSEN, R. N. DATE- AUG. 1967 ARG-163

Transistor biased amplifier has a biased diode discriminator driven by a high impedance /several megohms/ current source, rather than a voltage source with several hundred ohms output impedance. This high impedance input arrangement makes the incremental impedance of the threshold diode negligible relative to the input impedance.

B67-10313

PRECISION CAPACITOR HAS IMPROVED TEMPERATURE AND OPERATIONAL STABILITY

BROOKSHIER, W. K. LEWIS, R. N. DATE- AUG. 1967 ARG-189

Vacuum dielectric capacitor is fabricated from materials with very low temperature coefficients of expansion. This precision capacitor in the 1000-2000 picofarad range has a near-zero temperature coefficient of capacitance, eliminates ion chamber action caused by air ionization in the dielectric, and minimizes electromagnetic field charging effects.

B67-10314

SIC/SI DIODE TRIGGER CIRCUIT PROVIDES AUTOMATIC RANGE SWITCHING FOR LOG AMPLIFIER

SPON- INNOVATOR NOT GIVEN /TYCO LABS./ DATE- AUG. 1967 M-FS-1879

Sic/Si diode pair provides automatic range change to extend the operating range of a logarithmic amplifier-conversion circuit and assures stability at or near the range switch-over point. The diode provides hysteresis for a trigger circuit that actuates a relay at the desired range extension point.

B67-10317

IMPROVED HEAD-CONTROLLED TV SYSTEM PRODUCES HIGH-QUALITY REMOTE IMAGE

GOERTZ, R. LINDBERG, J. MINGESZ, D. POTTS, C. DATE- SEP. 1967 ARG-128

Manipulator operator uses an improved resolution

tv camera/monitor positioning system to view the remote handling and processing of reactive, flammable, explosive, or contaminated materials. The pan and tilt motions of the camera and monitor are slaved to follow the corresponding motions of the operators head.

B67-10318

ELECTRONIC TEST INSTRUMENT GENERATES EXTREMELY SMALL CURRENT SIGNALS

BROOKSHIER, W. K. DATE- SEP. 1967 ARG-276

Generator produces dynamic test signals in the range from 0.0001 and 10 to the minus 12th power amperes. It involves an extension of the technique of applying a triangular voltage waveform to a small capacitor to obtain a square-wave output current. The effects of stray capacitance are minimized by appropriate shielding.

B67-10333

BRAZE JOINT QUALITY TESTED ELECTROMAGNETICALLY

GRAVES, D. B. /N. AM. AVIATION/ MC KOWN, R. D. DATE- SEP. 1967 M-FS-12795

Nondestructive electromagnetic method detects the extent of gold/nickel braze alloy flow in an engine injector sleeve-to-post joint. Voltage is induced in an inductor coil, along with a magnetically permeable material. The effects of altering the quantity of braze alloy present can then be measured.

B67-10334

FIELD EFFECT TRANSISTORS IMPROVE BUFFER AMPLIFIER

SPON- INNOVATOR NOT GIVEN /DYNATRONICS/ DATE- OCT. 1967 M-FS-916

Unity gain buffer amplifier with a Field Effect Transistor /FET/ differential input stage responds much faster than bipolar transistors when operated at low current levels. The circuit uses a dual FET in a unity gain buffer amplifier having extremely high input impedance, low bias current requirements, and wide bandwidth.

B67-10335

METHOD OF IMPROVING CONTACT BONDS IN SILICON INTEGRATED CIRCUITS

LYTLE, W. J. /WESTINGHOUSE ELEC. CORP./ SCHUSTER, M. A. DATE- SEP. 1967 M-FS-1753

Fabrication method produces stable and reliable metallic systems for interconnections, contact pads, and bonded leads in silicon planar integrated circuits. The method is based on substrate isolation of the interconnection metal from the contact pad and bonded wire.

B67-10336

DEVICE ENABLES CALIBRATION OF MICROPHONES AT HIGH SOUND PRESSURE LEVELS

GILLEN, A. /WESTINGHOUSE ELEC. CORP./ DATE- SEP. 1967 M-FS-11980

Coupling device accurately calibrates microphones at high sound pressure intensities. The system which uses a liquid as the coupling medium can operate in an automatic mode by using a standard microphone as a control sensor. Feedback from the standard microphone controls the calibration signal level.

B67-10338

ACCURACY OF LASER MEASUREMENTS IMPROVED BY PULSE AUTOCORRELATOR ELECTRONIC SYSTEM

CAMPANELLA, S. J. /MELPAR/ DATE- SEP. 1967 MSC-10033

Pulse autocorrelator electronic system discriminates between the dispersion effect of a disturbed laser signal and background noise by detecting multipath arrivals of Gaussian-shaped signal pulses. The autocorrelation function is time-dependent and can be determined by integrating the product of a received pulse and its delayed replicas.

B67-10339
VIBRATION ANALYSIS UTILIZING MOSSBAUER EFFECT
 ROUGHTON, N. A. DATE- SEP. 1967 REAN- SEE ALSO
 NASA-SP-132
 M-FS-11974
 Measuring instrument analyzes mechanical vibrations in transducers at amplitudes in the range of a few to 100 angstroms. This instrument utilizes the Mossbauer effect, the phenomenon of the recoil-free emission and resonant absorption of nuclear gamma rays in solids.

B67-10343
LIMIT CIRCUIT PREVENTS OVERDRIVING OF OPERATIONAL AMPLIFIER
 OPENSHAW, F. L. /AEROJET-GEN. CORP./ DATE- SEP. 1967
 NUC-10082
 Cutoff-type high gain amplifier coupled by a diode prevents overdriving of operational amplifier. An amplified feedback signal offsets the excess input signal that tends to cause the amplifier to exceed its preset limit. The output is, therefore, held to the set clamp level.

B67-10347
CURRENT PULSE AMPLIFIER TRANSMITS DETECTOR SIGNALS WITH MINIMUM DISTORTION AND ATTENUATION
 BUSH, N. E. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- SEP. 1967
 NUC-10055
 Amplifier translates the square pulses generated by a boron-trifluoride neutron sensitive detector located adjacent to a nuclear reactor to slower, long exponential decay pulses. These pulses are transmitted over long coaxial cables with minimum distortion and loss of frequency.

B67-10356
REPARABLE, HIGH-DENSITY MICROELECTRONIC MODULE PROVIDES EFFECTIVE HEAT SINK
 CARLSON, K. J. /BOEING CO./ MAYTONE, F. F.
 DATE- OCT. 1967
 M-FS-13075
 Reparable modular system is used for packaging microelectronic flat packs and miniature discrete components. This three-dimensional compartmented structure incorporates etched phosphor bronze sheets and frames with etched wire conductors. It provides an effective heat sink for electric power dissipation in the absence of convective cooling means.

B67-10357
DIGITAL-TO-ANALOG CONVERTER OPERATES FROM LOW LEVEL INPUTS
 WINKELSTEIN, R. A. DATE- OCT. 1967
 JPL-907
 Circuit controls a voltage controlled oscillator from computer output binary data representing a rate at which the oscillator is to change. It operates with low level output devices such as integrated circuit registers and devices with somewhat variable output levels.

B67-10359
TEST DEVICE PREVENTS WELD JOINT DAMAGE BY ELIMINATING AXIAL PIN FORCES ON UNPOTTED MODULES
 CREE, R. E. /GEN. DYN./CONVAIR/ DATE- OCT. 1967
 LEWIS-10201
 Test device makes electrical connection to pins on unpotted electronic modules without introducing any displacing forces of the pins, thus preventing weld joint damage. The pins are spaced in a potting header, but are free to slide in and out except for restraint from welded wire joints.

B67-10361
POCKET-SIZE MANUAL TAPE READER DEVICE AIDS COMPUTER TAPE CHECKING
 ODLE, F. L. /BOEING CO./ DATE- OCT. 1967
 KSC-10058
 Pocket-size plastic manual tape reader device aids in reading, interpreting, and correcting binary and octal coded punched tapes. The coded information is more easily read if the color of

the back plate contrasts sharply with that of the tape.

B67-10362
MOVABLE RF PROBE ELIMINATES NEED FOR CALIBRATION IN PLASMA ACCELERATORS
 MILLER, D. B. /GE/ DATE- OCT. 1967
 LEWIS-10127
 Movable RF antenna probe in plasma accelerators continuously maps the RF field both within and beyond the accelerator. It eliminates the need for installing probes in the accelerator walls. The moving RF probe can be used to map the RF electrical field under various accelerator conditions.

B67-10363
SYSTEM AUTOMATICALLY PROVIDES DYNAMIC LAUNCH DECISION CRITERIA
 DOIG, J. E. /BOEING CO./ DATE- OCT. 1967
 M-FS-13063
 Saturn 5 Dynamic Launch Decision Criteria model provides instantaneous criteria, derived from the parametric behavior of a complex system such as a space launch vehicle plus its payload, for the decision making of launch management personnel.

B67-10367
TRANSDUCER MEASURES EMBEDMENT STRESSES IN ELECTRONIC MODULES
 SMITH, M. H. /DOUGLAS AIRCRAFT CO./ DATE- OCT. 1967
 M-FS-13486
 Strain gage load transducer measures axial embedment stresses in resins used for encapsulation of welded electronic modules. It simulates the geometry of an actual electronic component and can be modified in size, shape, and operating temperature.

B67-10368
SIGNAL GENERATOR CONVERTS DIRECT CURRENT TO MULTIPHASE SUPPLIES
 BAUDE, J. /ALLIS-CHALMERS MFG. CO./ DATE- OCT. 1967
 MSC-11043
 Multiphase wave generator uses multivibrators in a feedback control mode that produces output signal pairs that are impressed on the primary windings of inverter transformers sequentially with a 120 degree phase shift from each other.

B67-10369
MULTIPLE METER MONITORING CIRCUITS SERVED BY SINGLE ALARM
 BANDINI, U. /GRUMMAN AIRCRAFT ENG. CORP./ DATE- OCT. 1967
 MSC-10984
 Circuitry for multiple meter relay circuits provides complete isolation for each circuit served by a single alarm and permits alarm reset after an out-of-tolerance event in one relay circuit so that the remaining relay circuits continue to be alarm protected.

B67-10370
MECHANICAL PROPERTIES OF WIRE INSULATION AUTOMATICALLY DETERMINED
 DAWN, F. S. GILL, W. L. DATE- OCT. 1967
 MSC-10983
 Three separate mechanisms test the insulation on electrical wire specimens for mechanical resistance to flexure, abrasion or wear, and vibration. The test mechanisms perform the evaluation tests on insulated wire specimens in a chamber which can be controlled to simulate space or spacecraft cabin environments.

B67-10376
CIRCUIT AUTOMATICALLY CALIBRATES FLOWMETER AGAINST LIQUID-LEVEL GAGE REFERENCE
 FIELD, R. J. /N. AM. AVIATION/ DATE- OCT. 1967
 M-FS-2194
 Turbine-type flowmeter uses the flow of liquid from a tank with reed-type liquid level switches as a calibration reference. A circuit to generate a reliable gate signal consists of an input and switch identification stage, monostable

01 ELECTRICAL (ELECTRONIC)

and bistable multivibrators, and a signal inverter and pulse output stage.

B67-10378

FLOWMETER DETERMINES MIX RATIO FOR VISCOUS ADHESIVES

LEMONS, C. R. /DOUGLAS AIRCRAFT CO./ DATE- OCT. 1967

M-FS-2308

Flowmeter determines mix ratio for continuous flow mixing machine used to produce an adhesive from a high viscosity resin and aliphatic amine hardener pumped through separate lines to a rotary blender. The flowmeter uses strain gages in the two flow paths and monitors their outputs with appropriate instrumentation.

B67-10382

USE OF COLOR-CODED SLEEVE SHUTTERS ACCELERATES OSCILLOGRAPH CHANNEL SELECTION

BOUCHLAS, T. /BOEING CO./ BOWDEN, F. W. DATE- OCT. 1967

KSC-10092

Sleeve-type shutters mechanically adjust individual galvanometer light beams onto or away from selected channels on oscillograph papers. In complex test setups, the sleeve-type shutters are color coded to separately identify each oscillograph channel. This technique could be used on any equipment using tubular galvanometer light sources.

B67-10384

CRACK GROWTH MEASURED ON FLAT AND CURVED SURFACES AT CRYOGENIC TEMPERATURES

ORANGE, T. W. SULLIVAN, T. L. DATE- OCT. 1967

LEWIS-389

Multiple element continuity gage measures plane stress crack growth plus surface crack growth under plane strain conditions. The gage measures flat and curved surfaces and operates at cryogenic temperatures.

B67-10386

CONTINUOUS WAVE DETECTOR HAS WIDE FREQUENCY RANGE

DEUTSCH, W. F. /N. AM. AVIATION/ JARMINSKI, S. J. WHEATLEY, C. E. DATE- OCT. 1967

M-FS-1849

Portable battery-operated detector indicates the presence of steady state signals exceeding a predetermined value over a wide frequency range by the closure of output relay contacts. It was designed to monitor electronic equipment used in the Saturn 2 program.

B67-10387

LAMP ENABLES MEASUREMENT OF OXYGEN CONCENTRATION IN PRESENCE OF WATER VAPOR

BRISCO, F. J. /PERKIN-ELMER CORP./ MOOREHEAD, J. E. PALGE, W. S. DATE- OCT. 1967

MSC-10043

Open-electrode ultraviolet source lamp radiates sufficient energy at 1800 angstroms and 1470 angstroms for use in a double-beam, dual-wavelength oxygen sensor. The lamp is filled with xenon at a pressure of 100 mm of Hg.

B67-10389

RUGGED SWITCH RESPONDS TO MINUTE PRESSURE DIFFERENTIALS

FRIEND, L. C. /BENDIX CORP./ SHAUB, K. D. DATE- OCT. 1967

M-FS-12704

Pressure responsive switching device exhibits high sensitivity but is extremely rugged and resistant to large amplitude shock and velocity loading. This snap-action, single pole-double throw switch operates over a wide temperature range.

B67-10390

HIGH POWER DC/DC AND DC/AC ELECTRICAL POWER CONVERSION TECHNIQUES DEVELOPED

BERRYMAN, G. WHITE, W. T. DATE- OCT. 1967

M-FS-13227

Small magnetic amplifiers pass square waves through transformers and provide regulation by varying the pulse width on the secondary of the output power transformers. This pulse duration

modulation is provided by a control rectifier technique or a phase-shift technique.

B67-10396

MULTIPLEXER USES INSULATED GATE-FIELD EFFECT TRANSISTORS

GUSSOW, S. S. /BOEING CO./ DATE- OCT. 1967

M-FS-13096

Small lightweight multiplexer incorporates IG-FETs /Insulated Gate-Field Effect Transistors/ for all digital logic functions, including the internally generated 3.6-kHz clock. It consists of 30 primary channels, each of which is sampled 120 times per second.

B67-10399

POTASSIUM PLASMA CELL FACILITATES THERMIONIC ENERGY CONVERSION PROCESS

RICHARDS, H. K. DATE- OCT. 1967 REAN- SEE ALSO ANL-6802

ARG-10010

Thermionic energy converter converts nuclear generated heat directly into high frequency and direct current output. It consists of a potassium plasma cell, a tantalum emitter, and a silver plated copper collector. This conversion process eliminates the steam interface usually required between the atomic heat source and the electrical conversion system.

B67-10402

AUTOMATIC TELEMETRY CHECKOUT SYSTEM

GEORGE, W. V. /BOEING CO./ DATE- NOV. 1967

M-FS-12580

Telemetry checkout station is designed to automatically perform measurements on the vehicle telemetry. Its features include real-time digitizing and computer controlled station setup, data processing, and self-check. The station can handle a wide variety of automatic tests by changing its computer programs.

B67-10404

CONTROL APPARATUS FOR SPECTRAL ENERGY SOURCE

GORDON, W. A. DATE- NOV. 1967

LEWIS-391

Automatic light-controlling system for dc arc emission spectrographs controls the vaporization rate of the sample and stabilizes the dc arc. The output energy is regulated such that advantage can be taken of the highly sensitive dc arc source without sacrificing the desired precision.

B67-10410

CURRENT STEERING COMMUTATOR OFFERS VERSATILITY

ZOTTARELLI, L. J. DATE- OCT. 1967

JPL-812

Novel current steering commutator is capable of stepping to all possible locations from any location by appropriate control logic, and is easily tailored to specific user requirements.

B67-10412

TORQUE METER AIDS STUDY OF HYSTERESIS MOTOR RINGS

COLE, M. /METALS RES./ DATE- NOV. 1967

M-FS-12219

Torque meter, simulating hysteresis motor operation, allows rotor ring performance characteristics to be analyzed. The meter determines hysteresis motor torque and actual stresses of the ring due to its mechanical situation and rotation, aids in the study of asymmetries or defects in motor rings, and measures rotational hysteresis.

B67-10416

DIELECTRIC PRISMS WOULD IMPROVE PERFORMANCE OF QUASI-OPTICAL MICROWAVE COMPONENTS

CARSON, J. W. DATE- OCT. 1967

ERC-10011

Properties of the Brewster angle and internal reflection in a dielectric prism are proposed as the basis of a new type of element for use in oversize waveguide in quasi-optical microwave components. Waveguide loss is reduced and precision broadband attenuators, phase shifters,

and directional couplers can be constructed on the basis of the properties.

B67-10422

INFRARED RADIOMETER

BIRD, A. N. /SOUTHERN RES. INST./ DATE- NOV. 1967

M-FS-13373

Radiometer may be used either with an f/16 telescope to measure thermal radiation from the surface of the dark moon or with a short-range optical system to measure thermal radiation from laboratory samples.

B67-10424

TEMPERATURE-SENSED CRYOGENIC BLEED MAINTAINS

LIQUID STATE IN TRANSFER LINE

LINDGREN, A. R. /N. AM. AVIATION/ DATE- OCT. 1967

M-FS-12681

Inverted tee, installed at a high point in a cryogenic transfer line, is equipped with an insulated bleed line that passes a fixed amount of cryogenic fluid at atmospheric pressure. A sensing device activates a vent valve in the tee stack whenever gaseous nitrogen is present.

B67-10425

STUDY MADE OF ANODIZED ALUMINUM CIRCUIT BOARDS

JACOBI, C. /BOEING CO./ SEWELL, R. DATE- NOV. 1967

M-FS-13580

Hard coated aluminum circuit boards demonstrate the feasibility of obtaining an electrical power circuit of high packaging density with very high thermal conductivity and mechanical strengths.

B67-10426

ALUMINUM HEAT SINK ENABLES POWER TRANSISTORS TO BE MOUNTED INTEGRALLY WITH PRINTED CIRCUIT BOARD

SEAWARD, R. C. /N. AM. AVIATION/ DATE- OCT. 1967

M-FS-13663

Power transistor is provided with an integral flat plate aluminum heat sink which mounts directly on a printed circuit board containing associated circuitry. Standoff spacers are used to attach the heat sink to the printed circuit board containing the remainder of the circuitry.

B67-10433

CONCEPTUAL NONORTHOGONAL GYRO CONFIGURATION FOR GUIDANCE AND NAVIGATION

GILMORE, J. P. /MIT/ DATE- NOV. 1967

MSC-11363

Nonorthogonal sensor configuration using six single-degree-of-freedom inertial reference gyroscopes and a complete data processing and self-contained failure detection-and-isolation mechanism provides redundant capabilities to guidance and navigation systems. This system has been formulated in a strap-down configuration to attain maximum redundancy.

B67-10434

ALGEBRAIC MONTE CARLO PROCEDURE REDUCES STATISTICAL ANALYSIS TIME AND COST FACTORS

AFRICANO, R. C. /N. AM. AVIATION/ LCGSDCN, T. S. DATE- NOV. 1967

M-FS-1887

Algebraic Monte Carlo procedure statistically analyzes performance parameters in large, complex systems. The individual effects of input variables can be isolated and individual input statistics can be changed without having to repeat the entire analysis.

B67-10435

INTERFERENCE EFFECTS ELIMINATED IN RANDOM ORIENTED SPACE STATION ANTENNA SYSTEM

REILLY, R. R. /LOCKHEED-CALIF. CO./ DATE- NOV. 1967

MSC-11004

System eliminates destructive interference effects among multiple omnidirectional or semi-omnidirectional antennas on a large space vehicle that is either spin-stabilized or randomly oriented relative to the ground station with which

communication is necessary.

B67-10438

REVIEW OF RESEARCH AND DEVELOPMENT IN FLUID LOGIC ELEMENTS

READER, T. /SFERRY RAND CORP./ DATE- NOV. 1967

M-FS-420

Research and development in multistate fluid logic elements is reviewed in a historical and critical report. The report concludes that in the development of fluid amplifiers, there are elements with very high gain and poor switching speed, and other elements with very high switching speed and poor gain.

B67-10444

ELLIPSOIDAL-MIRROR REFLECTOMETER ACCURATELY

MEASURES INFRARED REFLECTANCE OF MATERIALS

DUNN, S. T. /NATL. BUR. OF STDS./ RICHMOND, J. C. DATE- NOV. 1967

GSFC-566

Reflectometer accurately measures the reflectance of specimens in the infrared beyond 2.5 microns and under geometric conditions approximating normal irradiation and hemispherical viewing. It includes an ellipsoidal mirror, a specially coated averaging sphere associated with a detector for minimizing spatial and angular sensitivity, and an incident flux chopper.

B67-10446

BATTERY CHARGE REGULATOR IS COULOMETER

CONTROLLED

PAULKOVICH, J. DATE- NOV. 1967

GSFC-561

Coulometer controlled battery charge regulator controls nickel/cadmium type primary cells used in space applications. The use of the coulometer as an ampere hour measuring device permits all available current to go to the battery until full charge state is reached, at which time the charge rate is automatically reduced.

B67-10447

OSCILLATOR CIRCUIT OPERATES AS DIGITALLY CONTROLLED FREQUENCY SYNTHESIZER

CLIFF, R. A. DATE- NOV. 1967

GSFC-570

Oscillator circuit converts digital data from the format of binary information at several input terminals to the format of discrete frequencies at the output terminals. Each state of the input levels corresponds to one frequency at the output. This device provides a large number of accurately controlled frequencies from a single stable oscillator.

B67-10448

FOIL RADIOMETER ACCESSORY IMPROVES

MEASUREMENTS

SCHUMACHER, P. E. /N. AM. AVIATION/ DATE- NOV. 1967

M-FS-12684 M-FS-12717

The responsiveness of a foil radiometer is increased and its time constant is simultaneously decreased by isolating the foil in a controlled environment. Using an optical system, it is coupled to the media to be measured, and the resulting concentration of energy permits the thermocouple junction temperature to respond quickly.

B67-10449

DIGITAL VOLTAGE-CONTROLLED OSCILLATOR

SALIGA, T. V. SCHAEFER, D. H. STRONG, J. P., III DATE- NOV. 1967

GSFC-512

Digital voltage-controlled oscillator generates a variable frequency signal controlled linearly about a center frequency with high stability and is phase controlled by an applied voltage. Integration ahead of the digital circuitry provides linear operation with control voltage having appreciable noise components.

B67-10458

DESIGN FOR HIGH-TEMPERATURE /1800 DEG F/

LIQUID METAL PRESSURE TRANSDUCER

ENGDAHL, R. E. /CONSOLIDATED CONTROLS CORP./

01 ELECTRICAL (ELECTRONIC)

DATE- NOV. 1967

LEWIS-10144

Thermionic diode sensor is used as a pressure transducer in advanced space power systems using liquid metals as working and heat transfer media at temperatures up to 1800 deg F. The sensor converts the motion of a pressure actuated refractory alloy capsule into a suitable electrical output.

B67-10459

STABLE AC PHASE AND AMPLITUDE COMPARATOR

BRUCE, H. P. /MARTIN CO./ DATE- NOV. 1967

M-FS-13086

Stable ac phase and amplitude comparator detects excessive vehicle maneuvering or vibration. It has phase demodulation, low-pass filter, and multiple threshold-setting capability designed specifically for low drifts over a wide range of temperatures.

B67-10460

RANGE RECORDING TECHNIQUE ENABLES FOUR-WAY

POLARIZATION MEASUREMENTS

SWINDALL, P. E. DATE- NOV. 1967

M-FS-12447

Manually tracked antenna is the most critical part of range recording system which has signal strength recording responses from dc to 20 kHz. The system records all polarizations simultaneously.

B67-10461

PROTECTED, HIGH-TEMPERATURE CONNECTING CABLE

ENGDAHL, R. E. /CONSOLIDATED CONTROLS CORP./

DATE- NOV. 1967

LEWIS-10149

Ceramic insulated, swaged stainless steel, sheathed, protective atmosphere cable admits electrical leads into an 1800 deg F air-environment test chamber. The cable has some bending capability and provides for nine niobium alloy conductors. An argon purge during the TIG weld closure protects internal wires from oxidation and embrittlement.

B67-10467

AUTOMATIC TESTING DEVICE FACILITATES NOISE

CHECKS AND ELECTRONIC CALIBRATIONS

HARROLD, J. L. WEEGMANN, C. P. DATE- NOV. 1967

LEWIS-10173

Automatic Digital Noise Checker determines the noise content of the many analog inputs of a data acquisition system and whether the Electronic Calibrations /EC/ on some data channels are operating properly.

B67-10468

SERIES TRANSISTORS ISOLATE AMPLIFIER

FROM FLYBACK VOLTAGE

BANKS, W. /GEN. DYN. CORP./ DATE- NOV. 1967

MSC-11023

Circuit enables high sawtooth currents to be passed through a deflection coil and isolate the coil driving amplifier from the flyback voltage. It incorporates a switch consisting of transistors in series with the driving amplifier and deflection coil. The switch disconnects the deflection coil from the amplifier during the retrace time.

B67-10469

ULTRAMINIATURE TELEVISION CAMERA

DETREVILLE, R. J. DRAGO, N. /TELEDYNE SYSTEMS CO./

N. DATE- NOV. 1967

M-FS-11967

Ultraminiature television camera with a total volume of 20.25 cubic inches, requires 28 vdc power, operates on UHF and accommodates standard 8-mm optics. It uses microelectronic assembly packaging techniques and contains a magnetically deflected and electrostatically focused vidicon, automatic gain control circuit, power supply, and transmitter.

B67-10470

TECHNIQUE ELIMINATES HIGH VOLTAGE ARCING

AT ELECTRODE-INSULATOR CONTACT AREA

NEALY, G. DATE- NOV. 1967

LEWIS-10133

Coating the electrode-insulator contact area with silver epoxy conductive paint and forcing the electrode and insulator tightly together into a permanent connection, eliminates electrical arcing in high-voltage electrodes supplying electrical power to vacuum facilities.

B67-10471

TRANSIENT SENSOR DEVELOPMENT

CASH, J. /FED. ELEC. CORP./ DATE- NOV. 1967

M-FS-13370 M-FS-13371

Pulse width/amplitude- and noise-sensors are updated to integrated circuit design concepts, and rise time/amplitude sensor design is reduced to an operational prototype to make all the sensors compatible for one system operation. Therefore, transients interfering with the design operation of receivers could be individually isolated and identified.

B67-10475

BLOOD PRESSURE REPROGRAMMING ADAPTER

ASSISTS SIGNAL RECORDING

VICK, H. A. DATE- DEC. 1967

MSC-265

Blood pressure reprogramming adapter separates the two components of a blood pressure signal, a dc pressure signal and an ac Korotkoff sounds signal, so that the Korotkoff sounds are recorded on one channel as received while the dc pressure signal is converted to FM and recorded on a second channel.

B67-10481

CONVERTER PROVIDES CONSTANT ELECTRICAL

POWER AT VARIOUS OUTPUT VOLTAGES

PAULKOVICH, J. DATE- DEC. 1967

GSFC-519

Power converter, using an inverted flyback technique, transfers electrical energy at a constant rate from a solar cell source to a number of individual batteries, which are to be charged one at a time. The converter inverts the polarity of the solar cell source and provides the correct charging voltage.

B67-10482

SURFACE-CRACK DETECTION BY MICROWAVE METHODS

FEINSTEIN, L. HRUBY, R. DATE- DEC. 1967

ARC-10009

Microwave surface-crack detection system examines metallic surfaces with a noncontacting probe. The change in the microwave signal reflected from the surface under investigation is an indication of the existence of surface flaws. This technique can detect flaws and scratches as small as 100 microinches.

B67-10487

LONG TIME CONSTANT TIMER REQUIRES NO

RECOVERY TIME

SOMERLOCK, C. R. DATE- DEC. 1967

GSFC-10091

Timing circuit delivers relatively long pulses, yet requires no recovery time after turnoff. It can be retrigged before it has timed out and turned off.

B67-10496

DIGITAL SERVO READOUT SYSTEM INCREASES

RECORDING ACCURACY OF SERVO-BALANCE SCALES

FAUPELL, L. C. /WESTINGHOUSE ASTRONUCL. LAB./

DAVIES, J. B. /TRIDYNE

CORP./ DATE- DEC. 1967

NUC-10125

Digital servo readout system increases recording accuracy of servo-balance weighing scales. Reliability is also increased due to the reduction of the number of components.

B67-10497

HIGH TEMPERATURE THERMOCOUPLE DESIGN

PROVIDES GAS COOLING WITHOUT INCREASING

OVERALL SIZE OF UNIT

ZELLNER, G. J. /WESTINGHOUSE ASTRONUCL. LAB./

DATE- DEC. 1967

NUC-10515

High temperature thermocouple uses a thermoelement

of noncircular cross section with insulation of circular cross section to provide space for the flow of coolant gas down the probe.

B67-10499

VANADIUM DIAPHRAGM ELECTRODE SERVES AS HYDROGEN DIFFUSER IN LITHIUM HYDRIDE CELL
CROUTHANEL, C. E. HEINRICH, R. R. JOHNSON, C. E.
DATE- DEC. 1967 REAN- SEE ALSO B67-10189
ARG-10048

Lithium hydride cell uses vanadium diaphragm electrode as a hydrogen diffuser. Vanadium is high in hydrogen gas solubility and permeability, is least sensitive to adverse surface effects, maintains good mechanical strength in hydrogen atmospheres, and appears to be compatible with all alkali-halide electrolytes and lithium metals.

B67-10503

COMPOSITE SOLAR CELL MATRIX IS RELIABLE, LIGHTWEIGHT AND FLEXIBLE
YASUI, R. K. DATE- DEC. 1967
NPO-10821

Conducting strips mechanically and electrically connect individual solar cells into a linear array of cells, called a solar submodule, and then connect in series two or more submodules to form a solar cell matrix. Tiny perforations in the strip make it easy to solder them directly to the individual solar cells.

B67-10505

THIN FILM THERMAL DETECTOR
MASERJIAN, J. DATE- DEC. 1967
JPL-943

Abnormally large variation of capacitance with temperature is obtained in thin film capacitors when a fixed ionic space charge is present in sufficient density in a dielectric film. This effect is the basis for a new kind of thin film thermal detector, whose performance at room temperature equals or exceeds that of comparable devices at much lower temperatures.

B67-10506

PERFORMANCE OF TURBINE-TYPE FLOWMETERS IN LIQUID HYDROGEN
DATE- DEC. 1967 REAN- SEE ALSO NASA-TN-D-3770
LEWIS-10137

Tests using commercially available flowmeters provide information on the constancy in water of the calibration factor /pulses per unit volume/, on the maximum deviation of the factor from its mean value, and on the probability of predicting the calibration factor of a meter in liquid hydrogen at full scale.

B67-10507

TEST AND INSPECTION FOR PROCESS CONTROL OF MONOLITHIC CIRCUITS
SPANGENBERG, E. /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1967
M-FS-13084

Report details the test and inspection procedures for the mass production of high reliability integrated circuits. It covers configuration control, basic fundamentals of quality control, control charts, wafer process evaluation, general process evaluation, evaluation score system, and diffusion evaluation.

B67-10513

IMPROVED CIRCUIT FOR MEASURING CAPACITIVE AND INDUCTIVE REACTANCES
DALINS, I. MC CARTY, V. /ALA. UNIV. RES. INST./
DATE- DEC. 1967
M-FS-13083

Amplifier circuit measures very small changes of capacitive or inductive reactance, such as produced by a variable capacitance or a variable inductance displacement transducer. The circuit employs reactance-sensing oscillators in which field effect transistors serve as the active elements.

B67-10514

APPARATUS MAKES KLYSTRON OPERATING FREQUENCY ADJUSTABLE FROM REMOTE POINT
CLAUSS, R. C. DATE- DEC. 1967

NPO-09831

Apparatus makes possible proper frequency adjustment in a receiver using a pump klystron for a traveling-wave master. It incorporates a tunable overcoupled cavity with irises of appropriate size to accomplish frequency spread over the desired range and to maintain the Q of the klystron circuit at the optimum value.

B67-10515

VIDEO SYNCHRONIZATION PROCESSOR OVERCOMES POOR SIGNAL-TO-NOISE RATIO
WEBB, D. L. DATE- DEC. 1967
KSC-10002

Video synchronization processor overcomes poor signal-to-noise ratio which occurs during adverse signal conditions caused by flame attenuation, antenna pattern nulls, and near-horizon tracking. The system maintains sync lock far below the point where excessive noise would normally render the video useless.

B67-10517

CONE AND COLUMN SOLAR ENERGY CONCENTRATOR
MC CUSKER, T. J. /GOODYEAR AEROSPACE CORP./
DATE- DEC. 1967 REAN- SEE ALSO NASA-CR-52845
LANGLEY-210

Solar energy concentrator consists of a reflective membrane cone and a stepped parabolic column located along the optical axis of the cone. The membrane cone can be folded for packaging and is supported by an expandable ring at the rim of the cone when erected. The stepped parabolic column can be telescoped for packaging.

B67-10519

CIRCUIT MEASURES HYSTERESIS LOOP AREAS AT 30 HZ
HOFFMAN, C. /MIDWEST APPLIED SCI. CORP./ SPILO, D. DATE- OCT. 1967
M-FS-13069

Analog circuit measures hysteresis loop areas as a function of time during fatigue testing of specimens subjected to sinusoidal tension-compression stresses at a frequency of Hz. When the sinusoidal stress signal is multiplied by the strain signal, the dc signal is proportional to hysteresis loop area.

B67-10534

FLAME SPRAYED DIELECTRIC COATINGS IMPROVE HEAT DISSIPATION IN ELECTRONIC PACKAGING
MACKAY, T. L. /DOUGLAS AIRCRAFT CO./ HULLER, A. N. VANAMAN, J. B. DATE- DEC. 1967
M-FS-13569

Heat sinks in electronic packaging can be flame sprayed with dielectric coatings of alumina or beryllia and finished off with an organic sealer to provide high heat and electrical resistivity.

B67-10535

EUTECTIC FUSE PROVIDES CURRENT AND THERMAL PROTECTION UNDER HIGH VIBRATION
IEROKOMOS, N. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-13664

Eutectic fuses provide current and thermal protection to an electronic system and maintain this protection under high vibration environments. The fuses are embedded within heat shrinkable sleeving which provides positive closing action under the conditions of high current or temperature.

B67-10538

DOUBLE COPPER SHEATH MULTICONDUCTOR INSTRUMENTATION CABLE IS DURABLE AND EASILY INSTALLED IN HIGH THERMAL OR NUCLEAR RADIATION AREA
MC CRAE, A. W., JR. /AEROJET-GEN. CORP./ DATE- DEC. 1967
NUC-10007

Multiconductor instrumentation cable in which the conducting wires are routed through two concentric copper tube sheaths, employing a compressed insulator between the conductors and between the inner and outer sheaths, is durable and easily installed in high thermal or nuclear radiation area. The double sheath is a barrier against moisture, abrasion, and vibration.

01 ELECTRICAL (ELECTRONIC)

B67-10540
AUTOMATIC TRANSDUCER SWITCHING PROVIDES
ACCURATE WIDE RANGE MEASUREMENT OF PRESSURE
DIFFERENTIAL
 YODER, S. K. /AEROJET-GEN. CORP./ DATE- DEC. 1967

NUC-10001
 Automatic pressure transducer switching network sequentially selects any one of a number of limited-range transducers as gas pressure rises or falls, extending the range of measurement and lessening the chances of damage due to high pressure.

B67-10544
ANALOG BUFFER ISOLATES HIGH IMPEDANCE
SOURCE FROM LOW IMPEDANCE LOAD
 DENNY, W. A. /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1967
M-FS-13481

Analog buffer amplifier isolates a high impedance source from a low impedance load through an impedance ratio of approximately 200 million to one. Isolation is accomplished with little alteration to temperature stability, linearity, and gain parameters.

B67-10545
INSTRUMENTATION MONITORS TRANSPORTED
MATERIAL THROUGH VARIETY OF PARAMETERS
 HANSON, H. S. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-12938

Transport instrumentation system used in transporting sensitive or delicate equipment measures the environmental parameters to which the equipment is exposed and records them constantly in time reference. The system provides a complete historical record plus the capability of taking corrective action where indicated by real time readout.

B67-10546
DEVELOPMENT OF LOW TEMPERATURE BATTERY
 ARMSTRONG, G. M. /LIVINGSTON ELECTRON CORP./
 DATE- DEC. 1967 REAN- SEE ALSO NASA CR-54970,
 NASA CR-72173
LEWIS-10326

Self-contained low temperature battery system consisting of a magnesium anode, potassium thiocyanate-ammonia electrolyte and a cathode composed of a mixture of sulfur, carbon, and mercuric sulfate operates for at least seventy-two hours within a discharge temperature range of plus 20 degrees C to minus 90 degrees C.

B67-10548
GMT/LOCAL-TIME CONVERSION CHART
 CREVELING, C. J. DATE- DEC. 1967
GSFC-10521

GMT/local-time conversion is made by a longitude pocket instrument that automatically indicates desired information by simply manipulating the moveable portion of the instrument in accordance with a set of simple instructions imprinted on the reverse side of the instrument.

B67-10550
HIGH-TEMPERATURE /1100 DEGREES F/ CAPACITORS
OPERATE WITHOUT SUPPLEMENT COOLING
 STAPLETON, R. E. /WESTINGHOUSE ELEC./ DATE- DEC. 1967
LEWIS-10324

Multilayered capacitor with one-mil thick pyrolytic boron nitride and wrap around sputtered electrodes achieves parallel electrical interconnections in a stacked configuration of 3 to 9 wafers. These capacitors are compact, lightweight, and suitable for operation in high temperatures without supplemental cooling.

B67-10552
LIGHT-CONTROLLED RESISTORS PROVIDE
QUADRATURE SIGNAL REJECTION FOR HIGH-GAIN
SERVO SYSTEMS
 MC CAULEY, D. D. /PHILCO/ DATE- DEC. 1967
WSO-340

Servo amplifier feedback system, in which the phase sensitive detection, low pass filtering, and multiplication functions required for quadrature

rejection, are preformed by light-controlled photoresistors, eliminates complex circuitry. System increases gain, improves signal-to-noise ratio, and eliminates the necessity for compensation.

B67-10553
SIMPLE FIRST ORDER DATA COMPRESSION
PROCESSOR CONCEPT
 ANDERSON, T. O. DATE- DEC. 1967
NPO-10338

Data-compression processing systems based on an analog-to-digital converter /ADC/, includes a qualitative comparator for comparison of the ADC output with a ramp generator, which is connected as a bidirectional binary counter with selective inputs. A bidirectional ramp counter selects the proper ramp through a ramp generator selection network.

B67-10554
CALIBRATION TECHNIQUE FOR ELECTROMAGNETIC
FLOWMETERS
 SAWOCHKA, S. G. /GE/ DATE- DEC. 1967 REAN- SEE
 ALSO NASA-CR-851
LEWIS-10328

Thermal calorimetric method is used to calibrate electromagnetic flowmeters for liquid alkali metals. The electromagnetic flowmeter is placed in the liquid metal flow system in series with a thermal calorimeter. Therefore, the calculated flow rate through the calorimeter can be compared directly with the respective electromagnetic flowmeter reading.

B67-10557
IMPROVED CAVITY-TYPE ABSOLUTE
TOTAL-RADIATION RADIOMETER
 KENDALL, J. M., SR. PLAMONDON, J. A., JR. DATE-
 DEC. 1967
JPL-807

Conical cavity-type absolute radiometer measures the intensity of radiant energy to an accuracy of one to two percent in a vacuum of ten to the minus fifth torr or lower. There is a uniform response over the ultraviolet, visible, and infrared range, and it requires no calibration or comparison with a radiation standard.

B67-10558
SOLID STATE SINGLE-ENDED SWITCHING
DC-TO-DC CONVERTER
 HONNELL, M. A. /AUBURN UNIV./ DATE- DEC. 1967
M-FS-13598

Solid state, single-ended switching dc-to-dc converter electrically isolated a dc supply from the prime dc power service.

B67-10559
SOLID STATE ZERO-BIAS BILATERAL SWITCH
 HUSTED, J. M. /RCA/ DATE- DEC. 1967
GSFC-532

Circuit switches a plus or minus 2.5 volt peak, dc to 300 kHz input to an operational amplifier. Featured is a bilateral transistor which draws a saturation current of equal amplitude and opposite polarity to the saturation current of the bilateral transistor, cancelling the dc bias effect at the output.

B67-10560
FLAT PACK INTERCONNECTION STRUCTURE
SIMPLIFIES MODULAR ELECTRONIC ASSEMBLIES
 KATZIN, L. DATE- DEC. 1967
JPL-819

Flat pack interconnection structure composed of stick modules simplifies modular electronic assemblies by allowing a single axis mother board. Two of the wiring planes are located in the stick module, which is the lower level of assembly, with the third wiring plane in the mother board.

B67-10561
TRANSISTOR H PARAMETER CONVERSION SLIDE
RULE
 BRANTNER, R. E. DATE- DEC. 1967
JPL-649

Slide rule enables the ready conversion of transistor h parameters from one form to another

and reduces calculation time by a factor of 5 to 10. The scales are selected to cover all ranges of each parameter that will normally exist for any transistor, and answers are given in the correct order of magnitude, making powers-of-ten calculations unnecessary.

B67-10562

IMPROVED DIGITAL TV ENCODING AND DECODING SYSTEM

DEUTERMANN, A. R. /PHILCO-FORD CORP./ DATE- DEC. 1967

MSC-11147

Analog-to-digital coder and digital-to-analog decoder system handles wideband TV signals. The system incorporates solid state plug-in modular units and is operated in a VSD /Variable Slope Delta Modulation/ mode or in the conventional one-bit DM /Delta Modulation/ mode.

B67-10565

LOGIC CIRCUIT DETECTS BOTH PRESENT AND MISSING NEGATIVE PULSES IN SUPERIMPOSED WAVETRAINS

RICE, R. E. /DOUGLAS AIRCRAFT/ DATE- DEC. 1967

M-FS-12518

Pulse divide and determination network provides a logical determination of pulse presence within a data train. The network uses digital logic circuitry to divide positive and negative pulses, to shape the separated pulses, and to determine, by means of coincidence logic, if negative pulses are missing from the pulse train.

B67-10569

MOSFET IMPROVES PERFORMANCE OF POWER SUPPLY REGULATOR

LOKERSON, D. C. DATE- DEC. 1967

GSFC-10022

Circuit with Metal Oxide Semiconductor Field Effect Transistor /MOSFET/ as the voltage reference, provides a high degree of power supply voltage regulation and temperature compensation.

B67-10571

ANALOG VOICING DETECTOR RESPONDS TO PITCH

ABEL, R. S. WATKINS, H. E. /PHILCO-FORD CORP./ DATE- DEC. 1967

GSFC-10085

Modified electronic voice encoder /Vocoder/ includes an independent analog mode of operation in addition to the conventional digital mode. The Vocoder is a bandwidth compression equipment that permits voice transmission over channels, having only a fraction of the bandwidth required for conventional telephone-quality speech transmission.

B67-10572

TELEPRINTER USES THERMAL PRINTING TECHNIQUE

PERKINS, R. D. PERKINS, W. E. TAYLOR, J. W. THOMAS, D. G. PERKINS, R. E. /NATL. CASH REGISTER CO./ DATE- DEC. 1967

MSC-11327

Alphanumeric/facsimile printer receives serial digital data in the form of a specified number of bits per group and prints it on thermally sensitive paper. A solid state shift-register memorizes the incoming serial digital data.

B67-10574

NONDESTRUCTIVE TESTING TECHNIQUES USED IN ANALYSIS OF HONEYCOMB STRUCTURE BOND STRENGTH

ERDMAN, D. C. MARTIN, G. MOORE, J. F. THOMAS, G. VARNEY, H. S. /N. AM. AVIATION/ DATE- DEC. 1967

M-FS-1214 M-FS-1221

DOT /Driver-Displacement Oriented Transducer/, applicable to both lap shear type application and honeycomb sandwich structures, measures the displacement of the honeycomb composite face sheet. It incorporates an electromagnetic driver and a displacement measuring system into a single unit to provide noncontact bond strength measurements.

B67-10575

IMPROVED FREQUENCY DIVIDER EMPLOYS

TRANSISTOR AVALANCHE EFFECT

JOHNS, C. E. DATE- DEC. 1967

NPO-10008

New frequency divider circuit can be synchronized over a wider input control frequency range, has greater phase stability, and is less sensitive to temperature changes than conventional synchronized oscillators. The new circuit uses the avalanche breakdown mode of operation of transistors.

B67-10576

MULTIPLEX TELEVISION TRANSMISSION SYSTEM

REED, W. R. DATE- DEC. 1967

MSC-11595

Time-multiplexing system enables several cameras to share a single commercial television transmission channel. This system is useful in industries for visually monitoring several operating areas or instrument panels from a remote location.

B67-10585

COMPUTER MEMORY ACCESS TECHNIQUE

ZOTTARELLI, L. J. DATE- DEC. 1967

NPO-10201

Computer memory access commutator and steering gate configuration produces bipolar current pulses while still employing only the diodes and magnetic cores of the classic commutator, thereby appreciably reducing the complexity of the memory assembly.

B67-10587

LASER COMMUNICATION SYSTEM IS INSENSITIVE TO ATMOSPHERICALLY INDUCED NOISE

PACKARD, J. N. /AIRCRAFT ARMAMENTS/ DATE- DEC. 1967

GSFC-10396

Angle modulated transmitted reference heterodyne laser communication system is insensitive to atmospherically induced amplitude noise fluctuations and phase distortions.

B67-10595

CONCEPTUAL SERVO TECHNIQUE FOR CONTROLLING TAPE DRIVERS

BENTLEY, R. /KINELOGIC CORP./ COUCHMAN, R. DATE- DEC. 1967

M-FS-12955

Electronic speed control design maintains magnetic tape in close synchronism at the airborne and ground stationed devices. Use of the servo system during the record and reproduce modes results in the minimum amount of frequency distortion and flutter.

B67-10598

CARDIOTACHOMETER WITH LINEAR BEAT-TO-BEAT FREQUENCY RESPONSE

DEBOO, G. J. POPE, J. M. SMITH, D. B. D. DATE- DEC. 1967

ARC-10033

Cardiotachometer detects and displays the human heart rate during physiological studies. It provides linear response to the heart rate, records heart rate during rest and under heavy stress, provides a beat-to-beat indication of changes in heart rate, and is relatively free of interfering signals from activities other than the heart rate.

B67-10603

MULTIPULSE CURRENT SOURCE OFFERS LOW POWER LOSSES AND HIGH RELIABILITY

SPON- INNOVATOR NOT GIVEN /STANFORD RES. INST./ DATE- DEC. 1967

LANGLEY-68

Pulse current source uses low loss, high reliability, LC circuits to provide the necessary high impedance for magnetic memory cores, frequently used in digital computational equipment. Square-loop reactors replace the semiconductor switches previously used.

B67-10606

PREDICTION OF RADIATION DAMAGE EFFECTS IN TRANSISTORS

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- DEC. 1967

GSFC-10021

01 ELECTRICAL(ELECTRONIC)

Quantitative relationships between radiation dosage to transistors and resultant damage are established. Calculation of these dose levels is based on high energy particle population data and analysis of the shielding effect provided by the enclosures surrounding a given transistor.

B67-10614

STUDY OF THERMAL EFFECTS ON NICKEL-CADMIUM BATTERIES

FOLEY, R. T. /AM. UNIV./ WEBSTER, W. H. DATE- DEC. 1967 REAN- SEE ALSO B67-10615 GSFC-10003

Isothermal continuous flow calorimeter is designed to test a nickel-cadmium battery under numerous orbital conditions. This sensitive calorimeter collects cell data such as oxygen pressure and rate of heat generation, and calculates changes in enthalpy.

B67-10615

IMPROVED CALORIMETER PROVIDES ACCURATE THERMAL MEASUREMENTS OF SPACE BATTERIES

FOLEY, R. T. /AM. UNIV./ WEBSTER, W. H. DATE- DEC. 1967 GSFC-10003A

Isothermal continuous flow calorimeter measures the thermal characteristics of space batteries undergoing typical orbital cycling. This is 28 times as sensitive as calorimeters previously used.

B67-10616

VAPOR DEPOSITION PROCESS PROVIDES NEW METHOD FOR FABRICATING HIGH TEMPERATURE THERMOCOUPLES

REHLEY, G. A. /WESTINGHOUSE ASTRONUCL. LAB./ ZELLNER, G. J. DATE- DEC. 1967 NUC-10152

Fabrication techniques for high temperature thermocouples bind all components so that differential thermal expansion and contraction do not result in mechanical slippage and localized stress concentrations. Installation space is reduced or larger thermoelements and thicker insulation can be used to improve temperature measurement accuracy.

B67-10620

BALLPOINT PROBE GIVES OPTIMUM RESULTS IN ULTRASONIC TESTING

MELTON, R. E. /SPACO/ DATE- DEC. 1967 M-FS-13590

Ballpoint-type ultrasonic probe assembly focuses its beam precisely on the bond lines of a composite thin face sheet structure when testing for bond integrity. It can scan in any direction, and eliminate external couplant spray.

B67-10624

TEMPERATURE-STABILIZED, TRIGGERABLE MICROELECTRONIC ASTABLE MULTIVIBRATOR STARTS RELIABLY

STEBBINS, W. J. /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1967 MSC-1173

Multiple chip custom block, MIC construction is used to fabricate an ultracompact, low-power astable multivibrator. The design provides a multivibrator that free runs, eliminating lockup, is triggerable, pulling into synchronization with an external signal source, and permits design flexibility for controlling the frequency variations with temperature.

B67-10629

ELECTRONIC SKEWING CIRCUIT MONITORS EXACT POSITION OF OBJECT UNDERWATER

ROLLER, R. /WESTINGHOUSE ASTRONUCL. LAB./ YAROSHUK, N. DATE- DEC. 1967 NUC-10146

Linear Variable Differential Transformer /LVDT/ electronic skewing circuit guides a long cylindrical capsule underwater into a larger tube so that it does not contact the tube wall. This device detects movement of the capsule from a reference point and provides a continuous signal that is monitored on an oscilloscope.

B67-10635

CONNECTOR SHORTING CAP PROVIDES PIN ALIGNMENT, INSPECTION, AND STRAY VOLTAGE PROTECTION

PETERS, G. A. /N. AM. AVIATION/ WARNING, K. DATE- DEC. 1967 M-FS-13111

Electrical shorting cap provides pin alignment, protection from stray voltages, and inspection capabilities. A Teflon straightener insert is built in to overcome any problems with bent or misaligned pins. A clear plastic bottom allows for inspection of the presence and condition of the pins.

B67-10637

HYDRAULIC SERVO SYSTEM INCREASES ACCURACY IN FATIGUE TESTING

DIXON, G. V. KIBLER, K. S. DATE- DEC. 1967 LANGLEY-217

Hydraulic servo system increases accuracy in applying fatigue loading to a specimen under test. An error sensing electronic control loop, coupled to the hydraulic proportional closed loop cyclic force generator, provides an accurately controlled peak force to the specimen.

B67-10642

HIGHLY STABLE MICROWAVE DELAY LINE

HIGA, W. H. DATE- DEC. 1967 NPO-09828

TWM /Traveling Wave Master/ comb structure serves as a highly stable microwave delay line for determining the short-term stability of the hydrogen maser frequency standards used in the deep space network. Cryogenic cooling is used to minimize signal attenuation and thermal noise.

B67-10643

CONCEPT FOR AUTOMATIC DOPPLER COMPENSATION IN TWO-WAY COMMUNICATION SYSTEMS

MULLER, R. M. DATE- JAN. 1968 GSFC-10213

Automatic Frequency Control system compensates for Doppler shift in two-way communication systems where one or both stations are moving. This automatic correction can be applied to the reply link to eliminate frequency search for the reply or an excessive bandwidth to accommodate the Doppler.

B67-10646

AN IMPROVED MAGNETIC TAPE RECORDER

UBER, P. W. DATE- JAN. 1968 GSFC-08259

Magnetic tape recorder employs a single capstan for simultaneously driving the supply and take-up reels in such a manner that the tape passing between the reels is kept under a predetermined constant tension. This recorder operates with little power and is sufficiently rugged to withstand the severe stresses encountered in high-altitude balloon flight tests.

B67-10649

ELECTRON BEAM DEFLECTED TO DETERMINE FOCAL POINT LOCATION

DOWNING, R. D. /GE/ DATE- JAN. 1968 REAN- SEE ALSO B67-10650 M-FS-14107

System locates the focal point of an extremely high intensity electron beam. The electron beam is swept and scanned cyclically with deflection coils under a focusing lens, causing the beam focal point to move so the locus of its positions is a spherical surface symmetrical to the beam axis.

B67-10650

ELECTRON BEAM STANDBY ABSORBER SYSTEM

DOWNING, R. D. /GE/ DATE- JAN. 1968 REAN- SEE ALSO B67-10649 M-FS-14108

Electron beam energy is absorbed by deflectors which allow beam distribution over an absorber located between the deflectors and workpiece. The undeflected beam passes through a hole in the absorber when the deflection is de-energized, when energized, the beam is kept to a minimum power

level by deflection rate change.

B67-10652

DEVELOPMENT OF DETONATION REACTION ENGINE

LANGE, O. H. STEIN, R. J. TUBBS, H. E. DATE-
JAN. 1968 REAN- SEE ALSO B67-10649
M-PS-14020

Reaction engine operates on the principle of a controlled condensed detonation. In this engine the gas products that are expelled from the engine to produce thrust are generated by the condensed detonation reaction. The engine is constructed of two basic sections consisting of a detonation wave generator section and a condensed detonation reaction section.

B67-10656

LOW COST SCR LAMP DRIVER INDICATES CONTENTS OF DIGITAL COMPUTER REGISTERS

CLIFF, R. A. DATE- DEC. 1967
GSFC-10221

Silicon Controlled Rectifier /SCR/ lamp driver is adapted for use in integrated circuit digital computers where it indicates the contents of the various registers. The threshold voltage at which visual indication begins is very sharply defined and can be adjusted to suit particular system requirements.

B67-10657

REFLECTOMETER FOR RECEIVER INPUT SYSTEM

STELZRIED, C. T. DATE- JAN. 1968
NPO-10843

Reflectometer, built into a microwave input system, measures the match of devices in the waveguide system of tracking receivers. Match measurements can be made on a routine calibration basis. It was installed in the S-band receiving system in the feed cone of the 210-ft antenna.

B67-10658

DAMAGES IN ROLLING ELEMENT BEARINGS MAY BE DETECTED EARLY

WEICHBRODT, B. /GE/ DATE- DEC. 1967
HQ-10031

Early detection method locates damage or small defects in rolling element bearings of critical machine components. This detection method operates on the principle that an impact is generated each time a defect in an otherwise smooth surface is in intimate moving contact with another smooth surface.

B67-10661

AIR SAMPLER COLLECTS AND PROTECTS MINUTE PARTICLES

WOOD, R. C. /LITTON SYSTEMS/ DATE- DEC. 1967
HQ-10037

Air ejector impactor sampler collects and protects samples of particles greater than 0.1 micron in diameter. In operation, it causes impaction of particle-laden air onto several collection surfaces within a collection cylinder. When not operating, the collector cylinder is maintained in a retracted state within a protective envelope.

B67-10662

PHASE PLANE DISPLAYS DETECT INCIPIENT FAILURE IN SERVO SYSTEM TESTING

AFFENITO, F. J. /DUNLAP AND ASSOCIATES/ WOHL, J. G. DATE- DEC. 1967
HQ-10018

Computer based data conditioning and display technique detects incipient failure in servo system testing, for use in prelaunch checkout of complex nonlinear servomechanisms. These phase plane displays enable identification of on line, unusual or abnormal servo responses which can be displayed compactly in the time domain on a cathode ray tube.

B67-10668

UNIQUE FREQUENCY-SHIFT-KEYED DEMODULATION SYSTEM

STALOFF, C. /RCA/ TELTELBAUM, S. DATE- JAN. 1968
GSFC-217

Frequency-Shift-Keyed /FSK/ demodulator provides a frequency discriminator whose outputs

are separate and applied to two identical decoding channels, one decoding binary ones and the other decoding binary zeros. This demodulator rejects data applied to it at any frequency higher than design.

B67-10669

ULTRAMINIATURE MANOMETER-TIPPED CARDIAC

CATHETER

COON, G. W. DATE- DEC. 1967 REAN- SEE ALSO
NASA-TN-D-3319 AND B63-10429
ARC-10054

Miniature diaphragm-type capacitance transducer capable of being mounted on the end of a cardiac catheter has been developed for measurement of intravascular pressures. The transducer can be inserted in small ducts /arteries and veins/ without disturbing the flow characteristics. It is very useful for making measurements in babies.

B67-10672

THERMIONIC DIODE SWITCHING HAS HIGH TEMPERATURE APPLICATION

LUEBBERS, S. S. SHIMADA, K. DATE- JAN. 1968
NPO-10404

Thermionic converter switch permits chopping in the immediate vicinity of a low-voltage, high current power source, eliminating line losses due to temperature limitations of semiconductor devices.

B67-10674

AREAS OF IRREGULAR, DISCONTINUOUS PATTERNS RAPIDLY AND ACCURATELY MEASURED

MUNFORD, J. A. WHITFIELD, C. E. DATE- JAN. 1968
GSFC-10184

Simple, rapid method measures the surface area of a pattern such as comprised by the conductors on a printed circuit board. A negative or positive film of the circuit layout is placed over a uniformly illuminated translucent surface and the proportion of light transmitted to silicon solar cells is determined.

B67-10675

BROADBAND CHOKE SUPPRESSES SPURIOUS CURRENTS IN ANTENNA STRUCTURE

BISHOP, O. L. /MCDONNELL-DOUGLAS CORP./ BOLT, C. A., JR. DATE- JAN. 1968
MSC-10013

Quarter-wavelength chokes are mounted on the coaxial line of an antenna structure to prevent induced spurious currents from affecting the antenna radiation frequency pattern. The choke-absorbent combination approximately doubled the usable frequency range for the antenna system studied.

B67-10676

SCAN RATE CONVERTER FOR TAPE RECORDING AND PLAYBACK OF TV PICTURES

HOLT, N. I. DATE- JAN. 1968
NPO-10166

Magnetic tape recording and playback equipment converts television pictures, both black and white and color, from one scan rate to another. The equipment indexes color picture frames for retrieval electronically and can be used as a document storage and retrieval medium that is compatible with hard-copy printout machines.

B68-10001

DC PIN-TO-PIN TESTING OF INTEGRATED CIRCUITS

THOMAS, E. F. DATE- JAN. 1968
GSFC-10284

External pin-to-pin nondestructive testing procedure measures the electrical characteristics of each element in an integrated circuit. The procedure involves choosing specific pairs of pins and applying appropriate test voltages to them.

B68-10002

GAGE MONITORS QUALITY OF CROSS-WIRE RESISTANCE WELDS

ETZEL, J. PILICH, A. DATE- JAN. 1968
GSFC-90549

Gage nondestructively monitors the quality of cross-wire resistance welds during the welding

01 ELECTRICAL (ELECTRONIC)

operation. The gage gives a dial indication of the relative embedment of the cross wires during the actual welding operation. A direct relationship exists between the depth of embedment and both weld strength and consistency.

B68-10003
LINEAR ANALOG DC VOLTAGE-TO-PULSE-WIDTH
CONVERTER
 CROCKET, W. R. DATE- JAN. 1968
 GSFC-556

Circuit converts a dc analog input signal to pulse widths that are proportional to the input signal voltage. The circuit would be particularly useful as an analog-to-digital converter where low power, ruggedness, reliability, and good linearity are prime requirements.

B68-10007
BINETAL SENSOR AVERAGES TEMPERATURE OF
NONUNIFORM PROFILE
 DITTRICH, R. T. DATE- JAN. 1968
 LEWIS-10362

Instrument that measures an average temperature across a nonuniform temperature profile under steady-state conditions has been developed. The principle of operation is an application of the expansion of a solid material caused by a change in temperature.

B68-10008
IMPROVED PHASE LOCKED LOOP RECEIVER
 DALEY, T. J. /GEN. DYN./ELECTRON./ DATE- JAN. 1968
 GSFC-09561

Improved phase locked loop receiver tracks and demodulates a signal whose signal-to-noise ratio may be low and whose information sidebands are close in frequency. This receiver recovers the carrier from input signals and applies it to a demodulator which recovers the sidebands.

B68-10012
ONE-SHOT PULSE SHAPER CIRCUIT
 RADYS, R. G. /HUGHES AIRCRAFT CO./ DATE- JAN. 1968
 XGS-11379

Pulse shaper circuit exhibits low power dissipation, self setting, and easy triggering. It is basically a magnetic one-shot multivibrator consisting of two blocking oscillators and an inhibit circuit.

B68-10015
INPUT GATE CIRCUIT CONVERTED FOR USE AS
LINEAR AMPLIFIER
 HARPER, T. P. /IBM/ DATE- JAN. 1968
 M-FS-14265

Commercially available integrated circuit that is marketed as a digital computer input gate circuit was converted to a linear amplifier in a microphone circuit that has high input impedance, low output impedance, low cost, and is small enough to fit on a standard printed circuit card.

B68-10016
SMALL, LOW POWER ANALOG-TO-DIGITAL
CONVERTER
 DUNN, R. D. FULLERTON, D. H. /BOEING CO./ DATE- JAN. 1968
 M-FS-13954

A small, low-power, high-speed, 8-bit analog-to-digital converter using silicon chip integrated circuits is suitable for use in airborne test data systems. The successive approximation method of analog-to-digital conversion is used to generate the digital output.

B68-10017
REGULATED DC-TO-DC CONVERTER FEATURES LOW
POWER DRAIN
 THORNWALL, J. DATE- JAN. 1968
 GSFC-03429

A regulated dc-to-dc converter requires negligible standby power for the operation of critical electronic equipment. The main operating circuitry consumes power intermittently according to load conditions, rather than constantly.

B68-10018
DIGITAL DATA AVERAGER IMPROVES CONVENTIONAL
MEASUREMENT SYSTEM PERFORMANCE
 NAYLOR, T. K. ROBERTS, J. A., JR. SCHELLENBACH, R. R. /RCA/ DATE- FEB. 1968
 MSC-12078

Multipurpose digital averager provides measurement improvement in noisy signal environments. It provides increased measurement accuracy and resolution to basic instrumentation devices by an arithmetical process in real time. It is used with standard conventional measurement equipment and digital data printers.

B68-10019
CIRCUIT DETECTS VOLTAGE DECREASE IN
COMPUTER POWER SUPPLY
 HOUCK, W. H. DATE- FEB. 1968
 KSC-67-120

Rapid-response monitoring circuit detects voltage decrease or dropout in any single phase or all three phases simultaneously of a 3-phase 60 Hz computer power supply. It uses lamps to indicate voltage conditions and provides a digital pulse output for a chronological record of voltage irregularities.

B68-10027
ANALYSIS OF FLUTTER IN TAPE TRANSPORT
SYSTEMS
 DAVIS, R. C. SIMPSON, R. S. /ALABAMA UNIV./ DATE- JAN. 1968
 M-FS-11970

Effect of flutter on digital data is recorded by magnetic tape recorders used with instrumentation systems. Major effect for both FM and direct recording techniques is shown to be a perturbation of the signal time base.

B68-10028
ELECTRONIC APERTURE CONTROL DEvised FOR
SOLID STATE IMAGING SYSTEM
 ANDERS, R. A. CALLAHAN, D. E. MC CANN, D. H. /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1968
 M-FS-12428

Electronic means of performing the equivalent of automatic aperture control has been devised for the new class of television cameras that incorporates a solid state imaging device in the form of phototransistor mosaic sensors.

B68-10030
FLARE ANGLES MEASURED WITH BALL GAGE
 CLEGHORN, D. WALL, W. A. DATE- MAY 1968
 M-FS-14690

Precision tungsten carbide balls measure the internal angle of flared joints. Measurements from small and large balls in the flare throat to an external reference point are made. The difference in distances and diameters determine the average slope of the flare between the points of ball contact.

B68-10051
THIN FILM HEAT TRANSFER GAGE IS STABLE
AT HIGHER TEMPERATURES
 LOYD, J. R. PICKARD, R. F. /ASTRO-SPACE LABS./ DATE- MAR. 1968 REAN- SEE ALSO B66-10180
 M-FS-12396

Thin film convective heat transfer gage functions effectively for prolonged periods at temperatures up to 1000 degrees F. An initial resistance shift does not inhibit the performance or accuracy of the gages, as the original resistance-temperature relationship remains unchanged.

B68-10054
AMPLITUDE AND FREQUENCY READOUT OVERLAY
 FITCH, A. E. DATE- MAR. 1968
 GSFC-10183

Amplitude and frequency readout overlay simplifies the interpretation of oscillograph traces for full scale deflections of one inch. The overlay increases accuracy in data interpretation and saves time in analyzing oscillograph records.

B68-10056
LUMINESCENT SCREEN COMPOSITION FOR

CATHODE RAY TUBES

HILBORN, E. H. DATE- MAR. 1968
ERC-19

Screen composition for cathode ray tubes exhibits differential color of emission as a function of beam current variation at a constant accelerating voltage. The screen consists of a mixture of phosphors which emit different hues, have different current saturation values and exhibit a nonlinear current-brightness characteristic.

B68-10058

SIMPLIFIED, HIGH-SPEED BINARY DATA DECODER

ANDERSON, T. O. DATE- FEB. 1968
NPO-10118

Simplified, high-speed decoder of encoded binary data received over a noisy channel is provided in a versatile apparatus that can accommodate more than one particular set of codes. The apparatus is applicable to satellite, lunar, and planetary data transmission.

B68-10059

THERMAL SHORT IMPROVES SENSITIVITY OF CRYOGENICALLY COOLED MASER

CLAUSS, R. C. DATE- MAR. 1968
NPO-09975

In-line, quarter-wave thermal short cools the center conductor of the signal-input coaxial transmission line to a cryogenically cooled traveling wave maser. It reduces both the thermal noise contribution of the coaxial line and the heat leak through the center conductor to the maser at 4.4 degrees K.

B68-10061

ELECTRONIC CIRCUIT PROVIDES AUTOMATIC LEVEL CONTROL FOR LIQUID NITROGEN TRAPS

TURVY, R. R. DATE- MAR. 1968
KSC-10127

Electronic circuit, based on the principle of increased thermistor resistance corresponding to decreases in temperature provides an automatic level control for liquid nitrogen cold traps. The electronically controlled apparatus is practically service-free, requiring only occasional reliability checks.

B68-10063

PLASTIC PREFORMS FACILITATE FABRICATION OF WELDED CORDWOOD ELECTRONIC MODULES

STURMAN, J. C. DATE- MAR. 1968
LEWIS-90339

Molded plastic preform facilitates the fabrication of small lots of welded cordwood circuits. The preforms retain the components during welding and electrical checkout and facilitate encapsulation of the welded module when used with a conventional potting shell.

B68-10065

MULTICHANNEL IMPLANTABLE TELEMETRY SYSTEM

FRYER, T. B. DATE- MAR. 1968 REAN- SEE ALSO
B64-10171, B66-10057, AND B66-10624
ARC-10083

Multichannel telemetry system is used for chronic implantation in animals to monitor a variety of physiological parameters. A hermetically sealed unit, the system uses a time-sharing multiplex scheme to commute between various sensor inputs and enables the number of channels to be increased or decreased.

B68-10067

SELF-CORRECTING, SYNCHRONIZING RING COUNTER USING INTEGRATED CIRCUIT DEVICES

MAASBERG, W. A. /IBM/ DATE- MAY 1968
M-FS-13901

Three nand gate circuits are used to add error detection and reset logic circuitry for initiating and retaining the correct binary state in the flip-flop circuits of a ring counter. As the input signals are counted, the position of the specified state moves in ordered sequence around circuit loop.

B68-10068

DIVERSITY RF RECEIVING SYSTEM WITH

IMPROVED PHASE-LOCK CHARACTERISTICS

DI LOSA, V. J. LAUGHLIN, C. R., JR. DATE- MAR. 1968

XGS-01222

Improved diversity receiving system automatically utilizes the combined output from its two independent receiving channels /with cross-polarized receiving antennas/ to increase the reliability of maintaining the requisite phase lock for optimum signal reception. It is adapted for use with AM, PM, or narrow band FM signals.

B68-10069

PRINCIPLES OF OPTICAL-DATA PROCESSING TECHNIQUES

SHULMAN, A. R. DATE- MAR. 1968
GSFC-10271

Document presents optical-data processing information on a level which will convey the basic principles involved to those having a general technical background. Mathematical discussions are included but are not required for a basic understanding.

B68-10070

DEVELOPMENT OF BIAxIAL TEST FIXTURE

INCLUDES CRYOGENIC APPLICATION

HELF, J. C. KELLY, R. E. KEER, D. A. WALDRON, C. R. /N. AM. AVIATION/ DATE- APR. 1968
M-FS-14185 M-FS-14189

Test fixture has the capability of producing biaxial stress fields in test specimens to the point of failure. It determines biaxial stress by dividing the applied load by the net cross section. With modification it can evaluate materials, design concepts, and production hardware at cryogenic temperatures.

B68-10073

NEW MICROELECTRONIC POWER AMPLIFIER

NEW, T. C. /WESTINGHOUSE ELEC. CORP./ DATE- MAR. 1968

M-FS-13621

Integrated push-pull power amplifier fabricated on a chip of silicon has interdigitated power transistors and is hermetically encapsulated in a beryllia flat package. It provides current output greater than the nominal 10 amperes from an input current drive of 1 ampere.

B68-10074

IMPROVED DC VOLTAGE MULTIPLIER

SAVELLE, C. R., JR. /SPACO/ DATE- MAR. 1968
M-FS-14042

Circuit multiplies a dc input voltage in the millivolt range to yield a larger dc output voltage bearing a fixed ratio to the input voltage. The supply voltage need not be precisely regulated, the potentiometer need not be linear, and the gain of servo amplifier is not critical.

B68-10079

MAGNETIC TAPE TRANSPORT CONTROLLED BY ROTATING TRANSDUCER HEADS

CHUPITY, J. SALCEDO, G. SPERRY, J. D. /AMPEX CORP./ DATE- MAR. 1968

GSFC-483

Magnetic tape transport includes a common drive for both the tape drive capstans and the rotating record/reproduce heads. Speed of the drive may be varied within a preselected range, but, once selected, remains constant so head and capstan are driven in synchronization and at constant speed.

B68-10083

TWIN SOLUTION CALORIMETER DETERMINES HEATS OF FORMATION OF ALLOYS AT HIGH TEMPERATURES

DARBY, J. B., JR. KLEB, R. KLEPPA, O. J. /CHICAGO UNIV./ DATE- APR. 1968

ARG-10114

Calvert-type, twin liquid metal solution calorimeter determines the heats of formation of transition metal alloys at high temperatures. The twin differential calorimeter measures the small heat effects generated over extended periods of time, has maximum operating temperature of 1073 degrees K and an automatic data recording system.

01 ELECTRICAL (ELECTRONIC)

B68-10084

GYRATOR-TYPE CIRCUITS REPLACE UNGROUNDED
INDUCTORS
DEBOO, G. J. DATE- MAR. 1968
XAC-10608

Gyrator circuits using only transistors, capacitors, and resistors which can replace both grounded and ungrounded inductors have been developed to permit complete microminiaturization of circuitry by integration of the components.

B68-10086

METHOD OF DISJOINING ADHESIVELY BONDED
ELECTRONIC CORDWOOD MODULES
SACRAMONE, P. J. /RCA/ DATE- MAY 1968
MSC-12060

Embedment of resistive heating elements in a cordwood module used for packaging electronic components, facilitates separation of the adhesive bond between the module, and metal heat sink and the potting material without damaging the components. Electrical power applied to the elements causes breakdown of bonding material.

B68-10087

SUPERCONDUCTING SWITCH PERMITS MEASUREMENT
OF SMALL VOLTAGES AT CRYOGENIC TEMPERATURES
GOVEDNIK, R. E. HUEBENER, R. P. DATE- APR. 1968
ARG-90260

Dual-coil, superconducting, on-off switch measures small, thermoelectrically generated voltages produced by thermocouples in a liquid helium bath. Placed in a shunt configuration between the thermocouple and the measuring device, the measuring device sees the sum of the voltage to be measured and the spurious thermoelectric voltages.

B68-10088

NEW CAMERA TUBE IMPROVES ULTRASONIC
INSPECTION SYSTEM
BERGER, H. COLLIS, W. J. JACOBS, J. E.
/NORTHWESTERN UNIV./ DATE- APR. 1968
ARG-90237

Electron multiplier, incorporated into the camera tube of an ultrasonic imaging system, improves resolution, effectively shields low level circuits, and provides a high level signal input to the television camera. It is effective for inspection of metallic materials for bonds, voids, and homogeneity.

B68-10089

MONITOR SENSES AMOUNT OF CONTAMINATION
DEPOSITED ON SURFACES
SHEEHY, R. N. DATE- MAR. 1968
GSFC-10212

Monitoring device detects and indicates directly the amount of contamination deposited on a surface. It uses an optical system in conjunction with a reliable collimated light source and associated electronics. Change in its output signal is proportional to change in the optical absorption characteristics of the sample plate surface.

B68-10091

AUTOMATIC CONTOUR WELDER INCORPORATES
SPEED CONTROL SYSTEM
WALL, W. A., JR. DATE- MAR. 1968
M-FS-14574

Speed control system maintains the welding torch of an automatic welder at a substantially constant speed. The system is particularly useful when welding contoured or unusually shaped surfaces, which cause the distance from the work surface to the weld carriage to vary in a random manner.

B68-10093

ACCUMULATOR FOR SHAFT ENCODER
CARROLL, C. C. CHILDS, J. A. ROBISON, R. J.
/AUBURN UNIV./ DATE- MAR. 1968
M-FS-13599

Digital accumulator relies almost entirely on integrated circuitry to process the data derived from the outputs of gyro shaft encoder. After the read command is given, the output register collects and stores the data that are on the set output terminals of the up-down counters.

B68-10100

ALTERNATING CURRENT ELECTROMAGNETIC SERVO
INDUCTION METER
BOGUE, R. K. DATE- MAY 1968
XPR-03838

Electromagnetic device accurately indicates the responses of various sensors in high performance flight research aircraft to conditions encountered in flight. The device responds to sensor inputs to move a slideable armature along an indicator scale by the force of currents induced in the armature winding.

B68-10106

PORTABLE PULSE CODE MODULATION /PCM/
SUBSYSTEM
BRADANINI, P. A. KLUTH, J. T. /N. AM. AVIATION/
DATE- MAR. 1968
MSC-11369

Small, programmable, high speed PCM subsystem, supports the variety of signals inherent in sophisticated equipment. A signal generated by a transducer is first conditioned to the proper signal range, then sampled by an external multiplexer or by the subsystem directly and then converted and transmitted to a receiving station.

B68-10112

PROJECTION TRANSPARENCIES FROM PRINTED
MATERIAL
GRUNEWALD, L. S. NICKERSON, T. B. /BOEING CO./
DATE- APR. 1968
M-FS-14608

Method for preparing project transparencies, or view graphs, permits the use of almost any expendable printed material, pictures, charts, or text, in unlimited color or black and white. The method can be accomplished by either of two techniques, with a slight difference in materials.

B68-10114

PIGGY-BACK MOUNTING WOULD INCREASE
MICROCIRCUIT PACKAGING DENSITY
GAUDIANO, S. DATE- APR. 1968
MSC-12059

Piggy-back method of packaging integrated circuits will increase packaging density and design flexibility. It will also eliminate interconnection leads between the die and associated inductances, and thus increase the attainable frequency response of the circuit.

B68-10116

HIGH EFFICIENCY, HIGH FREQUENCY MAGNETIC
DEFLECTION DRIVER
SCHAFF, P. L. /WESTINGHOUSE ELEC. CORP./ DATE-
APR. 1968
MSC-11597

Electromagnetic deflection yoke stores energy during the scan and releases it in the flyback or retrace. The operation of the device involves a method of switching to a voltage high enough to dissipate the flyback pulse during the retrace time and then operating during the scan time at a much lower voltage.

B68-10118

BILATERAL, ZERO-IMPEDANCE STATIC
SEMICONDUCTOR SWITCH
DOUGHMANN, C. L. /WESTINGHOUSE ELEC. CORP./
DATE- APR. 1968
LEWIS-10129

Static semiconductor switching circuit eliminates the undesirable features of electromechanical relays and conventional semiconductor switching circuits. There is a net zero voltage drop at the terminals and thus a zero impedance for bilateral currents there.

B68-10121

CIRCUIT ENHANCES VERTICAL RESOLUTION IN
RASTER SCANNING SYSTEMS
ALSOVSKY, W. H. GREENWOOD, J. R. HOLLEY, O. M.
/PHILCO-FORD CORP./ DATE- APR. 1968
MSC-12123

Circuit enhances vertical resolution in electron beam, raster scanning systems exhibiting aperture distortion in the vertical direction. A sensitized area /image/ produces a video output

when the scan beam nears it, which causes vertical elongation in the reconstructed images of all sensitized areas on the surface.

B68-10124
RELIABLE, SELF-CALIBRATING VIBRATION
TRANSDUCER
 MC KINNEY, R. L. DATE- APR. 1968
 LANGLEY-89

Transducer system measures the uniaxial vibration amplitudes /deflections/ and frequency of a body subjected to mechanical vibration. The basic system is self-calibrating and provides an output which unambiguously indicates the direction as well as the magnitude of the uniaxial deflections.

B68-10129
COMPENSATION CIRCUIT IMPROVES OPERATION OF
INDUCTIVE COUPLING TRANSFORMERS
 SPON- INNOVATOR NOT GIVEN /SPERRY GYROSCOPE CO./
 DATE- APR. 1968
 M-FS-13801

Circuitry eliminates undesirable modulation effects in rotary transformers which transfer electrical energy to and from angular rate transducers on a gyroscope. It cancels the error by feeding back compensation signals through a tertiary winding on the stator of the output rotary transformer.

B68-10130
PHASE-LOCK LOOP FREQUENCY CONTROL AND THE
DROPOUT PROBLEM
 ATTWOOD, S. KLINE, A. J. /MOTOROLA/ DATE- APR. 1968
 M-FS-13948 M-FS-13950

Technique automatically sets the frequency of narrow band phase-lock loops within automatic lock-in-range. It presets a phase-lock loop to a desired center frequency with a closed loop electronic frequency discriminator and holds the phase-lock loop to that center frequency until lock is achieved.

B68-10131
AUTOMATED PATIENT MONITORING SYSTEM
 BEDARD, R. E. BUXTON, R. L. DAWSON, W. S.
 /BOEING CO./ DATE- MAY 1968 REAN- SEE ALSO
 B68-10065
 M-FS-14552

Radio-linked patient monitoring system collects several channels of physiological data from as many as 64 hospital patients and transmits the data in digital form to a central control station. The system consists of a central control station and battery-operated patient units comprising small strap-on electronics packages.

B68-10133
IMPROVED COMPENSATION CIRCUIT FOR
DIRECT-COUPLED AMPLIFIERS
 BREUER, D. R. /TRW SPACE TECHNOL. LABS./ DATE- APR. 1968
 MSC-11148 MSC-11235

Drift- and offset-control circuit compensates the inherent temperature drift and offset of a closed-loop feedback amplifier. It overcomes the disadvantages of conventional chopping circuits used to minimize drift in low-level, direct-coupled amplifiers.

B68-10138
ELECTRONIC CALORIMETRIC COMPUTER
 HECKELMAN, J. D. DATE- APR. 1968
 LEWIS-90254

Electronic calorimetric computer calculates nuclear reactor thermal power output to a nominal accuracy of 1 percent. Heat balance is determined by an electronic approach. The thermal power is calculated using the inlet and outlet temperatures and the volume of cooling water and is displayed by a digital readout system.

B68-10140
INSTRUMENTATION FOR BONE DENSITY MEASUREMENT
 MEHAGG, L. S. /KAMAN INSTR./ DATE- APR. 1968
 MSC-11388

Measurement system evaluates the integrated bone

density over a specific cross section of bone. A digital computer converts stored bone scan data to equivalent aluminum calibration wedge thickness, and bone density is then integrated along the scan by using the trapezoidal approximation integration formula.

B68-10141
STEREO PHOTOMACROGRAPHY SYSTEM
 LINDSEY, W. F. DATE- APR. 1968
 LANGLEY-10176

Stereo photomacrography system provides sharply focused and correctly exposed stereo pairs of photographs through a stereomicroscope. The system uses components of the old system but incorporates a sharp focusing system and includes an improved photometer.

B68-10144
CARDIAC R-WAVE DETECTOR
 GEBBEN, V. D. DATE- APR. 1968 REAN- SEE ALSO
 NASA-TM-X-1489
 LEWIS-10394

Cardiac R wave detector obtains the systolic contraction signal of the human heart and uses it as a reference signal for the heart-assist pump cycle. It processes the electrocardiac signal /QRS wave complex/ of the natural heart in a sequence of operations which essentially eliminates all components from the input signal except the R wave.

B68-10145
HIGH-PRESSURE GAS FACILITATES CALIBRATION OF
TURBINE FLOWMETERS FOR LIQUID HYDROGEN
 KRAUSE, L. N. SZANISZLO, A. J. DATE- MAY 1968
 REAN- SEE ALSO B67-10506 AND NASA-TN-D-3773
 LEWIS-10402

Nitrogen gas at a pressure of 60 atmospheres and ambient temperature facilitates the calibration of turbine flowmeters used for monitoring the flow of liquid hydrogen in cryogenic systems. Full-scale calibration factors can be obtained to an accuracy of 0.4 percent.

B68-10147
DEFLECTION CIRCUIT MONITORS FORCE ON OBJECT
UNDER WATER
 ROLLER, R. YAROSHUK, N. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- MAY 1968
 NUC-10147

Capsule containing samples for radiation testing is guided under through a seal to an exact position within a nuclear reactor. A Linear Variable Differential Transformer /LVDT/ flexplate deflection circuit monitors the force on the capsule as it is positioned within the reactor.

B68-10148
SILICON SOLAR CELL MONITORS HIGH TEMPERATURE
FURNACE OPERATION
 ZELLNER, G. J. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- MAY 1968
 NUC-10163

Silicon solar cell, attached to each viewpoint, monitors that incandescent emission from the hot interior of a furnace without interfering with the test assembly or optical pyrometry during the test. This technique can provide continuous indication of hot spots or provide warning of excessive temperatures in cooler regions.

B68-10149
SYSTEM REMOTELY INSPECTS, MEASURES, AND
RECORDS INTERNAL IRREGULARITIES IN PIPING
 BERRY, F. H. CUNNINGHAM, J. Y. HEISMAN, R. M.
 ICELAND, W. F. NORWOOD, L. B. /N. AM. AVIATION/ DATE- MAY 1968
 M-FS-14545

Video electromechanical probe visually inspects and measures internal offset and peaking of welds in relatively large piping. Irregularity dimensions are recorded on peripheral equipment consisting of video tape and X-Y plotter. The probe is used for inspection of vacuum-jacketed liquid lines that cannot be inspected externally.

01 ELECTRICAL (ELECTRONIC)

B68-10151

IMPROVED S/N METER

WINDETT, C. B. /MOTOROLA/ DATE- MAY 1968

MSC-11656

Signal-to-noise ratios /S/N/ meter containing a variable-frequency notch filter measures noise plus interference in the presence of carrier or modulation signals. A noise source and calibration signal source are included in the instrument for calibration purposes.

B68-10152

MM-WAVE POWER METER MOUNT

MULLEN, D. L. OLTMAN, D. A. STELZRIED, C. T.

DATE- MAY 1968

NPO-10348

E-band thermistor mount and a technique for adjusting a temperature compensating thermistor to provide an electrically balanced bridge are used for measuring RF power in the mm-wavelength. The mount is relatively insensitive to temperature effects that cause measurement errors in single ended circuits.

B68-10155

HYDRA 1 DATA DISPLAY SYSTEM

HODGKINS, R. L. CSGOOD, D. R. DATE- MAY 1968

MSC-11594

System, named Hydra, generates charts, graphs, and printed matter on slides or conventional negatives and positives, and combines these media with a capability of storage on magnetic tape for future updating to accommodate engineering changes or contract modifications to be readily added to basic data.

B68-10156

PRECISION BOLONETER BRIDGE

WHITE, D. R. /N. AM. AVIATION/ DATE- MAY 1968

MSC-11473

Prototype precision bolometer calibration bridge is manually balanced device for indicating dc bias and balance with either dc or ac power. An external galvanometer is used with the bridge for null indication, and the circuitry monitors voltage and current simultaneously without adapters in testing 100 and 200 ohm thin film bolometers.

B68-10157

THERMAL RESISTANCES OF SOLDER-BOSS/POTTING COMPOUND COMBINATIONS

VEILLEUX, E. D. /RCA/ DATE- MAY 1968

MSC-12074

Formulas, which can be used as a design tool, are derived to calculate the thermal resistance of solder-boss/potting compound combinations, for different depths of a solder boss, in electronic cordwood modules. Since the solder boss is the heat source, its shape and position will affect the thermal resistance of the surrounding potting compound.

B68-10163

IMPROVED PROCESS FOR MAKING THIN-FILM SODIUM NIOBATE CAPACITORS

MICKA, E. Z. /TRW SPACE TECHNOL. LABS./ DATE- MAY 1968

MSC-11231

Sodium niobate, formed by high vacuum, flash, and reactive evaporations, has a high dielectric constant and is used as a thin film dielectric in microelectronic capacitors. High purity films are formed from relatively inexpensive, pure starting materials. Crystalline sodium niobate films can be formed on amorphous or crystalline materials.

B68-10166

SILICON SURFACE BARRIER DETECTORS USED FOR LIQUID HYDROGEN DENSITY MEASUREMENT

JAMES, D. T. MILAM, J. K. WINSLETT, H. B. /ORTEC CO./ DATE- JUN. 1968

M-FS-14115

Multichannel system employing a radioisotope radiation source, strontium-90, radiation detector, and a silicon surface barrier detector, measures the local density of liquid hydrogen at various levels in a storage tank. The instrument

contains electronic equipment for collecting the density information, and a data handling system for processing this information.

B68-10171

SILICON OXIDE FILMS GROWN IN MICROWAVE DISCHARGE

KRAITCHMAN, J. /WESTINGHOUSE RES. LABS./ DATE- JUN. 1968

M-FS-14634

Silicon oxide films thicker than 1000 angstrom are produced in the dense plasma of a microwave discharge. The oxide growth is characterized by a rate limiting diffusion process modified by sputtering effects produced by the discharge. Silicon is rapidly oxidized at temperatures estimated to be 500 degrees C or lower.

B68-10173

TUNNEL DIODE CIRCUIT USED AS NANOSECOND-RANGE TIME MARKER

LARSEN, R. N. SHEAR, E. B. DATE- JUN. 1968

ARG-90164

Simple tunnel diode time marker circuit determines the time at which an event occurs in a scintillation crystal. It is capable of triggering at voltages as low as the noise level of a 10-stage PM tube.

B68-10175

CAPACITANCE-COUPLED WIPER INCREASES POTENTIOMETER LIFE

DINEFF, J. DATE- JUN. 1968 REAN- SEE ALSO

NASA-TN-X-1235

ARC-10060

Capacitively-coupled wiper reduces the friction between the sliding contact and the potentiometer element in conventional potentiometers. A small preamplifier employed close to the wiper reduces errors caused by output cable capacitance. The device is friction free with resultant low wear and has high speed and high resolution.

B68-10182

STEADY-STATE DIFFERENTIAL CALORIMETER MEASURES GAMMA HEATING IN REACTOR

HERBST, D. TALBOY, J. H. DATE- JUN. 1968 REAN- SEE ALSO

ANL-7178

ARG-10120

Steady-state differential calorimeter, which displays good accuracy and reproducibility of results, is used to measure gamma heating in a reactor environment. The calorimeter has a long life expectancy since it is virtually unharmed by the reactor environment.

B68-10183

DETECTION AND LOCATION OF METALLIC OBJECTS IMBEDDED IN NONMETALLIC STRUCTURES

BROWN, R. L. NEUSCHAEFER, R. W. DATE- JUN. 1968

M-FS-14790

Small battery operated eddy current proximity measuring device detects and locates metal objects the size of a dime at distances up to one foot within nonmetallic structures. This device weighs approximately two pounds, occupies approximately 60 cubic inches, and is battery powered.

B68-10185

CONCEPT FOR SLEEVE INDUCTION MOTOR WITH 1-MSEC MECHANICAL TIME CONSTANT

WIEGAND, D. E. DATE- JUN. 1968

ARG-10124

Conductive sleeve induction motor having a 1-msec mechanical time constant is used with solid-state devices to control all-electric servo power systems. The servomotor rotor inertia is small compared to the maximum force rating of the servo motion, permitting high no-load acceleration.

B68-10188

HIGH- AND LOW-PRESSURE PNEUMOTACHOMETERS MEASURE RESPIRATION RATES ACCURATELY IN ADVERSE ENVIRONMENTS

FAGOT, R. J. MC DONALD, R. T. /NORTHROP

NORTRONICS/ ROMAN, J. A. DATE- JUN. 1968 REAN- SEE ALSO

NASA-TN-D-4217

FRC-10012 FRC-10022

Respiration-rate transducers in the form of pneumotachometers measure respiration rates of pilots operating high performance research aircraft. In each low pressure or high pressure oxygen system a sensor is placed in series with the pilots oxygen supply line to detect gas flow accompanying respiration.

B68-10202

FAST-RESPONSE CUP ANEMOMETER FEATURES
COSINE RESPONSE

FRENZEN, P. DATE- JUN. 1968 REAN- SEE ALSO
ANL-7360
ARG-90193

Six-cup, low-inertia anemometer combines high resolution and fast response with a unique ability to sense only the horizontal component of the winds fluctuating rapidly in three dimensions. Cup assemblies are fabricated of expanded polystyrene plastic.

B68-10203

ELECTRONIC LOAD FOR TESTING POWER
GENERATING DEVICES

FRIEDMAN, E. B. STEFFER, G. DATE- JUN. 1968
NPO-10350

Instrument tests various electric power generating devices by connecting the devices to the input of the load and comparing their outputs with a reference voltage. The load automatically adjusts until voltage output of the power generating device matches the reference.

B68-10205

MULTILAYER PLATED WIRE SHOWS PROMISE AS
MEMORY DEVICE

KADISH, D. /MIT/ DATE- JUN. 1968
MSC-11587

Multilayer plated wire memory system surpasses planar thin film memories because of its high speed, simplicity, and high output. The device consists of 5 mil Be-Cu wire plated with Ni-Fe alloy about 1 micron thick crossed orthogonally by word lines.

B68-10207

FACSIMILE VIDEO ENHANCEMENT DEVICE
VERMILLION, C.-H. DATE- JUN. 1968

GSFC-10185

Video remodulation unit enhances facsimile transmission using an amplitude-modulated 2400 Hz carrier. The unit demodulates the signal and then remodulates it, using the same carrier. By using the unit controls, modulation can be set to levels that compensate for picture in-transit degradation.

B68-10210

ACTIVE RC NETWORKS OF LOW SENSITIVITY FOR
INTEGRATED CIRCUIT TRANSFER FUNCTION SYNTHESIS

HUELSMAN, L. P. KERWIN, W. J. NEWCOMB, R. W.
DATE- JUN. 1968

ARC-10146

Active RC network is capable of extremely high Q performance with exceptional stability and has independently adjustable zeros and poles. The circuit consists of two integrators and two summers that are interconnected to produce a complete second-order numerator and a second-order denominator.

B68-10213

TECHNIQUE INCREASES STORAGE CAPACITY IN
CAMERA TUBE TARGET

BOLL, K. F. DE VRIES, H. R. /WESTINGHOUSE ELEC.
CORP./ DATE- JUN. 1968

MSC-11599

Technique increases the signal current, where direct beam readout is used, in Secondary Electron Conduction /SEC/ camera tubes. Increasing the storage capacity and therefore the dynamic range of the SEC target permits satisfactory operation at reduced frame rates.

B68-10218

ZINC-OXYGEN PRIMARY CELL YIELDS HIGH
ENERGY DENSITY

GRAFF, C. B. DATE- JUN. 1968
M-PS-14661

Zinc-oxygen primary cell yields high energy density for battery used as an auxiliary power source in space vehicle systems. Maximum reliability and minimum battery weight is achieved by using a stacking configuration of 23 series-connected modules with 6 parallel-connected cells per module.

B68-10220

NEW ELECTRICAL PLETHYSMOGRAPH MONITORS
CARDIAC OUTPUT

KUBICEK, W. B. PATTERSON, R. P. WITSOE, D. A.
/MINNESOTA UNIV./ DATE- JUN. 1968

MSC-11447

Four-electrode impedance plethysmograph measures ventricular stroke volume of cardiac output of humans. The instrument is automatic, operates with only one recording channel, and minimizes patient discomfort.

B68-10223

LIGHTWEIGHT HEATER GENERATES HIGH
TEMPERATURES FROM LOW CURRENT

HANSEN, E. L. DATE- JUL. 1968
SAN-10004

Double spiral molybdenum heater element uses low current, needs no insulation, and requires support only at the ends, which are also the power input points. Because there is no insulation or internal support necessary, the heater is lightweight. Its temperature potential will vary with its size and environment.

B68-10224

SEMICONDUCTOR AC STATIC POWER SWITCH

VRANCIK, J. DATE- JUN. 1968
LEWIS-10344

Semiconductor ac static power switch has long life and high reliability, contains no moving parts, and operates satisfactorily in severe environments, including high vibration and shock conditions. Due to their resistance to shock and vibration, static switches are used where accidental switching caused by mechanical vibration or shock cannot be tolerated.

B68-10230

IMPROVED ATOMIC RESONANCE GAS CELL FOR USE
IN FREQUENCY STANDARDS

HUGGETT, G. R. /VARIAN ASSOCIATES/ DATE- JUL.
1968

MSC-11666

Atomic resonance gas cell maintains a stable operating frequency in the presence of pressure fluctuations in the ambient atmosphere. The new cell includes an envelope which is transparent to radiation in the optical region and to microwave energy at the atomic resonance frequency of the alkali-metal vapor within the envelope.

B68-10233

ELECTROCARDIOGRAPH TRANSMITTED BY RF AND
TELEPHONE LINKS IN EMERGENCY SITUATIONS

CARPENTER, L. R. LEWIS, C. E., JR. MC DONALD, R.
T. DATE- JUL. 1968

FRC-10031

Electrocardiograph of an injured human subject is transmitted by RF and telephone links from the ambulance at the emergency scene, to the hospital emergency facilities. This system eliminates delay in the diagnosis of required therapy, thereby enhancing emergency and rescue operations.

B68-10236

QUASI-STATIC VAPOR PRESSURE MEASUREMENTS
ON REACTIVE SYSTEMS IN INERT ATMOSPHERE BOX

FISCHER, A. K. DATE- JUL. 1968

ARG-90142

Apparatus makes vapor pressure measurements on air-sensitive systems in an inert atmosphere glove box. Once the apparatus is loaded with the sample and all connections made, all measuring operations may be performed outside the box. The apparatus is a single-tube adaptation of the double-tube quasi-static technique.

B68-10238

ASTRONAUT SPACE SUIT COMMUNICATION ANTENNA

LINDSEY, J. F., III NASON, G. H. DATE- JUL. 1968

01 ELECTRICAL (ELECTRONIC)

MSC-12101

Astronaut space suit communication antenna consists of a spring steel monopole in a blade-type configuration. This antenna is mounted in a copper cup filled with a potting compound that is recessed in the center to facilitate bending the blade flat for stowing when not in use.

B68-10241

PARALLEL-TO-SERIAL BIPHASE-DATA CONVERTER

TRUELOVE, R. D. /N. AM. AVIATION/ DATE- JUL. 1968

MSC-11600

Data converter produces a serial biphasic output signal from parallel input data. Alternate bits are loaded into a shift register in complement form so that the bits appear at the end of the shift register in a true-complement form sequence.

B68-10242

WELDER ANALYZER

MILLER, I. L. /GEN. MOTORS CORP./ DATE- JUL. 1968

MSC-12068

Welder analyzer circuit evaluates and certifies resistance welding machines. The analyzer measures peak current, peak voltage, peak power, total energy, and first-pulse energy. It is used as an energy monitor while welding is being performed, or a precision shunt load for a pure electrical evaluation of the weld machine.

B68-10244

IMPROVED TRAVELING WAVE MASER AMPLIFIER

CLAUSS, R. C. DATE- JUL. 1968

NPO-10548

Traveling Wave Maser /TWM/ that operates at S-band frequencies is characterized by a greatly improved gain-bandwidth product with relatively low equivalent-noise temperature. Tests indicate that its performance exceeds that of any other type of S-band amplifier.

B68-10246

MINIATURE PRESSURE TRANSDUCER FOR STRESSED

MEMBER APPLICATION

WALKER, R. R. WICKHAM, C. G. /N. AM. AVIATION/ DATE- JUL. 1968

MSC-11869

Miniature pressure transducer responds to static or dynamic pressures acting against a structural surface without introducing errors caused by stresses in the structural surface. This is accomplished by a thin stainless steel pressure sensing diaphragm with an attached foil strain gage.

B68-10254

HARMONIC DISTORTION ANALYZER SPEEDS SETUP OF

MAGNETIC TAPE RECORDERS

TINARI, D. F. DATE- JUL. 1968

GSFC-10198

Harmonic distortion analyzer effects rapid and accurate setup and calibration of magnetic tape instrumentation recorders. The analyzer is portable, requires no warmup period and need not be calibrated for normal usage. Average setup time with this analyzer is approximately 30 seconds per track.

B68-10258

ACQUISITION OF PSEUDONOISE SIGNALS BY

SEQUENTIAL ESTIMATION

WARD, R. B. /LOCKHEED MISSILES AND SPACE CO./

DATE- JUL. 1968

M-PS-13898

Rapid Acquisition by Sequential Estimation /RASE/ system is used in the receivers of tracking and communications systems to bring identical locally generated pseudonoise digital modulation signal into time synchronization with the incoming pseudonoise signal. This acquisition system is particularly suited for medium input signal-to-noise ratios.

B68-10262

SILICON STRAIN SENSORS ENABLE PRESSURE MEASUREMENT AT CRYOGENIC TEMPERATURES

BOWMAN, R. BURNS, J. MC LELLAN, W. /ELECTRO-OPTICAL SYSTEMS/ DATE- JUL. 1968
M-PS-14703

Miniature pressure transducers with diffused, heavily doped silicon strain-gage sensor elements, operates over a wide temperature range. Small thermal mass combined with close coupling between a metallic diaphragm and sensor elements minimizes sensitivity to temperature transients.

B68-10263

IMPROVED FUEL-CELL-TYPE HYDROGEN SENSOR

RUDEK, F. P. RUTKOWSKI, M. D. /GE/ DATE- JUL. 1968

M-PS-14656

Modified hydrogen sensor replaces oxygen cathode with a cathode consisting of a sealed paste of gold hydroxide and a pure gold current collector. The net reaction which occurs during cell operation is the reduction of the gold hydroxide to gold and water, with a half-cell potential of 1.4 volts.

B68-10264

CONCEPTUAL DEAD WEIGHT DEVICE TO PROVIDE

PRESSURE CALIBRATION

KARCHER, G. OLSON, G. /CHRYSLER CORP./ DATE- JUL. 1968

M-PS-14672

Dead weight testing device uses a common force plane piston manometer to set accurate gage pressure in pounds per square inch. An additional piston gage easily adapts the device for absolute pressure calibration.

B68-10267

MOEBIUS RESISTOR IS NONINDUCTIVE AND

NONREACTIVE

DAVIS, R. L. DATE- JUL. 1968

SAN-10020

Moebius strip made of insulated resistive materials with electrical leads attached directly opposite one another provides a noninductive, nonreactive resistor which is simple, inexpensive, and flexible in usage, and can be made to almost any desired size and shape.

B68-10268

VIBRATION TESTING AND DYNAMIC STUDIES OF

RELAYS

SPON- INNOVATOR NOT GIVEN /OKLAHOMA STATE UNIV./

DATE- JUL. 1968

M-PS-14542

Study has been undertaken to determine the separation criteria for a preloaded, idealized set of contacts when they are subjected to a steady-state sinusoidal excitation and when the elasticity of one contact is nonlinear. The study consists of two phases, theoretical and experimental.

B68-10269

LOW ENERGY OHMMETER CAN BE USED TO TEST

SENSITIVE CIRCUITS, OTHER METERS

PLATT, L. W. DATE- JUL. 1968

SAN-10013

Hazardous circuit ohmmeter is of sufficiently low energy output that it may be used to test extremely sensitive circuits safely, reliably, and accurately. A polyurethane-foam-lined aluminum case provided protection for the unit assembly.

B68-10272

NOISE FIGURE MEASUREMENT CONCEPT FOR

ACOUSTIC AMPLIFIERS

JOHNSON, V. R. YEAGER, J. R. /MICROWAVE

ELECTRON./ DATE- JUL. 1968

GSFC-10066

Optimum length buffer crystals are used with an amplification section for measuring the noise figure for acoustic amplifiers. Measuring the time required to saturate with noise a signal, which is reflected back and forth in the circuit, gives a direct measurement of the amplifiers noise figure.

B68-10273

RECHARGE UNIT PROVIDES FOR OPTIMUM

RECHARGING OF BATTERY CELLS

BAER, D. FORD, F. E. DATE- AUG. 1968
GSFC-10688

Percent recharge unit permits each cell of a rechargeable battery to be charged to a preset capacity of the cell. The unit automatically monitors and controls a rechargeable battery subjected to charge-discharge cycling tests.

B68-10280

IGNITION OF BINARY ALLOYS OF URANIUM

BAKER, L., JR. BINGLE, J. D. SCHNIZLEIN, J. G.
DATE- AUG. 1968

ARG-10057

Experiments determine the effect of alloying additives on the ignition of uranium. Data on oxidation rates, ignition temperatures, and burning curves are provided in the report.

B68-10283

HIGH-VOLTAGE PULSE GENERATOR DEVELOPED FOR

WIDE-GAP SPARK CHAMBERS

KELLER, L. P. WALSHON, E. G. DATE- AUG. 1968
ARG-10136

Low-inductance, high-capacitance Marx pulse generator provides for minimization of internal inductance and suppression of external electromagnetic radiation. The spark gaps of the generator are enclosed in a pressurized nitrogen atmosphere which allows the charging voltage to be varied by changing the nitrogen pressure.

B68-10289

DEEP SPACE FM SYSTEM, A CONCEPT

DOLAND, G. D. /LOCHKEED ELECTRON. CO./ DATE-
AUG. 1968

MSC-11825

Deep space frequency modulation system permits transmission of data where the signal deviation is greater than 1/2 the predetection bandwidth. It provides satisfactory performance at great distances or with low signal levels.

B68-10290

DYNAMIC LINEARITY MEASUREMENT TECHNIQUE

MERZ, K. MORRELL, L. /BOEING CO./ DATE- AUG.
1968

KSC-10186

Measurement technique involves frequency modulated discriminator which produces an error signal as two signals, one of known and one of unknown frequency. The signals are electronically switched to a discriminator input, allowing independent measuring of dynamic linearity in a frequency modulated subcarrier oscillator.

B68-10291

CRYOGENIC LIQUID LEVEL MEASURING PROBE

DINKEL, J. A. WEGNER, C. R. DATE- AUG. 1968
ARG-10138

Universal probe, which contains a unique frequency discriminator, measures the static and dynamic levels of cryogenic liquids in a hydrogen bubble chamber. The probe allows boiling conditions or other turbulence to be observed throughout all the transition stages.

B68-10301

RANDOM ACCESS-RANDOM RELEASE RELAY SWITCHING

MATRIX

CARTER, J. A. EVANS, F. E. /N. AM. ROCKWELL
CORP./ DATE- AUG. 1968

M-FS-12590

XY relay switching matrix provides complete random access and random release of 400 points. A mercury-wetted bistable relay with independent set and reset coils is the unique feature associated with each point.

B68-10303

CONCEPTUAL APPARATUS FOR DETECTING LEAKS OF
NONCONDUCTIVE LIQUIDS

WALSH, G. D. /BOEING CO./ DATE- AUG. 1968
M-FS-14713

Apparatus detects leaks at joints in lines carrying electrically nonconductive liquids. The proposed apparatus could include a panel that would give a visual or audible indication of a leak /to permit manual shutdown/ and/or an electromechanical actuator that would

automatically cut off the flow when a leak occurs.

B68-10305

CURRENT-LIMITING VOLTAGE REGULATOR

CLEVELAND, E. F. DATE- AUG. 1968

MSC-11824

Voltage regulator, which operates within preset current limits, acts as a circuit breaker to prevent overload failure, and automatically resets when the overload is removed. The power dissipated in the series transistor of the circuit is constant from normal load to short circuit condition.

B68-10306

COMMUNICATION SYSTEM FEATURES DUAL MODE

RANGE ACQUISITION PLUS TIME DELAY

MEASUREMENT

ATWOOD, S. W. KLINE, A. W., JR. WELTER, N. E.
/MOTOROLA/ DATE- AUG. 1968

M-FS-14323 M-FS-14324

Communication system combines range acquisition system and time measurement system for tracking high velocity aircraft and spacecraft. The range acquisition system uses a pseudonoise code to determine range and the time measurement system reduces uncontrolled phase variations in the demodulated signal.

B68-10307

ENCAPSULATION TECHNIQUE ELIMINATES THERMAL

STRESSES IN WELDED ELECTRONIC MODULES

KIMMEL, M. /N. AM. ROCKWELL CORP./ DATE- AUG.
1968 REAN- SEE ALSO B67-10367

M-FS-14581

Encapsulation technique minimizes embedment and thermal stresses in welded electronic modules. A coating of thinned room-temperature vulcanizing silicone rubber having a high coefficient of expansion and flexibility at low temperature, is applied first and then an encapsulating epoxy resin having a relatively low coefficient of expansion is added.

B68-10308

SOLID STATE HIGH-VOLTAGE PULSER OPERATES

WITH LOW SUPPLY VOLTAGE

MILBERGER, W. E. /WESTINGHOUSE ELEC. CORP./
DATE- AUG. 1968

M-FS-14034

High speed klystron cathode pulser requires low voltage to generate high-voltage pulses. Broadband video transformers are wound in two configurations - /1/ transmission line, multifilar toroids and /2/ loop coupling toroids. The circuit adapts to generate high-speed, high-voltage, high-stability power pulses at megawatt levels.

B68-10309

FEASIBILITY STUDY OF WIRELESS POWER

TRANSMISSION SYSTEMS

ROBINSON, W. J., JR. DATE- AUG. 1968

M-FS-14691

Wireless microwave or laser energy transfers power from a manned earth-orbiting central station to unmanned astronomical substations. More efficient systems are required for the microwave power transmission.

B68-10310

STANDARDS FOR COMPATIBILITY OF PRINTED

CIRCUIT AND COMPONENT LEAD MATERIALS

SPON- INNOVATOR NOT GIVEN /MARTIN CO./ DATE- AUG.
1968

M-FS-14531

Study of packaging of microminiature electronic components reveals methods of improving compatibility of lead materials, joining techniques, transfer molding concepts, printed circuit board materials, and process and material specifications.

B68-10311

IMPROVED ELECTRO-OPTICAL TRACKING SYSTEM

JOHNSON, R. E. WEISS, P. F. /SYLVANIA ELECTRON.
SYSTEMS/ DATE- AUG. 1968

M-FS-14791

Electro-optical tracking system employs a laser

01 ELECTRICAL (ELECTRONIC)

beam illuminating source, an electronic laser beam deflector, and an image dissector photomultiplier. An electronic scanning transmitter and receiver follows rapid movements or accelerations of the target.

B68-10312
SYSTEM MEASURES ARC ENERGY DISSIPATED IN RELAY CONTACT CYCLING
 SPON- INNOVATOR NOT GIVEN /OKLAHOMA ST. UNIV./
 DATE- AUG. 1968
 M-FS-14541

System, containing cycle timer, measures the energy dissipated at the contacts of a relay operating in an electric circuit. The system measures as well as records the energy for a large number of repetitive operations.

B68-10313
ANALYSIS AND DESIGN OF A CLASS-D AMPLIFIER
 SPON- INNOVATOR NOT GIVEN /AUBURN UNIV./ DATE- AUG. 1968
 M-FS-14803

Analysis of a basic class-D amplifier circuit configuration shows its adaptability to a variety of applications. The feedback, input and output configuration and the frequency spectrum of the pulse-width-modulated signal are analyzed.

B68-10314
COLOR-TELEVISED MEDICAL MICROSCOPY
 HEATH, M. A. PECK, J. C. DATE- AUG. 1968
 MSC-13086

Color television microscopy used at laboratory range magnifications, reproduces a slide image with sufficient fidelity for medical laboratory and instructional use. The system is used for instant pathological reporting between operating room and remotely located pathologist viewing a biopsy through this medium.

B68-10315
GIMBAL ANGLE SENSOR
 ZAREMBA, J. G. /TRW SYSTEMS GROUP/ DATE- AUG. 1968
 GSFC-10305

Detector flake located parallel to a slotted mask mechanical differentiator, senses the rotation of a gimbal reaction wheel mounting. As the gimbal moves light passes through the mask and strikes a section of the detector, the electrical output of which has been calibrated in terms of degrees of rotation.

B68-10316
OPTIMETRIC SYSTEM FACILITATES COLORIMETRIC AND FLUOROMETRIC MEASUREMENTS
 HALEY, F. C. DATE- AUG. 1968
 NPO-10233

Compact, unitary optometric systems uses a single device for colorimetric, fluorometric and spectral absorption measurements. The basic element of the unitary systems is a test cell containing filter elements with uniquely fabricated lenses.

B68-10317
METHOD OF REDUCING TIME BASE ERROR IN DIGITAL MAGNETIC RECORDERS
 MOORE, J. M. /ELECTRO-MECH. RES./ DATE- AUG. 1968
 GSFC-10108

Apparatus reduces Time Base Error /TBE/ in the playback of digital data from magnetic recording equipment. The apparatus uses a magnet which employs a servo position control of the tape by which the playback data clock is phase locked with a fixed frequency reference signal.

B68-10319
ULTRASONIC TEMPERATURE MEASURING DEVICE
 CARNEVALE, E. H. LYNNWORTH, L. C. /PARAMETRICS/ DATE- AUG. 1968
 LEWIS-10446

Pulse echo ultrasonic system automatically determines the temperature in the core of a nuclear rocket engine by measuring the transit time of an acoustic pulse in a wire sensor. The measurement is based on the fact that the speed of sound in the sensor material is a function of

temperature.

B68-10321
CONCEPT TO CONVERT ELECTRICAL POWER
 RATTI, N. /LEAR SIEGLER/ DATE- AUG. 1968
 GSFC-10222

Moving fluid conductor transforms electrical power from one voltage to another. The electrically conductive fluid acts as a coupling medium between or among multiple electromagnetic fields producing the conversion.

B68-10323
HYDROGEN SAFETY MANUAL
 SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- AUG. 1968 REAN- SEE ALSO NASA-SP-5032 AND NASA-TM-X-52454
 LEWIS-10487

Hydrogen safety manual covers the characteristics and nature of hydrogen, design principles for hydrogen systems, protection of personnel and equipment, and operating and emergency procedures. It sets standards and practices for minimum safety requirements at hydrogen installations.

B68-10325
ELECTROCHEMICAL CELL HAS INTERNAL RESISTIVE HEATER ELEMENT
 COLSTON, E. F. FORD, P. E. HENNIGAN, T. J. DATE- AUG. 1968
 GSFC-10358

External source supplies power to electrochemical cells containing internal resistive heater element. Each cell plate is individually contained in its own Pellon bag, enabling the heater element to be arranged in a continuous, parallel circuit.

B68-10327
POWER CONSUMPTION IN ACOUSTIC AMPLIFIERS UNDER CONDITIONS OF MAXIMUM STABLE GAIN
 JOHNSON, V. R. /MICROWAVE ELECTRON./ DATE- AUG. 1968
 GSFC-10067

Comparison is made of the power consumed and the acoustic amplification realized when a dc bias field is placed across a piezoelectric semiconductor and adjusted to amplify a microwave acoustic signal to the point where the forward gain is just equal to the reverse attenuation. This represents the maximum possible gain condition.

B68-10328
TRANSISTORIZED MARX BANK PULSE CIRCUIT PROVIDES VOLTAGE MULTIPLICATION WITH NANOSECOND RISE-TIME
 JUNG, E. A. LEWIS, R. N. DATE- AUG. 1968
 ARG-10110

Base-triggered avalanche transistor circuit used in a Marx bank pulser configuration provides voltage multiplication with nanosecond rise-time. The avalanche-mode transistors replace conventional spark gaps in the Marx bank. The delay time from an input signal to the output signal to the output is typically 6 nanoseconds.

B68-10330
SIMULTANEOUS MESSAGE FRAMING AND ERROR DETECTION
 FREY, A. H., JR. /IBM/ DATE- SEP. 1968
 MSC-12001

Circuitry simultaneously inserts message framing information and detects noise errors in binary code data transmissions. Separate message groups are framed without requiring both framing bits and error-checking bits, and predetermined message sequence are separated from other message sequences without being hampered by intervening noise.

B68-10333
AUTOMATIC, NONDESTRUCTIVE TEST MONITORS IN-PROCESS WELD QUALITY
 DEAL, F. C. /MARTIN CO./ DATE- SEP. 1968
 M-FS-14996

Instrument automatically and nondestructively monitors the quality of welds produced in microresistance welding. It measures the

infrared energy generated in the weld as the weld is made and compares this energy with maximum and minimum limits of infrared energy values previously correlated with acceptable weld-strength tolerances.

B68-10336

FULLY AUTOMATIC TELEMETRY DATA PROCESSOR
COX, F. B. /BECKMAN INSTR. CO./ KEIPERT, F. A.
LEE, R. C. DATE- SEP 1968 REAN- SEE ALSO
NASA-TN-D-3981
GSFC-10576

Satellite Telemetry Automatic Reduction System
/STARS 2/, a fully automatic computer-controlled telemetry data processor, maximizes data recovery, reduces turnaround time, increases flexibility, and improves operational efficiency. The system incorporates a CDC 3200 computer as its central element.

B68-10337

TEMPERATURE OR PRESSURE CONTROLLER
GILLET, J. D. /N. AM. ROCKWELL CORP./ DATE-
SEP. 1968
LEWIS-10297

Silicon chip thermal sensor coupled into a solid state power source controls temperature or pressure in combustion research. The silicon chip sensing element is embedded in a ceramic support for insulation, and connected to a high resistance bridge which operates the solid state power amplifiers.

B68-10341

SUPERCONDUCTIVE THIN FILM MAKES CONVENIENT
LIQUID HELIUM LEVEL SENSOR
BECKER, H. H. DATE- SEP. 1968
LANGLEY-10289

Sensor consisting of superconductive film mounted on a dipstick measures the level of liquid helium in a Dewar flask. The sensor is made by depositing a thin film of niobium metal to a thickness of 2000 angstroms on a quartz substrate, which is then mounted on a graduated dipstick.

B68-10342

INDIUM ADHESION PROVIDES QUANTITATIVE
MEASURE OF SURFACE CLEANLINESS
KRIEGER, G. L. WILSON, G. J. DATE- SEP. 1968
SAN-10024

Indium tipped probe measures hydrophobic and hydrophilic contaminants on rough and smooth surfaces. The force needed to pull the indium tip, which adheres to a clean surface, away from the surface provides a quantitative measure of cleanliness.

B68-10350

FLUIDIC-THERMOCHROMIC DISPLAY DEVICE
GRAFSTEIN, D. HILBORN, E. H. DATE- SEP. 1968
REAN- SEE ALSO NASA-CR-80016 AND NASA-CR-86031
ERC-10031

Fluidic decoder and display device has low-power requirements for temperature control of thermochromic materials. An electro-to-fluid converter translates incoming electrical signals into pneumatics signal of sufficient power to operate the fluidic logic elements.

B68-10357

CLOSED CIRCUIT TV SYSTEM AUTOMATICALLY
GUIDES WELDING ARC
STEPHANS, D. L. /HAYES INTERN. CORP./ WALL, W.
A., JR. DATE- SEP. 1968
M-FS-20084

Closed circuit television /CCTV/ system automatically guides a welding torch to position the welding arc accurately along weld seams. Digital counting and logic techniques incorporated in the control circuitry, ensure performance reliability.

B68-10362

RATING OF ELECTRICAL WIRES IN VACUUM
ENVIRONMENTS
SCHAEFER, J. L. SVENSON, F. C. /N. AM. ROCKWELL
CORP./ DATE- OCT. 1968
MSC-15108

Electric conductors used in vacuum environments

have smaller cross sections. This report provides data on the correct size wire for a required current load in free-air, low-pressure oxygen, and vacuum environments.

B68-10364

NONDESTRUCTIVE TEST DETERMINES OVERLOAD
DESTRUCTION CHARACTERISTICS OF CURRENT
LIMITER FUSES
SWARTZ, G. A. /ELECTRA-MIDLAND CORP./ DATE- OCT.
1968
XGS-08566

Nondestructive test predicts the time required for current limiters to blow /open the circuit/ when subjected to a given overload. The test method is based on an empirical relationship between the voltage rise across a current limiter for a fixed time interval and the time to blow.

B68-10365

AUTOMATIC PATIENT RESPIRATION FAILURE
DETECTION SYSTEM WITH WIRELESS TRANSMISSION
DINEFF, J. POPE, J. M. DATE- OCT. 1968
ARC-10174

Automatic respiration failure detection system detects respiration failure in patients with a surgically implanted tracheostomy tube, and actuates an audible and/or visual alarm. The system incorporates a miniature radio transmitter so that the patient is unencumbered by wires yet can be monitored from a remote location.

B68-10367

DETECTION OF EFFECT OF DEPOSITS ON OPTICAL
WINDOWS OF PYROMETER MEASUREMENTS
CIPOLONE, P. DATE- OCT. 1968
LEWIS-10366

Temperatures measurements in an enclosed test chamber are more accurate when the reflectivity of the inner coated surface is compared to the outer clean surface of an optical window. Temperature readings are corrected by correlating the reflectivity of the deposits with their effect on the temperature measurement.

B68-10370

COOLED MINIATURE PRESSURE TRANSDUCERS
EFFECTIVE AT HIGH TEMPERATURES
ARMENTROUT, E. C. DATE- OCT. 1968
LEWIS-10401

Miniature pressure transducers in compact water-cooled mounts are placed in hotter and more confined environments than previously possible. It quantitatively measures high frequency total pressure fluctuations resulting from rotating stall in an axial flow engine compressor.

B68-10379

AUTOMATIC SYSTEM NONDESTRUCTIVELY MONITORS
AND RECORDS FATIGUE CRACK GROWTH
HOPPE, F. INMAN, N. S. /FAIRCHILD HILLER CORP./
DATE- OCT. 1968
LANGLEY-10091

Ultrasonic reflection system automatically and nondestructively detects and records the propagation of fatigue cracks in test specimens undergoing fatigue cycling. A reflector plate obtains a reference signal and monitors the location of the tip of a propagating fatigue crack.

B68-10382

SYSTEM MEASURES RESPONSE TIME OF
PHOTOMULTIPLIER TUBES
LAUVER, M. R. DATE- OCT. 1968
LEWIS-10437

Calibration system enables precise determination of rise time of photosensitive detectors. To perform a calibration, the time-voltage curve of the excitation voltage for a light source is compared with the time-voltage curve of the voltage output from a photosensitive detector which is responding to the light.

B68-10384

IMPROVED LIMITER FOR TURN-ON CURRENT
TRANSIENT
HALLBERG, F. C. DATE- OCT. 1968
GSFC-10413

01 ELECTRICAL (ELECTRONIC)

Circuit limits the turn-on current transient to a specified amplitude and provides a low-impedance path between supply voltage and load after a prescribed time interval. The circuit offers a wide range of flexibility in adjusting peak current and automatic control of the initial peak current.

B68-10386
LOW-COST, FAST-RESPONSE DRIVE CIRCUIT FOR ELECTROMAGNETIC TORQUE MOTORS
 ZELLER, J. R. DATE- OCT. 1968
 LEWIS-10143

Fast-response coil drive circuit, for electromagnetic torque motors, reduces the inductive coil time constant with a minimum of circuit sophistication. The low-cost modulator servoamplifier is used with a compatible preamplifier stage which provides the servo-loop function of summing, adjustable gain and compensation.

B68-10388
METHOD FOR REDUCING SNAP IN MAGNETIC AMPLIFIERS
 FISCHER, R. L. E. WORD, J. L. DATE- OCT. 1968
 LEWIS-10388

Method of reducing snap in magnetic amplifiers uses a degenerative feedback circuit consisting of a resistor and a separate winding on a magnetic core. The feedback circuit extends amplifier range by allowing it to be used at lower values of output current.

B68-10389
METHOD FOR MAKING SMALL POINTED THERMOCOUPLES
 STOVER, C. M. DATE- OCT. 1968
 SAN-10014

Constantan wire worked to a needle point and covered with a copper coating produces a small, concentric, fast-reaction thermocouple that has the fast response time necessary to measure rapid temperature changes accurately and only slightly alters the environment being measured.

B68-10397
CHARTS DESIGNATE PROBABLE FUTURE OCEANOGRAPHIC RESEARCH FIELDS
 SPON- INNOVATOR NOT GIVEN /MCDONNELL DOUGLAS CO./
 DATE- OCT. 1968
 M-FS-20202

Charts outline the questions and problems of oceanographic research in the future. NASA uses the charts to estimate the probable requirements for instrumentation carried by satellites engaged in cooperative programs with other agencies concerned with identification, analysis, and solution of many of these problems.

B68-10399
AUTOMATIC SOLAR LAMP INTENSITY CONTROL SYSTEM
 LEVERONE, H. MANDELL, N. DATE- NOV. 1968
 XGS-10017

System that substitutes solar cells directly in the path of the radiation incident on the test volume and uses a dc bridge-null system was developed. The solar cell is affixed to a heat sink mounted on each of three arms for each solar lamp. Control of the radiation from the solar lamps is automatic.

B68-10400
LITHIUM-TELLURIUM BIMETALLIC CELL HAS INCREASED VOLTAGE
 CAIRNS, E. J. ROGERS, G. L. SHIMOTAKE, H. DATE- NOV. 1968
 ARG-10141

Lithium-tellurium secondary cell with a fused lithium halide electrolyte, tested in the temperature range 467 degrees to 500 degrees C, showed improvement over the sodium bismuth cell. The voltage of this bimetallic cell was increased by using the more electropositive anode material, lithium, and the more electronegative cathode material, tellurium.

B68-10402
SYSTEM FOR MEASURING SPATIAL DISTRIBUTION OF EJECTED DROPLETS, A CONCEPT
 AYYAZIAN, R. A. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968
 NPO-10185

System measures the spatial distribution of high-velocity droplets ejected from a nozzle or spray gun. The system employs an electrically resistive grid as the sensing screen, electrical leads, and a signal scanner such as a cathode ray tube.

B68-10404
DESIGN CONCEPT FOR NONARCING ELECTRICAL CONNECTOR
 HOLMEN, R. E. /DOUGLAS AIRCRAFT CO./ DATE- NOV. 1968
 M-FS-14937

Connector plug automatically minimizes arcing during mating and demating. This plug uses a high-resistivity outer sheath as an extension to the regular pin contact. It is used in atmospheres containing explosive gases, and reduces erosion at the contact surfaces where mating and demating are performed frequently.

B68-10411
INVERTED GROUNDING TECHNIQUE FOR ELECTRON BEAM HEATING
 JIRBERG, R. J. DATE- DEC. 1968
 LEWIS-10543

In the production of high temperature by electron bombardment the cathode is held at ground potential while the hot anode is raised to a high negative potential. An annealing chamber using the inverted grounding is constructed around a commercially available stainless steel cross.

B68-10412
AUTOMATIC CALIBRATION SYSTEM FOR PRESSURE TRANSDUCERS
 SPON- INNOVATOR NOT GIVEN /G. T. SCHJELDAHL CO./
 DATE- DEC. 1968
 M-FS-20127

Fifty-channel automatic pressure transducer calibration system increases quantity and accuracy for test evaluation calibration. The pressure transducers are installed in an environmental tests chamber and manifolded to connect them to a pressure balance which is uniform.

B68-10413
UV DETECTOR MONITORS ORGANIC CONTAMINATION OF OPTICAL SURFACES
 GLENN, C. G. KENNEDY, B. W. DATE- DEC. 1968
 M-FS-20246

Silicon carbide, insensitive to visible light, is used in photodetectors. System contamination can be monitored during the normal operation without interference to the operator, and without shielding from ambient light.

B68-10415
NEW BIMETALLIC EMP CELL SHOWS PROMISE IN DIRECT ENERGY CONVERSION
 HESSON, J. C. SHIMOTAKE, H. DATE- NOV. 1968
 ARG-10183

Concentration cell, based upon a thermally regenerative cell principle, produces electrical energy from any large heat source. This experimental bimetallic EMP cell uses a sodium-bismuth alloy cathode and a pure liquid sodium anode. The cell exhibits reliability, corrosion resistance, and high current density performance.

B68-10420
HIGH RESOLUTION GE/LI/ SPECTROMETER REDUCES RATE-DEPENDENT DISTORTIONS AT HIGH COUNTING RATES
 BRENNER, R. LARSEN, R. N. MANN, R. M. RUDNICK, S. J. SHERMAN, I. S. STRAUSS, M. G. DATE- NOV. 1968
 ARG-10144

Modified spectrometer system with a low-noise preamplifier reduces rate-dependent distortions at high counting rates, 25,000 counts per second. Pole-zero cancellation minimizes pulse

undershoots due to multiple time constants, baseline restoration improves resolution and prevents spectral shifts.

B68-10429
CONDITIONING FLAT CONDUCTORS FOR FLAT
CONDUCTOR CABLE PRODUCTION
SPON- INNOVATOR NOT GIVEN /VITRO CORP. OF AM./
DATE- DEC. 1968
M-FS-14914

Apparatus can straighten, anneal, clean, and a tension to stretch a cable one percent to assure uniform cross-sectional area. A conductor passes through temperature controlled distilled water and through a toroid coil. As the conductor enters the water, steam performs the cleaning action. Quenching and annealing also take place.

B68-10430
SYSTEM CONVERTS OPTICAL PHASE CHANGES TO
RF PHASE CHANGES
LOGUE, S. S. /GEN. DYN./CONVAIR/ DATE- NOV. 1968
M-FS-20091

System converts phase changes at optical frequencies to equal phase changes at RF. This system operates in conjunction with either a Michelson interferometer or conventional interferometers.

B68-10431
CHARGE CONTROL OF NICKEL-CADMIUM BATTERIES
BY COULOMETER AND THIRD ELECTRODE METHOD
FORD, F. PAULKOVITCH, J. DATE- SEP. 1968
GSFC-10487

Combined coulometer/third electrode control circuit for a nickel-cadmium battery included at least one cell of the third electrode type is illustrated. The coulometer/third electrode sensing circuit controls the series regulator as necessary to maintain the sensing voltage at the preset sensing level.

B68-10432
HIGH-EFFICIENCY STEP-UP REGULATOR
LISTER, L. R. /SPERRY RAND CORP./ DATE- DEC. 1968
M-FS-20049

Single-ended step-up regulator-chopper power supply /employing conventional chopper circuitry/ combines the advantages of the chopper and switching regulator circuits. Schematic of the power supply incorporating the step-up regulator is shown.

B68-10434
SELECTIVE VIDEO BLANKING TECHNIQUE
SABOE, M. M. TREUDE, R. C. /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1968
M-FS-20013

Adverse viewing effects caused by faulty photosensitive elements are eliminated. A linear maximal /or nonmaximal/ sequence generator gives a pseudorandom pulse train to selectively blank the display monitor during specified mosaic interrogation times. The outputs minimize the length of the required shift register generator.

B68-10436
COMPACT ROTATING CUP ANEMOMETER
WELLMAN, J. B. DATE- DEC. 1968
NPO-10563

Compact, collapsible rotating cup anemometer is used in remote locations where portability and durability are factors in the choice of equipment. This lightweight instrument has a low wind-velocity threshold, is capable of withstanding large mechanical shocks while in its stowed configuration, and has fast response to wind fluctuations.

B68-10437
TWO-WAY DIGITAL DRIVER/RECEIVER USES ONE
SET OF LINES
BURNETT, G. J. PFEIFER, A. F. /N. AM. ROCKWELL CORP./ DATE- OCT. 1968
ERC-10055

Two-way /bilateral/ digital driver/receiver system using MOS circuits was designed for a multiprocess computer having several subsystems at

relatively close locations. The system requires only a single set of communication lines between subsystems, thus achieving lower cost with increased reliability.

B68-10438
NOSEPIECE RESPIRATION MONITOR
LAVERY, A. L. LONG, L. E. RICE, N. E. DATE-
SEP. 1968
ERC-10136

Comfortable, inexpensive nosepiece respiration monitor produces rapid response signals to most conventional high impedance medical signal conditioners. The monitor measures respiration in a manner that produces a large signal with minimum delay.

B68-10443
SHORT CIRCUIT PROTECTION FOR A POWER
DISTRIBUTION SYSTEM
OWEN, J. R., III /IBM/ DATE- JAN. 1969
M-FS-14993

Sensing circuit detects when the output from a matrix is present and when it should be present. The circuit provides short circuit protection for a power distribution system where the selection of the driven load is accomplished by digital logic.

B68-10456
AMPLIFIER IMPROVEMENT CIRCUIT
STURMAN, J. DATE- DEC. 1968
LEWIS-10712

Stable input stage was designed for the use with a integrated circuit operational amplifier to provide improved performance as an instrumentation-type amplifier. The circuit provides high input impedance, stable gain, good common mode rejection, very low drift, and low output impedance.

B68-10501
READOUT SYSTEM FOR RADIATION DETECTOR
BAKER, B. R. CASHION, K. D. DATE- NOV. 1968
MSC-90180

Improved electrical circuit determines the amount of light detected by a photomultiplier tube when its output signal is in the dark-current range of the tube. The low-intensity light to which the tube responds arises from a thermo-luminescent ionized dosimeter.

B68-10502
RAPID-RESPONSE, LIGHT-EXPOSURE CONTROL
SYSTEM
KUEHL, D. K. ZWILLENBERG, M. L. /UNITED AIRCRAFT CORP./ DATE- DEC. 1968
NPO-10238

Rapid-response electro-optical, light exposure control system, will maintain the light reaching a camera film or other light-sensitive detector at essentially constant level, despite wide variations in the brightness of the light source. The system permits detailed photographic or photoelectric recording of the phenomenon over a range of brightnesses.

B68-10505
LONG-TERM DATA STORAGE AND RETRIEVAL
SYSTEM, A CONCEPT
FOX, T. L. /RCEING CO./ DATE- NOV. 1968
M-FS-14789

Combination magnetic tape/microfilm system may give reliable long-term storage and immediate retrieval. The recording, storage, and retrieval of data would be accomplished by computers, without manual intervention. The proposed system retrieves data in less than one hour after being stored for periods of up to 50 years.

B68-10511
ROCKET ENGINE ANALOG SIMULATION
PHILYAW, B. K. RANDAZZO, G. J. /BOEING CO./
DATE- NOV. 1968
M-FS-14511

Mathematical equations simulate the operation of a rocket engine, simulate destructive and nondestructive tests to verify engine design feasibility, and investigate nonlinear variations in engine performance.

01 ELECTRICAL (ELECTRONIC)

B68-10513

METHOD FOR MEASURING ALTERNATOR VOLTAGE TRANSIENTS

PERZ, D. A. DATE- NOV. 1968
LEWIS-10373

Transient voltage detection circuit measures voltage excursions and recovery times resulting from step-load changes applied to a combination alternator-voltage regulator.

B68-10514

AUTOMATIC CALIBRATION APPARATUS FOR TELEMETRY SYSTEMS

ALLEN, W. W. DATE- NOV. 1968
NPO-10560 NPO-10754

Apparatus automatically calibrates and tests spacecraft telemetry systems. The apparatus can generally be used to calibrate analog-to-digital converters.

B68-10516

HIGH-TEMPERATURE THERMIONIC EMISSION MICROSCOPE

CAMPBELL, A. E., JR. HAMERDINGER, R. W. /ELECTRO-OPT. SYSTEMS/ DATE- NOV. 1968
NPO-10584

Thermionic emission microscope was designed to operate with metal specimen cathode temperatures of 2000 degrees C.

B68-10518

INTEGRATED METAL TRANSISTOR LEADS

CARLEY, D. R. CASTERLINE, E. T. /RCA/ DATE- JUL. 1968
GSFC-90536

Technique that makes the metal leads integral to the transistor wafer and reduces capacitance in the device, thereby increasing its efficiency is outlined.

B68-10525

DIGITAL LASER-BEAM DEFLECTION SENSOR

POWELL, V. J. /GEN. TELEPHONE AND ELECTRON. LABS./ DATE- NOV. 1968
M-FS-14785

Sensor automatically and accurately measures the two-dimensional deflection angles of a laser beam to provide closed-loop servomechanism control of laser beam directivity.

B68-10529

IMPROVED COMMUNICATION SYSTEM FOR LARGE OPERATIONS CENTER

DRAPER, H. S. /BOEING CO./ DATE- NOV. 1968
M-FS-15016

When several microphones are fed into a common system, sound originating at any given source results in poor articulation. Introduction of an automatic microphone priority control suppresses echo and reverberation.

B68-10539

ACTIVE RC FILTER PERMITS EASY TRADE-OFF OF AMPLIFIER GAIN AND SENSITIVITY TO GAIN

KERWIN, W. J. SHAFER, C. V. DATE- NOV. 1968
ARC-10042

Passive RC network was designed with zeros of transmission in the right half of the complex frequency plane in the feedback loop of a simple negative-gain amplifier. The proper positioning provides any desired trade-off between amplifier gain and sensitivity to amplifier gain.

B68-10541

FAILURE RATES FOR ACCELERATED ACCEPTANCE TESTING OF SILICON TRANSISTORS

TOYE, C. R. DATE- NOV. 1968
ERC-10198

Extrapolation tables for the control of silicon transistor product reliability have been compiled. The tables are based on a version of the Arrhenius statistical relation and are intended to be used for low- and medium-power silicon transistors.

B68-10542

HIGH DIELECTRIC THICK FILMS FOR SCREENED CIRCUIT CAPACITORS

ULRICH, D. R. DATE- DEC. 1968

LANGLEY-10294

Techniques and materials have recently been developed to obtain high dielectric films /K of 300 to 800/. High dielectric barium titanate particles are mixed in a barium titanate glass.

B68-10543

TEMPERATURE CONTROLLED STRAIN GAGED EXTENSOMETER

RAMOS, G. L. SELOW, S. /AEROJET GEN./ DATE- DEC. 1968
LEWIS-10353

Temperature controlled strain-gaged extensometer measures longitudinal and girth deflections of pressure vessels in excess of one percent strain during pressurization and depressurization with cryogenic fluids at cryogenic temperatures. The device is of beryllium-copper strips.

B68-10544

COOLING OF 2-KW H SUBSCRIPT 2-0 SUBSCRIPT 2 FUEL CELL

ALLAN, K. N. BJORKMAN, H. K. ELBERT, T. E. HURLEY, J. R. /ALLIS-CHALMERS/ DATE- DEC. 1968
M-FS-13737 M-FS-13740 M-FS-13749

An extensive research and development program has been carried out to devise an improved method of removing waste heat of reaction from a developmental 2 kW hydrogen-oxygen fuel cell.

B68-10545

A 35 GHZ SOLID STATE TRANSMITTER/DRIVER

DE ANGELIS, X. A. DATE- DEC. 1968
M-FS-20152

Solid state transmitter/driver /multiplier/ signal source has been designed and fabricated to produce a stable crystal-controlled CW power output of 100 mw at 35 GHz.

B68-10547

OPERATIONAL INTEGRATOR

LUTZ, E. B. DATE- NOV. 1968
NPO-10230

System operates in the nonreturn-to-zero mode, maintaining the increased bit density capability of this mode but with much higher noise immunity than conventional schemes offer. This integrator performs a mathematical integrating function on inputs from 100 Hz through 100 MHz.

B68-10555

ELECTROLYTIC SILVER ION CELL STERILIZES WATER SUPPLY

ALBRIGHT, C. F. GILLERMAN, J. B. /GARRETT CORP./ DATE- DEC. 1968 REAN- SEE ALSO NASA-CR-65738
MSC-11827

Electrolytic water sterilizer controls microbial contamination in manned spacecraft. Individual sterilizer cells are self-contained and require no external power or control. The sterilizer generates silver ions which do not impart an unpleasant taste to water.

B68-10558

COMBINATION PROBE FOR AIRFLOW MEASUREMENTS

DUDZINSKI, T. J. GLAW, G. E. KRAUSE, L. N. DATE- DEC. 1968
LEWIS-10281

Probe combines a high-recovery shielded thermocouple for sensing total temperature, a total pressure sensing tube, and a flow direction sensing wedge having a 60 degree included angle.

B68-10559

ACCELERATION INSENSITIVE FLUID EXPANSION COMPENSATOR

HUGHES, L. F. /MIT/ DATE- OCT. 1968
ERC-10152

Device compensates for temperature and acceleration effects on a fluid-floated mass in a sealed container of a high performance angular or acceleration sensing instrument. It is used in precision instruments for regulation of gases or liquids in a moving body.

B68-10562

RELIABLE METHOD FOR TESTING GROSS LEAKS IN SEMICONDUCTOR COMPONENT PACKAGES

ALTSCHULER, T. L. DATE- DEC. 1968

ERC-10150

Simple, reliable, inexpensive method for gross-leak testing has been devised, based upon the conventional fine-leak technique. The sensitivity ranges from the detection of very large leaks down to leaks of 10 to the minus seven cc helium per sec.

B68-10563

PRESSURE-SENSITIVE BONDED JUNCTION
TRANSDUCERS

IANNINI, A. RINDNER, W. DATE- OCT. 1968

ERC-10087

Miniature transducers involve the use of appropriate commercial epoxy resins. Design protects the sensitive semiconductor surface from ambients and excludes an air space in the device capsule.

B68-10565

LOCATING **SNEAK PATHS** IN ELECTRICAL
CIRCUITRY

DANNBACK, T. M. /BOEING CO./ DATE- DEC. 1968

M-FS-15018

Use of a matrix system wherein circuit pin connections are assigned arbitrary designators and these used in formation of the matrix is illustrated. The matrix is a format that shows the current paths.

B68-10566

WELDING SKATE WITH COMPUTERIZED CONTROLS

WALL, W. A., JR. DATE- NOV. 1968

M-FS-20224

New welding skate concept for automatic TIG welding of contoured or double-contoured parts combines lightweight welding apparatus with electrical circuitry which computes the desired torch angle and positions a torch and cold-wire guide angle manipulator.

B68-10572

DESIGN OF DISSIPATIVE LINEAR PHASE FILTERS

PHARES, R. L. /SPACO, INC./ DATE- DEC. 1968

M-FS-14698

Set of design curves eliminates work involved in designing linear phase filters by being normalized in such a way as to apply to low, band, and high-pass filters of any bandwidth. Similar curves for any number of poles are plotted by solving a system of simultaneous equations.

B69-10012

MICROWAVE INTERFEROMETER CONTROLS CUTTING
DEPTH OF PLASTICS

HEISMAN, A. M. ICELAND, W. F. /N. AM. ROCKWELL
CORP./ DATE- FEB. 1969

M-FS-14673

Microwave interferometer system controls the cutting of plastic materials to a prescribed depth. The interferometer is mounted on a carriage with a spindle and cutting tool. A cross slide, mounted on the carriage, allows the interferometer and cutter to move toward or away from the plastic workpiece.

B69-10013

DEVICE FOR DIODE TUNING IN A STRIPLINE
VARACTOR HARMONIC MULTIPLIER

STEELE, K. P. /SYLVANIA ELECTRON. SYSTEMS/ DATE-
FEB. 1969

M-FS-20153

Stripline varactor harmonic multiplier uses a device for positioning the varactor diode with respect to the stripline circuit to obtain series resonance. The device also reduces detuning effects, due to thermal expansion, over a wide temperature range.

B69-10014

ISOLATED, MULTIPLE-OUTPUT VOLTAGE DC-TO-DC
CONVERTER

SPON- INNOVATOR NOT GIVEN /AUBURN UNIV./ DATE-
FEB. 1969 REAN- SEE ALSO NASA-CR-61737

M-FS-14976

Isolated, multiple output voltage dc-to-dc converter provides power for television transmitter used in space vehicles. The isolation is accomplished by using a single-end

switching transformer circuit. The converter is completely solid state.

B69-10015

MILLIVOLT SIGNAL LIMITER

HANSEN, I. G. PETERSON, V. S. DATE- FEB. 1969

LEWIS-90297

Low-voltage limiter circuit suppresses the output of platinum probes at temperatures beyond their operating range. The limiter circuit comprises an operational amplifier with a dual feedback loop. The signal limiter is useful in low-voltage instrumentation circuits normally operable or set for cryogenic temperatures.

B69-10027

MOSSBAUER-EFFECT DATA-COLLECTION SYSTEM

ASCHENBRENNER, R. A. VONDEROHE, R. H. DATE- FEB.
1969 REAN- SEE ALSO ANL-7386

ARG-10282

Automated data collection system which uses a small, general-purpose digital computer provides data acquisition from, and minor control of, four Mossbauer-effect experiments. This system is economical with no loss of versatility to the experimenter and is useful in handling large volumes of data from research experiments.

B69-10032

SIMPLE SWITCH ACTUATED BY FORCE APPLIED
OVER WIDE SOLID ANGLE

NELSON, B. /HUGHES AIRCRAFT CO./ DATE- FEB. 1969

XNP-09808

Electric switch can be actuated /closed/ by a force applied from any direction within a hemispheric envelope. The switch is comprised of a flexible, electrically conductive reed holding a conductive contact disc, mounted concentrically within a conductive tube.

B69-10037

USE OF BOTH LINEAR AND LOGARITHMIC
TRANSFER FUNCTIONS TO INCREASE DYNAMIC
RANGE OF VISUAL CHANNEL

PERETKO, H. T. /RCA/ DATE- FEB. 1969

GSFC-10675

Using both linear and logarithmic transfer functions in the visual channels of a dual channel radiometer increases the dynamic range to better than 1 to 10,000 foot-lamberts.

B69-10045

THICK TRANSDUCERS USED FOR GENERATING
SHORT-DURATION STRESS PULSES IN THIN
SPECIMENS

PETERSON, R. G. ROSEN, M. DATE- FEB. 1969

ARG-10232

By generating short stress pulses with thick transducers, the pulse-echo method for determining sound velocities and acoustic attenuation can be applied to thin specimens. The stress pulses enter a specimen where one pulse is reflected several times before a succeeding pulse enters the specimen.

B69-10050

FLOW ANGLE SENSOR AND READOUT SYSTEM

HANSEN, I. G. PETERSON, V. S. DATE- FEB. 1969

LEWIS-90298

Sensor determines fluid flow angles by means of a simple vane that positions itself in the direction of the flow. The vane rotates a small light-reflecting disc as it moves while the readout system uses two cyclically polarized light beams.

B69-10056

FRANGIBLE ELECTROCHEMICAL CELL AND SEALING
TECHNIQUE

HALPERT, G. HAYNOS, J. SHERPEY, J. DATE- MAR.
1969

XGS-10010

Electrochemical cell assembly, which includes a positive electrode plate between two negative electrode plates, is both flexible and compact, and frangible under severe shock conditions. Leak-tight integrity of the housing is maintained by polymer-to-polymer fusion bonds through holes in the expanded metal electrode terminals.

01 ELECTRICAL (ELECTRONIC)

B69-10063

MICROELECTRONIC OSCILLATOR, 2

KLEINBERG, L. L. DATE- MAR. 1969 REAN- SEE ALSO

B69-10064

GSFC-10387

Microelectronic oscillator uses a bipolar transistor to circumvent the problem of developing suitable inductors for lower frequencies. The oscillator is fabricated by hybrid thin film techniques or by monolithic construction. Discrete microminiature components may also be employed.

B69-10064

MICROELECTRONIC OSCILLATOR

KLEINBERG, L. L. DATE- MAR. 1969 REAN- SEE ALSO

B69-10063

GSFC-10375

Bipolar transistor operated in a grounded base configuration is used as the inductor in a microelectronic oscillator. This configuration is employed using thin-film hybrid technology and is also applicable to monolithic technology.

B69-10070

ANALYSIS OF MAGNETICALLY-CONTROLLED PROCESSES IN PULSE-MODULATION SYSTEMS

VEILLETTE, L. J. DATE- MAR. 1969

GSFC-10241

Investigation established analytic expressions for the design of pulse modulators with modulating signal control of the reset level of flux in a nonlinear magnetic core. Expressions derived are applicable to both pulse-width and pulse-rate modulator designs.

B69-10073

ELECTRONIC VISUALIZATION OF GAS BEARING BEHAVIOR

EVANS, R. C. KLASSEN, H. A. WONG, R. Y. DATE- MAR. 1969

LEWIS-10711

Visualization technique produces a visual simulation of gas bearing operation by electronically combining the outputs from the clearance probes used to monitor bearing component motion. Computerized recordings of the probes output are processed, displayed on an oscilloscope screen and recorded with a high-speed motion picture camera.

B69-10090

PERFORMANCE OF LOW-PRESSURE THERMIONIC CONVERTERS IS EVALUATED

RICHARDS, H. K. DATE- MAR. 1969 REAN- SEE ALSO

ANL-7377

ARG-10276

Experiments, evaluating the performance of low-pressure thermionic converters, were conducted with cesium, potassium, and sodium-metal vapors. The results of the investigation are useful in the selection of favorable conditions for the design of thermionic reactor fuel elements, including RF output for special applications.

B69-10093

STRUCTURAL ANALYSIS AND MATRIX INTERPRETIVE SYSTEM /SAMIS/

SPON- INNOVATOR NOT GIVEN /PHILCO CORP./ DATE- APR. 1969 REAN- SEE ALSO B67-10171

NPO-10839

SAMIS digital computer program simplifies automated structural analysis and eliminates reprogramming for problem changes. Program objectives are achieved by standardizing, by providing a modular program, and by programming for intermediate-size problems.

B69-10094

ON-LINE COMPUTER SYSTEM FOR USE WITH LOW-ENERGY NUCLEAR PHYSICS EXPERIMENTS IS REPORTED

GEMMELL, D. S. DATE- MAY 1969 REAN- SEE ALSO

ANL-6993

ARG-10257

Computer program handles data from low-energy nuclear physics experiments which utilize the ND-160 pulse-height analyzer and the PHYLIS computing system. The program allows

experimenters to choose from about 50 different basic data-handling functions and to prescribe the order in which these functions will be performed.

B69-10095

SIMPLE DEMODULATOR FOR TELEMETRY PHASE-SHIFT KEYED SUBCARRIERS

COUVILLON, L. A. DATE- MAY 1969

NPO-11000

Circuit, suitable for operation at high signal-to-noise ratio environments, recovers pulse-code modulated data from digital telemetry systems which use phase-shift keyed subcarrier techniques. This demodulator is easily constructed from microcircuit elements and may be applied where low-cost, relatively high-level signal systems are used.

B69-10096

SILICON CARBIDE DIODE FOR INCREASED LIGHT OUTPUT

GRIFFITHS, L. B. MLAVSKY, A. I. /TYCO LABS./ DATE- JUN. 1969

M-FS-20063

Transition metals improve the overall light output and the output in particular regions of the electroluminescent of a silicon carbide semiconductor device. These metals /impurities/ introduce levels that can be pumped electrically and affect the efficiency of the recombination process involved in emission of radiation.

B69-10097

MOUNTING METHOD IMPROVES ELECTRICAL AND VIBRATIONAL CHARACTERISTICS OF SCREEN ELECTRODES

NELSON, R. E. /WESTINGHOUSE ELEC. CORP./ DATE- JUN. 1969

M-FS-20169

Electrical characteristics of the mesh or screen electrodes used in electron tubes are improved by decreasing the shunt capacitance of the tube while retaining the close spacing needed for the required resolution. Vibrational characteristics are enhanced by raising the natural resonant frequency.

B69-10101

IMPROVED PHASE-SHIFT-KEYED DETECTOR

CHANDLER, J. /SPERRY RAND CORP./ DATE- MAY 1969

M-FS-20064

Improved phase-shift-keyed detector contains an active filter circuit which uses an operational amplifier and resistor-capacitor network. The detector is used in the Saturn space vehicle and Apollo telescope mount command systems to translate an analog signal from the command receiver into digital information for the command decoder.

B69-10113

SURFACE TEMPERATURE MAPPING WITH INFRARED PHOTOGRAPHIC PYROMETRY

POLLACK, F. G. DATE- JUN. 1969

LEWIS-10763

Infrared photographic pyrometry method measures and maps the temperature distribution on a heated surface with accuracy and precision. This method involves the collection, detection and measurement of a narrow bandwidth of emitted infrared radiation. Standard commercially-available equipment is used, together with systematic procedures.

B69-10114

OPTICALLY INDUCED FREE CARRIER LIGHT MODULATOR

GRUBER, C. L. RICHARDS, W. E. DATE- APR. 1969

GSFC-10216

Signal carrier laser beam is optically modulated by a second laser beam of different frequency acting on a free carrier source to which the signal carrier laser is directed. The second laser beam affects the transmission characteristics of the free carrier source to light from the signal carrier laser, thus modulating it.

B69-10115

RING LASER ANGLE ENCODER

COCCOLI, J. D. LAWSON, J. R. MC GARTY, T. P.
NICKLES, J. E. /MIT/ DATE- APR. 1969
MSC-13099

Ring laser angle encoder with a scanning photometer autocollimator and an isolation axis, provides continuous digital readout. It measures the angular difference in inertial attitudes of target /any phenomena generating or reflecting a light beam/ two at a time relative to target one at a time.

B69-10116

SIMPLE TUNNEL DIODE CIRCUIT FOR ACCURATE ZERO CROSSING TIMING

NETZ, A. J. DATE- APR. 1969
ARG-10309

Tunnel diode circuit, capable of timing the zero crossing point of bipolar pulses, provides effective design for a fast crossing detector. It combines a nonlinear load line with the diode to detect the zero crossing of a wide range of input waveshapes.

B69-10117

REMOTELY-ACTUATED BIOMEDICAL SWITCH

LEE, R. D. DATE- APR. 1969
ARC-10105

Remotely-actuated biomedical switching circuit using transistors consumes no power in the off position and can be actuated by a single-frequency telemetry pulse to control implanted instrumentation. Silicon controlled rectifiers permit the circuit design which imposes zero drain on supply batteries when not in use.

B69-10120

BOOTSTRAP UNLOADER

PFIFFNER, H. J. /HUGHES AIRCRAFT CO./ DATE- MAY 1969
XNP-09768

Circuit can sample a number of transducers in sequence without drawing from them. This bootstrap unloader uses a differential amplifier with one input connected to a circuit which is the equivalent of the circuit to be unloaded, and the other input delivering the proper unloading currents.

B69-10121

CIRCUITRY SELECTIVELY LIMITS DATA STORAGE IN GENERAL PURPOSE COMPUTER

SLOPPER, D. K. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1969
GSFC-10605

Circuitry limits storage in the memory of a stored program general purpose digital computer by permitting storage or writing to certain, specified areas of memory. The limit register used in the computer is easily set under program control, and the memory block size and position is readily changed to suit each specific program.

B69-10125

MOSSBAUER VIBRATION CALIBRATION SYSTEMS

EVALUATED
HOBBS, J. V. NETUSIL, W. F. /ROCKETDYNE/ DATE- MAY 1969 REAN- SEE ALSO B67-10339 AND NASA SP-132
M-PS-20014

Mossbauer effect vibration calibrator measures the velocity of high frequency, low amplitude vibration at various velocity and frequency ranges. It contains a highly precise calibrations standard unit and a vibration measuring system and may be applied to ultrafine testing and calibrating piezoelectric shakers, and vibration transducers.

B69-10126

INTEGRATED CIRCUIT WITH MULTIPLE COLLECTOR CURRENT SOURCE

HELLSTROM, M. J. LIN, H. C. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1969
M-PS-20177

Integrated circuit with multiple collector current source achieves the equivalent of a large number of resistors in a small area. Functional

equivalents of a transistor reduce the size requirement for low power integrated circuits, providing an efficient alternative to the conventional diffused resistor process in integrated circuit fabrication.

B69-10129

CONCEPT FOR A MULTIFUNCTIONAL OSCILLOSCOPE PROBE

STRINGER, E. J. /N. AM. ROCKWELL CORP./ DATE- MAY 1969
M-PS-16390

Multifunctional oscilloscope probe incorporates required electronic components so that any one of three desired functions /direct, demodulation, or low capacitance/ can be switched into the oscilloscope. The probe obviates the need for the three separate oscilloscope probes previously used in checking electronic equipment.

B69-10130

TUNABLE BANDPASS FILTER WITH VARIABLE SELECTIVITY

KERWIN, W. J. SHAFFER, C. V. DATE- MAY 1969
REAN- SEE ALSO B68-10210
ARC-10191

Basic active RC networks constructed from stages that realize second-order transfer functions using two integrators offer excellent stability. Modifications of the basic network produce a highly stable bandpass filter having separate controls that independently adjust center frequency, Q, and center frequency gain.

B69-10131

HIGH-ENERGY, HIGH-POWER, LONG-LIFE BATTERY

ABENS, S. G. /HONEYWELL/LIVINGSTON ELECTRON. LAB./ DATE- MAY 1969
LEWIS-10724

High-energy-density primary battery achieves energy densities of up to 130 watt hrs./lb. The electrochemical couple consists of a lithium anode, a copper-fluoride cathode, and uses methyl formate/lithium hexafluoroarsenate for the electrolyte. Once achieved, battery life is approximately 30 hours.

B69-10133

ONE HUNDRED MHZ VOLTAGE-CONTROLLED OSCILLATOR ELECTRICAL POTENTIAL

SWARD, A. V., JR. DATE- MAY 1969
NPO-11004

Voltage controlled oscillator /VCO/ generates a center frequency of 100 MHz with low phase noise. VCOs at this and lower frequencies are applied to phase-lock-loop detection systems used in tracking receivers and telemetry systems.

B69-10135

MASS TRANSPORT MECHANISM IN POROUS FUEL CELL ELECTRODES

JONSSON, I. LINDHOLM, I. /ALLMAENNA SVENSKA ELECK. AKTIEBOLAGET/ DATE- MAY 1969
HQ-10343

Results of experiments on hydrogen-oxygen fuel cells show that higher current densities are obtained with cell anodes having a 100 micron thin active layer of porous nickel containing silver electrocatalyst. Increase in current density is attributed to a convective mass transport mechanism.

B69-10140

FULL WAVE DC-TO-DC CONVERTER USING ENERGY STORAGE TRANSFORMERS

MOORE, E. T. WILSON, T. G. /WILMORE ELECTRON. CO./ DATE- MAY 1969
LEWIS-10375

Full wave dc-to-dc converter, for an ion thruster, uses energy storage transformers to provide a method of dc-to-dc conversion and regulation. The converter has a high degree of physical simplicity, is lightweight and has high efficiency.

B69-10143

SCHMITT TRIGGER MULTIVIBRATOR

ZRUBEK, W. E. DATE- MAY 1969
MSC-10955

01 ELECTRICAL (ELECTRONIC)

Schmitt trigger multivibrator circuit, capable of astable, monostable or bistable operation, incorporates an input circuit in conjunction with a Schmitt trigger circuit. The circuits form two output signal levels, are useful in switching circuit applications, initiates oscillations, and forms highly unsymmetrical wave forms.

B69-10149
CALIBRATION OF A RESISTANCE THERMOMETER
DOWN TO 0.04 DEGREES K
CULBERT, H. V. SUNGAILA, Z. DATE- MAY 1969
ARG-10318

Method for calibrating germanium-resistance thermometers in cryostats between 0.4 degrees K and 4 degrees K involves extrapolating the specific heat of a sample metal to low temperatures. This method is used when a magnetic thermometer is not available.

B69-10151
POSITIVE AND NEGATIVE OUTPUT CIRCUITS
HASLOWSKI, E. A. DATE- MAY 1969
LEWIS-10715

Trigger circuit has a fixed positive output in the on state and a fixed negative output in the off state. The amplitude of the positive and negative pulses may be independently chosen.

B69-10152
SURFACE IRREGULARITIES DETECTED BY FLARE
INSPECTION INSTRUMENT
ZOIKE, H. M. /METRO PHYS./ DATE- MAY 1969
N-PS-20157

Portable fiber optics sensing device which detects surface irregularities in a specific tube flare, permits discrete dimensional measurements to be taken, scanned and read out with only one setup. Capabilities of the instrument can be expanded to include surface inspection of various kinds of tube flares.

B69-10153
PCM BIT DETECTION WITH CORRECTION FOR
INTERSYMBOL INTERFERENCE
THUMIN, A. I. /NEW YORK UNIV./ DATE- MAY 1969
GSFC-10155

For pulse code modulation bits, received signals are filtered by integrate and dump filter from which samples are directed to end of PCM bit. Threshold decision circuit determines level of sample voltage. Effects of interference of known past bit can be corrected by raising or lowering threshold voltage value.

B69-10155
TECHNICAL REPORT ON GALVANIC CELLS WITH
FUSED-SALT ELECTROLYTES
CAIRNS, E. J. CROUTHAMER, C. E. FISCHER, A. K. FOSTER, M. S. HESSON, J. C. JOHNSON, C. E. SHIMOTAKE, H. TEVEBAUGH, A. D. DATE- JUN. 1969
REAN- SEE ALSO ANL-7316
ARG-10297

Technical report is presented on sodium and lithium cells using fused salt electrolytes. It includes a discussion of the thermally regenerative galvanic cell and the secondary bimetallic cell for storage of electricity.

B69-10156
VACUUM GAGE SYSTEM FOR RADIATION ENVIRONMENT
SUMMERS, R. L. DATE- MAY 1969
LEWIS-10797

Hot-cathode ionization gages used to measure high-vacuum pressures are subject to error when ionizing radiation is present. Because this radiation creates additional ions, a second ion gage is mounted near the pressure-measuring gage to detect and measure the radiation induced error.

B69-10161
EXPERIMENTAL PREDICTION OF PERFORMANCE
BY SUPERCONDUCTING CABLES
BROOKS, J. M. PURCELL, J. R. DATE- JUN. 1969
ARG-10215

Broken superconductor method of short sample testing makes possible the prediction of the performance of well cooled, stabilized, superconducting cable coils. It yields a

field-versus-current curve for a short sample of cable. Plots are given for the superconductor and copper currents at various magnetic field strengths.

B69-10162
MAGNETOHYDRODYNAMIC GENERATORS USING
TWO-PHASE LIQUID-METAL FLOWS
PETRICK, M. DATE- JUN. 1969
ARG-10168

Two-phase flow generator cycle of a magnetohydrodynamic /MHD/ generator uses a working fluid which is compressible and treated as an expanding gas. The two-phase mixture passes from the heat source through the MHD generator, where the expansion process takes place and the electrical energy is extracted.

B69-10173
GAGE PROVIDES AUDIBLE SIGNAL TO FACILITATE
CHECKOUT OF CONNECTOR PINS
NORTHERN, E. J. /BOEING CO./ DATE- JUN. 1969
KSC-10335

Commercial push gage has been modified to enable rapid, accurate testing of paddle pins in distributors, bullet pins and patch boards. The purpose of the gage is to ensure that the pins will not break electrical contact when they are subjected to a minimum, preset pressure.

B69-10186
SPHERICAL ION SOURCE
HALL, L. G. /SDS DATA SYSTEMS/ DATE- JUN. 1969
XNP-08898

Radial focusing of electrons in ion source produces greater ion densities, resulting in higher resolution and focus capability for a given source volume. Electron beam is focused near exit aperture by spherical fields. High density ions allow focusing ion beam to high density at echo, allowing high current through small aperture.

B69-10191
LINEAR-LOG COUNTING-RATE METER USES
TRANSCONDUCTANCE CHARACTERISTICS OF A
SILICON PLANAR TRANSISTOR
EICHHOLZ, J. J. DATE- JUL. 1969 REAN- SEE ALSO
ANL-6968
ARG-10158

Counting rate meter compresses a wide range of data values, or decades of current. Silicon planar transistor, operating in the zero collector-base voltage mode, is used as a feedback element in an operational amplifier to obtain the log response.

B69-10212
A MAGNIFYING SCRATCH-GAGE FORCE TRANSDUCER
SCOTT, C. E. DATE- JUL. 1969
LANGLEY-10496

Single-component scratch-gage transducer incorporates a unique motion magnification scheme to increase the magnitude of the load measuring scratch approximately 15 times over that of conventional models. It is small, load carrying and high in natural frequency.

B69-10213
MAGNETICALLY COUPLED EMISSION REGULATOR
SPON- INNOVATOR NOT GIVEN /CONSULTANTS AND
DESIGNERS/ DATE- JUL. 1969
GSFC-10056

Magnetic coupling between input and power handling circuits isolates high voltage. A feedback regulator samples the ion source bias current and provides deviation signals to a magnetic amplifier pulse modulator. The pulse modulator controls the dc to ac power inverter which in turn, controls the emission current.

B69-10215
TECHNIQUE FOR TUNING ANTENNA SYSTEMS
PRODUCING NEGLIGIBLE SIGNAL RADIATION
HERZ, K. /BOEING CO./ DATE- AUG. 1969
KSC-10060

Sweep and marker generators tune and match antenna system in its operational environment. Sweep generator simulates transmissions over entire

frequency range of the antenna receiving system. Marker generator identifies frequency points along the wave form displayed on oscilloscope.

B69-10216
COMPENSATION OF PULSE-REBALANCED INERTIAL INSTRUMENTS

LORY, C. B. DATE- JUL. 1969
 MSC-13098

Study explains the basic concept of pulse-rebalanced inertial instruments in terms of an idealized model which performs the processes of integration, prediction and quantization. An analytical model of an actual pulse-rebalanced instrument was derived in a form comparable to the idealized system.

B69-10217
LOW-COST VOLTAGE-LEVEL DETECTOR
 STURMAN, J. C. DATE- JUL. 1969
 LEWIS-10885

Integrated circuit senses when the voltage level has exceeded or is below a given reference level. The circuit, consisting of a differential amplifier, an SCR, and a pair of zener diodes, is useful for overload detection and monitoring power supplies.

B69-10218
PROTECTIVE CLOTHING FOR WORKERS WITH 5-KW AND 20-KW SHORT-ARC LAMPS
 ARGOU, M. J. DATE- JUL. 1969
 NPO-11155

Two suits of protective clothing reduce hazards to personnel working near short-arc lamps. One suit is worn during assembly or servicing of inoperative 5- and 20-kw lamps. The other suit is worn during adjustment or focusing of operating 5-kw lamps.

B69-10220
LINEAR VOLTAGE-TO-FREQUENCY CONVERTER
 LOKERSON, D. C. DATE- JUL. 1969
 GSFC-10546

Voltage-to-frequency converter, with ultra-high input impedance and linear response, is used in analog to digital data conversion systems. Voltage-to-current converter, using MOSFET devices and a multivibrator, has ultra-linear voltage-to-frequency characteristics. It replaces voltage sensitive magnetic-core oscillators.

B69-10221
MULTIPLE-MASK CHEMICAL ETCHING
 CANNON, D. L. /LOCKHEED ELECTRON CO./ DATE- AUG. 1969
 MSC-13114

Multiple masking techniques use lateral etching to reduce the total area of the high etch-rate oxide exposed to the chemical etchant. One method uses a short-term etch to remove the top layer from the silicon oxide surface, another acts before the top layer is grown.

B69-10224
TWO DEVICES FOR ANALYSIS OF NYSTAGMUS
 GUEDRY, P. E., JR. /NAVAL AEROSPACE MED. INST./
 TURNIPSEED, G. /NAVAL AEROSPACE MED. CENTER/
 DATE- JUL. 1969
 HQ-10273

Electromechanical Slope Computer /ESC/ and Electronic Summation Device /ESD/ facilitates rapid analysis of nystagmus records. The ESC reads out the slope and time of each nystagmus wave form. The ESD provides much faster analysis than the ESC. It provides an immediate analog display and digital display of analyzed nystagmus.

B69-10225
RF NOISE SUPPRESSION USING THE PHOTODIELECTRIC EFFECT IN SEMICONDUCTORS
 ARNDT, G. D. DATE- JUL. 1969
 MSC-12259

Technique using photodielectric effect of semiconductor in high-Q superconductive cavity gives initial improvement of 2-4 db in

signal-to-noise enhancement of conventional RF communication systems. Wide band signal plus noise can be transmitted through a narrow-band cavity due to parametric perturbation of the cavity frequency or phase.

B69-10228
COBALT IMPROVES NICKEL HYDROXIDE ELECTRODES FOR BATTERIES
 LERNER, S. R. /GULTON IND./ SEIGER, H. N. DATE- JUL. 1969
 LEWIS-10760

Positive nickel hydroxide electrodes containing 20 mole percent of cobalt hydroxide are more efficient than when impregnated to the same degree by weight with nickel hydroxide alone. Charge-acceptance and oxygen-evolution tests indicate cobalt electrodes are more efficient than plain positive nickel hydroxide electrodes at all rates of charge.

B69-10230
HIGHLY LINEAR, SENSITIVE ANALOG-TO-DIGITAL CONVERTER
 COX, J. /GULTON IND./ FINLEY, W. R. DATE- JUL. 1969
 MSC-13110

Analog-to-digital converter converts 10 volt full scale input signal into 13 bit digital output. Advantages include high sensitivity, linearity, low quantizing error, high resistance to mechanical shock and vibration loads, and temporary data storage capabilities.

B69-10233
SEGMENTED SIGE-PBTE COUPLES
 EGGERS, P. E. /BATTELLE MEM. INST./ MUELLER, J. J. DATE- JUL. 1969
 GSFC-10746

New design of segmented couples incorporates an intermediate junction contacted by pressure, and eliminates transition members that bond materials differing in thermal expansion. Development of a reproducible and reliable intermediate junction between PbTe and SiGe will be applicable to direct conversion of energy.

B69-10244
CONCEPTUAL TECHNIQUES FOR REDUCING PARASITIC CURRENT GAIN OF LATERAL PNP TRANSISTORS
 GALLAGHER, R. C. /WESTINGHOUSE ELEC. CORP./
 SCOTT, J. M. DATE- JUL. 1969
 MSC-13199 MSC-13200

Two techniques have been conceptually proposed as possible means of reducing parasitic beta in lateral p-n-p transistors. One method uses a degenerate substrate and high concentration P /plus/ guard-ring diffusion, another places the base contact at the center of an annular ring structure.

B69-10246
NOVEL TERMINAL STRIPS FOR TRANSFORMERS
 WILER, E. M. DATE- JUL. 1969
 NPO-10842

Spacing tinned terminal leads between two tapes of woven glass fiber that are sandwich-bonded with pliable epoxy adhesive alleviates problems of taped leads pulling away from the transformer and shorting due to crossover of wires. Individual leads may or may not be enclosed in glass-fiber sleeves.

B69-10247
SIMPLIFIED SYSTEM DISPLAYS COMPLEX CURVES CORRESPONDING TO INPUT DATA
 DERTOUZOUS, M. L. GRAHAM, H. L. /MIT/ DATE- AUG. 1969
 HQ-10073

Cathode ray oscilloscope displays curves or contours of complex shapes corresponding to sets of x,y coordinates. It requires few storage facilities and produces a rapid display of complex curves with a fewer number of commands than previous systems.

B69-10251
LOW-LOSS **C BAND PARASITIC PROBE**

01 ELECTRICAL (ELECTRONIC)

CRIBB, H. E. DATE- JUL. 1969
KSC-09348

Low insertion-loss C band parasitic probe couples RF energy from a transmitting medium to a receiving medium with a minimum of interference in order to minimize power requirements.

B69-10253
RADIATION TOLERANT SILICON NITRIDE INSULATED GATE FIELD EFFECT TRANSISTORS
NEWMAN, P. A. DATE- JUL. 1969
GSFC-10581

Metal-Insulated-Semiconductor Field Effect Transistor /MISFET/ device uses a silicon nitride passivation layer over a thin silicon oxide layer to enhance the radiation tolerance. It is useful in electronic systems exposed to space radiation environment or the effects of nuclear weapons.

B69-10259
REDUCING QUANTIZER DEADBAND WITH A **RANGE SWITCHING** DIGITAL FILTER
CARROLL, C. C. /AUBURN UNIV./ DATE- AUG. 1969
M-FS-20419

Range switching digital filter with three predetermined quantization levels decreases quantization deadband. Mathematical program form implements the transfer function of the filter.

B69-10269
MULTI-FEED CONE FOR CASSEGRAINIAN ANTENNA
STELZRIED, C. T. DATE- AUG. 1969
NPO-10539

Multiple-cone feed horn system for a Cassegrainian antenna using a rotatable hyperboloid in conjunction with a multiple cone system is possible by moving hyperboloid relative to fixed multiple feeds and paraboloid. The hyperboloid can be adjusted so that, for each feed, it is in the best possible position.

B69-10270
PRECISE GIMBALLING MECHANISM
FERRERA, J. D. JOHNSON, K. G. PERKINS, G. S. DATE- AUG. 1969
NPO-11057

Prototype support mechanisms allow precise and repeatable gimballing of engines with a minimum of lost motion and backlash. It also minimizes the use of gears and reduces lubrication requirements for long time space operations of several years duration.

B69-10271
IMPROVED METHOD OF FABRICATING PLANAR GALLIUM ARSENIDE DIODES
ROY, M. M. YEH, T. H. DATE- AUG. 1969
XNP-04235

Improved method fabricates electroluminescent planar P-N gallium arsenide diodes. GaAs is masked with silicon monoxide to allow P-type impurities to be diffused into unmasked portions of GaAs to form P-N junctions.

B69-10272
NONDESTRUCTIVE EVALUATION OF PRINTED WIRING BOARDS BY MICROHM RESISTANCE MEASUREMENTS
STIEFELD, B. DATE- AUG. 1969
SAN-10034

Application of the microhm measuring circuit to measurement of plated-through hole resistances, when combined with appropriate probes, provides data that can be related to the quality of copper plating on printed wiring boards. Acceptance limits can be established and continuous inspection performed, with plating defects causing abnormal readings.

B69-10274
RESONANT MICROWAVE DICHROIC SURFACE
ESTEP, H. /LOCKHEED ELECTRONICS CO./
SAKELLARPOULOS, E. G. DATE- DEC. 1969
GSFC-10658

Dichroic surface has high stopband filter characteristics with a low stopband-to-passband frequency ratio. It utilizes two stagger-tuned, resonant artificial dielectric surfaces and is virtually polarization insensitive.

B69-10281
PIEZOELECTRIC LOCK MECHANISM RESISTS LOCKPICKING
STUETZER, O. M. DATE- AUG. 1969
SAN-10037

Electrically coded piezoelectric lock mechanisms are strong, have few moving parts, are resettable, and are relatively unaffected by high magnetic fields. Codes are extremely difficult to circumvent.

B69-10289
SWEEP FREQUENCY DETECTOR
CLAUSS, R. C. DATE- AUG. 1969
NPO-10669

Sweep detector or passive spectrum analyzer provides a positive monitoring of the bandwidth of the input amplifier of a tracking receiver. Used with an oscilloscope, it provides a visual display of a microwave amplifier bandpass.

B69-10290
HIGH-POWER MICROWAVE POWER DIVIDER CONCEPT
KOEBLY, R. B. /CALIF. INST. OF TECHNOL./ DATE- AUG. 1969
NPO-11031

Variable power divider keeps microwave transmitter at full power. This preserves the bandwidth and modulation characteristics and proportions any amount of the full power from the normal antenna into a dissipative load.

B69-10297
MAXIMUM RMS ERROR COMPARISON OF SEVERAL REDUNDANCY TECHNIQUES
BREAUX, J. N. /BOEING CO./ DATE- AUG. 1969
M-FS-15075

Paper presents mathematical comparison of several techniques with the limiting slope technique for data reduction and reconstruction. Limiting slope method results in maximum possible RMS error versus data compression ratio advantage of 2-to-1 over step and fan methods and 3-to-1 over the two point projection method.

B69-10306
EVALUATION OF MAGNETIC MATERIALS FOR STATIC INVERTERS AND CONVERTERS
FROST, R. M. /WESTINGHOUSE ELEC. CORP./ MC VAY, R. E. PAVLOVIC, D. M. DATE- AUG. 1969
LEWIS-10343

Program studies materials for use in static inverters and converters. It gives suitable data on the behavior of commonly used materials when excited with square wave power.

B69-10307
REMOTE CONTROL THERMAL ACTUATOR
ENGLUND, D. R. HARRIGILL, W. T. KRSEK, A. DATE- AUG. 1969
LEWIS-10873

Thermal actuator makes precise changes in the position of one object with respect to another. Expansion of metal tubes located in the actuator changes the position of the mounting block. Capacitance probe measures the change in position of the block relative to the fixed target plate.

B69-10308
SURVEY OF MAN-MADE ELECTRICAL NOISE AFFECTING RADIO BROADCASTING
BISIGNANI, W. T. /RADIO CORP. OF AM./ GARNER, W. B. DATE- AUG. 1969
HQ-10290

Survey, consisting of limited noise measurements, was made to augment and verify existing data at HF and VHF and to obtain basic data at UHF. Exact frequencies were determined by the absence of intentionally generated signals around three selected frequencies.

B69-10312
NEW PASSIVE TELEMETRY SYSTEM
VISSCHER, J. /FAIRCHILD HILLER CORP./ DATE- AUG. 1969
HQ-10214

Passive telemetry system enables the monitoring of vital biological functions from living organisms, without external connections or power sources.

The FM system, using a phase locked loop technique, keeps the information frequency and powering frequencies separate.

is determined by a crystal oscillator.

B69-10313

CIRCUIT COUNTS PULSES AND INDICATES TIME OF OCCURRENCE OF SLOW PULSES

BAUMER, W. E. /COMPUTER CONTROL CO./ TIMM, J. D.
DATE- AUG. 1969
XNP-06234

Counter includes one section which counts the first several pulses, and a second section which counts pulses from a clock between the beginning of a sampling interval and the receipt of the first pulse by the circuit. The number of clock pulses indicates receipt time of the first pulse.

B69-10314

SELF-SHIELDING PRINTED CIRCUIT BOARDS FOR HIGH FREQUENCY AMPLIFIERS AND TRANSMITTERS

GALVIN, D. /MIT/ DATE- AUG. 1969

HQ-10433

Printed circuit boards retaining as much copper as possible provide electromagnetic shielding between stages of the high frequency amplifiers and transmitters. Oscillation is prevented, spurious output signals are reduced, and multiple stages are kept isolated from each other, both thermally and electrically.

B69-10315

SEPARATION SIMULATOR

PHLIEGER, G. A., JR. DATE- AUG. 1969
KSC-67-15

Separation simulator, consisting of a control panel and an electromechanical simulator unit, simulates electrical separation of space flight vehicle stages. Simulation is accomplished by electrically inserting the simulator between the normal interstage couplings of the vehicle. Actual separation is accomplished by energizing two solenoids.

B69-10316

INTEGRATED SEQUENCE DISPLAY DEVICE

ROSINE, D. R. /BOEING CO./ DATE- AUG. 1969
KSC-10381

Device integrates a planned test sequence with real-time changes indicated on a visual display which includes a record of both planned and unplanned events related to a time base. Motor driven paper chart can be advanced or reversed to display the time span of interest.

B69-10318

IMPROVED ANODE DESIGN FOR METAL-OXYGEN CELLS

ARRANCE, F. C. /MC DONNELL DOUGLAS CORP./
ROBERTSON, W. A. ROSA, A. G. DATE- AUG. 1969
LEWIS-10871

Method for returning electrolyte to the anode compartment in metal-oxygen second battery cells eliminates the problem of the anode drying out during charge-discharge cycling. Electrolyte forced out of the separator is returned to the anode by a microporous insert and wicking material.

B69-10322

FIELD EFFECT TRANSISTOR /FET/ CIRCUIT FOR VARIABLE GAIN AMPLIFIERS

SPAID, G. H. DATE- SEP. 1969
GSFC-10116

Amplifier circuit using two FETs combines improved input and output impedances with relatively large signal handling capability and an immunity from adverse effects of automatic gain control. Circuit has sources and drains in parallel plus a resistive divider for signal and bias to either of the gate terminals.

B69-10323

SIMPLE, ACCURATE AUTOMATIC FREQUENCY CONTROL CIRCUIT

BYRNE, F. DATE- DEC. 1969
KSC-10393

Automatic frequency control circuit is designed for use with voltage-controlled variable-frequency oscillators. The output frequency of the circuit

B69-10325

COMBINATION RANGING SYSTEM AND MAPPING RADAR

GOLDSTEIN, R. M. HORTTOR, R. L. DATE- SEP. 1969
NPO-11001

Transmitter, radiating at a right angle to the spacecraft trajectory and intersecting the surface at a shallow angle, yields accurate radar maps of lunar or planetary surfaces. Earth based station receives the signal reflected from the planetary surface. Mapping coordinates and signal strength are produced by earth based transmitter.

B69-10326

AN INTEGRATED CIRCUIT SWITCH

BONIN, E. L. /TEXAS INSTRUMENTS INC./ DATE- SEP. 1969
NPO-11073

Multi-chip integrated circuit switch consists of a GaAs photon-emitting diode in close proximity with Si phototransistor. A high current gain is obtained when the transistor has a high forward common-emitter current gain.

B69-10327

AN IMPROVED METHOD FOR ELECTRICAL CABLE TERMINATIONS

BAKER, C. D. DATE- OCT. 1969
NPO-10694

Method utilizes a standard terminal lug, a braided wire passed through the barrel and overlapping the top of the lug, and a ferrule to clamp the end of the wire. Electrical connectors can be sterilized and visibly inspected for reliability.

B69-10329

TECHNIQUE FOR PREDICTING TEMPERATURE DISTRIBUTION IN GASES

KASCAK, A. RAGSDALE, R. DATE- SEP. 1969
LEWIS-10918

Simple algebraic equations enable calculation of the temperature distribution throughout a heat generating, radiation gas. They apply over the entire range of opacities, for any heat flux, for a temperature dependent absorption coefficient, and for a non-uniform distribution of volumetric heat sources.

B69-10333

THE EFFECT OF MISMATCHED COMPONENTS ON MICROWAVE NOISE-TEMPERATURE CALIBRATIONS

OTOSHI, T. Y. DATE- SEP. 1969
NPO-11163

Analysis of errors on microwave noise-temperature measurements is important due to development of very low-noise antenna receiving systems and in the absolute accuracies to which the noise temperatures of these systems can be calibrated. Scattering parameters describe properties of the microwave network connected between noise source and receiver.

B69-10338

A METHOD FOR REDUCING SAMPLING JITTER IN DIGITAL CONTROL SYSTEMS

ANDERSON, T. O. HURD W. J. DATE- SEP. 1969
NPO-11088

Digital phase lock loop system is designed by smoothing the proportional control with a low pass filter. This method does not significantly affect the loop dynamics when the smoothing filter bandwidth is wide compared to loop bandwidth.

B69-10340

HELICAL RECORDER

COLE, P. T. STUDDER, P. A. TYLER, A. L. DATE- NOV. 1969
GSFC-10614

Tape recorder, using metallic tape, has a minimum of moving parts and no belts. It permits long-term bulk storage in extreme environments, and has less weight and bulk than present recording equipment.

B69-10347

TRACER OF ELECTRICAL CONDUIT OR PIPES

01 ELECTRICAL(ELECTRONIC)

PECK, R. R. /N. AM. ROCKWELL CORP./ DATE- SEP. 1969

MSC-15223

Device matches ends of a buried conduit, transversing an inaccessible area, without cutting the current.

B69-10349

AUTOMATIC GAUSSIAN RANDOM-NOISE LIMITER

WOODBURY, R. C. DATE- SEP. 1969

NPO-10169

Circuit limits the positive and negative peaks of a random-noise signal. It accurately establishes a known limiting level relative to any given RMS value of the random-noise signal input.

B69-10351

FOOT-OPERATED CELL-COUNTER

EISLER, W. J., JR. FRY, R. J. M. LE BUIS, D.

DATE- SEP. 1969 REAN- SEE ALSO ANL-7409

ARG-10315

Cell-counter for cell indices consists of a footboard with four pressure sensitive switches and an enclosure for the components and circuitry. This device increases the operators efficiency by reducing the number of required hand movements.

B69-10354

AN INFRARED TELEVISION SYSTEM FOR HYDROGEN

FLAME DETECTION

WODE, M. G. /BROWN ENGINEERING CO./ DATE- SEP. 1969

KSC-10368

Infrared sensitive vidicon camera system, utilizing a single camera operating in the near infrared, detects a hydrogen flame burning in a bright sunlit environment.

B69-10356

IDENTIFICATION OF THERMOCOUPLE MATERIAL

NELSON, R. F. /N. AM. ROCKWELL CORP./ VROLYK, J.

J. DATE- SEP. 1969

M-FS-18540

Fabrication of probes from a representative selection of materials used to make thermocouples identifies materials used in thermocouple junctions. Generating a thermoelectric electromotive between hot and cold junctions verifies whether or not the material in question is the same as the probe.

B69-10359

OPTIMUM FM PRE-EMPHASIS

MEERZ, K. W. /BOEING CO./ DATE- SEP. 1969

KSC-10151

Calibrated RF signal generator, precision RF attenuator, and a wave analyzer are used to determine the spectral noise characteristics in the baseband of receiver as a function of RF input power.

B69-10362

AN OVERVIEW OF ELECTROMAGNETIC INTERFERENCE

PROBLEMS IN SPACECRAFT

BASTOW, J. G. DATE- SEP. 1969

NPO-11170

Electromagnetic Interference Workshop held at JPL /Feb., 1968/ permitted an exchange of information on electromagnetic interference problems encountered in aerospace programs. The experiences related at this workshop dealt primarily with Surveyor, Lunar Orbiter, OGO, ATS, and Mariner unmanned programs.

B69-10364

PRESSURE TRANSDUCER

BAKER, C. D. DATE- SEP. 1969

NPO-10853

Pressure-sensitive transducer, consisting of a series of spindle-supported electrically conductive metal washers connected to electrical sensing circuitry, determines the force exerted between a mounting bolt and nut on relatively fragile components.

B69-10369

IMPROVED DC VOLTAGE REGULATOR

BARNES, H. F. DATE- SEP. 1969

XKS-06467

Simplified solid-state circuit provides a closely regulated dc voltage from an unregulated dc source. It eliminates the undesirable loading effect of the emitter-base current of a transistor used in an error-sensing circuit of a regulated dc power supply.

B69-10376

HIGH-TEMPERATURE, GAS-FILLED CERAMIC

RECTIFIERS, THYRATONS, AND

VOLTAGE-REFERENCE TUBES

BAUM, E. A. /GE/ DATE- SEP. 1969

LEWIS-90271

Thyratron, capable of being operated as a rectifier and a voltage-reference tube, was constructed and tested for 1000 hours at temperatures to 800 degrees C. With current levels at 15 amps and peak voltages of 2000 volts and frequencies at 6000 cps, tube efficiency was greater than 97 percent.

B69-10378

IMPROVED VHF DIRECTION FINDING SYSTEM

GRAF, E. R. /AUBURN UNIV./ NEFF, H. DATE- SEP. 1969

M-FS-20439

Direction finding device operating at very high frequencies requires a loop antenna, mechanical rotation, and large structures. The system is applicable to an unmanned configuration. Direction information is extracted in the form of a direction cosine analog.

B69-10380

ENERGY-STORAGE OF A PRESCRIBED IMPEDANCE

SEATON, A. F. /HUGHES AIRCRAFT CO./ DATE- SEP. 1969

NPO-10303

Reflector antenna of the parabolic type offers complete control of its aperture illumination function. The antennas beam width can be changed easily by excitation of various amounts of the line-source feed. The conical reflector collimates a beam when the feed complies with certain geometric constraints.

B69-10381

PHASE MULTIPLYING ELECTRONIC SCANNING ARRAY

SEATON, A. F. /HUGHES AIRCRAFT CO./ DATE- SEP. 1969

NPO-10302

Scanning array was designed with properties of low RF loss and phase control. The array consists of a series of special waveguides, hybrids made up of two variable reactance branch arms for input signals, an edge slot for the difference port, and a sum arm for the unradiated signal.

B69-10382

IMPROVED CIRCULARLY POLARIZED PLANAR-ARRAY

ANTENNA

SEATON, A. F. /HUGHES AIRCRAFT CO./ DATE- SEP. 1969

NPO-10301

Slots sitting astride the virtual wall in a multimode wave guide can be used for generation of one component of a circularly polarized beam. There is a high degree of efficiency without the use of a slow-wave structure.

B69-10383

WIDE-BAND DOUBLER AND SINE WAVE QUADRATURE

GENERATOR

CROW, R. B. DATE- SEP. 1969

NPO-11133

Phase-locked loop with photoresistive control, which provides both sine and cosine outputs for subcarrier demodulation, serves as a telemetry demodulator signal conditioner with a second harmonic signal for synchronization with the locally generated code.

B69-10384

AUTOMATIC CALORIMETRY SYSTEM MONITORS RF

POWER

HARNES, B. W. HEIBERGER, E. C. DATE- SEP. 1969

NPO-11033

Calorimetry system monitors the average power dissipated in a high power RF transmitter.

Sensors measure the change in temperature and the flow rate of the coolant, while a multiplier computes the power dissipated in the RF load.

B69-10385

IMPROVED PERCEPTUAL-MOTOR PERFORMANCE MEASUREMENT SYSTEM

PARKER, J. F., JR. /BIOTECHNOLOGY, INC./ REILLY, R. E. DATE- SEP. 1969

HQ-10123

Battery of tests determines the primary dimensions of perceptual-motor performance. Eighteen basic measures range from simple tests to sophisticated electronic devices. Improved system has one unit for the subject containing test display and response elements, and one for the experimenter where test setups, programming, and scoring are accomplished.

B69-10386

REAL-TIME OPERATING SYSTEM/360

HOFFMAN, R. L. /IBM CORP./ KOPP, R. S. MUELLER, H. R. POLLAN, W. D. VAN SANT, B. W. WEILER, P. W. DATE- SEP. 1969

MSC-12148

RTOS has a cost savings advantage for real-time applications, such as those with random inputs requiring a flexible data routing facility, display systems simplified by a device independent interface language, and complex applications needing added storage protection and data queuing.

B69-10390

A THIRTY-SIX ELEMENT ARRAY ANTENNA SYSTEM

GRAF, E. R. /AUBURN UNIV./ DATE- SEP. 1969

M-FS-20435

Thirty-six element square array, with mutual coupling between crossed slots for array elements, is used as an electronically scanned tracking antenna. The system does not require the movement of the antenna or the presence of an operator.

B69-10392

AN ELECTRONIC CIRCUIT FOR SENSING

MAJFUNCTIONS IN TEST INSTRUMENTATION

MILLER, W. M., JR. /BOEING CO./ DATE- DEC. 1969

KSC-10209

Monitoring device differentiates between malfunctions occurring in the system undergoing test and malfunctions within the test instrumentation itself. Electronic circuits in the monitor use transistors to commutate silicon controlled rectifiers by removing the drive voltage, display circuits are then used to monitor multiple discrete lines.

B69-10401

IMPROVED FERROUS SHIELDING FOR FLAT CABLES

DRECHSLER, R. J. /DOUGLAS AIRCRAFT CO./ DATE- SEP. 1969

M-FS-14524

To improve shielding of flat multicore cables, a thin, seamless ferrous shield around all cores optimizes low frequency magnetic shielding. Such shielding is covered with an ultrathin seamless coat of highly conductive nonferrous material.

B69-10402

NONDESTRUCTIVE TESTING OF WELDS ON

THIN-WALLED TUBING

HAGEMAIER, D. J. /N. AM. ROCKWELL CORP./

POSAKONY, G. J. DATE- SEP. 1969

M-FS-18144

Special ultrasonic search unit, or transducer assembly, reliably inspects the quality of melt-through welds of fusion welded tubing couplers for hydraulic lines. This instrumentation can also be used to detect faulty braze bonds in thin-walled, small diameter joints and wall thickness of thin-walled metal tubing.

B69-10407

A POSITIVE TAPER TRAVELING-WAVE TUBE

GRECHBERG, R. W. /WATKINS-JOHNSON CO./ ROBERTS,

L. A. DATE- SEP. 1969

LANGLEY-10263

Synchronism can be maintained between the RF beam current and the circuit electromagnetic waves over

substantially the entire length of a traveling-wave tube by increasing the pitch of the last portion of the helical wave structure. There is no loss of linearity or beam conversion efficiency.

B69-10410

NOVEL MULTIPURPOSE TIMER FOR LABORATORIES

EISLER, W. J. KLEIN, P. D. DATE- SEP. 1969

ARG-10147

Multipurpose digital delay timer simultaneously controls both a buffer pump and a fraction-collector. Timing and control may be in 30-second increments for up to 15 hours. Use of glassware and scintillation vials make it economical.

B69-10416

PUNCH-MAGNET DELAY ELIMINATED BY

MODIFICATION OF CIRCUIT

COHN, C. E. DATE- SEP. 1969

ARG-10333

Reduction of retardation by diode-resistor networks of the current-decay time of a punch magnet by connection of a Zener diode in series with the damping network increases the reliability of data on paper tape.

B69-10418

RADIOGRAPHIC THRESHOLD DETECTION LEVELS OF

ALUMINUM WELD DEFECTS

TRYON, R. W. /GEN. DYNAMICS/ DATE- SEP. 1969

M-FS-20487

Test program is used in the design and fabrication of special graduated aluminum penetrometers. The program evaluates the threshold detection capabilities of a fixed radiographic technique in detecting surface and subsurface cracks in one-quarter inch aluminum welds. The radiographic films were evaluated and the threshold detection capabilities defined.

B69-10419

THERMAL CALIBRATION TARGET

BULLER, J. S. /SANTA BARBARA RES. CENTER/ DATE-

SEP. 1969

XGS-11144

Blackbody source calibrates the response of a medium resolution infrared radiometer used on a meteorological satellite. This approach controls the temperature of a thermal calibrating device over a wide range without the need for controlling a liquid nitrogen input to the device. The availability of liquid nitrogen achieves the required thermal control.

B69-10427

A COMPACT ROTARY VANE ATTENUATOR

NIXON, D. L. CTOSH, T. Y. STELZRIED, C. T.

DATE- SEP. 1969

NPO-10562

Rotary vane attenuator, when used as a front end attenuator, introduces an insertion loss that is proportional to the angle of rotation. New technique allows the construction of a shortened compact unit suitable for most installations.

B69-10429

ACCURATE NINE-DECADE TEMPERATURE-COMPENSATED

LOGARITHMIC AMPLIFIER

BOBIS, J. P. MC DOWELL, W. P. PAUL, V. H. DATE-

SEP. 1969

ARG-10480

Transistor-driven temperature-stable amplifier with logarithmic operating characteristics permits presentation of the entire range of the reactor without range switching. This circuit is capable of monitoring ion chamber currents over spans of 8 or 9 decades and is used in nuclear reactor instrumentation. Application is found in materials under ultrahigh vacuum.

B69-10436

LEADS INTEGRAL WITH THE INTERNAL

INTERCONNECTION THAT PENETRATE THE

MOLDED WALL OF A PACKAGE

MARLEY, J. /ITT FEDERAL LABS./ DATE- SEP. 1969

LANGLEY-10228

Multiplicity of external ribbon leads makes

01 ELECTRICAL (ELECTRONIC)

possible connections to a sealed or encapsulated microassembly. The leads are integral with the internal connections on a single part that can be fabricated economically by fine-detail electroplating.

B69-10438

LEAKAGE MEASURING METHOD

CLAUSEN, R. J. /DOUGLAS AIRCRAFT CO./ DATE- SEP. 1969

M-FS-14722

Technique measures leakages of high pressure test specimens occurring on the input rather than the output side of a test specimen. Technique involves paralleling-off the pressure supply line and duplicating and measuring the leakage flowing into a specimen rather than attempting to measure the leakage flowing out of it.

B69-10439

SIMPLE QUASI-EXPONENTIAL SLOPE GENERATOR

ANDERSON, T. O. HURD, W. J. DATE- SEP. 1969

NPO-11130

Circuitry for digitally generating an exponentially decaying wave function permits discrete values to be sampled from the exponential waveform for comparison with a binary number of specified accuracy. This exponential-decay generator employs a simple binary counter to count in the sequence of exponential decay.

B69-10440

TEMPERATURE-CONTROLLED RESISTOR

PERKINS, T. G. DATE- SEP. 1969

NPO-10713

Electrical resistance of a carbon-pile resistor is controlled by the compression or relaxation of a pile of carbon disks by a thermally actuated bimetallic spring. The concept is advantageous in that it is direct-acting, can cover a wide range of controllable characteristics, and can handle considerable power directly.

B69-10441

IMPROVED METHOD OF DICING INTEGRATED CIRCUIT WAFERS INTO CHIPS

LITANT, I. SCAPICCHIO, A. J. DATE- SEP. 1969

ERC-10138

Method employing a pressure chamber is used for dicing semiconductor single-crystal wafers, containing integrated circuits, into small chips along pre-scribed lines. Uniform bending of the scribed wafer over the convex surface of a perforated hemisphere, breaks it cleanly into individual chips without damaging the circuits.

B69-10443

THE QUANTASYN, AN IMPROVED QUANTUM DETECTOR

GORSTEIN, M. MC WILLIAMS, I. G. /MIT/ SEWARD, H. H. DATE- SEP. 1969

ERC-10148

Quantasyn provides absolute measurement of radiation flux in the range 1000 Å to 4500 Å and into the vacuum ultraviolet. This radiation detector combines the high quantum efficiency and inherent linearity of the silicon solar cell with the constant quantum response of the fluorescent organic compound lumogen.

B69-10445

CURRENT-SWITCHING TECHNIQUE FOR ANALOG PULSE CIRCUITS

LARSEN, R. N. DATE- SEP. 1969

ARG-10479

Circuit technique uses a signal diode as a series current-pass element. Technique is applied to the design of a biased amplifier circuit and a nanosecond-pulse stretcher circuit.

B69-10452

AUTOMATIC TUNING OF HYDROGEN MASERS

LEVINE, M. /HEWLETT-PACKARD/ VESSOT, R. DATE- NOV. 1969

GSFC-10127

Varying the density of the atoms in the cavity changes the Q of the atoms. When the cavity is mistuned, the density variation causes a frequency variation proportional to the degree of cavity mistuning.

B69-10453

MODULAR PACKAGING TECHNIQUE FOR COMBINING INTEGRATED CIRCUITS AND DISCRETE COMPONENTS

LACCHIA, J. P. /ELECTRO-OPTICAL SYSTEMS, INC./ DATE- SEP. 1969

GSFC-10369

Technique for packaging electronic modules interconnects integrated circuits and discrete components by means of beryllium-copper strips in a molded diallylphthalate tray. Simple girder-like construction provides ease of assembly, high rigidity, excellent vibration resistance, and good heat dissipation characteristics.

B69-10460

OPTIMIZING SOLAR-CELL GRID GEOMETRY

CROSSLEY, A. P. /RCA/ DATE- OCT. 1969

HQ-10417

Trade-off analysis and mathematical expressions calculate optimum grid geometry in terms of various cell parameters. Determination of the grid geometry provides proper balance between grid resistance and cell output to optimize the energy conversion process.

B69-10461

SYNCHRONOUS CHARGE-CONSTRAINED ELECTROQUASISTATIC GENERATOR

MELCHER, J. R. /MIT/ DATE- SEP. 1969

HQ-10231

Electroquasistatic generator depends on electroquasistatic interactions to provide synchronous operation. The generator employs a moving insulating belt, with an ac electric potential source to establish positively and negatively charged regions on the belt. The field effect of the charges on the belt creates an ac output voltage.

B69-10465

TECHNIQUE FOR PINPOINTING SUBMICRON PARTICLES IN THE ELECTRON MICROSCOPE

MILLER, E. L. /MC DONNELL DOUGLAS/ PHILLIPS, A. DATE- SEP. 1969

HQ-10043

Series of electron micrographs at successively lower magnifications can localize the substrate area sufficiently for a particle to be picked up by the beam of the electron microprobe. This approach could be modified to apply to fractographic studies, particularly of oxidation products stripped from fractures.

B69-10470

PREPARATION OF SUPERCONDUCTING THIN FILMS OF TRANSITION-METAL INTERSTITIAL COMPOUNDS

GAVALER, J. R. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1969

HQ-10445

Sputtering technique forms transition-metal interstitial compounds into superconducting thin films having transition temperatures similar to those of the bulk materials. Since the magnetic-field and current-carrying properties of the films exceed those of the bulk materials, they may have applications other than in tunneling devices.

B69-10472

ELECTRONIC ANALOG EQUALIZATION FOR VIBRATIONAL TESTING

TRUBERT, M. R. P. DATE- DEC. 1969

NPO-10544

Method of real time equalization involving use of an analog computer achieves effective qualification testing by realistically simulating the effects of the vibrational forces which will actually be experienced in powered flight.

B69-10474

BREAKAWAY ELECTRICAL CONNECTOR

KATZIN, L. DATE- SEP. 1969

NPO-11140

One-shot, breakaway multiwire cable connector is fabricated by using a number of small-diameter interconnecting wires, each of which, differing incrementally in length, is welded to neighboring pin and cable terminations. This design

eliminates frictional binding and provides highly reliable cable interconnections until the connector is disengaged.

B69-10476
MAGNETIC FIELD MAPPER
MASTERS, R. M. STENGER, F. J. DATE- SEP. 1969
LEWIS-10782

Magnetic field mapper locates imperfections in cadmium sulphide solar cells by detecting and displaying the variations of the normal component of the magnetic field resulting from current density variations. It can also inspect for nonuniformities in other electrically conductive materials.

B69-10477
DEVICE FOR OBTAINING SEPARATION OF OXYGEN
GLUECKERT, A. J. /GEN. AM. TRANSPORTATION/
REMUS, G. A. DATE- SEP. 1969
LANGLEY-11007

Permeation membrane of a magnesium-nickel alloy of silver has the ability to permeate oxygen at high temperatures for an extended period of operation without failure. The measured rates of oxygen permeation in a tubular configuration of this alloy are higher than any previous rates published.

B69-10479
LITERAL READOUT OF IDENTIFICATION SIGNALS IN MORSE CODE
MEISSNER, C. W., JR. DATE- OCT. 1969
LANGLEY-10222

Instrument, designed for mounting in aircraft instrument panels, decodes identification signals received in Morse from VOR or ILS transmitters as they are received and displays the literal equivalent. Without elaboration it cannot decode numbers.

B69-10480
AN UNCONVENTIONAL MAGNETICALLY-COUPLED MULTIVIBRATOR
MOORE, E. T. /DUKE UNIV./ YU, Y. DATE- SEP. 1969
HQ-10226

Multivibrator circuit provides a low-frequency sine wave output without using a low-frequency power transformer or filter components. This circuit, utilizing two transistors and a magnetic core, represents a reduction in complexity, size, and weight over similar units.

B69-10481
IMPROVED PULSE SHAPE DISCRIMINATOR FOR FAST NEUTRON-GAMMA RAY DETECTION SYSTEM
LOCKWOOD, J. A. /NEW HAMPSHIRE UNIV./ ST. ONGE, R. DATE- SEP. 1969
HQ-10151

Discriminator in nuclear particle detection system distinguishes nuclear particle type and energy among many different nuclear particles. Discriminator incorporates passive, linear circuit elements so that it will operate over a wide dynamic range.

B69-10484
ADJUSTABLE THERMAL **TREE**
APPEL, B. H. /N. AM. ROCKWELL CORP./ HAWKINS, B. H. DATE- SEP. 1969
MSC-15556

Tree mounts 10 thermocouples on extensible arms to provide a reliable heat profile of conditions within heat treating devices, such as ovens and autoclaves, and within environmental test chambers.

B69-10487
PHASE-LOCKED-LOOP PHASE MODULATOR WITH HIGH MODULATION INDEX, LOW DISTORTION
BADSTIBNER, C. G. /RCA/ DATE- OCT. 1969
MSC-12247

Phase-locked-loop phase modulator has the capability of generating a 6.8 MHz carrier at modulation indexes as high as 2, with a distortion of the demodulated signal of less than 5 percent. These characteristics are obtained

without the use of multipliers.

B69-10490
FUSE PROTECTS CIRCUIT FROM VOLTAGE AND CURRENT OVERLOADS
CASEY, L. O. DATE- OCT. 1969
MSC-12135

Low-melting resistor connected in series with the load protects the circuit against current overloads. It protects test subjects and patients being monitored by electronic instrumentation from inadvertent overloads of current, and sensitive electronic equipment against high-voltage damage.

B69-10494
EPITAXIAL CRYSTALLINE GROWTH UPON COLD SUBSTRATES
LEBDUSKA, R. L. /PHYSICS TECHNOL. LAB., INC./
DATE- OCT. 1969
MSC-11196

By sputtering a material with a high-energy ion-beam bombardment, the molecules of the target can be dislodged and ejected for subsequent deposition on a cold substrate of the desired crystallographic type and orientation.

B69-10497
STEREO TV ENHANCEMENT STUDY
SPON- INNOVATOR NOT GIVEN /KOLLSMAN INSTRUMENT CORP./ DATE- SEP. 1969
M-FS-14805

Setting up an artificial situation using photographs of lunar-type terrain on a dual TV-type projection system determines the effectiveness of stereo TV presentations in allowing an operator to remotely control an extra-terrestrial vehicle.

B69-10498
FOLDED STICK MODULE
KATZIN, L. DATE- OCT. 1969
NPO-10854

Integrated circuit modules can be compactly assembled into short-run complex electronic assemblies by mounting them on a Stick module. This module provides a method of high-density packaging for industrial operations that require the fabrication of compact circuitry configurations.

B69-10502
ROTARY ANTENNA ATTENUATOR
DICKINSON, R. M. HARDY, J. C. DATE- OCT. 1969
NPO-10648

Radio frequency attenuator, having negligible insertion loss at minimum attenuation, can be used for making precise antenna gain measurements. It is small in size compared to a rotary-vane attenuator.

B69-10503
SIMPLIFIED, RELIABLE CIRCUIT SORTS BINARY NUMBERS IN ORDER OF MAGNITUDE
ANDERSON, T. O. DATE- OCT. 1969
NPO-10112

Circuit includes a single-word input/output register and a multiword serial memory which are circulated in synchronism. It puts out data at a rate compatible with relatively slow-speed electromechanical devices.

B69-10507
RADIOMETRIC TEMPERATURE REFERENCE
MONFORD, L. G., JR. DATE- OCT. 1969
MSC-13276

Radiometric Temperature Reference uses a thermistor as both a heating and sensing element to maintain its resistance at a preselected level to continuously control the power supplying it. The fixed infrared radiation level must be simple, rugged, and capable of high temperature operation.

B69-10512
CONSTANT-FREQUENCY, VARIABLE-DUTY-CYCLE MULTIVIBRATOR
JOHNSON, J. E. /MICHIGAN UNIV./ DATE- OCT. 1969
XGS-10033

01 ELECTRICAL (ELECTRONIC)

Circuit provides a pulse source of constant frequency with a duty cycle that is adjustable by an external input signal. It could serve as a switching mode voltage regulator or as a switching source for control systems.

B69-10513 IMPROVED SYSTEM FOR DOCUMENTING MEASUREMENT DATA

PETERSON, R. H. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969
MSC-18269

New documentation method reduces each system record to the basic system data card, one system recorder card, and a form fill-in type system diagram. All recorder data cards are of identical format, requiring only one line of keypunch data input to prepare recorder listing cards for a system.

B69-10516 RATE OF HEAT EXTRACTION CONTROLLER FOR ENVIRONMENTAL CONTROL

ANNIS, J. F. /WEBB ASSOCIATES/ TROUTMAN, S. J. WEBB, P. DATE- SEP. 1969
HQ-10318

Automatic control device measures a physiological parameter related to heat production and conditions it to control the heat removal capacity of a watercooled environmental control suit.

B69-10523 AN INTERFEROMETER TRACKING RADAR SYSTEM

BRODERICK, R. F. DATE- OCT. 1969
MSC-10956

Fine tuning acquisition and tracking interferometer radar system uses a first antenna array of at least three receiving antennas. Array includes a reference antenna, a coarse tuning antenna, and a fine tuning antenna aligned on a receiving axis. Short range rendezvous system provides increased position accuracy.

B69-10526 COVER PROTECTS CRITICAL ELECTRICAL CONNECTORS AGAINST DAMAGE DURING HANDLING

CAMPOY, A. Z. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969
MSC-15662

Split-half cover eliminates the surface marring and dirt penetration problems previously encountered during handling and cable assembly. Metal retaining ring slips over the two plastic halves to hold them in place.

B69-10533 GAS METAL ARC /GMA/ WELD TORCH PROXIMITY CONTROL

HAWKES, E. D. /N. AM. ROCKWELL CORP./ DATE- NOV. 1969
M-FS-16327

Adjustable transducer probe, which is attached to a welding torch and maintains a preset touch-to-work distance, accurately follows irregular surfaces, is less sensitive to heat and static interference, and has more positive response because of electro-mechanical control.

B69-10537 IMPROVED CAMERA FOR BETTER X-RAY POWDER PHOTOGRAPHS

PARRISH, W. /N. AM. PHILIPS CO./ VAJDA, I. E. DATE- NOV. 1969
HQ-10424

Camera obtains powder-type photographs of single crystals or polycrystalline powder specimens. X-ray diffraction photographs of a powder specimen are characterized by improved resolution and greater intensity. A reasonably good powder pattern of small samples can be produced for identification purposes.

B69-10538 DESIGN FOR A RAPID AUTOMATIC SYNC ACQUISITION SYSTEM

ANDERSON, T. O. GALLO, A. J. DATE- OCT. 1969
NPO-10214

System provides rapid command sync acquisition between widely separated transmitter-receivers.

It is based on a rapid, automatic range-adjustment approach rather than the time-consuming cycle slipping or stepping techniques of conventional phase-locked loops.

B69-10539 CIRCUIT BOARD HOLE COORDINATE LOCATOR CONCEPT

SAMUEL, L. W. /BOEING CO./ DATE- NOV. 1969
M-FS-14737

Fixed light source registers the x and y coordinates of holes in a fixed opaque template. A first surface parabolic mirror and a set of photocells are used to detect the passage of light through the individual holes.

B69-10546 SYNCHRONIZING REDUNDANT POWER OSCILLATORS

JENSON, K. J. /HONEYWELL, INC./ DATE- NOV. 1969
XGS-09377 XGS-09378

Outputs of oscillators are synchronized by summing the power transformer phase voltages, the summed voltages are applied to the frequency determining inductors of the individual voltage-controlled power oscillators. The beat frequency is eliminated when synchronization is achieved.

B69-10548 HIGH VOLTAGE PULSE GENERATOR

PIPPEN, D. L. DATE- OCT. 1969
MSC-12178

Generator has an improved circuit for generating a controllable, high voltage spark having a constant known energy output. It can be used for testing the flash and ignition characteristics of nonmetallic materials in a controlled gas environment.

B69-10550 MULTICHANNEL SPECTROSCOPY GUIDE

RÖTBE, D. E. /CORNELL AERONAUTICAL LAB., INC./ DATE- NOV. 1969
HQ-10441

System makes use of diverging duct walls for conducting the light from entrance slits to the conductors by means of multiple reflectors. This system simultaneously records, photoelectrically, the intensities of several closely spaced narrow wavelengths in the ultraviolet and infrared areas of the spectrum.

B69-10553 USE OF MEDICAL AND DENTAL X-RAY EQUIPMENT FOR NONDESTRUCTIVE TESTING

SPON- INNOVATOR NOT GIVEN /MANNED SPACECRAFT CENTER/ DATE- OCT. 1969
MSC-13389

Industrial X ray equipment is used for nondestructive testing to detect defects in metal joints, electrical terminal blocks, sealed assemblies, and other hardware. Medical and dental X ray equipment is also used for hardware troubleshooting.

B69-10557 ESTIMATION OF SIGNAL-TO-NOISE RATIOS

COUVILLON, L. A., JR. GILCHRIST, C. E. DATE- OCT. 1969
XNP-05254

Statistical method estimates signal-to-noise ratios in an observed random voltage, such as the output of a telemetry receiver. Signals from a distant transmitting source, overlaid by noise signals, are monitored continuously.

B69-10568 ELECTROOPTICAL SCANNING OF FILM

BILLINGSLEY, F. C. VOLKOFF, J. J. DATE- OCT. 1969
NPO-11106

Scan-in scan-out flying spot scanning system recognizes three different levels of transmissivity within a frame. It selectively acts on these levels either to intensify the illumination or to extend the duration of the illuminating spot to any picture element. Thus it improves the ratio of signal to tube noise in the cameras output.

B69-10569

**AUTOMATIC FREQUENCY CONTROL OF
VOLTAGE-CONTROLLED OSCILLATORS**
KOLBLY, R. B. DATE- OCT. 1969
NPO-11064

Optical-capacitive coupling is used for isolation of control voltages, such as the high-voltage level of a klystron control electrode that is not referenced to ground, to serve as error voltages referenced to system ground so that the magnitude and sense of correction may be transferred.

B69-10570

AUTOMATED PLOTTING OF EQUIPOTENTIALS
BUNKER, E. R., JR. DATE- NOV. 1969
NPO-11134

By substitution of resistance paper for normal plotting paper, an x-y plotter can be used to draw automatically the equipotential lines between components represented in planar form on the paper. This technique is used for high voltage electronic components of complex configuration for the prediction of stress in the intervening insulation.

B69-10578

**LOAD CURRENT SENSOR FOR A PULSE WIDTH
MODULATOR POWER REGULATOR**
HRON, R. L. /HONEYWELL, INC./ DATE- DEC. 1969
GSFC-10656

Circuit, using a pulse transformer, enables a sensor to operate for a short portion of the duty cycle. Current drawn from the load is minimized and high impedance is reflected to the load.

B69-10584

**MILLIMETER-WAVE ATMOSPHERIC LOSS PREDICTION
METHOD**
STELZRIED, C. T. DATE- NOV. 1969
NPO-11054

Relationship between atmospheric attenuation and the ground temperature and humidity provides a reference from which changes in temperature and humidity will produce a corresponding atmospheric loss figure. Computer program computes atmospheric loss due to water content, given the measured loss and ground temperature and humidity.

B69-10585

**BALLOON BATTERIES, CHARGED AND HEATED BY
SOLAR ENERGY**
SPON- INNOVATOR NOT GIVEN /HELPER, INC./ DATE-
NOV. 1969
GSFC-10769

Shielded heat-of-fusion material envelope collects and stores solar heat to maintain temperature during the night cycle at 30,000 feet. Spiral-wound fluoroplastic film structure has low density to avoid damage to aircraft in case of impact.

B69-10597

**AUTOMATIC STAR-HORIZON ANGLE MEASUREMENT
SYSTEM**
KORBER, K. KOSO, D. A. NARDELLA, P. C. DATE-
NOV. 1969
MSC-11585

Automatic star horizontal angle measuring aid for general navigational use incorporates an Apollo type sextant. The eyepiece of the sextant is replaced with two light detectors and appropriate circuitry. The device automatically determines the angle between a navigational star and a unique point on the earth's horizon as seen on a spacecraft.

B69-10601

CRYOGENIC PRESSURE TRANSDUCER
HENDRIX, J. M. DATE- NOV. 1969
M-FS-14909

Cryogenic pressure transducer utilizes a diaphragm which is electron beam welded to a fitting. This assembly is then heliarc welded to the main body of the transducer. The transducer requires no damping oil and thus is capable of operating at both cryogenic and high temperatures.

B69-10603

FLEXIBLE HIGH-VOLTAGE SUPPLY FOR

EXPERIMENTAL ELECTRON MICROSCOPE

CHAPMAN, G. L. JUNG, E. A. LEWIS, R. N. VAN
LOON, L. S. WELTER, L. M. DATE- OCT. 1969
ARG-10482

Scanning microscope uses a field-emission tip for the electron source, an electron gun that simultaneously accelerates and focuses electrons from the source, and one auxiliary lens to produce a final probe size at the specimen on the order of angstroms.

B69-10607

**SPRAYED SHIELDING OF PLASTIC-ENCAPSULATED
ELECTRONIC MODULES**
MULLER, A. N. /DOUGLAS AIRCRAFT CO./ DATE- NOV.
1969
M-FS-13570

Metallic coating directly sprayed on electronic modules provides simple and reliable lightweight protection against radio frequency interference. A plasma arc may be used. Aluminum and copper are the most effective metals.

B69-10612

**LIVE-TIMER METHOD OF AUTOMATIC DEAD-TIME
CORRECTION FOR PRECISION COUNTING**
PORGES, K. G. RUDNICK, S. J. DATE- OCT. 1969
ARG-10478

Automatic correction for dead time losses in nuclear counting experiments is implemented by a simple live timer arrangement in which each counting interval is extended for compensation for the dead time during that interval. This method eliminates repetitious manual calculations, source of error, and dependence upon paralysis shifts.

B69-10613

**ANALYSIS OF SECONDARY CELLS WITH
LITHIUM ANODES AND IMMOBILIZED
FUSED-SALT ELECTROLYTES**
CAIRNS, E. J. ROGERS, G. L. SHIMOTAKE, H. DATE-
OCT. 1969
ARG-10452

Secondary cells with liquid lithium anodes, liquid bismuth or tellurium cathodes, and fused lithium halide electrolytes immobilized as rigid pastes operate between 380 and 485 degrees. Applications include power sources in space, military vehicle propulsion and special commercial vehicle propulsion.

B69-10614

**HIGHLY STABLE HIGH-RATE DISCRIMINATOR FOR
NUCLEAR COUNTING**
ENGLISH, J. J. HOWARD, R. H. RUDNICK, S. J.
DATE- OCT. 1969
ARG-10483

Pulse amplitude discriminator is specially designed for nuclear counting applications. At very high rates, the threshold is stable. The output-pulse width and the dead time change negligibly. The unit incorporates a provision for automatic dead-time correction.

B69-10618

**IBM-1620 MONITOR 11-D DISK-STORAGE
SUBROUTINES**
KREJCI, H. F. DATE- OCT. 1969
ARG-10376

Set of subroutines provides the FORTRAN user with protected, permanent, disk storage of data on an IBM 1620 Monitor 11-D system. The program consists of a set of four subroutines and a utility program. It allows block data to be transferred directly between assigned core locations and disk storage.

B69-10621

**MANGANESE-56 COINCIDENCE-COUNTING FACILITY
PRECISELY MEASURES NEUTRON-SOURCE STRENGTH**
DE VOLPI, A. LARSEN, R. N. PORGES, K. G. A.
DATE- OCT. 1969
ARG-90261

Precise measurement of neutron-source strength is provided by a manganese 56 coincidence-counting facility using the manganese-bath technique. This facility combines nuclear instrumentation with coincidence-counting techniques to handle a wide variety of radioisotope-counting

requirements.

B69-10630

STORAGE OF ELECTRIC AND MAGNETIC ENERGY
IN PASSIVE NONRECIPROCAL NETWORKS
SMITH, W. E. DATE- NOV. 1969

ARG-10360

Examination of the relation of stored electric and magnetic energy within a system to the terminal behavior of nonreciprocal passive networks shows both similarities and important differences between wholly reciprocal systems and systems containing nonreciprocal elements.

B69-10631

SELF-DISCHARGE IN BIMETALLIC CELLS
CONTAINING ALKALI METAL

POSTER, M. S. HESSON, J. C. SHIMOTAKE, H. DATE-
NOV. 1969

ARG-10347

Theoretical analysis of thermally regenerative bimetallic cells with alkali metal anodes shows a relation between the current drawn and the rate of discharge under open-circuit conditions. The self-discharge rate of the cell is due to the dissolution and ionization of alkali metal atoms in the fused-salt electrolyte

B69-10639

DATA PROCESSING METHOD FOR A WEAK, MOVING
TELEMETRY SIGNAL

KENDALL, W. B. LEVY, G. S. NIXON, D. L. PANSON,
P. L. DATE- NOV. 1969

NPO-11003

Method of processing data from a spacecraft, where the carrier has a low signal-to-noise ratio and wide unpredictable frequency shifts, consists of analogue recording of the noisy signal along with a high-frequency tone that is used as a clock to trigger a digitizer.

B69-10640

PULSE-HEIGHT ANALYZER WITH DIGITAL READOUT
GOLDSWORTHY, W. W. /LAWRENCE RADIATION LAB./
DATE- NOV. 1969

ARG-10503

Feedback-controlled pulse-amplitude integrator and amplifier is used as an analog-to-digital converter that converts event-liberated charges, emanating from a nuclear-particle detector, directly to numbers rather than to analog-dependent voltages.

B69-10652

NEW TYPE PRESSURE TRANSDUCER FOR SEVERE
THERMAL ENVIRONMENTS

SPON- INNOVATOR NOT GIVEN /BATTELLE MEM. INST./
DATE- NOV. 1969

M-FS-20208

Pressure transducer used in a rocket motor chamber to measure the amplitudes and frequencies of dynamic pressures /exceeding 2000 psi/ occurring during unstable combustion. the transducer utilizes a transpirational cooled porous beryllium plug and pressure transmitting column.

B69-10653

WIND TOWER INFLUENCE STUDY

HATHORN, J. W. /BOEING CO./ DATE- DEC. 1969

M-FS-20239

Set of correction factors is applied to measured mean wind speed and direction so that close approximations of the mean speed and direction of the free stream wind can be obtained from a wind tower. A wind director sensor is employed to determine which sensor is windward of the tower and to engage it for monitoring the wind.

B69-10655

VERSATILE TELEMONITORING SYSTEM
FERGUS, R. W. DATE- NOV. 1969

ARG-10339

Small scale versatile multichannel telemonitoring can be installed economically with considerable expansion capabilities. This system contains a data transmitter, control transmitter, control receiver, display of readout units, a sync generator, and some remote control features.

B69-10665

DESIGN OF PRINTED CIRCUIT COILS

HIGGINS, W. T. /MIT/ DATE- DEC. 1969

HQ-10431

Spiral-like coil is printed with several extra turns which increase the realizable coil inductance. Included are shorting connections which not only short the extra turns, but also short out several turns of the main body. Coil tuning is accomplished by removing the shorts until the desired inductance is obtained.

B69-10666

MONOPOLE MASS SPECTROMETER WITH IMPROVED
SENSITIVITY AND REDUCED BACKGROUND

HERZOG, R. F. /GCA CORP./ DATE- DEC. 1969

HQ-10476

Monopole mass spectrometer is increased by nearly an order of magnitude when a weak external magnetic field is applied so that the ion beam is deflected towards the rod. This magnetic field eliminates background noise at the low end of the mass scale.

B69-10670

DEVICE FOR REFLOWING ELECTRODEPOSITED SOLDER
ON TERMINALS

JOHNSON, T. C. /N. AM. ROCKWELL CORP./ DATE-
DEC. 1969

M-FS-13821

Terminals are reflowed in a hot strata and solidified in a cooler strata, without physical contact with each other, any fixturing, or the container. Terminals are passed through the upper portion of a reflow flask containing hot peanut oil, and then through the lower portion containing oil at ambient temperatures.

B69-10671

CONTROL JET PLACEMENT ON SPACECRAFT

CRAWFORD, E. S. /MIT/ DATE- DEC. 1969

MSC-13365

For efficient operation and configuration design of multijet spacecraft control systems methods of linear programming are used to select combinations of individual jet-burn times which produce the desired impulses. Minimum-fuel and fuel-time solutions are found.

B69-10673

DISCRIMINATION OF FISH OIL AND MINERAL
OIL SLICKS ON SEA WATER

MAC DOWALL, J. /BARRINGER RES., LTD./ DATE- DEC.
1969

HQ-10412

Fish oil and mineral oil slicks on sea water can be discriminated by their different spreading characteristics and by their reflectivities and color variations over a range of wavelengths. Reflectivities of oil and oil films are determined using a dual beam reflectance apparatus.

B69-10676

TECHNIQUE FOR IMPROVING SOLID STATE
MOSAIC IMAGES

SABOE, J. M. /WESTINGHOUSE ELECTRIC CORP./
DATE- DEC. 1969

M-FS-20532

Method identifies and corrects mosaic image faults in solid state visual displays and opto-electronic presentation systems. Composite video signals containing faults due to defective sensing elements are corrected by a memory unit that contains the stored fault pattern and supplies the appropriate fault word to the blanking circuit.

B69-10677

MEASUREMENT TECHNIQUE FOR THE DETERMINATION
OF ANTENNA DIRECTIVITY

LIPIN, R. /SPERRY RAND CORP./ RAINWATER, L.
DATE- DEC. 1969

M-FS-12799

Measurement of great circle patterns requires rotation in azimuth with discrete rotation in elevation. This technique eliminates a set of slip-rings and rotary joints and permits the use of larger models since only continuous azimuth rotation is required.

B69-10678

MODIFICATION TO IMPROVE SELF-ISOLATING
TRANSISTOR ARRAYSFARNSWORTH, D. L. /WESTINGHOUSE ELECTRIC CORP./
DATE- DEC. 1969
M-FS-20499

Fabrication process improves the size ratio and shape factor of the base region of self-isolating transistor arrays. Basic processing steps in the modified method include sub-diffusion, epitaxial layer growth, isolation-diffusions, enhancement diffusions, aluminum interconnect deposition, and testing and packaging.

B69-10687

MICROELECTRONIC DEVICE DATA HANDBOOK

SPON- INNOVATOR NOT GIVEN /ARINC RES. CORP./
DATE- DEC. 1969
ERC-10322

Handbook provides general guidance to the technology of integrated circuits for readers with little or no experience. It does not supply solutions to specific design problems, but is heavily footnoted to the original sources.

B69-10689

REDUCING CONTACT RESISTANCE AT SEMICONDUCTOR
TO METAL OR ALUMINUM TO METAL INTERFACESKELLER, K. R. /RCA/ DATE- DEC. 1969
ERC-10254

Etchant containing chloroplatinous or chloroplatinic acid greatly reduces contact resistance between metallic surfaces. Etching results in a monolayer plating of platinum on the wafer surface, preventing oxide growth.

B69-10690

MINIATURE BACKWARD-DIODE PRESSURE SENSOR
FEATURES STABILITY AND LOW POWER CONSUMPTIONGARFEIN, A. RINDNER, W. DATE- DEC. 1969
ERC-10229

Backward-diode pressure transducer retains the advantages of a tunneling mechanism, requires no shunting resistor, operates at a low voltage level, and consumes little power.

B69-10691

CONDITIONING OF PULSES FROM AEROSOL-PARTICLE
DETECTORSBOWIE, J. E. MARTIN, C. T. DATE- DEC. 1969
ERC-10250

Pulse-conditioner translates pulses generated by aerosol-particle detectors to a form acceptable by commercially available pulse height analyzers designed for nuclear-energy spectroscopy.

B69-10695

PCM SYNCHRONIZATION BY WORD STUFFING

BUTMAN, S. DATE- DEC. 1969
NPO-10688

When a transmitted word, consisting of a number of pulses, is detected and removed from the data stream, the space left by the removal is eliminated by a memory buffer. This eliminates the need for a clock synchronizer thereby removing instability problems.

B69-10697

A STERILIZABLE HIGH-IMPACT ANTENNA

WOO, K. E. DATE- DEC. 1969
NPO-10231

Rectangular cup antenna withstands indirect impacts up to 10,000g and direct impacts up to 250 ft/sec of impact velocity and provides radiation of selected polarization and beam shape. It has high radiating efficiency, and relatively broad bandwidth.

B69-10699

PULSED HIGH-VOLTAGE DC RF SPUTTERING

PRZYBYSZEWSKI, J. S., JR. SHALTENS, R. K. DATE-
DEC. 1969
LEWIS-10920

Sputtering technique uses pulsed high voltage direct current to the object to be plated and a radio frequency sputtered film source. Resultant film has excellent adhesion, and objects can be plated uniformly on all sides.

B69-10713

VACUUM GAGE CALIBRATION SYSTEM FOR 10 TO THE
MINUS 8TH POWER TO 10 TORRHOLANDA, R. DATE- DEC. 1969
LEWIS-11032

Calibration system consists of a gas source, a source pressure gage, source volume, transfer volume and test chamber, plus appropriate piping, valves and vacuum source. It has been modified to cover as broad a range as possible while still providing accuracy and convenience.

B69-10722

DEPOSITION MONITOR AND CONTROL

SALISBURY, S. S. DATE- DEC. 1969
NPO-10706

Two quartz crystal oscillators monitor and control the thickness and the rate of thin film deposition. The outputs of both oscillators, one exposed to mass and heat and the other exposed only to heat, were mixed and the difference frequency was used as the indication of film thickness.

B69-10725

POCKET-SIZED TONE-MODULATED FM TRANSMITTER

COUVILLON, L. A. DATE- DEC. 1969
NPO-11180

Pressure of a button on a crystal-controlled transmitter causes generation of a tone. The tone modulates the FM transmitter which in turn radiates by way of the enclosed loop antenna, through the radio-frequency-transparent wall of the transmitters case to the receiver.

B69-10731

APPLICATION OF CRYPTANALYTIC TECHNIQUES TO

THE ANALYSIS OF NUCLEAR SPACE BATTERIES

EPSTEIN, S. /HAUCHLY ASSOCIATES, INC./ HAUCHLY,
J. WAITE, J. DATE- DEC. 1969
GSFC-10569

By using Bi-gram and Tri-gram tables, a pattern can be formed to determine failure modes and mechanisms. Computer programs provide accurate predictions of cell failure several thousand cycles before actual failure.

B69-10732

CONTROLLED SUBSTRATE COOLING IMPROVES

REPRODUCIBILITY OF VAPOR DEPOSITED

SEMICONDUCTOR COMPOSITES

CLOUGH, R. /RCA/ RICHEN, D. TIETJEN, J. DATE-
DEC. 1969
ERC-10161

Improved substrate holder preferentially provides more uniform substrate cooling and increases the proportion of vapor flowing over the substrate during growth. Nitrogen gas is constricted in the substrate holder to cool the substrate.

B69-10734

A SIMPLE ELECTROMETER FOR MEASURING SMALL

PHOTOELECTRIC CURRENTS

SPON- INNOVATOR NOT GIVEN /AM. MACHINE AND
FOUNDRY CO./ DATE- DEC. 1969
GSFC-10603

Quartz-fiber direct-indicating pocket dosimeter is a small-current integrating electrometer. By attaching the photocathode to the quartz fiber terminal and the photoelectron collector to the barrel of the dosimeter and by charging the device to 150 V, a small-current measuring device can be achieved.

B69-10736

PHOTOMICRONETROLOGY

YOUNG, F. L. /N. AM. ROCKWELL CORP./ DATE- DEC.
1969
M-FS-14556

Photomicrometrology combines microphotography with standard measuring techniques. The negative of a photograph taken through a microscope at a predetermined level of magnification is overlaid on an optical scale of the same magnification. This technique is successful in measurements to 25 microinches.

B69-10741

LATERAL PNP BIPOLAR TRANSISTOR WITH

02 PHYSICAL SCIENCES (ENERGY SOURCES)

AINING FIELD DIFFUSIONS

GALLAGHER, R. C. /WESTERN ELECTRIC CORP./ MC
CANN, D. H. DATE- DEC. 1969
MSC-13072

Fabrication technique produces field aided lateral PNP transistors compatible with micropower switching circuits. The sub-collector diffusion is performed with phosphorus as the dopant and the epitaxy is grown using the higher temperature silicon tetrachloride process.

B69-10742

AN ELECTRICAL CONNECTOR PIN PROTECTOR
MC QUILLLEN, R. B. /N. AM. ROCKWELL CORP./
MITCHELL, G. R. DATE- DEC. 1969
MSC-15660

Spring loaded insert protects electrical connector pins from being bent due to improper mating, or probing the pins with a screwdriver. This device modifies existing electrical connectors using only springs and retaining pins.

B69-10746

OPTICAL FREQUENCY WAVEGUIDE AND ION
TRANSMISSION SYSTEM
CHIAO, R. Y. /MIT/ TOWNES, C. H. DATE- DEC.
1969
HQ-10541

Electromagnetically generated, high-dielectric tube forms a waveguide which retains the electromagnetic energy within the beam, the trapped beam establishes an optical frequency waveguide appropriate for its own conduction with minimum diffraction loss.

B69-10747

BATTERY CHARGE-DISCHARGE CONTROLLER
CICCANTI, A. D. /BOEING CO./ DATE- DEC. 1969
MSC-11836

Charge-discharge controller contains punched-tape programmer capable of programming 305 discrete steps in the battery load. The indicating instrumentation includes meters for ampere-hours, watt-hours, voltage, current, and internal temperature and pressure. It also generates analog signals for recording the displayed data.

B69-10748

SYSTEM CONVERTS SLOW-SCAN TO STANDARD
FAST-SCAN TV SIGNALS
LIPOMA, P. C. /LOCKHEED ELECTRONICS CORP./ TE
POEL, H. E. DATE- DEC. 1969 REAN- SEE ALSO
B67-10676
MSC-90534

Signal conversion system converts slow-scan video signals into standard fast-scan television signals that are required for reproduction of television pictures on American TV sets. This system permits conversion of TV pictures produced in accordance with the standards of one country into the standards of another country.

B69-10750

PULSE-CODE-MODULATION BASELINE CORRECTION
FOR LOW SIGNAL-TO-NOISE RATIOS
STEPHENS, T. J. /TRW SYSTEMS GROUP/ DATE- DEC.
1969
MSC-13268

Time-shared integrate-hold-dump circuits separate the dc level due to the signal /bit information/ from the dc signal due to the baseline error. The system detects the baseline error, filters it, and then algebraically adds enough voltage to a servo loop to reduce the error to zero.

B69-10756

SEISMOGRAPHIC RECORDING OF LARGE ROCKET
ENGINE OPERATION
DALINS, I. MC CARTY, V. DATE- DEC. 1969
M-FS-20545

Recording equipment for rocket engine vibration is adaptable to determining the structural strength of building materials. This seismographic system is portable and is capable of measuring displacements in the direction of three mutually perpendicular axes.

B69-10764

DYNAMIC CALIBRATION OF TURBINE FLOWMETERS

STEVENS, G. H. DATE- DEC. 1969
LEWIS-11014

Turbine flowmeters are calibrated dynamically by means of frequency response tests, provided small perturbations are used. The indicated flow is related to the actual flow by a first order lag function. This lag function is completely defined by the breakpoint frequency which is directly proportional to mean flow rate.

B69-10776

SOLAR ACTIVITY HISTORY MODEL
MC KOWEN, P. /MARTIN MARIETTA CORP./ DATE- DEC.
1969
M-FS-20529

Solar activity model provides information on plages, sunspots, filaments, and flares. The model enables scheduling, which will indicate the time periods when solar experiments can be conducted. Data were collected at various locations throughout the world and recorded on tape for the computer.

B69-10782

EXPLODING BRIDGEWIRE DETONATOR SIMULATOR
SULLIVAN, R. B. TAPLEY, R. C. /DOUGLAS
AIRCRAFT CO., INC./ DATE- DEC. 1969
M-FS-02191

Tests indicate that electric detonator simulators of the exploding bridgewire type will not fire as a result of the application of a direct current power of one watt for 5 minutes. The detonator also will not fire if the protective gap fails and the firing stimulus is inadvertently applied.

B69-10807

INVESTIGATION OF THE DEVELOPMENT OF CRACKS
IN SOLDER JOINTS
MOORE, R. L. /SPERRY RAND CORP./ VINSON, R. J.
DATE- DEC. 1969
M-FS-20444

Study consisted of an analytical approach, in which a mathematical model of existing printed circuit board component mounting techniques was analyzed, and an empirical investigation was performed to determine the extent of damage caused by temperature cycling of the printed circuit boards.

02 PHYSICAL SCIENCES (ENERGY SOURCES)

B63-10260

SOLAR-ANGLE SENSOR HAS NO MOVING PARTS
EXNER, D. W., JR. HEISENHOLDER, G. W. SCHMIDT,
L. F. DATE- MAY 1964
JPL-418

To measure the direction of the sun over a spherical field of view, a cube-shaped solar sensor with a photocell on each side is used. The outputs from the six cells are fed into a computer for determining the position of the sun relative to an orthogonal coordinate system.

B63-10344

COOLING METHOD PROLONGS LIFE OF HOT-WIRE
TRANSDUCER
BALDWIN, L. V. SANDBORN, V. A. DATE- JUN. 1964
LEWIS-41

To cool a hot-wire transducer, the two ends of the wire are supported on thermally and electrically conductive rods, surrounded by a fluid cooling medium. By keeping the supporting rods at a substantially constant temperature, the probe is prevented from overheating.

B63-10346

NEW METHOD USED TO FABRICATE LIGHT-WEIGHT HEAT
EXCHANGER FOR ROCKET MOTOR
BAEHR, E. F. DATE- MAR. 1964
LEWIS-43

A grooved capstrip, to straddle the metal edges of regenerative cooling channels, increases the strength and heat transfer characteristics of lightweight motor cases. This capstrip is so designed as to form a firm joint between the

channels that form the rocket casing wall.

B63-10421
MIRROR DEVICE ALIGNS MACHINE SURFACE
PERPENDICULAR TO SIGHT LINES
KISSLER, H. R. /RCA/ DATE- MAY 1964
WOO-5

A sight alignment device is used to align two machines so that an axis of the first machine is parallel to a flat surface on the second. This sighting device depends on the reflection of a light beam from the surface to be aligned.

B65-10036
IONIZATION VACUUM GAGE STARTS QUICKLY, IS
UNAFFECTED BY SPURIOUS CURRENTS
GARWOOD, D. C. DATE- FEB. 1965
JPL-304

Ionization vacuum gage with a switch-operated starting device and a microammeter begins functioning quickly in a high vacuum. The microammeter is also protected by its circuit design from spurious currents.

B65-10046
WIDE-APERTURE SOLAR ENERGY COLLECTOR IS LIGHT
IN WEIGHT
SPON- INNOVATOR NOT GIVEN /BECKMAN INSTRUMENTS/
DATE- FEB. 1965
JPL-SC-055

By mounting the Fresnel lens in eight steps above three paraboloidal reflector rings of epoxy resin with aluminized surfaces, a light weight, wide-aperture solar energy collector is devised.

B65-10071
SIMPLE OPTICAL SYSTEM USED TO ALIGN
SPECTROGRAPH
EXTON, R. J. DATE- MAR. 1965
LANGLEY-92

Optically fast, portable spectrograph incorporates auxiliary optics in a boresight technique to use the zero order of the grating for visual alignment. This device obtains moderately resolved spectra of a multitude of light sources.

B65-10081
MAGNETIC FIELD TEST COILS ARE TEMPERATURE
COMPENSATED
SPON- INNOVATOR NOT GIVEN /SPECTRA PHYS./ DATE-
APR. 1965
GSPC-294

Magnetic field test coils with auxiliary winding wound opposite to main coil winding eliminates changes in field configurations due to temperature changes. The auxiliary coil is made with aluminum wire.

B65-10082
MULTIPLE ELEMENT SOFT X-RAY SOURCE PRODUCES
WIDE RANGE OF RADIATION
CARUSO, A. J. NEUBERT, W. M. DATE- MAR. 1965
GSFC-286

A rotating mount with target elements positioned independently for direct electron bombardment produces soft X ray radiation with a wide range of characteristics. The device may be used to study solar radiation from a satellite.

B65-10084
MODIFIED CONTOUR PROJECTOR MAKES EXCELLENT
CONTOUR DENSITOMETER
EXTON, R. J. DATE- MAR. 1965
LANGLEY-93

Thin glass beam splitter, densitometer head, and densitometer electronics are incorporated in a standard contour projector. The density contour of small areas of photographic film can be read. This instrument can be used as a research tool in process engineering.

B65-10100
ROTATING FILTERS PERMIT WIDE RANGE OF OPTICAL
PYROMETRY
EXTON, R. J. SIVITER, J. H., JR. STRASS, R. K.
DATE- APR. 1965
LANGLEY-33

Gear-driven dual filter disks of graduated density vary linearly with respect to rotation, allowing

a wide range of photographic pyrometry. This technique is applicable in metallurgy, glass, plastics and refractory research, and crystallography.

B65-10122
MICROWAVE TECHNIQUE MEASURES PLASMA
CHARACTERISTICS
LEONARD, W. F. DATE- APR. 1965
LANGLEY-134

Plasma electron density and temperature distribution are measured by passing a high frequency millimeter wave through plasma. Variations in density and temperature are determined by measuring insertion loss as the plasma travels between the microwave transmitting and receiving antennas.

B65-10129
APPARATUS PERMITS FLEXURE TESTING OF SPECIMENS
AT CRYOGENIC TEMPERATURES
DENABURG, C. R. REECE, O. Y. DATE- MAY 1965
N-F5-257

Cryostat with support structure for test specimen allows flexure fatigue testing of honeycomb composite sandwich structures at cryogenic temperatures. The cryostat consists of a cryogen container enclosing two pairs of yokes which support two rotating end clamps.

B65-10132
SIMPLE CIRCUIT POSITIONS FILM FRAMES IN
PROJECTOR
SILVER, R. H. DATE- MAY 1965
JPL-508

Individual frames on a photographic film strip in a projector are automatically positioned by a simple circuit. The circuit uses a photodiode that senses frame registry position and a relay that stops the film-advance motor to suspend the film at point of registry.

B65-10133
PROBE MEASURES CHARACTERISTICS OF HOT GAS
STREAM
SPON- INNOVATOR NOT GIVEN /PLASMA DYNE CORP./
DATE- MAY 1965
N-F5-240

Shielded, tubular flow calorimeter operated by valve position measures characteristics of a hot gas stream of unknown composition. Measurements of mass flow density and total heat content per unit mass, total heat content per unit mass only, and pitot pressure are made.

B65-10157
INTERNAL COOLING INCREASES RANGE OF
IMMERSION-TYPE TEMPERATURE PROBE
LANZO, C. D. DATE- JUN. 1965
LEWIS-171

Temperature probe used in a high temperature, high velocity gas stream consists of cooled outer shell and a cooled platinum sensing tube with iron constantan thermocouples.

B65-10171
FRESNEL ZONE PLATE FORMS IMAGES AT WAVELENGTHS
BELOW 1000 ANGSTROMS
SPON- INNOVATOR NOT GIVEN /SMITHSONIAN INST./
DATE- JUN. 1965
GSFC-231

Fresnel zone plate with openings replacing the usual transparent rings produces images in a vacuum ultraviolet. The plate is made by etching and electrodeposition.

B65-10186
ELECTRONIC MODULES EASILY SEPARATED FROM HEAT
SINK
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- JUN. 1965 REAN- SEE ALSO B63-10033
MSC-142

Metal heat sink and electronic modules bonded to a thermal bridge can be easily cleaved for removal of the modules for replacement or repair. A thin film of grease between a fluorocarbon polymer film on the metal heat sink and an adhesive film on the modules acts as the cleavage plane.

02 PHYSICAL SCIENCES (ENERGY SOURCES)

B65-10188

REFRACTORY METAL SHIELDING /INSULATION/
INCREASES OPERATING RANGE OF INDUCTION FURNACE
EBIHARA, E. T. DATE- JUN. 1965
LEWIS-202

Thermal radiation shield contains escaping heat from an induction furnace. The shield consists of a sheet of refractory metal foil and a loosely packed mat of refractory metal fibers in a concentric pattern. This shielding technique can be used for high temperature ovens, high temperature fluid lines, and chemical reaction vessels.

B65-10211

LIGHT RAY MODULATION CONTROLS OPTICAL SYSTEM ALIGNMENT

SPON- INNOVATOR NOT GIVEN /KOLLSMAN INSTR. CORP./
DATE- JUL. 1965
GSFC-171

Light ray modulator maintains focus in optical system subject to severe thermal gradients, vibration and shock. The modulated signals drive a servo system that aligns the system optics.

B65-10224

HEATER DECOMPOSES OIL BACKSTREAMING FROM HIGH-VACUUM PUMPS

SHAPIRO, H. DATE- AUG. 1965
GSFC-356

Heater placed between an oil diffusion pump and a vacuum chamber prevents backstreaming of oil molecules into the work area of the chamber. It breaks the oil molecules into basic constituents that can be pumped away.

B65-10239

ION PUMP PROVIDES INCREASED VACUUM PUMPING SPEED

SPON- INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./
DATE- AUG. 1965
NEO-13

Multiple-cell ion pumps with increased vacuum pumping speed are used for producing ultrahigh vacuums in vacuum tubes and mass spectrometers. The pump has eight cathode-anode magnetron cells arranged in a cylinder which increase the surface area of the cathode.

B65-10240

INSULATION ACCELERATES RATE OF COOLING WITH CRYOGENIC FLUID

ALLEN, L. D. DATE- AUG. 1965
MSC-161

Thermal insulating material increases the rate of heat transfer from the interior of a chamber to a liquid nitrogen-filled metal jacket. A thin film of the material is bonded to the surface of the metal wall facing the liquid nitrogen.

B65-10252

DISTANT OBJECTS DETECTED VISUALLY WITH OPTICAL FILTERS

SPON- INNOVATOR NOT GIVEN /LANGLEY/ DATE- AUG. 1965
LANGLEY-166

Fluorescent coating aids visual daylight detection and identification of distant objects. An object appears as a blinking light when the area is alternately scanned with transmitting and obscuring filters. This method can be effective in search and rescue operations.

B65-10253

OIL-DAMPED MERCURY POOL MAKES PRECISE OPTICAL ALIGNMENT TOOL

THEKAKARA, M. P. DATE- AUG. 1965
GSFC-353

Mercury pool with a cover layer of high viscosity oil provides a reference reflector for precise alignment of optical instruments. The cover layer effectively damps any ripples in the mercury from support structure vibrations.

B65-10272

INFRARED SHIELD FACILITATES OPTICAL PYROMETER MEASUREMENTS

EICHENBRENNER, F. F. ILLG, W. DATE- SEP. 1965
LANGLEY-133

Water-cooled shield facilitates optical pyrometer high temperature measurements of small sheet metal specimens subjected to tensile stress in fatigue tests. The shield excludes direct or reflected radiation from one face of the specimen and permits viewing of the infrared radiation only.

B65-10280

ELECTRON BOMBARDMENT IMPROVES VACUUM CHAMBER EFFICIENCY

PRZYBYSZESKI, J. SWIKER, M. A. WATSON, J.
DATE- SEP. 1965
LEWIS-160

Bombardment of vacuum chamber walls by an electron gun within the chamber achieves greater efficiency with less cost. The ultimate vacuum reached using the gun is greater than the system design level.

B65-10283

ELECTRON-BEAM DEFLECTION CONTROLLED BY DIGITAL SIGNALS

CRESSEY, J. R. DATE- SEP. 1965
GSFC-385

Electron-beam deflection in electronic image converters is controlled by a tapped magnetic deflection yoke and a series of current generators. The generators supply equal current to each tap through digitally controlled switches, thereby increasing the inherent accuracy of the system.

B65-10291

SPIRALED CHANNELS IMPROVE HEAT TRANSFER BETWEEN FLUIDS

HIGA, W. WIEBE, E. R. DATE- OCT. 1965
JPL-694

Spiral flow channels increase heat transfer between two fluids in a countercurrent heat exchanger of given volume. The heat exchanger is constructed by connecting a spiraled bellows-shaped ducting between two concentric cylindrical tubes.

B65-10292

INTERFEROMETER CONSTRUCTION ASSURES PARALLELISM OF CRITICAL COMPONENTS

CONNES, P. DATE- OCT. 1965
JPL-704

Interferometer with rigidly mounted components assures parallelism of critical components. The interferometer is constructed for effective operation even if the total instrument is subjected to mechanical stress.

B65-10295

UNIQUE CONSTRUCTION MAKES INTERFEROMETER INSENSITIVE TO MECHANICAL STRESSES

BEER, R. DATE- OCT. 1965
JPL-725

Michelson-type interferometer with a cat-eye reflector operates effectively even in the presence of random mechanical stresses. A cubical beamsplitter with dichroic surfaces permits operation in infrared or visible light.

B65-10296

COAXIAL CAPACITOR USED TO DETERMINE FLUID DENSITY

ATKISSON, E. A. DATE- OCT. 1965
LEWIS-232

Sensing device measures directly the density of compressible fluid existing simultaneously in both liquid and gaseous phases. The device is comprised of a capacitor connected as one leg of a bridge circuit, a power source, and an indicator calibrated to indicate density as a direct measurement.

B65-10297

SUPERCONDUCTOR SHIELDS TEST CHAMBER FROM AMBIENT MAGNETIC FIELDS

HILDEBRANDT, A. F. DATE- OCT. 1965
JPL-627

Shielding a test chamber for magnetic components enables it to maintain a constant, low magnetic field. The chamber is shielded from ambient magnetic fields by a lead foil cylinder maintained in a superconducting state by liquid helium.

B65-10330

WEDGE IMMERSSED THERMISTOR BOLOMETER MEASURES INFRARED RADIATION

DREYFUS, M. G. /BARNES ENG. CO./ DATE- NOV. 1965
GSFC-443

Wedge immersed-thermistor bolometer measures infrared radiation in the atmosphere. The thermistor flakes are immersed by optical contact on a wedge-shaped germanium lens whose narrow dimension is clamped between two complementary wedge-shaped germanium blocks bonded with a suitable adhesive.

B65-10331

CLOSED FLUID SYSTEM WITHOUT MOVING PARTS CONTROLS TEMPERATURE

STENGER, P. J. DATE- NOV. 1965
LEWIS-222

Closed fluid system maintains a constant temperature in an insulated region without the use of any moving parts. Within the system, the energy for thermodynamic cycling of two-phase heat transfer fluid and a hydraulic fluid is entirely supplied by the heat generated in the thermally insulated region.

B65-10356

SEGMENTED ELECTRODE INCREASES OPERATING PRESSURE OF MHD ACCELERATOR

SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- NOV. 1965
LANGLEY-95

Circumferentially segmented-ring electrode replaces the solid-ring electrode in a basic magnetohydrodynamic (MHD) accelerator. This produces diffuse discharges at pressures as high as 100 atmospheres.

B65-10368

VACUUM CHAMBER PROVIDES IMPROVED INSULATION AND SUPPORT FOR CRYOSTAT

SPON- INNOVATOR NOT GIVEN /GE/ DATE- DEC. 1965
M-FS-415

Taut wires in an evacuated cylinder minimize heat transfer through the walls and junctions of a liquid-helium-filled cryostat by suspending the cryostat.

B65-10373

MODIFIED PROCEDURE SPEEDS CAMERA COPY LAYOUT FOR OFFSET PRINTING

SMITH, L. F. DATE- DEC. 1965
GSFC-424

Projecting a grid pattern on a steel layout board facilitates the alignment of camera copy for photo-offset reproduction. Small flat bar magnets fasten the copy to the board.

B65-10395

OPTICAL OUTPUT ENHANCES FLOWMETER ACCURACY

WOLPIN, E. G. /N. AM. AVIATION/ DATE- DEC. 1965
M-FS-482

Magnetic flowmeter with a direct-coupled optical output increases accuracy and operates independently of other system inputs. The design includes simple external adjustment and signal amplitude control.

B66-10004

COPPER FOIL PROVIDES UNIFORM HEAT SINK PATH

PHILLIPS, I. E., JR. SCHREIBANS, F. A. /N. AM. AVIATION/ DATE- JAN. 1966
MSC-262

Thermal path prevents voids and discontinuities which make heat sinks in electronic equipment inefficient. The thermal path combines the high thermal conductivity of copper with the resiliency of silicone rubber.

B66-10008

AUTOMATIC FLUID SEPARATOR SUPPLIES OWN DRIVING POWER

DECKER, M. S. MAJNERI, L. A. SPULGIS, I. S. /MIDLAND-ROSS CORP./ DATE- JAN. 1966
WOO-085

Centrifugal separator suspended in the fuel tank of a space vehicle selects and vents gas vapor at zero gravity. Escaping vapor is used to drive an expander turbine that is magnetically coupled to

the separator.

B66-10010

OPTICAL PROJECTORS SIMULATE HUMAN EYES TO ESTABLISH OPERATOR'S FIELD OF VIEW

BEAM, R. A. /N. AM. AVIATION/ DATE- JAN. 1966
WOO-250

Device projects visual pattern limits of the field of view of an operator as his eyes are directed at a given point on a control panel. The device, which consists of two projectors, provides instant evaluation of visual ability at a point on a panel.

B66-10016

SINGLE PROJECTOR ACCOMMODATES SLIDES OF DIFFERENT SIZE AND FORMAT

GATES, G. H. DATE- JAN. 1966
GSFC-439

Projector with two adjustable external units accommodates slides of different size and format. One external unit is the holder for different size slides and includes mounting means for appropriate condensing lens and heat filters. The other unit is a turret lens assembly. The machine is easily adaptable to rear-screen and front-screen projection over various distances.

B66-10017

PTFE-ALUMINUM FILMS SERVE AS NEUTRAL DENSITY FILTERS

BURKS, H. D. DATE- JAN. 1966
LANGLEY-189

Polytetrafluoroethylene (PTFE) films coated with aluminum films act as neutral density filters in the wavelength range 0.3 to 2.1 microns. These filters are effective in the calibration of photometric systems.

B66-10045

COMPLEMENTARY SYSTEM VAPORIZES SUBCOOLED LIQUID, IMPROVES TRANSFORMER EFFICIENCY

KETAILY, E. C. /N. AM. AVIATION/ DATE- FEB. 1966
M-FS-550

Complementary system converts subcooled liquid hydrogen or nitrogen to gas. The inherent induction heat losses of an electrical transformer are used in the vaporizing process. Transformer efficiency is improved in the process.

B66-10058

CALORIMETER ACCURATELY MEASURES THERMAL RADIATION ENERGY

ANDERSON, W. W., JR. MILLER, H. B. SWEET, G. E. DATE- FEB. 1966
LANGLEY-173

Calorimeter accurately measures steady-state and transient, low-level thermal radiation energy. The calorimeter uses a compensating shield between the sensor and the calorimeter mount to intercept sensor heat losses and to provide a reference for determining a correction factor.

B66-10060

THIN CARBON FILM SERVES AS UV BANDPASS FILTER

SPON- INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ DATE- FEB. 1966
ERC-8

Thin carbon film deposited on a 70 percent transparent screen provides a filter for narrow-band detectors in the extreme ultraviolet. The filter also suppresses scattered light and light of unwanted orders in vacuum spectrographs.

B66-10072

BEAM SPLITTER USED IN DUAL FILMING TECHNIQUE

ZELDIN, S. /N. AM. AVIATION/ DATE- FEB. 1966
M-FS-501

Tubular tee is intersected at its junction by a reflecting/transmitting mirror angled to provide two images of an object for simultaneous photographing from two positions. This method is used when space and focal conditions are limited.

B66-10075

SPECIMEN HOLDER DESIGN IMPROVES ACCURACY OF X-RAY POWDER ANALYSIS

MACK, M. /N. AM. PHILLIPS CORP./ DATE- FEB. 1966
JPL-SC-165

02 PHYSICAL SCIENCES (ENERGY SOURCES)

Specimen holder for X ray diffraction analysis presents the specimen to the incident X rays in a curvature. This permits the use of an X ray beam having a larger divergence angle, the beam intensity is increased, and the statistical accuracy of analysis is improved.

B66-10079

HIGH-PRESSURE, LOW TEMPERATURE ELECTRICAL CONNECTOR MAKES NO-LEAK SEAL

WEAKLEY, J. F. /N. AM. AVIATION/ DATE- MAR. 1966
MSC-276

Flow control of cryogenic liquids is achieved through use of an electrical feed-through connector with a solenoid-type valve. To prevent gas leakage, the connector is designed and structured so that extremely high pressure and low temperatures contribute to its sealing properties.

B66-10086

SCREEN OF CYLINDRICAL LENSES PRODUCES STEREOSCOPIC TELEVISION PICTURES

WORK, C. L. /SPACO, INC./ DATE- MAR. 1966
M-FS-273

Stereoscopic television pictures are produced by placing a colorless, transparent screen of adjacent parallel cylindrical lenses before a raster from two synchronized TV cameras. Alternate frames from alternate cameras are displayed. The viewers sensory perception fuses the two images into one three-dimensional picture.

B66-10095

ULTRAVIOLET PHOTOGRAPHIC PYROMETER USED IN ROCKET EXHAUST ANALYSIS

LEVIN, B. P. /N. AM. AVIATION/ DATE- MAR. 1966
M-FS-499

Ultraviolet photographic pyrometer investigates the role of carbon as a thermal radiator and determines the geometry, location, and progress of afterburning phenomena in the exhaust plume of rocket engines using liquid oxygen/RP-1 as propellant.

B66-10096

INEXPENSIVE INFRARED SOURCE IMPROVED FROM FLASHLIGHT

SPON- INNOVATOR NOT GIVEN /FAIRCHILD HILLER CORP./ DATE- MAR. 1966
M-FS-494

Inexpensive hand-held source of infrared energy is provided by a flashlight bulb coated with a paint which filters out the visible light emitted by the bulb and transmits only infrared radiation. This device can be used for checking infrared sensors and for experimental purposes.

B66-10098

NEW ENERGY STORAGE CONCEPT USES TAPES

GRUBER, A. KAFESJIAN, R. R. /MONSANTO RES. CORP./ DATE- MAR. 1966
LEWIS-239

Energy storage system uses movable permeable tapes with cathode and electrolyte material that is drawn across an anode to produce electric power. The system features long shelf life, high efficiency, and flexible operation.

B66-10108

PLASTIC SCINTILLATOR CONVERTS STANDARD PHOTOMULTIPLIER TO ULTRAVIOLET RANGE

SPON- INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ DATE- MAR. 1966
ERC-9

Commercially available plastic scintillators are attached to the glass windows of standard photomultiplier tubes for detection of ultraviolet radiation.

B66-10114

HIGHLY SENSITIVE SOLIDS MASS SPECTROMETER USES INERT-GAS ION SOURCE

SPON- INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ DATE- MAR. 1966
ERC-11

Mass spectrometer provides a recorded analysis of solid material surfaces and bulk. A beam of high-energy inert-gas ions bombards the surface atoms of a sample and converts a percentage into

an ionized vapor. The mass spectrum analyzer separates the vapor ionic constituents by mass-to-charge ratio.

B66-10121

COMPOUND IMPROVES THERMAL INTERFACE BETWEEN THERMOCOUPLE AND SENSED SURFACE

KALLIN, I. N. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- MAR. 1966
NU-0028

Thermocouples and brittle materials are joined without welding by an epoxy resin cement mixer with a conducting material. This mixture does not form thermal barriers at cryogenic temperatures.

B66-10122

NIOBIMUM THIN FILMS ARE SUPERCONDUCTIVE IN STRONG MAGNETIC FIELDS AT LOW TEMPERATURES

CLOUGH, P. J. /NATL. RES. CORP./ FOWLER, P. DATE- MAR. 1966
JPL-SC-174

Niobium film superconductor carries high currents in strong magnetic fields. The thin niobium film is formed on an inert substrate through evaporation in a vacuum environment. Control of temperature and vacuum results in rejection of gaseous impurities so that the film is of a very high purity.

B66-10143

SEXTANT MEASURES SPACECRAFT ALTITUDE WITHOUT GRAVITATIONAL REFERENCE

SPON- INNOVATOR NOT GIVEN /GEONAUTICS, INC./ DATE- APR. 1966
MSC-200

Horizon-sensing sextant measures the altitude of an orbiting spacecraft without gravitational reference by optically measuring the dip angle to the horizon along a line of sight in each of two planes. The sextant scans over a relatively limited field of view.

B66-10153

ARGON PURGE GAS COOLED BY CHILL BOX

SPIRO, L. W. /N. AM. AVIATION/ DATE- APR. 1966
M-FS-560

Cooling argon purge gas by routing it through a shop-fabricated chill box reduces charring of tungsten inert gas torch head components. The argon gas is in a cooled state as it enters the torch and prevents buildup of char caused by the high concentrations of heat in the weld area during welding operations.

B66-10156

CIRCULAR, EXPLOSION-PROOF LAMP PROVIDES UNIFORM ILLUMINATION

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- APR. 1966
MSC-382

Circular explosion-proof fluorescent lamp is fitted around a TV camera lens to provide shadowless illumination with a low radiant heat flux. The lamp is mounted in a transparent acrylic housing sealed with clear silicone rubber.

B66-10157

CRYOGENIC LIQUID TRANSFER SYSTEM REDUCES RESIDUAL BOILOFF

HEGLAND, D. E. DATE- APR. 1966
LEWIS-274

System for transferring cryogenic liquids to a dewar prevents boiloff of residual liquid by venting the boiloff to the atmosphere during the transfer tube cooling period. The system is most useful with liquids having very small heat of vaporization.

B66-10173

OFFSET LENSES AND VERSATILITY TO PHOTOTYPESETTING MACHINE

JAMES, A. M. /DOCUMENTATION, INC./ DATE- APR. 1966
HQ-9

Offset lenses facilitate the composition of inputs of other than straight baseline characters on the Photon phototypesetting machine. A number of lenses in the turret are mounted in an offset

pattern that causes characters projected through them to fall on the photographic paper in the magazine above and below the baseline.

B66-10178

FATIGUE CRACKS DETECTED AND MEASURED WITHOUT TEST INTERRUPTION

FRECHE, J. C. KLIMA, S. J. LESCO, D. J. DATE- MAY 1966

LEWIS-266

Ultrasonic flaw detector records cracks in materials undergoing fatigue tests, without interfering with test progress. The detector contains modified transducers clamped to the specimens, and an oscillograph readout.

B66-10181

ALUMINUM DOPING IMPROVES SILICON SOLAR CELLS

SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- MAY 1966

REAN- SEE ALSO NASA-TN-D-2711

LEWIS-206

Aluminum doped silicon solar cells with resistivities in the 10- to 20-ohm centimeter range have broad spectral response, high efficiency and long lifetimes in nuclear radiation environments. Production advantages include low material rejection and increased production yields, and close tolerance control.

B66-10183

INSULATION FOR CRYOGENIC TANKS HAS REDUCED THICKNESS AND WEIGHT

DUMIRE, P. E. MIDDLETON, R. L. SCHELL, J. T. STUCKEY, J. M. DATE- MAY 1966 REAN- SEE ALSO NASA-SP-5030

M-FS-326

Dual seal insulation, consisting of an inner layer of sealed-cell Mylar honeycomb core and an outer helium purge channel of fiber glass reinforced phenolic honeycomb core, is used as a thin, lightweight insulation for external surfaces of cryogenic-propellant tanks.

B66-10186

RADIATION USED TO TEMPERATURE COMPENSATE SEMICONDUCTOR STRAIN GAGES

GROSS, C. DATE- MAY 1966

LANGLEY-207

Exposure to high energy electron radiation reduces the temperature coefficients of resistance and gage factor of a range of resistivities of n- and p-type semiconductor silicon strain gages. After irradiation, the gages are heated to a high temperature for a 24-hour period to stabilize their temperature coefficients.

B66-10187

RUBBER-COATED BELLOWS IMPROVES VIBRATION DAMPING IN VACUUM LINES

HEGLAND, D. E. SMITH, R. J. DATE- MAY 1966

LEWIS-273

Compact-vibration damping systems, consisting of rubber-coated metal bellows with a sliding O-ring connector, are used in vacuum lines. The device presents a metallic surface to the vacuum system and combines flexibility with the necessary stiffness. It protects against physical damage, reduces fatigue failure, and provides easy mating of nonparallel lines.

B66-10199

MOUNT ENABLES PRECISION ADJUSTMENT OF OPTICAL-INSTRUMENTATION MIRROR

SPON- INNOVATOR NOT GIVEN /MIT/ DATE- MAY 1966

MSC-184

Mirror mount assembly allows the plane of a mirror to be adjusted through small angles about two orthogonal axes. The assembly, which has a mirror mount with two independently adjustable flexure joints, allows independent precise adjustment of the mirror mount with respect to each axis.

B66-10231

SOLAR CELL SUBMODULE DESIGN FACILITATES ASSEMBLY OF LIGHTWEIGHT ARRAYS

YASUI, R. K. DATE- MAY 1966

JPL-728

Solar cell submodules with bus bars that leave

tabs along one end of the submodule and wires with raised portions along the other end are assembled by interlocking the tabs and wires of adjacent submodules. This structural design is lightweight and reliable and requires no metallic substructure.

B66-10257

FREON PROVIDES HEAT TRANSFER FOR SOLID CO₂

CALIBRATION STANDARD

SPON- INNOVATOR NOT GIVEN /LEEDS AND NORTHRUP CO./ DATE- JUN. 1966

M-FS-644

Acetone and Freon as liquid heat transfer mediums bring a dry ice bath to, and keep it at, the temperature required when using solid carbon dioxide as a calibration standard. Although acetone gives better results, Freon TF is preferred since acetone reacts violently in the presence of liquid oxygen.

B66-10263

OPTICAL DEVICE ENABLES SMALL DETECTOR TO SEE LARGE FIELD OF VIEW

ARNDT, J. H. /TRW SPACE TECHNOL. LABS./ DATE- JUN. 1966

WOO-253

Optical device images the sun on a mask that transmits it or prevents its transmission to a photodetector behind the mask depending on image position on the mask. The device uses a pinhole as the image former to provide a large field of view and diffraction-limited resolution.

B66-10268

HIGH-SPEED FURNACE USES INFRARED RADIATION FOR CONTROLLED BRAZING

ECKLES, P. N. /AEROJET-GEN. CORP./ DATE- JUN. 1966

NU-0047

Furnace produces controlled heat for brazing and heat treating metals over a wide range of temperatures by using a near-infrared heat source positioned at one focus of an ellipsoidal reflector mounted below a cylindrical quartz chamber. This furnace maintains a pure atmosphere, has rapid heatup and cooldown, and permits visual observation.

B66-10289

ULTRASONIC HAND TOOL ALLOWS CONVENIENT

SCANNING OF SPOT WELDS

MITCHELL, D. K. /BOEING CO./ DATE- JUL. 1966

M-FS-539

Small, portable, electrically powered hand tool, coupled with auxiliary ultrasonic equipment, allows convenient scanning of spot welds for discontinuities.

B66-10290

MODIFIED MCLEOD GAGE RECORDS AUTOMATICALLY

FAETH, P. A. DATE- JUL. 1966

LEWIS-290

Modified McLeod gage records pressure measurements automatically. The measurements can be programmed in advance by means of an automatic timer.

B66-10307

COMMERCIAL FILM PRODUCES POSITIVE X-RAY PHOTO IN TEN SECONDS

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUL. 1966

M-FS-521

Type 52 Polaroid Land Film Packet provides a rapid, inexpensive method of producing positive X-ray photographs of various objects.

B66-10316

LEGIBILITY OF ELECTROLUMINESCENT INSTRUMENT PANELS INVESTIGATED

MC LEAN, M. V. MILLER, G. E. /N. AM. AVIATION/ DATE- AUG. 1966

MSC-494 MSC-496 MSC-501 MSC-505

Legibility studies of several EL /electroluminescent/ displays correlate reading time and accuracy with number size, stroke/width ratio, indicia size, pointer width, contrast, ambient illumination, and color background and

02 PHYSICAL SCIENCES (ENERGY SOURCES)

contrast. Human factor criteria established on non-EL displays may not apply to EL displays.

B66-10325

BIMETALLIC DEVICES HELP MAINTAIN CONSTANT SEALING FORCES DOWN TO CRYOGENIC TEMPERATURES
DE BOSKEY, W. R. /MEPAR/ DATE- JUL. 1966
M-FS-800

Tantalum washers compensate for different thermal coefficients of expansion between stainless steel and an aluminum O-ring. The washers have sufficient thickness to maintain a vacuum seal from room to cryogenic temperatures.

B66-10330

ADAPTER ASSEMBLY PREVENTS DAMAGE TO TUBING DURING HIGH PRESSURE TESTS

STINNETT, L. L. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-563

Portable adapter assembly prevents damage to tubing and injury to personnel when pressurizing a system or during high pressure tests. The assembly is capable of withstanding high pressure. It is securely attached to the tubing stub end and may be removed without brazing, cutting or cleaning the tube.

B66-10331

CIRCUIT PROVIDES ACCURATE FOUR-QUADRANT MULTIPLICATION

MC GOWAN, G. F. /MARTIN-MARIETTA CORP./ DATE- JUL. 1966
WOO-272

Solid state circuit provides four-quadrant multiplication at frequencies ranging from dc to 100 cps using pulse-width and -height multiplication techniques. The circuit consumes little power and has an accuracy of approximately one percent.

B66-10348

INEXPENSIVE INSULATION IS EFFECTIVE FOR CRYOGENIC TRANSFER LINES

LINDGREN, A. R. /N. AM. AVIATION/ DATE- AUG. 1966
MSC-618

Matting cover thermally insulates cryogenic-liquid transfer pipelines. The matting consists of layers of commercially available fiber glass tape in which the fibers are randomly oriented in parallel planes.

B66-10372

SPECIAL TREATMENT REDUCES HELIUM PERMEATION OF GLASS IN VACUUM SYSTEMS

BRYANT, P. J. GOSSELIN, C. M. /MIDWEST RES. INST./ DATE- AUG. 1966
BQ-25

Internal surfaces of the glass component of a vacuum system are exposed to cesium in gaseous form to reduce helium permeation. The cesium gas is derived from decomposition of cesium nitrate through heating. Several minutes of exposure of the internal surfaces of the glass vessel are sufficient to complete the treatment.

B66-10388

AUXILIARY TITANIUM SUBLIMATION PUMP PRODUCES ULTRAHIGH /10 TO THE MINUS 11 TORR/ VACUUM

OUTLAW, R. A. DATE- SEP. 1966
LANGLEY-212

Sublimated titanium as a gettering agent in conjunction with a turbine-type pump provides a two-step procedure for obtaining an ultrahigh vacuum of 10 to the minus 11 torr. The pump alone evacuates the chamber to a pressure of 10 to the minus 9 torr. The residual gas is removed by the gettering agent at a pumping speed of 15 liters per second per square inch.

B66-10435

CHEMICAL REGENERATION OF EMITTER SURFACE INCREASES THERMIONIC DIODE LIFE

BREITEISER, R. DATE- OCT. 1966 REAN- SEE ALSO NASA-TN-D-1877
LEWIS-17

Chemical regeneration of sublimated emitter electrode increases the operating efficiency and life of thermionic diodes. A gas which forms

chemical compounds with the sublimated emitter material is introduced into the space between the emitter and the collector. The compounds migrate to the emitter where they decompose and redeposit the emitter material.

B66-10474

GAS PRESSURE FEEDS FILM INTO CAMERA AT HIGH SPEED

KEIGHER, P. J. DATE- NOV. 1966
ARG-97

Blast of gas blows a loop of unexposed film as a wave across a vacuum platen to feed film smoothly into a camera so that 2 successive lengths can be exposed within 50 milliseconds. This technique can be readily applied to multiple aperture cameras as well as to various types of films.

B66-10483

UNIFORM REFLECTIVE FILMS DEPOSITED ON LARGE SURFACES

SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- NOV. 1966 REAN- SEE ALSO NASA-TN-D-3357
GSPC-507

Specially designed baffle which intercepts varying amounts of the vapor stream from an evaporant source, vacuum deposits films of uniform thickness on large substrates, using a single small area evaporation source. A mirror coated by this method will have a reflectance as high as 82 percent at 1216 angstroms with a variation of only plus/minus 2 percent over the surface.

B66-10499

CRYOGENIC COOLING REDUCES HIGH VOLTAGE ARCING BETWEEN ELECTRODES OPERATING IN A VACUUM

DE GEETER, D. J. DATE- NOV. 1966
ARG-109

Cooling to a temperature of approximately liquid nitrogen or lower, reduces arcing, or high voltage breakdown, between two closely spaced electrodes operating in a vacuum. This cooling technique can be applied to electrodes having other than hemispherical shapes.

B66-10507

PANELS ILLUMINATED BY EDGE-LIGHTED LENS TECHNIQUE

HAAG, G. E. HCRSPALL, R. B. /N. AM. AVIATION/ DATE- NOV. 1966
MSC-871

Electroluminescent lamps used to edge-light a specially ground lens provide nonglare, reduced eye strain panel illumination. There is no noticeable falloff in brightness along the lens edge. Light intensity diminishes toward the lens center. A slight halo, observed along the lens edge, has no detrimental effect.

B66-10508

EXPERIMENTAL INVESTIGATION OF MEGAWATT DC ARC HEATING OF NITROGEN

BOLDMAN, D. R. CAMPBELL, J. P. DATE- DEC. 1966
LEWIS-313

Four types of arc heaters, each with the capability of providing arc power levels in excess of 1 megawatt in nitrogen, were tested over a range of power levels and nitrogen flow rates to determine their value as heaters for hypersonic tunnels. The data derived should be useful in the design of high energy heaters for various industrial processes.

B66-10532

LIGHT-INTENSITY MODULATOR WITHSTANDS HIGH HEAT FLUXES

NAPLES, H. G. STRASS, H. K. DATE- NOV. 1966
MSC-246

Mechanism modulates and controls the intensity of luminous radiation in light beams associated with high-intensity heat flux. This modulator incorporates two fluid-cooled, externally grooved, contracting metal cylinders which when rotated about their longitudinal axes present a circular aperture of varying size depending on the degree of rotation.

B66-10547

HIGH INTENSITY RADIATION HEAT SOURCE IS

CAPABLE OF SUSTAINED OPERATION
 GEIDEMAN, W. A. MULLER, K. /TEXRON ELECTRONICS/
 DATE- NOV. 1966
 ARC-61

Water cooled, high intensity radiation source rated at 125 kw, with an efficiency of 31 to 34 percent is used in the evaluation of ablative materials under simulated conditions of high velocity entry into planetary atmospheres. The source operates repeatedly at maximum power for periods of 10 to 20 minutes.

B66-10554
CALCULATION OF INFRARED SPECTRAL TRANSMITTANCES OF INHOMOGENEOUS GASES
 HUFFAKER, R. M. DATE- DEC. 1966
 M-FS-1563

Calculation of spectral transmittance for a particular inhomogeneous gas path is made by combining known data on gases at constant temperature, pressure, and concentration. The spectral transmittances of the inhomogeneous plume gases is needed to calculate the heat radiated from the exhaust plume to the rocket base of a multiple engine rocket.

B66-10560
LASER MEASURING SYSTEM ACCURATELY LOCATES POINT COORDINATES ON PHOTOGRAPH
 DOEDE, J. H. LINDENMEYER, C. W. VONDEROHE, R. H.
 DATE- DEC. 1966
 ARG-74

Laser activated ultraprecision ranging apparatus interfaced with a computer determines point coordinates on a photograph. A helium-neon gas CW laser provides collimated light for a null balancing optical system. This system has no mechanical connection between the ranging apparatus and the photograph.

B66-10565
MIXER CONDITIONS TEMPERATURE OF LIQUIFIED GAS STREAMS
 TALMOR, E. /N. AM. AVIATION/ DATE- DEC. 1966
 M-FS-1784

Room temperature gaseous hydrogen mixed with liquified hydrogen in a venturi produces a two-phased liquid hydrogen stream at a stable temperature. This technique is useful in laboratory testing where presently, temperature control is maintained by a calibrated heat leak that results in considerable expenditure of cryogenic refrigerants.

B66-10583
NEON ISOTOPES CANCEL ERRORS IN GAS LASER
 MACEK, W. M. OLTHUIS, R. W. SCHNEIDER, J. R.
 /SPERRY GYROSCOPE CO./ DATE- DEC. 1966
 M-FS-1476

Neon isotopes cancel frequency pushing errors arising from unequal gain in the two countercirculating beams of a helium-neon filled discharge tube used in a ring laser.

B66-10596
OPTICAL AUTOMATIC GAIN CHANNEL
 HRUS, G. ZUKOWSKY, W. /PERKIN-ELMER CORP./
 DATE- DEC. 1966
 M-FS-1550

Automatic Gain Control /AGC/ channel automatically compensates for gain changes in the azimuth error channel due to time varying optical sight degrading effects. This system is useful in remote television monitors, automatic navigation systems, and surveying and mapping instrumentation.

B66-10602
EXPOSURE VALVE /EV/ SYSTEM EXPANDED TO INCLUDE FILTER FACTORS AND TRANSMITTANCE
 LINDSEY, W. F. DATE- DEC. 1966
 LANGLEY-190

Application of the exposure value system requires that the system be extended to high brightness level and expanded to include filter factors. A minimum of four photographic factors are involved in the evaluation of an exposure which, when determined from tables of 1-stop interval, could introduce noticeable error.

B66-10615
FEED-THRU FLANGE IS USEFUL IN VACUUM APPLICATIONS TO CRYOGENIC TEMPERATURES
 YAGER, S. P. DATE- DEC. 1966
 JPL-846

Feed-thru flange seals inner and outer walls of high vacuum test chambers. It is used in vacuum applications at both cryogenic and higher than cryogenic temperatures. A damaged flange can still be used for partial vacuum, noncryogenic applications in conjunction with an appropriate rubber seal.

B66-10630
TECHNIQUE FOR MEASURING ABSORPTANCE AND EMITTANCE BY USING CYCLIC INCIDENT RADIATION
 JACK, J. R. DATE- DEC. 1966 REAN- SEE ALSO
 NASA-TN-X-52193
 LEWIS-321

Cyclic radiation technique has been developed for determining absorptance and emittance of metal surfaces. Using this technique both absorptance and emittance can be determined from one set of data, and variable and controlled temperature levels are possible.

B66-10638
TWIN HELIX SYSTEM PRODUCES FAST SCAN IN INFRARED DETECTOR
 VANZETTI, R. /N. AM. AVIATION/ DATE- DEC. 1966
 M-FS-1598

Two rotating wheels in orthogonal relationship with helicoidal reflecting surfaces mounted on their outer rims achieve a linear speed without normal time loss in their return motion. The pitch of the helicoidal surfaces equals the displacement that the mirrors must traverse.

B66-10652
ROCKET ENGINE VIBRATION ACCURATELY MEASURED BY PHOTOGRAPHY
 CRAIG, K. A. /N. AM. AVIATION/ DATE- DEC. 1966
 M-FS-1916

High speed instrumentation camera focused on a partially masked light bulb which is securely mounted to the test fixture permits measurement of engine performance parameters when usual electronic vibration instrumentation is unavailable. Vibration is recorded as a light trace deviating from the light rays photographed in the static hardware condition.

B66-10654
CRYOGENIC FLUID SAMPLING DEVICE PERMITS TESTING UNDER HAZARDOUS CONDITIONS
 MITCHELL, J. A. /N. AM. AVIATION/ DATE- DEC. 1966
 M-FS-1927

Remotely controlled sampling device obtains timed sample of flowing cryogenic liquid propellants in remote or hazardous testing conditions. The device consists of a calibrated container, a dewar, a solenoid valve, a pressure gage, and a manual bleed valve.

B66-10657
SIMPLE TECHNIQUE DETERMINES AC PROPERTIES OF HARD SUPERCONDUCTIVE MATERIALS
 HARPER, C. M. HECHT, R. /RCA/ DATE- DEC. 1966
 M-FS-1818

Critical current density of neodymium-titanium alloy samples is analyzed from magnetization curves to determine the ac properties of hard superconductive materials. A complete family of magnetization curves is obtained, each curve representing performance at a different temperature.

B66-10660
PROCESS PRODUCES ACCURATE REGISTRY BETWEEN CIRCUIT BOARD PRINTS
 SPON- INNOVATOR NOT GIVEN /BENDIX CORP./ DATE- DEC. 1966
 LANGLEY-288

Tapes and quick-mount circles of contrasting colors aid in obtaining precise registry between the two circuits of two-sided printed circuit boards. The tapes and circles are mounted on opposite sides of transparent plastic film to

02 PHYSICAL SCIENCES (ENERGY SOURCES)

define the conductive path and feed-through hole locations.

B66-10682
PRIMARY CELLS UTILIZE HALOGEN-ORGANIC
CHARGE TRANSFER COMPLEX
GUTHMANN, F. HERMANN, A. M. REMBAUM, A. DATE-
DEC. 1966
JPL-926

Electrochemical cells with solid state components employ charge transfer complexes or donor-acceptor complexes in which the donor component is an organic compound and the acceptor component is a halogen. A minor proportion of graphite added to these compositions helps reduce the resistivity.

B66-10693
LASER DOPPLER FLOWMETER MEASURES GAS
VELOCITY
FOREMAN, W. /BROWN ENG. CORP./ HUFFAKER, R. M.
DATE- DEC. 1966
M-FS-1747

Utilizing the large magnitudes of Doppler shifts obtainable from a CW gas laser, local velocity vectors are measured by using the visible light from the laser. This technique is applicable for the measurement of velocity of any moving surface.

B66-10700
PROBLEM OF OSCILLATING CONE IN SUPERSONIC
FLOW IS SOLVED BY SMALL PERTURBATION
TECHNIQUES
PAO, T.-H. /MIT/ DATE- DEC. 1966
M-FS-869

Small perturbation technique solves the problem of an oscillating cone in supersonic flow. The logic of the program is straightforward, as reflected in the actual instructions for solving the problem.

B67-10008
POLAROID FILM HELPS LOCATE OBJECTS IN
INACCESSIBLE AREAS QUICKLY
GRIFFIN, H. G. /N. AM. AVIATION/ MC CLELLAND, G.
W. DATE- JAN. 1967
MSC-960

Polaroid film is used with conventional portable X ray equipment to locate and shoot items or objects in difficult areas. Polaroid film development time is about 20 seconds.

B67-10021
POLARIMETER PROVIDES TRANSIENT RESPONSE
IN NANOSECOND RANGE
JOHNSTON, A. R. DATE- FEB. 1967
JPL-890

Conventional polarimeter with a Senarmont compensator improves transient response and eliminates manual manipulation. A sampled photomultiplier output is fed to a low pass filter, resulting in a signal representing the optical state existing at the instant of sampling. With this technique, an unknown transient-induced retardation can be measured.

B67-10024
PLASMA JET ELECTRODE HAS LONGER OPERATING
LIFE
GRACEY, C. M. /AEROJET GEN. CORP./ DATE- FEB.
1967
NU-0098

Water-cooled, silver-infiltrated tungsten electrode has twice the operating lifetime of the pure tungsten electrode used in plasma jet generators. This electrode reduces the erosion rate, ensures excellent heat transfer, and reduces thermal stresses.

B67-10036
NEUTRON ACTIVATION ANALYSIS TRACES COPPER
ARTIFACTS TO GEOGRAPHICAL POINT OF ORIGIN
CONWAY, M. FIELDS, P. FRIEDMAN, A. KASTNER, M.
METTA, D. MILSTED, J. OLSEN, E. DATE- MAR. 1967
ARG-119

Impurities remaining in the metallic copper are identified and quantified by spectrographic and neutron activation analysis. Determination of the type of ore used for the copper artifact places the geographic point of origin of the

artifact.

B67-10037
CORRELATION ESTABLISHED BETWEEN HEAT TRANSFER
AND ULTRASONIC TRANSMISSION PROPERTIES OF
COPPER BRAZE BONDS
DI NOVI, R. A. DATE- MAR. 1967 REAN- SEE ALSO
ANL-7074
ARG-247

Measuring and correlating the thermal conductivity and ultrasonic transmission of seven hot-brazed-bonded copper plates established a relationship between heat transfer and ultrasonic transmission properties of the bonds. This relationship permits the prediction of heat transfer characteristics from ultrasonic transmission tests.

B67-10054
METHOD ACCURATELY MEASURES MEAN PARTICLE
DIAMETERS OF MONODISPERSE POLYSTYRENE
LATEXES
KUBITSCHKE, H. E. DATE- MAR. 1967
ARG-207

Photomicrographic method determines mean particle diameters of monodisperse polystyrene latexes. Many diameters are measured simultaneously by measuring row lengths of particles in a triangular array at a glass-oil interface. The method provides size standards for electronic particle counters and prevents distortions, softening, and flattening.

B67-10057
MECHANISMS OF SUPERCONDUCTIVITY
INVESTIGATED BY NUCLEAR RADIATION
AUTLER, S. H. COFFEY, H. T. KELLER, E. L.
PATTERSON, A. DATE- MAR. 1967
M-FS-1944

Investigation focused on the behavior of superconducting magnet and its constituent materials during and after exposure to nuclear radiation. The results will indicate the feasibility of their use in diverse applications and various environments.

B67-10068
STUDY MADE OF INTERACTION BETWEEN SOUND
FIELDS AND STRUCTURAL VIBRATIONS
LYON, R. H. SMITH, P. W., JR. /BOLT, BERANEK,
AND NEWMAN/ DATE- APR. 1967
HQ-26

Study analyzes structural vibrations and the interactions between them and sound fields. It outlines a conceptual framework to analyze the vibrations of systems and their interactions, incorporating the results of earlier studies and establishing a unified basis for continuing research.

B67-10071
ELECTRONIC FILTER DISCRIMINATES BETWEEN
TRUE AND FALSE REFLECTIONS
MERCHANT, J. /HONEYWELL INC./ DATE- APR. 1967
HQ-55

Electronic filtering system discriminates between true corneal and false reflections, solving the problem of spurious reflections of the CRT light in newly designed oculometer.

B67-10072
AN IMPROVED SOFT X-RAY PHOTOIONIZATION
DETECTOR
STOBER, A. K. YOUNG, R. M. DATE- APR. 1967
GSPC-540

Photoionization detector with an alumina shell, a beryllium foil window, and a xenon gas fill measures small incident photon fluxes from soft X-rays. It has high spectral selectivity and quantum efficiencies, and a long shelf life. It minimizes electrical leakage and recontamination, and will hold a high vacuum.

B67-10075
STUDY MADE OF FAR INFRARED SPECTRA OF
SILICATE MINERALS
SPON- INNOVATOR NOT GIVEN /ARTHUR D. LITTLE,
INC./ DATE- APR. 1967
M-FS-1811

Study of mineral in the far infrared region of the spectrum examines the problems and feasibility of remote sensing of the composition of the moon or tenuous atmosphere planets. Most of the work described utilized reflection techniques.

B67-10082

FATIGUE ZONES IN METALS IDENTIFIED BY
POLARIZED LIGHT PHOTOGRAPHY

WALSH, F. D. /BORING CO./ DATE- APR. 1967
WOO-286

Polarized light technique clearly defines the fatigue zones in metal for measuring and photographing. White light is passed through a vertical polarizing filter and then is reflected onto the surface of the fracture specimen.

B67-10088

EXPERIMENTAL SCALING STUDY OF FLUID
AMPLIFIER ELEMENTS

ABLER, J. GREER, I. TAFT, C. /CASE INST. OF
TECH./ DATE- APR. 1967
M-FS-1882

Study examines scaling parameters of three fluid amplifier elements - a bistable device, a boundary layer control device, and a vortex device. Variations in performance due to size, fluid, and other conditions are studied. Even with restricted examples the large number of variables impedes the establishment of these scaling laws.

B67-10109

SPECIAL PURPOSE REFLECTOMETER USES MODIFIED
ULBRICHT SPHERE

GORSTEIN, M. /MIT/ DATE- MAY 1967
MSC-1135

Modified Ulbricht sphere measures stray radiation caused by irregularities in the reflective surface of an optical test specimen. The test specimen is positioned between a light source and exit port and all diffusely scattered radiation is measured by a photomultiplier tube in the sphere.

B67-10110

STAR/HORIZON SIMULATOR USED TO TEST SPACE
GUIDANCE SYSTEM

SCHMIDT, W. C. /MIT/ DATE- MAY 1967
MSC-407

Star/horizon simulator is used for alignment and optical plus photoelectric tests of the sextant for the Apollo guidance and navigation system optical unit assembly. The unit is basically a refractive collimator with a two inch objective lens system and a twenty-four inch focal length.

B67-10120

VISUAL ATTITUDE ORIENTATION AND ALIGNMENT
SYSTEM

BEAM, R. A. MORRIS, D. B. /N. AM. AVIATION/
DATE- MAY 1967
MSC-647

Active vehicle optical alignment aid and a passive vehicle three-dimensional alignment target ensure proper orientation and alignment plus control of the closure range and rate between two bodies, one in controlled motion and one at rest.

B67-10126

HIGH-ENERGY-RATE MAGNETOHYDRAULIC METAL
FORMING SYSTEM

SPON- INNOVATOR NOT GIVEN /ADVAN. KINET./ DATE-
MAY 1967
M-FS-2142

In the magneto-hydraulic metal forming system, a sonic shock wave is generated in a liquid medium by a coil energized by an electrical discharge. These waves transfer energy from a metal diaphragm, actuated by a pulsed magnetic field, to a metal workpiece. In the development a study was made of the pressure pulse phenomenon in a liquid medium.

B67-10128

IMPROVED CRYOGENIC REFRIGERATION SYSTEM

HIGA, W. H. DATE- MAY 1967
JPL-731

Two-position shuttle valve simplifies valving arrangement and crank-shaft configuration in gas-balancing and Stirling-cycle refrigeration

systems used to produce temperatures below 173 degrees K. It connects the displacer and regenerator alternately to the supply line or the return line of the compressor, and establishes constant pressure on the drive piston.

B67-10131

NEUTRON DIFFRACTOMETER ALLOWS BOTH MAGNETIC
AND CRYSTALLOGRAPHIC ANALYSES

ATOJI, H. DATE- JUN. 1967 REAN- SEE ALSO
ANL-6920
ARG-191

Automatic double-crystal neutron diffractometer performs both crystal and magnetic structural analyses. This shielded installation has a goniometric turntable and electronic controls, and auxiliary equipment including a goniometer, diffraction electromagnet, two cryogenic dewars, and two diffraction furnaces.

B67-10134

CRYOGENIC SEAL REMAINS LEAKTIGHT DURING
THERMAL DISPLACEMENT

FIELDS, T. H. MARTIN, K. B. PEWITT, E. G. DATE-
MAY 1967
ARG-96

Cryogenic seals protect the surfaces of a plastic member in a low-pressure system subjected to extreme temperature changes. The outer seal is an aluminum expansion ring bonded to the lens outer surface and the inner seal consists of a resin-filled aluminum U-ring bonded to the inner surface.

B67-10164

SOLAR X-RAY SPECTRUM REPRODUCED IN VACUUM

ERDMAN, C. A. KIRCHNER, L. P. /IIT RES. INST./
DATE- JUN. 1967
MSC-228 MSC-1168

Desired low energy X rays are produced by modifying commercial ion tubes and combining them with standard power supplies and control circuitry. These X rays have less deviation from the solar X ray spectrum in energy and intensity.

B67-10216

ELECTRON BEAM WELDER X-RAYS ITS OWN WELDS

RODEN, W. A. /GEN. DYN./CONVAIR DIV./ DATE- JUN.
1967
LEWIS-10111

Beam of an electron beam welder X rays its own welds, enabling rapid weld quality checks to be made without removing the work from the vacuum chamber. A tungsten target produces X rays when hit by the beam. They are directed at the weld specimen and recorded on polaroid film.

B67-10218

X-RAY SOURCE USES INTERCHANGEABLE TARGET

ANODES TO VARY X-RAY WAVELENGTH
SHIELDS, R. A. DATE- JUL. 1967
NPO-10036

Compact laboratory X ray tube generates X rays of various wavelengths by using interchangeable target anodes. The wavelength of the X rays depends on the metal from which the anode is made.

B67-10247

WATER COOLED ANODE INCREASES LIFE OF HIGH

TEMPERATURE ARC LAMP
RIISE, H. N. DATE- NOV. 1967
NPO-10180

Water cooling system increases the life of the anode of a high temperature compact arc lamp. A shaped water passage is provided through the tip or hottest point of the anode so that water will flow through it at a relatively high velocity.

B67-10264

INEXPENSIVE CRYOGENIC INSULATION REPLACES

VACUUM JACKETED LINE
FUCHS, C. E. /WESTINGHOUSE ASTRONUC. LAB./
DATE- JUL. 1967
NUC-10061

Commercially available aluminized Mylar, cork and fiber glass form a multilayered sealed system and provide rugged and economical field installed insulation for cryogenic /liquid nitrogen or

oxygen/ pipe lines in an exposed environment.

B67-10288

LASER SYSTEM GENERATES SINGLE-FREQUENCY LIGHT

TARG, R. /SYLVANIA ELECTRON. SYSTEMS/ DATE- AUG. 1967

M-FS-2556

Program eliminates major sources of noise in the laser output, with minimum sacrifice of total laser output power. Results include the design and development of a CW laser system which features high power single-frequency output in the S-20 photocathode response region.

B67-10295

IMPROVED ULTRASONIC TV IMAGES ACHIEVED BY USE OF LAMB-WAVE ORIENTATION TECHNIQUE
BERGER, H. DATE- AUG. 1967 REAN- SEE ALSO
ANL-7042
ARG-203

Lamb-wave sample orientation technique minimizes the interference from standing waves in continuous wave ultrasonic television imaging techniques used with thin metallic samples. The sample under investigation is oriented such that the wave incident upon it is not normal, but slightly angled.

B67-10296

THERMAL NEUTRON IMAGE INTENSIFIER TUBE PROVIDES BRIGHTLY VISIBLE RADIOGRAPHIC PATTERN

BERGER, H. KRASKA, I. /ARGONNE/ NIKLAS, W. SCHMIDT, A. /THE RAULAND CORP./ DATE- AUG. 1967
ARG-120

Vacuum-type neutron image intensifier tube improves image detection in thermal neutron radiographic inspection. This system converts images to an electron image, and with electron acceleration and demagnification between the input target and output screen, produces a bright image viewed through a closed circuit television system.

B67-10297

FRESNEL DIFFRACTION PLATES ARE SIMPLE AND INEXPENSIVE

HOOVER, R. B. DATE- AUG. 1967
M-FS-12731

Fresnel plate demonstrates diffraction phenomena simply and inexpensively. A large number of identical diffracting apertures are made in random orientation on photographic film. When a small source of light is viewed through the plate, the diffraction pattern typical of the diffracting aperture is readily seen.

B67-10316

RADIATION COUNTING TECHNIQUE ALLOWS DENSITY MEASUREMENT OF METALS IN HIGH-PRESSURE/ HIGH-TEMPERATURE ENVIRONMENT

DILLION, I. G. NELSON, P. A. SWANSON, B. S. DATE- SEP. 1967
ARG-124

Radioactive tracers induced by neutron irradiation provide a gamma ray flux proportional to the density of a metal, allowing density measurement of these metals in extreme high-temperature and high-pressure environments. This concept is applicable to most metals, as well as other substances.

B67-10326

PORTABLE SPECTROMETER MONITORS INERT GAS SHIELD IN WELDING PROCESS

GROVE, E. L. /IIT RES. INST./ DATE- SEP. 1967
M-FS-12144

Portable spectrometer using photosensitive readouts, monitors the amount of oxygen and hydrogen in the inert gas shield of a tungsten-inert gas welding process. A fiber optic bundle transmits the light from the welding arc to the spectrometer.

B67-10337

LOW-ENERGY GAMMA RAY INSPECTION OF BRAZED ALUMINUM JOINTS

BROWN, J. A. /N. AM. AVIATION/ DATE- SEP. 1967
MSC-1189

Americium 241 serves as a suitable radioisotope /gamma ray source/ and exposure probe for radiographic inspection of brazed aluminum joints in areas of limited accessibility. The powdered isotope is contained in a sealed capsule mounted at the end of a spring-loaded pushrod in the probe assembly.

B67-10342

SIMPLIFIED TECHNIQUE DEMONSTRATES MAGNETIC DOMAIN SWITCHING

SPON- INNOVATOR NOT GIVEN /SPERRY RAND CORP./ DATE- OCT. 1967
M-FS-13153

Light from a conventional photographic light source is polarized and projected through thin samples of gadolinium iron garnet and then observed with a conventional polarizing microscope. A distinctive change in color from red to yellow is observed as the magnetic domains are switched.

B67-10352

PRACTICAL NEW METHOD OF MEASURING THERMAL-NEUTRON FLUENCE

SIEBOLD, J. R. /AEROJET-GEN. CORP./ WARMAN, E. A. DATE- OCT. 1967
NUC-10086

Thermoluminescence dosimeter technique measures thermal-neutron fluence by encapsulating lithium fluoride phosphor powder and exposing it to a neutron environment. The capsule is heated in a dosimeter reader, which results in light emission proportional to the neutron fluence.

B67-10371

MEASURING COPLANARITY OF SURFACES

WERNER, M. M. /KOLLSMAN INSTR. CORP./ DATE- OCT. 1967
MSC-12044

Interferometric technique is used to measure the coplanarity and flatness of lapped surfaces on which a high-precision mirror is to be mounted. The measurement of minute height variations of several small discrete surfaces is accomplished simultaneously.

B67-10372

ELECTRON BEAM PARALLEL X-RAY GENERATOR

PAYNE, P. /AM. SCI. AND ENG./ DATE- OCT. 1967
MSC-11022

Broad X ray source produces a highly collimated beam of low energy X rays - a beam with 2 to 5 arc minutes of divergence at energies between 1 and 6 keV in less than 5 feet. The X ray beam is generated by electron bombardment of a target from a large area electron gun.

B67-10388

MODIFIED BLACKBODY DEVICE EMITS HIGH-DENSITY RADIATION

SCHUMACHER, P. E. /N. AM. AVIATION/ DATE- OCT. 1967
M-FS-12744

Modified device provides a versatile, precisely controllable source of blackbody radiation to calibrate radiometers used for spectrometric analysis of large rocket engine plumes.

B67-10391

METHOD PREVENTS SECONDARY RADIATION IN RADIOGRAPHIC INSPECTION

STRUCKUS, A. A. /N. AM. AVIATION/ DATE- OCT. 1967
M-FS-13383

Thin-walled neoprene containers prevent secondary radiation, scatter, and undercut during radiographic inspection. The containers are filled with a mixture of barium sulfate, red lead, and petroleum jelly that achieves the required absorption rate.

B67-10394

EXPERIMENTS TO INVESTIGATE PARTICULATE MATERIALS IN REDUCED GRAVITY FIELDS

BOWDEN, M. /ARTHUR D. LITTLE/ EDEN, R. F. FELSENTHAL, P. GLASER, P. E. WECHSLER, A. E. DATE- OCT. 1967
M-FS-13308

Study investigates agglomeration and macroscopic behavior in reduced gravity fields of particles of known properties by measuring and correlating thermal and acoustical properties of particulate materials. Experiment evaluations provide a basis for a particle behavior theory and measure bulk properties of particulate materials in reduced gravity.

B67-10398

AERIAL-IMAGE ENABLES DIAGRAMS AND ANIMATION
TO BE INSERTED IN MOTION PICTURES

ANDREWS, S. J., JR. TRESSSEL, G. W. DATE- OCT.
1967

ARG-165

Aerial-image unit makes it possible to insert diagrams and animation into live motion pictures, and also lift an element from a confusing background by suppressing general details. The unit includes a combination of two separate lens systems, the camera-projector system and the field lens system.

B67-10413

STUDY OF HYDROGEN SLUSH-HYDROGEN GEL
UTILIZATION

KELLER, C. W. /LOCKHEED MISSILES AND SPACE CO./
DATE- OCT. 1967

M-PS-13068

Study of hydrogen slush-hydrogen gel utilization is presented in two volume publication. The first volume contains the physical and thermal property data for hydrogen used in the study. In the second volume, details of the technical effort are presented including parametric analysis of effects on vehicle systems.

B67-10420

CONCEPT FOR CRYOGENIC LIQUID RECLAMATION
SYSTEM

DADERIAN, S. M. DATE- NOV. 1967

NPO-10322

Cryogenic liquid reclamation system is used as an add-on unit to the nitrogen system of environmental test laboratories to salvage liquid nitrogen presently being treated as waste. The system may be installed indoors or outdoors provided the gas boiled off from the cryogenic liquid is vented to the outside.

B67-10428

ULTRASONICS USED TO MEASURE RESIDUAL STRESS

SPON- INNOVATOR NOT GIVEN /R. W. BENSON AND
ASSOCIATES/ DATE- NOV. 1967

M-PS-12449

Ultrasonic method is used to measure residual stress in metal structures. By using this method, various forms of wave propagation in metals are possible, and more thorough analysis of complex geometric structures may be had.

B67-10430

STUDY MADE OF ACOUSTICAL MONITORING FOR
MECHANICAL CHECKOUT

SAVELLE, C. DATE- NOV. 1967

M-PS-13372

Study demonstrates that sonic signal analysis technique provides a powerful tool for mechanical component checkout. The technique also provides the unique capability of predicting component failures by detecting incipient malfunctions.

B67-10431

CAMERA LENS ADAPTER MAGNIFIES IMAGE

MOFFITT, F. L. DATE- NOV. 1967

M-PS-11955

Polaroid Land camera with an illuminated 7-power magnifier adapted to the lens, photographs weld flaws. The flaws are located by inspection with a 10-power magnifying glass and then photographed with this device, thus providing immediate pictorial data for use in remedial procedures.

B67-10443

CODED PHOTOGRAPHIC PROOF PAPER COULD SERVE
AS CONVENIENT DENSITOMETER

WINSLOW, D. J. DATE- NOV. 1967

M-PS-13374

Standard print-out proofing paper, preprinted with

an identifying code, serves as convenient densitometer. Exposure to light darkens the paper and gives a measure of the density of the resultant photographic image or the total amount of exposure sustained by the paper.

B67-10452

PROPOSED METHOD OF ROTARY DYNAMIC BALANCING

BY LASER

PERKINS, W. E. /N. AM. AVIATION/ DATE- NOV. 1967

M-PS-12422

Laser method, where high energies of monochromatic light can be precisely collimated to perform welding and machining processes, is proposed for rotary dynamic balancing. The unbalance, as detected with the velocity pickup, would trigger the laser system which would emit high energy pulses directed at the heavy side of the component.

B67-10462

FLUID BEHAVIORAL PATTERNS FOUND IN

SUBSCALE GEYSERING STUDY

BURKHALTER, J. E. GLASGOW, V. L. /BOEING CO./

DATE- NOV. 1967

M-PS-13582

Study provides a fundamental understanding of geysering mechanisms necessary for formulating theoretical analyses. An algebraic relationship between average heating rate, reservoir temperature, and geysering period was established and areas for future studies were identified.

B67-10465

STUDY MADE OF TRANSFER OF HEAT ENERGY

THROUGH METAL JOINTS IN VACUUM ENVIRONMENT

ELLIOT, D. H. /DOUGLAS AIRCRAFT CO./ DATE- NOV.

1967

M-PS-12534

Heat energy transfer is concentrated closely around a melted joint and the temperature drop across it decreases rapidly as the bolt and nut are tightened to a minimum torque level. Flat metal surfaces pressed together display a cyclical improvement in heat energy transfer as the interface pressure is increased.

B67-10474

METHOD FOR X-RAY STUDY UNDER EXTREME

TEMPERATURE AND PRESSURE CONDITIONS

PAUS, L. L. /EENDIX CORP./ DATE- DEC. 1967

MSC-11232

Vacuum chamber environmental simulator and X ray camera are used to study the stability of various minerals in extreme environmental conditions. An ion pump creates the desired vacuum. Exact sample positioning is obtained with a bellows sealed linear motion feed-through. Temperature control is by means of fluid conductive heat transfer.

B67-10477

TRAINING COURSE FOR RADIATION SAFETY

TECHNICIANS

LASUK, S. R. MOE, H. J. DATE- DEC. 1967 REAN-

SEE ALSO ANL-6991

ARG-216

Course of instruction includes sections on basic information, natural radioactivity, properties of alpha, beta, gamma, X rays, and neutrons, concepts of radiation units and dose determinations, shielding, biological effects, background radiation, radiation protection standards, and internal dose calculation.

B67-10485

DUAL PHOTOCHEMICAL REPLENISHER SYSTEM

REDUCES CHEMICAL LOSSES

KOLBER, J. M. DATE- DEC. 1967

KSC-67-111

Dual replenisher system reduces chemical losses and maintains optimum solution concentration during long nonprocessing cycles of photo processing machines. Using a single 3-position switch and solenoid control valves, the system provides instantaneous flow control to each processing tank.

B67-10508

GLANCING INCIDENCE TELESCOPE FOR FAR
ULTRAVIOLET AND SOFT X-RAYSNEUPERT, W. M. UNDERWOOD, J. H. DATE- DEC. 1967
GSFC-10052

Glancing-incidence telescope makes observations of distant celestial radiant bodies at wavelengths in the spectral region between 3 and 500 angstroms. The device can be used as a fore-optics system for a laboratory extreme ultraviolet spectrometer, or for the collection or imaging of thermal neutrons.

B67-10516

NOISE STUDY OF SINGLE STAGE COMPRESSOR
ROTOR-STATOR INTERACTIONCOPELAND, W. L. CRIGLER, J. L. DATE- DEC. 1967
LANGLEY-137

Study made of noise radiation from rotor-stator interaction in axial-flow compressors. The collected data were reduced to the form of radiation patterns and frequency spectra. These data show how the radiation patterns are affected by the relative number of rotor blades and stator vanes.

B67-10542

PLASTIC SHOE FACILITATES ULTRASONIC
INSPECTION OF THIN WALL METAL TUBINGLAMBERMEYER, D. J. /AEROJET-GEN. CORP./
PETERSON, R. H. DATE- DEC. 1967
NUC-10010

Plastic shoe aids inspection of thin walled stainless steel welded tubing to locate voids or other material defects in critical component equipment. Incorporated in available ultrasonic inspection equipment, it couples the transducer to the tube at desired incident angles.

B67-10564

MECHANIZED X-RAY INSPECTION SYSTEM
FOR LARGE TANKSOCCHIPINTI, G. C. /BOEING CO./ DATE- DEC. 1967
M-FS-12867 M-FS-12868 M-FS-13065 M-FS-13815

Mechanized X ray equipment provides nondestructive inspection of structural weldments at various positions on very large tanks. It mechanizes the placement of the film, automates the identification process, adheres to safety requirements, and eliminates all the usual time-consuming manual operations in industrial radiography.

B67-10597

NEUTRON DETECTOR SIMULTANEOUSLY MEASURES
FLUENCE AND DOSE EQUIVALENTDVORAK, R. P. DYER, N. C. DATE- DEC. 1967 REAN-
SEE ALSO ANL-7085
ARG-10071

Neutron detector acts as both an area monitoring instrument and a criticality dosimeter by simultaneously measuring dose equivalent and fluence. The fluence is determined by activation of six foils one inch below the surface of the moderator. Dose equivalent is determined from activation of three interlocked foils at the center of the moderator.

B67-10601

ANALYTICAL DRAFTING CURVES PROVIDE EXACT
EQUATIONS FOR PLOTTED DATASTEWART, R. B. DATE- DEC. 1967
LANGLEY-285

Analytical drafting curves provide explicit mathematical expressions for any numerical data that appears in the form of graphical plots. The curves each have a reference coordinate axis system indicated on the curve as well as the mathematical equation from which the curve was generated.

B67-10602

NEW TECHNIQUE FOR DETERMINATION OF
CROSS-POWER SPECTRAL DENSITY WITH DAMPED
OSCILLATORSSIMON, W. E. WALKER, L. A. /MARTIN CO./ DATE-
DEC. 1967
M-FS-14022

New cross-power spectral density computation

technique has been developed, as well as a technique for discrimination between periodic and random signals. This development is applicable to analysis of any stationary random process, and can be used in the aerospace and transportation fields.

B67-10605

LAMB WAVES INCREASE SENSITIVITY IN
NONDESTRUCTIVE TESTINGDI NOVI, R. DATE- DEC. 1967 REAN- SEE ALSO
ANL-6630 ANL-6329
ARG-10009

Lamb waves improve sensitivity and resolution in the detection of small defects in thin plates and small diameter, thin-walled tubing. This improvement over shear waves applies to both longitudinal and transverse flaws in the specimens.

B67-10609

GIMBALED-MIRROR SCANNING SYSTEM CAPABLE
OF SPIRAL PATTERNHAERTSCH, O. C. WILSON, M. W. DATE- DEC. 1967
GSFC-10170

Gimbaled-mirror infrared radiation scanner, with a lightweight torque motor direct coupled to each axis, is capable of scanning in a highly efficient spiral pattern. The scanner is lightweight and can be remotely positioned in previously inaccessible areas because the radiometer head and the gimbaled-mirror scanner can be separated.

B67-10610

HANDBOOK OF CRYOGENIC DATA IN GRAPHIC FORM

LOEB, M. B. /BOEING CO./ DATE- DEC. 1967

KSC-10009

Handbook of Cryogenic Data is written in graphic form and concentrates extensive data on common materials of construction and properties of fluids frequently encountered in designing cryogenic systems. All data are presented in the British system of units.

B67-10613

POLYSTYRENE CRYOSTAT FACILITATES TESTING
TENSILE SPECIMENS UNDER LIQUID NITROGENSHOGAN, R. P. /WESTINGHOUSE ASTRONUCL. LAB./
SKALKA, R. J. DATE- DEC. 1967
NUC-10522

Lightweight cryostat made of expanded polystyrene reduces eccentricity in a tensile system being tested under liquid nitrogen. The cryostat is attached directly to the tensile system by a special seal, reducing misalignment effects due to cryostat weight, and facilitates viewing and loading of the specimens.

B67-10617

TEST SYSTEM ACCURATELY DETERMINES TENSILE
PROPERTIES OF IRRADIATED METALS AT CRYOGENIC
TEMPERATURESLEVINE, P. J. /WESTINGHOUSE ASTRONUCL. LAB./
SKALKA, R. J. VANDERGRIFF, E. F. DATE- DEC. 1967
NUC-10521

Modified testing system determines tensile properties of irradiated brittle-type metals at cryogenic temperatures. The system includes a lightweight cryostat, split-screw grips, a universal joint, and a special temperature control system.

B67-10618

ENVIRONMENTAL CONTROL SYSTEM FOR CRYOGENIC
TESTING OF TENSILE SPECIMENSVANDERGRIFF, E. F. /WESTINGHOUSE ASTRONUCL. LAB./
YATSKO, G. O. DATE- DEC. 1967
NUC-10523

Environmental control system uses a special coil to permit the tensile testing of specimens which may be subjected to temperatures anywhere between liquid nitrogen and room temperature. The test specimen zone is surrounded by the coil which permits the selective flooding of the specimen with warm or cold gas.

B67-10621

JET ENGINE POWERS LARGE, HIGH-TEMPERATURE
WIND TUNNEL

BENHAM, T. F. /N. AM. AVIATION/ MULLIKEN, S. R.
DATE- DEC. 1967
M-FS-13544

Wind tunnel for large component testing uses a jet engine with afterburner to provide high temperatures /1200 degrees to 2000 degrees F/ and controlled high velocity gas. This economical wind tunnel can accommodate parts ten feet by ten feet or larger, and is a useful technique for qualitative information.

B67-10633
DEVELOPMENT OF CURIE POINT SWITCHING FOR THIN FILM, RANDOM ACCESS, MEMORY DEVICE
LEWICKI, G. W. /TCHERNEV, D. I. DATE- DEC. 1967
NPO-10402

Manganese bismuthide films are used in the development of a random access memory device of high packing density and nondestructive readout capability. Memory entry is by Curie point switching using a laser beam. Readout is accomplished by microoptical or micromagnetic scanning.

B67-10636
RONCHI TEST APPLIED TO MEASUREMENT OF SURFACE ROUGHNESS
GALLAY, H. M. /SCHJELDAHL /G.T./ CO./ VIZENOR, R. DATE- DEC. 1967
M-FS-12583

Ronchi test is applied to measure microscopic variations in surface roughness or flatness of metallized test specimens. Light is projected through a diffraction grating onto the test specimen, and the light reflected from the specimen is viewed or photographed through the grating.

B67-10640
REVIEW OF PHYSICS, INSTRUMENTATION AND DOSIMETRY OF RADIOACTIVE ISOTOPES
SINCLAIR, W. K. DATE- DEC. 1967
ARG-10037

General radioactive isotope information, stressing radioactivity, methods of measurement, and dosimetry of radioactive nuclides have been reviewed to serve as a reference for the medical profession. Instability of radionuclides, principal types of emission, and measurement of ionizing radiation are among the topics discussed.

B67-10644
DEVELOPMENT OF DUAL SOLID CRYOGENS FOR HIGH RELIABILITY REFRIGERATION SYSTEM
CAREN, R. P. /LOCKHEED MISSILES AND SPACE CO./ COSTON, R. M. DATE- DEC. 1967
GSFC-10188

High reliability solid cryogen refrigeration system consists of a container initially filled with a solid cryogen which is coupled thermally to an infrared detector by means of a link of high thermal conductivity extending from a heat exchanger within the cryogen container.

B67-10648
ADAPTIVE CONTROL CIRCUIT PREVENTS AMPLIFIER SATURATION
NORDSIECK, A. J. /GEN. MOTORS CORP./ DATE- JAN. 1968
ERC-10026

Adaptive control circuit prevents saturation of push-pull output amplifiers used in low-power, low-torque suspension system. The adaptive control circuit senses how near the output amplifiers are to saturation and sets the B voltage in such a way as to keep them just clear of saturation.

B67-10653
NONRECIPROCAL GAIN CONTROL FOR RING LASER
DUEKER, G. /PERKIN-ELMER CORP./ LEE, P. DATE- DEC. 1967
M-FS-14041

Nonreciprocal gain control is used in a ring laser where the two countercirculating beams may have differing intensities because of the residual Faraday rotation and other secondary nonreciprocal effects.

B67-10671
TELESCOPE MOUNT WITH AZIMUTH-ONLY PRIMARY
WELLS, W. H. DATE- JAN. 1968
NPO-10468

In large aperture telescope primary reflectors, the primary mirror is fixed with respect to the gravity vector to avoid varying gravity deflection problems. The primary reflector does not become distorted in various positions nor in changing positions.

B68-10010
FLOW TUBE USED TO COOL SOLAR-PUMPED LASER
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1968
MSC-11026

A flow tube has been designed and constructed to provide two major functions in the application of a laser beam for transmission of both sound and video. It maintains the YAG laser at the proper operating temperature of 300 degrees K under solar pumping conditions, and it serves as a pump cavity for the laser crystal.

B68-10013
METHOD OF MEASURING THERMAL CONDUCTIVITY OF HIGH PERFORMANCE INSULATION
HYDE, E. H. RUSSELL, L. D. /LOCKHEED MISSILES AND SPACE CO./ DATE- JAN. 1968
M-FS-14088

Method accurately measures the thermal conductivity of high-performance sheet insulation as a discrete function of temperature. It permits measurements to be made at temperature drops of approximately 10 degrees F across the insulation and ensures measurement accuracy by minimizing longitudinal heat losses in the system.

B68-10021
OPTICAL SYSTEM FACILITATES INSPECTION OF PRINTED CIRCUIT BOARDS
CRIDLIN, M. OCONNOR, J. DATE- JAN. 1968
GSFC-07971

Optical comparator method determines the quality and registration of surface features of double-sided printed circuit boards. Color-coded superimposed images of both sides of a printed circuit board are presented to view, clearly showing details and registration of the circuitry.

B68-10060
NEW TECHNIQUE FOR OPTIMAL SMOOTHING OF DATA
FRASER, D. C. /MIT/ DATE- MAY 1968
MSC-11354

Recursive method for the optimal smoothing of data has numerical superiority and is more easily understood in terms of physical reasoning than earlier methods. Using a Kalman filter, the smoothing technique, applied to a nonlinear parameter identification problem, is useful in those situations where linearization about a reference solution is valid.

B68-10071
IMPROVED OPTICAL DIFFRACTOMETER
BILDERBACK, R. R. DATE- MAR. 1968
MSC-12055

Diffractionmeter is designed for diffraction measurements in the visible and near-infrared spectral regions. It provides higher resolution of diffraction patterns, an alternate illumination section for coherent light /from a laser source/, a unique alignment and adjustment arrangement for the optical system, and a very stable mounting.

B68-10077
ELECTRONIC GATING CIRCUIT AND ULTRAVIOLET LASER EXCITATION PERMIT IMPROVED DOSIMETER SENSITIVITY
EGGENBERGER, D. KING, D. LONGNECKER, A. SCHUTT, D. /NOTRE DAME UNIV./ DATE- APR. 1968
ARG-10109

Standard dosimeter reader, modified by adding an electronic gating circuit to trigger the intensity level photomultiplier, increases readout sensitivity of photoluminescent dosimeter systems. The gating circuit is controlled by a second photomultiplier which senses a short ultraviolet pulse from a laser used to excite the dosimeter.

02 PHYSICAL SCIENCES (ENERGY SOURCES)

B68-10081

INFRARED SPECTRORADIOMETER FOR ROCKET

EXHAUST ANALYSIS

HERGET, W. F. /N. AM. ROCKWELL CORP./ DATE- MAY 1968

M-FS-14357

Infrared spectroradiometer measures high-resolution spectral absorption, emission, temperature, and concentration of chemical species in radically symmetric zones of the exhaust plumes of large rocket engines undergoing static firing tests. Measurements are made along predetermined lines of sight through the plume.

B68-10090

ANTI GLARE IMPROVEMENT FOR OPTICAL IMAGING SYSTEMS

DAVIS, E. S. DATE- MAR. 1968

NPO-10337

Baffle configuration provides a more efficient shade against interfering sources of illumination outside the desired field of view of optical imaging systems. It consists of a semi-ellipsoid of revolution about the minor axis with black specular reflecting surface and an aperture defined by the locus of the foci of the generating ellipse.

B68-10098

RECTANGULAR CONFIGURATION IMPROVES SUPERCONDUCTING CABLE

FOSS, M. LAVERICK, C. LOBELL, G. DATE- APR. 1968

ARG-90088

Superconducting cable for a cryogenic electromagnet with improved mechanical and thermal properties consists of a rectangular cross-sectioned combination of superconductor and normal conductor. The conductor cable has superconductors embedded in a metallic coating with high electrical and mechanical conductivity at liquid helium temperatures.

B68-10108

STUDY OF CRYOGENIC CONTAINER THERMODYNAMICS DURING PROPELLANT TRANSFER

BROGAN, J. J. VERNON, R. M. /LOCKHEED MISSILES AND SPACE CO./ DATE- MAY 1968

M-FS-14310

Study of thermodynamic phenomena occurring during transfer of cryogenic liquids from dewar to receiver tank reveals that the basic cause of tank implosion is evaporation rate of droplets entering the tank in the early transfer phase. Analyses of the thermodynamics involved and implosion prevention techniques are included.

B68-10113

ROCKET ENGINE NOZZLE PHOTOGRAPHIC SYSTEM

BAILEY, R. L. TIBBITTS, W. C. DATE- APR. 1968

NPO-10174

Protective enclosure for a camera, located on the exhaust stream of a rocket engine, permits continuous recording of erosion processes of materials used in nozzle throat structures. The system uses a standard camera in a water-cooled, pressurized enclosure having a unique, inert gas-swept viewing duct.

B68-10119

MULTICHIP PACKAGING WITH THERMAL INSULATION

MC INTURFF, R. G. MEND, W. G. /WESTINGHOUSE ELEC. CORP./ DATE- APR. 1968

M-FS-14076

Thermal insulation technique permits low and high power electronic chips to operate in the same package without thermal cross-coupling. An alumina glass shield thermally isolates the low power chip from the high power chip while Kovar substrate acts as a heat sink to remove heat from the high power chip.

B68-10126

OPTICAL INTEGRATING SPHERE OPERATES AT VISIBLE AND INFRARED WAVELENGTHS

AISENBERG, S. /SPACE SCI./ DATE- APR. 1968

M-FS-14248

An optical integrating sphere with a faceted

reflective lining on the inside surface will provide light randomization /mixing of diffusely and specularly reflected light/ with relatively few reflections. The improved sphere has a sufficiently high reflectivity for both visible and infrared radiation.

B68-10128

PHOTOGRAPHIC AND DRAFTING TECHNIQUES SIMPLIFY METHOD OF PRODUCING ENGINEERING DRAWINGS

PROVISOR, H. /N. AM. AVIATION/ DATE- APR. 1968

MSC-716

Combination of photographic and drafting techniques has been developed to simplify the preparation of three dimensional and diometric engineering drawings. Conventional photographs can be converted to line drawings by making copy negatives on high contrast film.

B68-10135

ANTECHAMBER FACILITATES LOADING AND UNLOADING OF VACUUM FURNACE

KRAMER, P. J. MILLS, J. A. ORTH, N. W. QUATINETZ, M. WAGNER, J. G. DATE- APR. 1968

LEWIS-10265

Antechamber facilitates the use of a furnace in which materials are heat treated in a high vacuum or a gas atmosphere. It has a high vacuum pumping system, a means for backfilling with a selected gas, an access door, glove ports, and a motor driven platform.

B68-10136

THE X SQUARE STATISTIC AND GOODNESS OF FIT TEST

ARGENTIERO, P. D. MORRIS, R. A. /MARYLAND UNIV./ TOLSON, R. H. /NASA, LANGLEY RES. CENTER/ DATE- APR. 1968

GSFC-10547

The X square statistic is a useful measure of the discrepancy between the actual distribution of a set of data points and the theoretical distribution of a random variable of which the data points supposedly are values. Thus the X square statistic is frequently used in goodness of fit tests.

B68-10143

DEEP GAMMA RAY PENETRATION IN THICK SHIELDS

ARMSTRONG, T. W. STEVENS, P. N. /TENN. UNIV./ DATE- APR. 1968

M-FS-14388

Appropriate importance function and sampling scheme facilitates the application of the Monte Carlo method to problems involving the deep penetration of radiation.

B68-10154

TOOL RECONSTRUCTS DATA INPUT POINTS

CORRESPONDING TO FIRST ORDER OUTPUT GRAPH

BIGGS, R. E. /N. AM. ROCKWELL CORP./ DATE- MAY 1968

M-FS-18003

Tool aids in graphic determination of input values for any first order lag system of known gain and time constant where the corresponding output function is displayed graphically and can be described by a first order differential equation. This tool permits a rapid reconstruction of input points.

B68-10160

ABSOLUTE LOW-PRESSURE CALIBRATION SYSTEM

ROEBRIG, J. R. /NATL. RES. CORP./ DATE- MAY 1968

M-FS-13085

McLeod gage is used as the primary reference standard in a system used for absolute calibration of vacuum gages in the very low pressure range. The system involves steady-state flow of a gas through a cascade of differentially pumped chambers or stages connected by precisely defined orifices.

B68-10170

LARGE-AMPLITUDE INVISCID FLUID MOTION IN AN ACCELERATING CONTAINER

PERKO, L. M. /LOCKHEED MISSILES AND SPACE CO./ DATE- JUN. 1968

MSC-11560

Study of dynamic behavior of the liquid-vapor interface of an inviscid fluid in an accelerating cylindrical container includes an analytical-numerical method for determining large amplitude motion. The method is based on the expansion of the velocity potential in a series of harmonic functions with time dependent coefficients.

B68-10174

LOW SCATTER LIGHTWEIGHT FISSION SPECTROMETER
CONSTRUCTED FOR BIOLOGICAL RESEARCH
FRIGERIO, N. A. DATE- JUN. 1968
ARG-10094

Low scatter, lightweight fission spectrometer provides a simple, reliable method for determining absolute neutron fluxes in a fixed neutron. It minimizes neutron scatter and energy degradation effects, and has a counting volume large enough to intercept the most energetic fission fragments, yet small enough to be discriminating.

B68-10178

CONCEPT TO COMFORT-CONDITION SUBJECTS
WEARING RESTRICTIVE CLOTHING
TUCKER, E. M. DATE- JUN. 1968
MSC-10964

Heat exchanger maintains a desirable thermal balance in a subject wearing restrictive clothing. A grid of high thermal conductance fibers, in contact with the skin, transfers heat to or from the skin surface by means of a system of ducts, carrying the transfer fluid which is maintained at a controlled temperature.

B68-10179

APPLICATION OF A TRUNCATED NORMAL FAILURE
DISTRIBUTION IN RELIABILITY TESTING
GROVES, C., JR. /N. AM. ROCKWELL CORP./ DATE-
JUN. 1968
M-PS-14328

Statistical truncated normal distribution function is applied as a time-to-failure distribution function in equipment reliability estimations. Age-dependent characteristics of the truncated function provide a basis for formulating a system of high-reliability testing that effectively merges statistical, engineering, and cost considerations.

B68-10181

STUDY OF CONVECTIVE MAGNETOHYDRODYNAMIC
CHANNEL FLOW
SINGER, R. M. DATE- JUN. 1968 REAN- SEE ALSO
ANL-6937
ARG-10102

Study involves the effects of the interactions of electromagnetic, velocity, and temperature fields to aid in the design of a magnetohydrodynamic device. It concerns a theoretical analysis of the convective flow of an electrically conducting gas in a channel composed of conducting walls.

B68-10186

MAGNETIC FORMING STUDIES
FURTH, H. P. HOLT, D. R. JATMUZ, P. J. MEHRA,
R. C. WANIEK, R. W. /ADVANCED KINET./ DATE-
JUN. 1968 REAN- SEE ALSO B65-10342
M-PS-14217

Investigation of the tensile strength dependability on the characteristic time over which a pressure pulse is applied to a metal workpiece shows that the mechanical properties of these materials are functions of the rate at which the material is undergoing strain. These results and techniques are used in magnetomotive metal forming.

B68-10190

PROCEDURE DEVELOPED FOR REPORTING
FAST-NEUTRON EXPOSURE
ROSSIN, A. D. DATE- JUN. 1968 REAN- SEE ALSO
ANL-6826
ARG-10035

Procedure for reporting fast-neutron exposure involves determination of the spectrum shape and absolute magnitude, selection of an energy weighting for the neutrons, and definition of a

unit for reporting exposure. Using this method, comparisons of irradiation data from different reactors will be free from errors resulting from differences between the spectra.

B68-10228

THEORY OF A REFINED EARTH MODEL
KRAUSE, H. G. L. DATE- JUN. 1968
M-PS-14679

Refined equations are derived relating the variations of the earth's gravity and radius as functions of longitude and latitude. They particularly relate the oblateness coefficients of the old harmonics and the difference of the polar radii /respectively, ellipticities and polar gravity accelerations/ in the Northern and Southern Hemispheres.

B68-10234

DESIGN TECHNIQUES - STOCHASTIC CONTROLLERS
WIDNALL, W. S. /MIT/ DATE- JUL. 1968
MSC-11554

Analytic techniques aid in the design of nearly optimal linear time-varying sampled-data stochastic controllers. The techniques also aid in the simplification and automation of program designing for control computers.

B68-10240

PROPERTIES OF OPTICS AT HIGH TEMPERATURE AND
THEIR MEASUREMENT, A STUDY
GATES, D. W. DATE- JUL. 1968
M-PS-14696

Bibliography lists, the sources containing emissivity and absorptivity data on materials at extremely high temperatures. The experimental techniques, equipment and efforts of the experimenters to characterize the materials used and methods to evaluate the errors are given in the sources in this bibliography.

B68-10243

PORTABLE, HIGH INTENSITY ISOTOPIC NEUTRON
SOURCE PROVIDES INCREASED EXPERIMENTAL
ACCURACY
MOHR, W. C. STEWART, D. C. WAHLGREN, M. A.
DATE- JUL. 1968 REAN- SEE ALSO ANL-6917 AND
ANL-6933
ARG-90250

Small portable, high intensity isotopic neutron source combines twelve curium-amerium beryllium sources. This high intensity of neutrons, with a flux which slowly decreases at a known rate, provides for increased experimental accuracy.

B68-10245

IMPROVED RELAY OPTICAL ELEMENT FOR
SPECTRORADIOMETER USING CRYOGENICALLY
COOLED DETECTOR
KRAEMER, A. R. /LOCKHEED MISSILES AND SPACE CO./
DATE- JUL. 1968
MSC-11688

By coating half of one element in the relay optical system of a spectroradiometer with a very high emissivity paint, the effect of the reflected radiation from the back of the filter wheel is eliminated optically. This causes the detector to view a constant level of radiation, regardless of how the reflectivity of the back of the filter wheel changes.

B68-10252

NEW METHOD FOR CRITICAL FAILURE PREDICTION
OF COMPLEX SYSTEMS
COX, C. T. EAGLE, K. H. MALIK, D. P. WOLIN, S.
/BOEING CO./ DATE- JUL. 1968
M-PS-14133

Rigorous analytical technique, called criticality determination methodology /or CD technique/ determines the probability that a given complex system will successfully achieve stated objectives. The CD technique identifies critical elements of the system by a failure mode and effects analysis.

B68-10255

ELECTRO-OPTIC MODULATOR FOR INFRARED LASER
USING GALLIUM ARSENIIDE CRYSTAL
WALSH, T. E. /RCA/ DATE- JUL. 1968

02 PHYSICAL SCIENCES (ENERGY SOURCES)

GSFC-10686

Gallium arsenide electro-optic modulator used for infrared lasers has a mica quarter-wave plate and two calcite polarizers to amplitude or phase modulate an infrared laser light source in the wavelength range from 1 to 3 microns. The large single crystal has uniformly high resistivities, is strain free, and comparable in quality to good optical glass.

B68-10259

FLUORESCENT PARTICLES ENABLE VISUALIZATION OF GAS FLOW

WILSON, A. J. /N. AM. ROCKWELL CORP./ DATE- JUL. 1968 REAN- SEE ALSO B66-10668

M-FS-14583

Fluorescent particles enable visualization of the flow patterns of gases at slow velocities. Through a transparent section in the gas line, a camera views the visible light emitted by the particles carried by the gas stream. Fine definition of the particle tracks are obtained at slow camera shutter speeds.

B68-10260

TECHNIQUE DEVELOPED FOR MEASURING TRANSMITTANCE OF OPTICAL BIREFRINGENT NETWORKS

AMMANN, E. O. YARBOROUGH, J. M. /SYLVANIA PROD./ DATE- AUG. 1968 REAN- SEE ALSO B68-10275

M-FS-14267

The transmission characteristics of synthesized optical single-pass and double-pass birefringent networks is obtained by measuring network transmission as a function of network temperature. This technique is most useful for testing those birefringent networks whose bandwidths and periods are very small.

B68-10265

ACOUSTIC WAVE ANALYSIS

JACKSON, E. D. /N. AM. ROCKWELL CORP./ DATE- JUL. 1968

M-FS-18076

The primary mechanism for generation of acoustic waves in a centrifugal pump, due to the rotor/stator interaction, is an unsteady source at the entrance of the blade row as represented by the unsteady velocity field. The amplitudes of wave generated by pressure loading on the blades and by velocity boundary condition are compared.

B68-10275

SYNTHESIS OF ELECTRO-OPTIC MODULATORS FOR AMPLITUDE MODULATION OF LIGHT

AMMANN, E. O. YARBOROUGH, J. M. /SYLVANIA ELEC. PROD./ DATE- AUG. 1968

M-FS-14268

Electro-optical modulator realizes voltage transfer function in synthesizing birefringent networks. Choice of the voltage transfer function is important, the most satisfactory optimizes the modulator property.

B68-10276

SOLUTION OF DIFFERENTIAL EQUATIONS BY APPLICATION OF TRANSFORMATION GROUPS

DRISKELL, C. N., JR. GALLAHER, L. J. MARTIN, R. H., JR. /GEORGIA INST. OF TECH./ DATE- AUG. 1968

M-FS-14802

Report applies transformation groups to the solution of systems of ordinary differential equations and partial differential equations. Lies theorem finds an integrating factor for appropriate invariance group or groups can be found and can be extended to partial differential equations.

B68-10282

HIGH-SPEED CAMERA SYNCHRONIZATION

ROJEC, E. A. /N. AM. ROCKWELL CORP./ DATE- AUG. 1968

M-FS-18062

Photoelectric sensor enables synchronization of the rotating mirror in a high-speed framing camera with the passage of a very-high-velocity droplet to obtain direct photographic data on droplet breakup. It detects droplet movement across a high intensity light beam and generates a signal

triggering the camera.

B68-10293

ISOTOPICALLY PURE MAGNESIUM ISOTOPE-24 IS PREPARED FROM MAGNESIUM-24 OXIDE

CHELLEW, N. R. SCHILB, J. D. STEUNENBERG, R. K. DATE- AUG. 1968

ARG-10154

Apparatus is used to prepare isotopically pure magnesium isotope-24, suitable for use in neutron scattering and polarization experiments. The apparatus permits thermal reduction of magnesium-24 oxide with aluminum and calcium oxide, and subsequent vaporization of the product metal in vacuum. It uses a resistance-heated furnace tube and cap assembly.

B68-10294

STUDY OF RADIATION EFFECTS ON MAMMALIAN CELLS IN VITRO

SINCLAIR, W. K. DATE- AUG. 1968

ARG-10191

Radiation effect on single cells and cell populations of Chinese hamster lung tissue is studied in vitro. The rate and position as the cell progresses through the generation cycle shows division delay, changes in some biochemical processes in the cell, chromosomal changes, colony size changes, and loss of reproductive capacity.

B68-10298

DETECTION SENSITIVITIES IN 3-8 MEV NEUTRON ACTIVATION

WAHLGREN, M. A. WING, J. DATE- AUG. 1968 REAN- SEE ALSO ANL-7242

ARG-10210

Study of detection sensitivities of 73 radioactive elements using fast unmoderated neutrons includes experiments for irradiation, cooling and counting conditions. The gamma ray emission spectra is used to identify the unknown material.

B68-10304

IMPROVED GAS RING LASER

COCCOLI, J. D. LAWSON, J. R. /MIT/ DATE- AUG. 1968

MSC-11584

Minimizing mode coupling improves sensing resolution of a gas ring laser in a gimballess gyroscope system or inertial rotation sensor. The piezoelectric-driven corner mirrors of the ring laser are oscillated in a direction parallel to their surfaces and the plane of rotation.

B68-10322

MODIFIED SINE BAR DEVICE MEASURES SMALL ANGLES WITH HIGH ACCURACY

THEKAERKARA, M. DATE- AUG. 1968

GSFC-438

Modified sine bar device measures small angles with enough accuracy to calibrate precision optical autocollimators. The sine bar is a massive bar of steel supported by two cylindrical rods at one end and one at the other.

B68-10326

4 PI-RECOIL PROPORTIONAL COUNTER USED AS NEUTRON SPECTROMETER

BENNETT, E. F. DATE- AUG. 1968 REAN- SEE ALSO ANL-6897

ARG-10101

Study considers problems encountered in using 4 pi-recoil counters for neutron spectra measurement. Emphasis is placed on calibration, shape discrimination, variation of W, the average energy loss per ion pair, and the effects of differentiation on the intrinsic counter resolution.

B68-10329

HIGH-SPEED PULSE CAMERA

LAWSON, J. R. /MIT/ DATE- AUG. 1968

MSC-11353

Miniaturized, 16 mm high speed pulse camera takes spectral photometric photographs upon instantaneous command. The design includes a low-friction, low-inertia film transport, a very thin beryllium shutter driven by a low-inertia stepper motor for minimum actuation time after a

pulse command, and a binary encoder.

B68-10339

DYNAMICS OF MOVING BUBBLES IN SINGLE AND BINARY COMPONENT SYSTEMS

CLARK, J. A. NERTE, H., JR. TOKUDA, N. YANG, W. J. /MICHIGAN UNIV./ DATE- SEP. 1968
M-FS-14845

Dynamics of a single bubble moving in a quiescent liquid is analyzed for single and binary component systems. The transport of energy and/or mass at thermodynamic-phase equilibrium governs the dynamics of the bubble at its interface.

B68-10345

INDEPENDENT DOUBLY TRUNCATED GAMMA VARIABLES

LAVENDER, D. E. /GEORGIA UNIV./ DATE- SEP. 1968
M-FS-20143

Density and distribution functions of the sum of independent variables, each having a truncated gamma density function, were derived for use in the measurement of complex physical phenomena.

B68-10346

CONTROLLABILITY OF DISTRIBUTED-PARAMETER SYSTEMS

HERGET, C. J. /CALIF. UNIV./ DATE- SEP. 1968
M-FS-14929

Controllability of distributed-parameter control systems is mathematically studied. A general theory for control systems includes those that cannot be described by ordinary differential equations.

B68-10347

IMPROVEMENT IN RECORDING AND READING HOLOGRAMS

HALLOCK, J. N. DATE- SEP. 1968
ERC-10151

Three-beam technique superimposes a number of patterns in the same plane of a hologram and then uniquely identifies each pattern by a suitable readout process. The developed readout process does not require any movement of parts.

B68-10348

STUDY OF OPTIMUM DISCRETE ESTIMATORS IN MEASUREMENT ANALYSIS

HUNG, J. C. IRWIN, J. D. /TENNESSEE UNIV./ DATE- SEP. 1968
M-FS-14915

Study of statistical techniques for obtaining estimates of true data parameters uses discrete measured quantities containing random error. These techniques develop estimation procedures as an iterative algorithm for digital computation in real time.

B68-10349

LASER-DOPPLER GAS-VELOCITY INSTRUMENT

BOOTH, S. MEISTER, K. ROLFE, E. SILK, J. K. YOUNG, R. M. /RAYTHEON CO./ DATE- SEP. 1968
REAN- SEE ALSO B66-10693
M-FS-20039

Three-D instrument using a laser light source measures both turbulence and mean velocity of subsonic and supersonic gas flows. This instrument is based on the measurement of the Doppler frequency shift of light waves scattered by moving particles in the gas stream.

B68-10363

IMPROVED RADIOGRAPHIC IMAGE AMPLIFIER PANEL

BROWN, R. L., SR. DATE- OCT. 1968
M-FS-14522

Layered image amplifier for radiographic /X ray and gamma ray/ applications, combines very high radiation sensitivity with fast image buildup and erasure capabilities by adding a layer of material that is both photoconductive and light-emitting to basic image amplifier and cascading this assembly with a modified Thorne panel.

B68-10396

EVALUATION OF SUPERCONDUCTING MAGNETS, A STUDY

DI SALVO, F. LUCAS, E. STEKLY, Z. J. J. STRAUSS, E. P. THOME, R. /AVCO EVERETT RES. LAB./ DATE- OCT. 1968

M-FS-14808

Study analytically develops and experimentally verifies the steady state behavior characteristics of composite superconductors. Zero-dimensional, one-dimensional, and three-dimensional analyses were performed.

B68-10406

FIBER GLASS PREVENTS CRACKING OF POLYURETHANE FOAM INSULATION ON CRYOGENIC VESSELS

FORGE, D. A. /MCDONNELL DOUGLAS CORP./ DATE- NOV. 1968
M-FS-20058

Fiber glass material, placed between polyurethane foam insulation and the outer surfaces of cryogenic vessels, retains its resilience at cryogenic temperatures and provides an expansion layer between the metal surfaces and the polyurethane foam, preventing cracking of the latter.

B68-10418

MINIATURIZED KING FURNACE PERMITS

ABSORPTION SPECTROSCOPY OF SMALL SAMPLES
ERCOLI, B. TOMPKINS, F. S. DATE- NOV. 1968
ARG-10177

Miniature King-type furnace, consisting of an inductively heated, small diameter tantalum tube supported in a radiation shield eliminates the disadvantages of the conventional furnace in obtaining absorption spectra of metal vapors.

B68-10426

CERIC AND FERROUS DOSIMETERS SHOW PRECISION FOR 50-5000 RAD RANGE

FRIGERIO, N. A. HENRY, V. D. DATE- NOV. 1968
ARG-10173

Ammonium thiocyanate, added to the usual ferrous sulfate dosimeter solution, yielded a very stable, precise and temperature-independent system eight times as sensitive as the classical Fricke system in the 50 to 5000 rad range. The ceric dosimeters, promising for use in mixed radiation fields, respond nearly independently of LET.

B68-10504

SOLVING NONLINEAR HEAT TRANSFER CONSTANT AREA FIN PROBLEMS

SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- NOV. 1968
M-FS-14851

Tables and graphs were compiled for solving nonlinear heat transfer constant area fin problems. The differential equation describing one-dimensional steady-state temperature distribution and heat flow under three modes of heat transfer with heat generation was investigated.

B68-10506

DUAL-PURPOSE CHAMBER-COOLING SYSTEM

FRAZE, R. E. DATE- NOV. 1968
NFO-10467

Inexpensive, portable system was designed for cooling small environmental test chambers with a temperature-controlled gas stream evaporated from a cryogenic liquid. The system reduces the temperature of a chamber to any desired point in a fraction of the time required by previous systems.

B68-10508

COOLANTS WITH SELECTIVE OPTICAL FILTERING CHARACTERISTICS FOR RUBY LASER APPLICATIONS

MC DEVITT, F. R. /AUBURN UNIV./ RASQUIN, J. R. DATE- NOV. 1968
M-FS-20188

Coolant-filtering medium developed consists of a solution of copper sulfate in a 4-1 volumetric mixture of ethanol and methanol. This solution should be a useful addition to ruby laser systems, particularly in large pulse or Q switching applications.

B68-10510

HEAT-LOAD SIMULATOR FOR HEAT SINK DESIGN

DUNLEAVY, A. M. VAUGHN, T. J. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968
MSC-15170

Heat-load simulator is fabricated from 1/4-inch

02 PHYSICAL SCIENCES (ENERGY SOURCES)

aluminum plate with a contact surface equal in dimensions and configuration to those of the electronic installation. The method controls thermal output to simulate actual electronic component thermal output.

B68-10517

HEAT TRANSFER COEFFICIENTS FOR LIQUID

HYDROGEN TURBOPUMPS

BISSEL, W. R. WAGNER, W. R. /N. AM. ROCKWELL
CORP./ DATE- NOV. 1968

M-FS-18345

Empirical equations were derived to establish the appropriate heat transfer coefficients as functions of the temperature drops and heat transfer rates for a wide range of convective and boiling conditions at different locations in a liquid hydrogen turbopump.

B68-10519

HIGH CONDUCTANCE VAPOR THERMAL SWITCH

HYMAN, N. L. DATE- SEP. 1968

GSFC-10109

High conductance vapor thermal switch was produced to maintain heat dissipating component temperatures within acceptable limits. The switch is a self-actuating, automatic device that regulates the rate of heat flow to control.

B68-10521

TELESCOPE DOME CONTROL SYSTEM AUTOMATICALLY

TRACKS SUN

CASHION, K. D. DATE- NOV. 1968

MSC-10966

Automatic control system is designed to rotate a dome so that a telescope, or other instruments, within the dome will continuously view the sun as the earth rotates.

B68-10533

A MASS FLUX PROBE FOR MEASUREMENT IN A

SUPERSONIC STREAM

GLANE, G. E. KRAUSE, L. N. DATE- DEC. 1968

LEWIS-10695

Probe consists essentially of a tube with a supersonic inlet pointed into the gas stream. The mass flow rate through the tube is determined at a flow measuring station.

B68-10546

IMAGING SLITLESS SPECTROMETER FOR X-RAY

ASTRONOMY

GURSKY, H. ZEHNFENNIG, T. /AM. SCI. AND ENG./

DATE- NOV. 1968

M-FS-14309

Imaging slitless spectrometer, a combination of an X ray transmission /or reflection/ grating and image-forming X ray telescope, is capable of obtaining simultaneous spatial and spectral information about celestial X ray sources.

B68-10548

ONE-DIMENSIONAL COULOMB-DAMPED WAVE MOTION

IN PRISMATIC BARS

TOHLIN, D. D., JR. DATE- DEC. 1968

M-FS-14815

Study analyzes wave motions in prismatic bars with Coulomb damping, using Laplace transforms as an aid in solving the partial differential equations. The results are detailed.

B68-10556

ELECTRON BEAM RECRYSTALLIZATION OF AMORPHOUS

SEMICONDUCTOR MATERIALS

EVANS, J. C., JR. DATE- DEC. 1968

LEWIS-10443

Nucleation and growth of crystalline films of silicon, germanium, and cadmium sulfide on substrates of plastic and glass were investigated. Amorphous films of germanium, silicon, and cadmium sulfide on amorphous substrates of glass and plastic were converted to the crystalline condition by electron bombardment.

B68-10560

SHORTENED PROCEDURE FOR OBTAINING

REPRODUCIBLE COPIES OF 35 MM COLOR SLIDES

LEVINE, F. /BOEING CO./ DATE- DEC. 1968

KSC-09957

Technique to reduce the steps required to obtain reproducible copies of 35 mm color slides has been developed. A 35 mm slide is projected directly onto a Xerox plate, eliminating the necessity to produce a film positive of the slide.

B68-10564

REPETITIVELY PULSED, WAVELENGTH-SELECTIVE

CARBON DIOXIDE LASER

HANST, P. L. DATE- NOV. 1968

ERC-10178

Carbon dioxide laser as a simple portable unit generates coherent light pulses at selected infrared wavelengths. The improved laser was designed for the detection of air pollutants but can be applied to optical communications.

B68-10569

ACCURATE DIGITAL TECHNIQUE SIMULATES FLIGHT

CONTROL SYSTEM

HAYS, J. R. /BOEING CO./ DATE- NOV. 1968

M-FS-14787

Fast, accurate technique for simulating the Saturn Flight Control System was devised. The technique is simple to implement and can be readily substituted for slower or less accurate techniques. This technique can be applied to a large class of problems that require a rapid accurate calculation of the response of linear differential equations to a continuous input.

B68-10570

IMPROVED TECHNIQUE FOR DIGITAL SIMULATION

OF BENDING AND SLOSH PHENOMENA

STAUFFER, N. E. /BOEING CO./ DATE- NOV. 1968

M-FS-14788

Mathematical model representation of bending and slosh phenomena in the Saturn vehicle results in linear second order differential equations. Improved technique was developed to provide a real-time digital solution of the equations. The technique may also be applied to nonreal time digital simulations, resulting in savings of digital computer time.

B68-10571

CORRECTION FOR LOSSES IN OPTICAL

BIREFRINGENT NETWORKS, A CONCEPT

AMMAN, E. O. /SYLVANIA ELEC. PROD./ DATE- NOV.

1968 REAN- SEE ALSO B68-10260 AND B68-10275

M-FS-20088

Technique determines the effects of losses upon the performance of a birefringent network and shows how the desired amplitude transmittance of the network may be corrected /or predistorted/, prior to synthesizing the birefringent network, to prevent the effects of crystal losses.

B68-10574

TRAINING MANUAL ON OPTICAL ALIGNMENT

INSTRUMENTS

SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- DEC. 1968

M-FS-20292

Training Manual RQA/M5 provides a basic course of instruction in the use of optical instruments for precise dimensional control and alignment of structural elements and assemblies, such as associated with space vehicles, aircraft, ships, and buildings.

B69-10001

SHORTENED PROCESSING TIME TECHNIQUE FOR

COLOR INDUSTRIAL RADIOGRAPHY

LAPINSKI, N. P. DATE- JAN. 1969

ARG-10235

Improved processing method reduces time required to generate a color radiograph. Prior to, or after exposure to penetrating radiation, the emulsion side of the film is flashed to a colored light which produces the hue changes in the processed radiograph. Agitation of the film during processing assures uniformity of results.

B69-10002

ISOTHERMAL DSC CALORIMETER PROVIDES

MEASUREMENTS FOR ALPHA ACTIVE, PYROPHORIC

MATERIALS

SAVAGE, H. DATE- JAN. 1969

ARG-10186

Isothermal drop calorimeter measures the heat content of intensely alpha active and pyrophoric materials in inert atmospheres. It consists of a furnace, calorimeter, and aluminum isothermal jacket contained within an inert-atmosphere glove box, which permits the use of unencapsulated materials without exposing personnel to alpha contamination.

B69-10003

DAUGHTER GROWTH IN FRESHLY SEPARATED

RA-226, AC-227 AND U-232

BASILE, L. J. MACIAS, E. S. MILSTEAD, J.

STEWART, D. C. DATE- JAN. 1969 REAN- SEE ALSO

ANL-7205

ARG-10226

Report provides computer-calculated curves and tables for the daughter buildup of Ra-226, Ac-227 and U-232 chains. Data are presented as a function of time beginning with pure samples of each parent. The information may be of interest to those using decay chains as isotopic alpha sources or neutron sources.

B69-10005

GE-DIODE DETECTOR COMBINED WITH

CRYSTAL-DIFFRACTION SPECTROMETER PERMITS

HIGH-RESOLUTION GAMMA RAY SPECTROSCOPY

NANENSON, A. I. SMITHER, R. K. DATE- JAN. 1969

ARG-10190

Crystal-diffraction spectrometer, combined with a lithium-drifted Ge-diode detector, performs high-resolution gamma ray spectroscopy on the complicated neutron-capture gamma ray spectra. The system is most useful in the 1-3 MeV energy range and improves the signal to background ratio.

B69-10011

NONDISPERSIVE X-RAY EMISSION ANALYSIS FOR

GEOCHEMICAL EXPLORATION

ADLER, I. LAMOTHE, R. SCHMADEBECK, R. TROMBKA,

J. I. /LAB. FOR THEORET. STUDIES/ SCHMADEBECK,

R./MELPAR, INC./ DATE- JAN. 1969

GSFC-10568

Nondispersive X ray emission technique uses lightweight, and rugged X ray fluorescence units. The X ray pulse-height spectra is excited by radioactive isotope sources. The technique is applicable for quantitative and qualitative analyses on complex chemical systems, and satisfies the goals for a lunar geochemical exploration device.

B69-10017

VARIABLE-MESH METHOD OF SOLVING

DIFFERENTIAL EQUATIONS

VAN WYK, R. /N. AM. ROCKWELL CORP./ DATE- FEB.

1969

NPO-10515

Multistep predictor-corrector method for numerical solution of ordinary differential equations retains high local accuracy and convergence properties. In addition, the method was developed in a form conducive to the generation of effective criteria for the selection of subsequent step sizes in step-by-step solution of differential equations.

B69-10020

METHOD OF MAKING CONICAL FIBER OPTICAL

COMPONENTS

BALKWILL, J. T. CAPELLARO, D. F. /OPTICS

TECHNOL./ DATE- FEB. 1969

XNP-09745

Improved method for producing fused-fiber optical components is described. These components have a frusto-conical shape and provide high-quality light transmission with high resolution capabilities. Fiber optical components can be used in precision optical systems, such as in certain camera applications.

B69-10024

BEAM PROFILES MEASURED WITH

THERMOLUMINESCENT DOSIMETERS

LUCKS, H. MARCOWITZ, S. M. WHEELER, R. W. DATE-

FEB. 1969 REAN- SEE ALSO ANL-7196

ARG-10229

Beam profilometer, using thermoluminescent

dosimeters, gives a quantitative and qualitative representation of the focus of an external proton beam of a synchrotron. The total number of particles in the beam, particle distribution, and the shape of the beam are determined.

B69-10028

GAGE MEASURES TOTAL RADIATION, INCLUDING

VACUUM UV, FROM IONIZED HIGH-TEMPERATURE

GASES

WOOD, A. D. /LOCKHEED MISSILES AND SPACE CO./

DATE- FEB. 1969

XNP-09802

Transient-heat transfer gage measures the total radiation intensity from vacuum ultraviolet and ionized high temperature gases. The gage includes a sensitive piezoelectric crystal that is completely isolated from any ionized flow and vacuum ultraviolet irradiation.

B69-10042

INSTABILITIES ENCOUNTERED DURING HEAT

TRANSFER TO A SUPERCRITICAL FLUID

CORNELIUS, A. J. DATE- FEB. 1969 REAN- SEE ALSO

ANL-7032

ARG-10266

Investigation was made of the unstable behavior of a heat-transfer loop operating at a supercritical pressure. Natural convection operation of the loop, with observations on acoustic and slow oscillatory behavior, was emphasized during testing. The basic cause of both types of behavior appeared to originate in the heated boundary layer.

B69-10043

PROPAGATION OF DENSITY DISTURBANCES IN

AIR-WATER FLOW

NASSOS, G. P. DATE- FEB. 1969 REAN- SEE ALSO

ANL-7053

ARG-10260

Study investigated the behavior of density waves propagating vertically in an atmospheric pressure air-water system using a technique based on the correlation between density change and electric resistivity. This information is of interest to industries working with heat transfer systems and fluid power and control systems.

B69-10047

ANALYSIS OF TRANSIENT THERMAL STRESS IN

HEAT-GENERATING PLATES AND HOLLOW CYLINDERS

CAUSED BY SUDDEN ENVIRONMENTAL TEMPERATURE

CHANGES

ROSENBERG, G. S. SCHOEERLE, D. F. VALENTIN, R.

A. DATE- FEB. 1969 REAN- SEE ALSO ANL-7294

ARG-10274

Analysis and solution are presented for transient thermal stresses in a free heat-generating flat plate and a free, hollow-generating cylinder as a result of sudden environmental changes. The technique used and graphical results obtained are of interest to the heat transfer industry.

B69-10057

DEWPOINT TEMPERATURE INVERSIONS ANALYZED

ASHBY, W. C. /SOUTHERN ILLINOIS UNIV./ BOGNER,

M. A. MOSES, H. DATE- MAR. 1969

ARG-10316

Dewpoint temperature inversion, with regard to other simultaneous meteorological conditions, was examined to establish the influence of meteorological variables on the variation of dewpoint temperature with height. This report covers instrumentation and available data, all the climatological features of dewpoint inversions, and specific special cases.

B69-10060

OPTICALLY EXCITING A MAGNETIC MEMORY - A

FEASIBILITY STUDY

GRISHORE, F. L. RHODES, J. E. /GEORGIA INST. OF

TECH./ DATE- MAR. 1969

M-FS-14854

Rare earth iron garnets were used in experiments to determine the feasibility of optically pumping a magnetic material to effect the switching process. It was found that rare earth garnets are limited by an absorption edge, only terbium

Q2 PHYSICAL SCIENCES (ENERGY SOURCES)

and dysprosium offer a possibility of pumping at energies below the conduction band edge.

B69-10075
SELECTIVE VIGNETTING OF TYPE 1 X-RAY
TELESCOPES
MANGUS, J. DATE- MAR. 1969
GSFC-10682

Selective vignetting technique optimizes the performance of a Type 1 X-ray telescope. The image quality of the telescope system is improved by matching the detector to the optimum focal surface and by vignetting rays which formerly contributed to the flare in comatic images.

B69-10077
ROCKET SONDE MEASUREMENTS OF OZONE IN THE
UPPER ATMOSPHERE
HILSENATH, E. DATE- MAR. 1969
GSFC-10580

Rocket sonde measurement of ozone content in the mesosphere and stratosphere is accomplished by an in situ determination of the ozone mixing rates as a function of altitude from approximately 65 km to 20 km. A chemiluminescent detector is used as an ozone sensor.

B69-10078
STUDY OF LATTICE DEFECT VIBRATION
ELLIOTT, R. J. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7237
ARG-10221

Report on the vibrations of defects in crystals relates how defects, well localized in a crystal but interacting strongly with the other atoms, change the properties of a perfect crystal. The methods used to solve defect problems relate the properties of an imperfect lattice to the properties of a perfect lattice.

B69-10080
THE RESPONSE OF MONOENERGETIC GAMMA RAYS
IN FINITE MEDIA ARE INVESTIGATED
SNOW, W. J. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7314
ARG-10295

In a study of the transport of radiation in matter, the response parameters of monoenergetic gamma rays incident on various materials with finite geometries were calculated on a CDC 3600 computer. The report includes results for gamma rays normal to cylindrical germanium and silicon detectors.

B69-10082
AN ULTRASONIC METHOD FOR STUDYING ELASTIC
MODULI AS A FUNCTION OF TEMPERATURE
PETERSON, R. G. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7119
ARG-10187

Ultrasonic method is used to determine the elastic moduli of materials used in components of high-temperature nuclear reactors. An ultrasonic, pulse-echo technique determines the velocity of sound waves propagating in a heated region of rod-shaped specimens. From these velocities, the elastic moduli are calculated.

B69-10089
NUMERICAL INTEGRATION OF ORDINARY
DIFFERENTIAL EQUATIONS OF VARIOUS ORDERS
GEAR, C. W. /ILLINOIS UNIV./ DATE- APR. 1969
REAN- SEE ALSO ANL-7126
ARG-10247

Report describes techniques for the numerical integration of differential equations of various orders. Modified multistep predictor-corrector methods for general initial-value problems are discussed and new methods are introduced.

B69-10091
LIQUID-METAL HEAT TRANSFER IN A COCURRENT-
FLOW, DOUBLE-PIPE HEAT EXCHANGER IS
INVESTIGATED
MERRIAM, R. L. DATE- APR. 1969 REAN- SEE ALSO
ANL-7056
ARG-10261

Analysis of liquid-metal heat transfer in cocurrent-flow, double-pipe heat exchangers shows

that heat-transfer coefficients depend upon the operating conditions of the heat exchanger and that use of the customary design equation to predict heat-exchanger performance leads to significant errors.

B69-10099
ACTIVE FREQUENCY CONTROL SYSTEM FOR
ARGON FM LASER
SPON- INNOVATOR NOT GIVEN /SYLVANIA ELEC.
PRODUCTS/ DATE- JUN. 1969
M-FS-14988

Frequency control system positions mirrors at either end of the laser cavity so the mirror separation is independent of thermal and acoustical fluctuations. A small portion of the laser output is split and directed upon a photodetector /photodiode/.

B69-10102
FAST FRAMING CAMERAS PROVIDE HIGH-SPEED
MULTI-CHANNEL DATA RECORDING
DE VOLPI, A. DATE- APR. 1969
ARG-10252

Fast-framing cameras record data obtained by a multichannel hodoscope which monitors reactor physics experiments. The cameras provide high rates of data acquisition at low equipment cost.

B69-10107
OCULTING-FILTER METHOD FOR OBTAINING
FLASHING-LIGHT VISIBILITY DATA
HARDY, A. C. ZAPP, K. /MIT/ DATE- APR. 1969
MSC-13097

Occluding-filter technique allows several types of flashing-light visibility data necessary for rendezvous and docking maneuvers, to be obtained for studying the perception of flashes at the visual threshold. The indications are that the method can be used to compare sources of radically different spectral composition.

B69-10112
PREDICTION OF FRICTION COEFFICIENTS FOR
GASES
TAYLOR, M. F. DATE- MAY 1969 REAN- SEE ALSO
NASA-TR-R-267
LEWIS-10774

Empirical relations are used for correlating laminar and turbulent friction coefficients for gases, with large variations in the physical properties, flowing through smooth tubes. These relations have been used to correlate friction coefficients for hydrogen, helium, nitrogen, carbon dioxide and air.

B69-10122
FLUORESCENT PHOTOGRAPHY OF SPRAY DROPLETS
USING A LASER LIGHT SOURCE
GROENEWEG, J. /WISCONSIN UNIV./ HIROYASU, H.
SOWLS, R. DATE- MAY 1969
LEWIS-10777

Monochromatic laser emission transformed by a fluorescent process into droplet emission over a wavelength band provides high light intensities for obtaining adequate time resolution to stop droplet action in photographic spray studies. Experiments showed that the Q switched laser-optical harmonic generator combination produced sharp, well-exposed droplet images.

B69-10142
IMPROVED COMBUSTION CHAMBER OPTICAL PROBE
WALKER, J. /LTV AEROSPACE CORP./ DATE- MAY 1969
MSC-10953

Optical inspection probe permits remote inspection of combustion chambers through 360 degrees, and is fully controllable in terms of elevation, focus, and sweep. It eliminates the hazards of physically entering combustion chamber interiors and throats of rocket engines for inspection.

B69-10165
LASER MICROPROBE FACILITY USED IN THE
ELEMENTAL ANALYSIS OF SMALL FEATURE OF A
SAMPLE
BALDWIN, J. M. /IDAHO NUCL. CORP./ DATE- JUN.
1969 REAN- SEE ALSO C1-1121
ARG-10359

Laser microprobe facility is effective in the elemental analysis of small areas of heterogeneous samples. The instrument uses the focused beam of a pulsed laser to evaporate a small volume of material from a relatively massive sample.

B69-10166

ION-RETARDING LENS IMPROVES THE ABUNDANCE SENSITIVITY OF TANDEM MASS SPECTROMETERS

KAISER, K. A. STEVENS, C. M. DATE- JUN. 1969

REAN- SEE ALSO ANL-7393

ARG-10365

Ion-retarding lens which increases the abundance sensitivity of tandem magnetic-analyzer mass spectrometers measures isotopes of low abundance in mass positions adjacent to isotopes of high abundance. The lens increases the abundance sensitivity for isotopes lying farther from high abundance isotopes than the energy cutoff of the lens.

B69-10167

PRIMARY RADICAL YIELDS IN PULSE IRRADIATED ALKALINE AQUEOUS SOLUTION

FIELDEN, E. M. HART, E. J. DATE- JUN. 1969

ARG-10322

Primary radical yields of hydrated electrons, H atoms, and OH radicals are determined by measuring hydrated electron formation following a 4 microsecond pulse of X rays. The pH dependence of free radical yields beyond pH 12 is determined by observation of the hydrated electrons.

B69-10172

DETECTION OF MOLECULAR INFRARED SPECTRA

SWANSON, L. W. /FIELD EMISSION CORP./ DATE- JUN. 1969

HQ-10377

Total Energy Distribution /TED/ measurements of field emitted electrons detect molecular infrared spectra of adsorbed molecules. Tunneling electron gives up energy to excite various modes of adsorbed molecule. These electrons, when energy-analyzed, show up on the collector and exhibit the spectra of various modes excited by tunneling electrons.

B69-10185

PLASMA-HEATING BY INDUCTION

HARRINGTON, K. /HUMPHRIES CORP./ THORPE, M. L. DATE- JUL. 1969

LEWIS-10528

Induction-heated plasma torch operates with an input of 1 Mw of direct current of which 71 percent is transferred to the plasma and the remainder is consumed by electrical losses in the system. Continuous operation of the torch should be possible for as long as 5,000 hours.

B69-10189

A PROTOTYPE HIGH POWER PORTABLE LAMP

SAMHIS, J. C. /MICRODOT, INC./ DATE- JUN. 1969

M-FS-20229

Portable lighting system serves the combined work and photographic needs of manned spacecraft efforts. This system enables the lamps to be momentarily brightened while the camera shutter is opened. The brightness is adequate for black and white or color photography and yet the increased heat load is nil.

B69-10193

RECTANGULAR-BORE, HIGH-GAIN LASER PLASMA TUBE

MOLLO, R. A. /PENNSYLVANIA STATE UNIV./ DATE- JUN. 1969

HQ-10234

Rectangular-bore tube improves population inversion obtained from upper and terminal laser states, resulting in a significant increase in unsaturated gain factor. Radial field produces efficient pumping of upper laser state. Narrow tube dimensions cause increased diffusion flow of neon in metastable states to tube walls.

B69-10194

STUDIES OF CYCLES FOR LIQUID-METAL MAGNETOHYDRODYNAMIC GENERATION OF POWER

LEE, K. PETRICK, M. DATE- JUN. 1969 REAN- SEE

ALSO ANL-6954

ARG-10250

Studies of liquid-metal magnetohydrodynamic power cycles indicate that the overall efficiency of a binary cycle, employing a liquid-metal topping cycle and a bottoming steam cycle, may reach 60 percent. Details of analyses and data on cycles are presented, and the commercial potential of the binary cycle is discussed.

B69-10201

ULTRA-HIGH-FLUX HEAT EXCHANGER

TREBES, D. M. /N. AM. ROCKWELL CORP./ DATE- JUN. 1969

M-FS-18135

Spherical depressions on the wall of the inner tube increase the heat flux in a concentric tube heat exchanger. Regularly spaced patterns of precisely formed depressions on the inner wall alleviate the film-binding phenomenon without significantly degrading the flow characteristics.

B69-10204

SOME NUMERICAL METHODS FOR INTEGRATING SYSTEMS OF FIRST-ORDER ORDINARY DIFFERENTIAL EQUATIONS

CLARK, N. W. DATE- JUL. 1969 REAN- SEE ALSO ANL-7428

ARG-10308

Report on numerical methods of integration includes the extrapolation methods of Bulirsch-Stoer and Neville. A comparison is made with the Runge-Kutta and Adams-Moulton methods, and circumstances are discussed under which the extrapolation method may be preferred.

B69-10210

IMPROVED LIQUID-LEVEL SENSOR FOR CRYOGENICS

HYMAN, L. G. SHEPPARD, J. F. SPINKA, H. DATE- JUL. 1969

ARG-10162

Liquid-level indicator, consisting of a diode heated by a resistor, allows simultaneous use of two or three of the liquids nitrogen, hydrogen, and helium. Operation depends on strong temperature-dependence of the forward resistance of a germanium diode and the difference between liquid and vapor in heat-transfer properties.

B69-10211

ANALYSES OF SILICON DIOXIDE, MAGNESIUM OXIDE, LEAD FLUORIDE, BISMUTH AS LOW-PASS VELOCITY FILTERS FOR NEUTRONS

CONNOR, D. HOLMRYD, S. DATE- JUN. 1969

ARG-10220

Transmission measurement of neutrons by filter materials for low energy neutrons is important for the study of structure and dynamics of condensed matter. Since only thermal neutrons are useful for such experiments, filter materials that transmit thermal neutrons while attenuating fast neutrons and gamma rays are of considerable interest.

B69-10214

MULTICHANNEL ANALYZERS AT HIGH RATES OF INPUT

RUDNICK, S. J. STRAUSS, M. G. DATE- JUL. 1969

ARG-10355

Multichannel analyzer, used with a gating system incorporating pole-zero compensation, pile-up rejection, and baseline-restoration, achieves good resolution at high rates of input. It improves resolution, reduces tailing and rate-contributed continuum, and eliminates spectral shift.

B69-10226

CAMERA MOUNT FOR CLOSE-UP STEREO PHOTOGRAPHS

GLAUDE, P. H. DATE- JUL. 1969

LANGLEY-10442

Camera mount, adaptable to any camera, facilitates obtaining close-up stereo pairs of photographs. The basic mount can be used with any standard camera, or with a stereo camera. The design of the camera adapter can be varied to meet mounting requirements of the particular camera used.

02 PHYSICAL SCIENCES (ENERGY SOURCES)

B69-10234

LIQUID LASER CAVITIES

BJORKLUND, S. /LOCKHEED ELECTRON./ FILIPESCU, N.
/GEO. WASHINGTON UNIV./ KELLERMEYER, G. L. MC
AVOY, N. DATE- JUL. 1969
GSPC-10592

Liquid laser cavities have plenum chambers at the ends of the capillary cell which are terminated in transparent optical flats. By use of these cavities, several new europium chelates and a terbium chelate can provide laser action in solution at room temperature.

B69-10248

DUAL-MODE OPERATION OF A NEUTRON SOURCE, A CONCEPT

GIVENS, W. W. MILLS, W. R., JR. /MOBIL OIL
CORP./ DATE- JUL. 1969
HQ-10106

Pulsed neutron source operates in conjunction with a photomultiplier tube coupled to a gamma ray scintillation crystal. This allows measurements of gamma radiation from both inelastic scattering and thermal neutron capture in a single experiment.

B69-10249

TUNGSTEN THERMAL NEUTRON DOSIMETER

BALL, L. L. RICHARDSON, P. J. SHEIBLEY, D. W.
DATE- AUG. 1969
LEWIS-10880

Tungsten-185 activity, which is produced by neutron activation of tungsten-184, determines thermal neutron flux. Radiochemical separation methods and counting techniques for irradiated tungsten provide accurate determination of the radiation exposure.

B69-10255

CHANNEL-WALL LIMITATIONS IN THE MAGNETOHYDRODYNAMIC INDUCTION GENERATOR

JACKSON, W. D. /MIT/ PIERSON, E. S. DATE- JUL.
1969 REAN- SEE ALSO ANL-7148
ARG-10128

Discussion of magnetohydrodynamic induction generator examines the machine in detail and materials problems influencing its design. The higher upper-temperature limit of the MHD system promises to be more efficient than present turbine systems for generating electricity.

B69-10258

CONCENTRATIONS OF THE NATURALLY OCCURRING

HOLTZMAN, R. B. DATE- JUL. 1969

ARG-10345

Study reveals naturally occurring radionuclides are ubiquitous and contribute a substantial fraction of the natural radiation dose to humans and various biota. Measurements may be useful in ecological and other biological problems such as tracing food chains of animals and study of the metabolism of these elements.

B69-10260

MULTILAYER INFRARED BEAMSPLITTER FILM SYSTEM

BASTIEN, R. C. /PERKIN-ELMER CORP./ HEINRICH, P.
L. DATE- AUG. 1969
XGS-11036

Multilayer infrared beamsplitter film system on a potassium bromide crystal substrate is operational over a wavelength range of 2.5 to 25 microns with nearly equal broadband reflectance and transmittance. It is useful in optical coating, vacuum deposition, radiometry, interferometry, and spectrometry.

B69-10275

A CONCEPT FOR MAGAZINE Bimat PROCESSOR

PARK, C. E. /BOEING CO./ DATE- AUG. 1969
KSC-06786

Concept utilizes existing film magazines to process photographic film as the film is exposed. A standard magazine can be converted to a Bimat processor by adding three stainless steel rollers. All chemicals required for processing and fixing the negative are contained in the Bimat film.

B69-10276

PNEUMATIC ANALOG-TO-PULSE FREQUENCY CONVERTER

DUSTIN, M. O. DATE- AUG. 1969
LEWIS-10345

Pneumatic analog-to-pulse frequency converter circuit has output pulse frequency proportional to the pressure level of the input signal. Converter circuit drives a pneumatic stepping motor and is part of a pneumatic control system for nuclear powered spacecraft.

B69-10286

AUTOMATIC BIRD WATCHER

EISLER, W. J., JR. FRIGERIO, N. A. DATE- AUG.
1969

ARG-10342

Radioactive-nuclide system automatically monitors animals in the field, using radioactive tracers affixed to the animals, Geiger-Muller tube radiation detectors, and event-recorders. Four animals can be monitored simultaneously within a 32-m circle, with each animal as far as 1 m from its associated detector.

B69-10291

IMPROVED FIRST ORDER INTERPOLATOR

ANDREWS, C. A. /IBM CORP./ DATE- AUG. 1969
MSC-11085

Data compression method enables first order interpolator to operate at higher speeds. Method requires same number of additions and subtractions but fewer multiplications than the conventional method.

B69-10301

SEMI-AUTOMATIC INSPECTION OF MICROFILM RECORDS

KLEIN, E. L. /RCA SERVICE CO./ DATE- AUG. 1969
M-PS-20240

Semiautomatic machine inspects microfilm for deficiencies. Advantages of microfilm inspector are uniformity of inspection method, increased speed of inspection, and improved quality through elimination of scratches and finger marks.

B69-10311

MULTIPURPOSE BINOCULAR SCANNING APPARATUS

CHAMBERLAIN, F. R. PARKER, G. L. DATE- AUG. 1969
NPO-11002

Optical gimballing apparatus directs narrow fields of view throughout solid angle approaching 4 pi steradians. Image rotation produced by scanning can be eliminated or altered by gear trains directly linked to the scanning drive assembly. It provides the basis for a binocular scanning capability.

B69-10321

A METHOD FOR PREDICTING INTERFACIAL

FREEZING OF A LIQUID FLOWING OVER A COLD SURFACE

SAVINO, J. M. SIEGEL, R. DATE- AUG. 1969
LEWIS-10813

Instantaneous thickness of a frozen layer is a function of specific heat, heat of fusion, temperatures, the frozen layer thickness at equilibrium, the thermal conductivity, and heat transfer coefficient. The equation can be evaluated on a desk calculator.

B69-10324

LASER ACTION FROM A TERBIUM BETA-KETOENOLATE AT ROOM TEMPERATURE

BJORKLUND, S. /LOCKHEED ELECTRONICS CO./
FILIPESCU, N. /GEO. WASHINGTON UNIV./ HURT, C.
R. KELLERMEYER, G. MC AVOY, N. DATE- SEP. 1969
GSPC-10593

Laser activity is achieved in a solution of terbium tris at room temperature in a liquid solvent of acetonitrile or p-dioxane. After precipitation, the microcrystals of hydrated tris chelate are filtered, washed in distilled water, and dried. They show no signs of deterioration after storage.

B69-10332

RESTRICTED-FLOW JUNCTION BETWEEN LIQUIDS

VANGO, S. P. DATE- SEP. 1969
NPO-10682

allowing a liquid to seep through a long crack in glass provides means for restricting its flow for long periods without attention. The length of the crack prevents the plugging to which capillaries are susceptible.

B69-10336
PREFERRED-ORIENTATION ANALYSIS OF
POLYCRYSTALLINE MATERIALS
DE WYS, E. C. DATE- SEP. 1969
NFO-10604

Automatic device built around a goniometer examines characteristics of polycrystalline materials and determines preferred orientations of crystallites. It is automatically rotatable in each of two planes and has circuit regulated sequential rotation. A fixed X ray source in conjunction with a detector examines the material.

B69-10341
AN IMPROVED ATOMIC HYDROGEN FREQUENCY AND
TIME STANDARD
MC GUNIGAL, T. E. PETERS, H. E. DATE- SEP. 1969
GSFC-10706

Use of a large bulb, long-multipole magnet, automatic tuner and aluminum cavity provides an improved hydrogen maser which is accurate over long periods of time and suitable for tracking station environments.

B69-10344
NEW SHIELD FOR GAMMA-RAY SPECTROMETRY
BRAR, S. S. GUSTAFSON, P. F. NELSON, D. M.
DATE- AUG. 1969
ARG-10388

Gamma ray shield that can be evacuated, refilled with a clean gas, and pressurized for exclusion of airborne radioactive contaminants effectively lowers background noise. Under working conditions, repeated evacuation and filling procedures have not adversely affected the sensitivity and resolution of the crystal detector.

B69-10365
IMPROVED VACUUM DEPOSITION APPARATUS
ERFENBACH, H. DATE- SEP. 1969
NFO-11009

Improved apparatus enables vacuum deposition of thick metal films on the inside surface of a cylinder. The evaporant is deposited to a uniform thickness and distribution on the inside surface of the substrate without imperfections that would otherwise result from droplet formation.

B69-10371
PREDICTION OF THERMAL RADIATION FROM A
ROCKET'S EXHAUST PLUME
LUDWIG, C. B. /GENERAL DYNAMICS CORP./ DATE-
SEP. 1969
M-FS-20414

Data from absorption coefficients and fine-structure parameters measured for water vapor have been incorporated in an analytic program useful in evaluating heating by radiation from the exhaust plume of a large rocket.

B69-10387
DIELECTRIC MATERIALS FOR USE IN THIN-FILM
CAPACITORS
CARR, H. E. /AUBURN UNI./ POSTER, W. D.
FROMHOLD, A. T., JR. HARBURCK, T. A. DATE- SEP.
1969 REAN- SEE ALSO NASA CR-90301
M-FS-20471

Investigation report presents details of dielectric properties of various metals measured at 300 degrees K for thermally evaporated oxides from 300 to 6000 Å in thickness. It is relevant to the medium of integrated circuitry.

B69-10405
IMPROVED METHOD OF OPTICAL DESIGN
HOWELL, B. J. /SPERRY RAND CORP./ DATE- SEP.
1969
GSFC-10743

Optical system designed by third order aberration theory is significantly improved by placing it into a ray deviation design program composed of

two distinct computer programs. Tests were conducted on telescope systems, an ultraviolet relay lens, and a four lens corrector system.

B69-10411
HYDROGEN FLASH LAMPS STUDIED
BENSON, M. J. BERLMAN, I. B. STEINGRAGER, O. J.
DATE- SEP. 1969
ARG-10419

Parameters of gas pressure, type of gas, tube voltage, and electrode gap are tested on the intensity and shape of a radiation pulse from a hydrogen-filled lamp.

B69-10415
NUMERICAL INVERSION OF FINITE TOEPLITZ
MATRICES AND VECTOR TOEPLITZ MATRICES
BAREISS, E. H. DATE- SEP. 1969
ARG-10445

Numerical technique increases the efficiencies of the numerical methods involving Toeplitz matrices by reducing the number of multiplications required by an N-order Toeplitz matrix from N-cubed to N-squared multiplications. Some efficient algorithms are given.

B69-10421
CONCEPT FOR IMPROVED VACUUM PRESSURE
MEASURING DEVICE
MEDVED, D. B. /ELECTRO-OPTICAL SYSTEMS, INC./
DATE- SEP. 1969
M-FS-20172

To measure vacuum pressures in the range of 5 times 10 to the minus 7 to 5 times 10 to the minus 16, a semiconductor resistor composed of sintered zinc oxide is used. Through the effect of surface adsorbed gases on the resistance of the semiconductor material, very low pressures are measured.

B69-10424
ROOT-CUBING AND GENERAL ROOT-POWERING
METHODS FOR FINDING THE ZEROS OF POLYNOMIALS
BAREISS, E. H. DATE- SEP. 1969
ARG-10444

Mathematical analysis technique generalizes a root squaring and root cubing method into a general root powering method. The introduction of partitioned polynomials into this general root powering method simplifies the coding of the polynomial transformations into input data suitable for processing by computer. The method includes analytic functions.

B69-10428
WALL-THICKNESS CHANGES PREDICTED IN
HOLLOW-DRAWN TUBING
FLINN, J. E. MURA, T. /NORTHWESTERN UNIV./
DATE- SEP. 1969
ARG-10425

Hollow-tube drawing or tube sinking theory is based on the concept of continuous distribution of dislocations. Material composition, parameter influence, and die-angle are determining factors in derivation of the theoretical model.

B69-10431
ENERGY-STORAGE OF A PRESCRIBED IMPEDANCE
SMITH, W. E. DATE- SEP. 1969
ARG-10428

General mathematical expression found for energy storage shows that for linear, passive networks there is a minimum possible energy storage corresponding to a prescribed impedance. The electromagnetic energy storage is determined at different excitation frequencies through analysis of the networks terminal and reactance characteristics.

B69-10444
OCULOMETER FOR REMOTE TRACKING OF EYE
MOVEMENT
MASON, K. A. /HONEYWELL, INC./ MERCHANT, J.
DATE- NOV. 1969
ERC-10114

Prototype oculometer which tracks lateral eye position and measures the direction of the eyes optical axis, pupil size, and blink occurrence performs measurements on the subject on a

real-time basis from a remote location.

B69-10446

METHOD FOR PREDICTING PUMP CAVITATION
PERFORMANCE

MOORE, R. RUGGERI, R. DATE- SEP. 1969
LEWIS-10916

Method requires the availability of two sets of appropriate data for each pump to be analyzed. At least one set of the data must provide measurable thermodynamic effects of cavitation.

B69-10447

CROSSED-BEAM TECHNIQUE FOR MEASURING
HORIZONTAL WINDS

HEYBEY, W. H. /AERO-ASTRODYNAMICS LAB./ DATE-
SEP. 1969

M-FS-20160

Three ground-based single-beam detectors determine wind vectors present within a given volume. Winds approximately constant near a selected height, blowing into or out of a 90 degree arc can be calculated with reasonably small error.

B69-10462

METHOD FOR DETERMINING PROPERTIES OF
MICROINSTABILITIES OF A MAGNETIZED PLASMA

CALLEN, J. D. /MIT/ MC CUNE, J. E. DATE- DEC.
1969

HQ-10447

Study comprises a determination of the plasma density at which absolute density becomes predominant by using the dielectric properties at this incipient unstable state. Relationships between wavelength, frequency, and density microinstabilities are used to derive the spatial dielectric function.

B69-10466

PROPOSED ACOUSTO-OPTIC FILTER

HARRIS, S. E. /STANFORD UNIV./ DATE- SEP. 1969
HQ-10440

Narrow band optical filter is electronically tunable over a large wavelength region. The filter utilizes collinear acousto-optic diffraction in an optically anisotropic media.

B69-10467

DAMPING OF THERMOELASTIC STRUCTURES

GILLIS, W. H. DATE- SEP. 1969
M-FS-20002

Report ascertains the effects of thermoelastic damping on the propagation of longitudinal waves in cylindrical rods. Review of results of wave propagation in unbounded elastic solids and in elastic cylinders precedes consideration of thermal modification of elastic properties.

B69-10469

PIEZOELECTRIC LINEAR ACTUATOR

LEHRER, S. /ASTROSYSTEMS INTERNATIONAL INC./
DATE- OCT. 1969

MSC-13194

Actuator exerts linear force that is controllable and reproducible to microinch tolerance. It is constructed for extremely accurate control of a valve but can also be used as a variable Venturi meter, micropositioner, microthruster, and in fluidics and reaction-control systems.

B69-10504

REPORT ON A CRYOGENIC GYROSCOPE

HARDING, J. T. DATE- OCT. 1969
NPO-11200

Report summarizes the principal problems encountered in sphere fabrication, magnetic field losses in superconductors, configurations for the supporting field, damping oscillations, refrigeration, techniques for accelerating the sphere, read-out, and testing the stability of the gyro.

B69-10508

METHOD OF DIRECTING A LASER BEAM WITH VERY
HIGH ACCURACY

ALLEN, L. H. SHUMATE, M. S. WESTPHAL, J. A.
DATE- OCT. 1969

NPO-11087

System will collimate and direct an argon laser

beam with high angular tracking accuracy at objects on the moons surface. It can be adapted to missile and satellite tracking.

B69-10510

ION MASS SPECTROMETER FOR SPECIAL USES

ABRAMSON, R. H. /TRW, INC./ FREDERICKS, R. W.
DATE- OCT. 1969

HQ-10418

Prototype of curved-electrode, Paul-type, quadrupole, electrodynamic mass filter has the mass-resolution and transmission-factor properties expected from both theoretical considerations and results of experiments using linear quadrupole features.

B69-10520

A NEW METHOD FOR THE DETERMINATION OF
PARTICULATE CONTAMINATION LEVELS FOR
SURFACE CLEANLINESS OF FLUID SYSTEMS

SPON- INNOVATOR NOT GIVEN /HAYES INTERN. CORP./
DATE- NOV. 1969

KSC-10267

Levels of contamination in fluid systems can be determined by a definition of a particle by a mathematical model, a method for calculating the tolerance limits of contamination, and an estimation of the probability that the contamination on the surface will migrate with the fluid in the system.

B69-10528

DESIGN AND SPARING TECHNIQUES TO MEET

SPECIFIED PERFORMANCE LIFE

HOLSTEAD, A. J., JR. /GE/ DATE- OCT. 1969
HQ-10200

Specified performance life technique starts with the general description of what is wanted, defines in block diagram the operational needs, and then defines the functional systems required. The technique is similar to a truncated reliability model, but the calculation is simplified by use of a Poisson distribution approach to failure probability.

B69-10529

A NEW METHOD FOR PRODUCING OPTICAL MIRRORS

MARKLE, D. A. /PERKIN-ELMER CORP./ VRABEL, J.
DATE- OCT. 1969

HQ-10227

Pure silicon improves optical mirrors for use in telescopes and high resolution optical systems. Pure silicon is used in both mirror and substrate in environments where large thermal changes occur. It has applicability in astronomical devices.

B69-10541

CRYOGENIC FLUID FLOW INSTABILITIES IN HEAT
EXCHANGERS

FLEMING, R. B. /GE/ STAUB, F. W. DATE- OCT.
1969

M-FS-20438

Analytical and experimental investigation determines the nature of oscillations and instabilities that occur in the flow of two-phase cryogenic fluids at both subcritical and supercritical pressures in heat exchangers. Test results with varying system parameters suggest certain design approaches with regard to heat exchanger geometry.

B69-10554

MINIATURIZED HIGH-RESOLUTION MASS/CHARGE

SPECTROGRAPH /DESIGN STUDY/

TAYLOR, L. H. /ELECTRO-OPTICAL SYSTEMS/
DATE- OCT. 1969

MSC-13279

Use of a double-focusing mass/charge spectrograph weighing less than 25 pounds is feasible for solar wind experiments. Instrument has a parallel-plate energy filter between the ion source and the double focusing units which alleviates the problem of designing an ion source of small energy spread.

B69-10556

MODIFIED CRYOGENIC STORAGE TANK SUBSYSTEM

BURNS, W. J. /BOEING CO./ ROBERTS, R. H. DATE-
OCT. 1969

KSC-10380

Internal spray distribution header is put into a liquid hydrogen vaporizer. When connected to the cryogenic material, it equalizes cooling around the circumference of the inlet header.

B69-10560

A THEORETICAL STUDY OF RADAR BACKSCATTER FROM DISTRIBUTED TARGETS WITH EMPHASIS ON POLARIZATION DEPENDENCE

HUYNEN, J. R. /LOCKHEED MISSILE AND SPACE CO./
DATE- NOV. 1969

M-PS-13775

Mathematical framework for the electromagnetic scattering from random extended targets, such as terrain and sea surface, encompasses both power scattering and signal depolarization. It incorporates specular treatment of electromagnetic scattering as well as the electrical properties represented by surface impedance and polarization dependence.

B69-10562

MOLECULAR RADIATION - ITS APPLICATION IN PHYSICAL MEASUREMENTS AND ANALYSES
SPON- INNOVATOR NOT GIVEN /MARSHALL SPACE FLIGHT CENTER/ DATE- OCT. 1969

M-PS-14816

Specialists Conference held at Marshall Space Flight Center reviewed work in molecular radiation to evaluate research possibilities in this field. Topics included spectral-line studies in the laboratory, application to practical heat transfer calculations of radiative transfer models, and use of measured radiation properties of gases.

B69-10563

WATER-GLYCOL SYSTEM VOLUME CALCULATION
LILEY, B. /N. AM. ROCKWELL CORP./ SCHAEDEL, G.
C. DATE- OCT. 1969

MSC-15193

Two methods calculate the volume of a thermodynamic system. Integral method uses an iterative solution to determine volume based on constants of liquid mass and gas mass. Differential method approximates volume by its initial values plus first-order differential changes in volume as functions of temperature and pressure.

B69-10577

FREQUENCY DOMAIN ANALYSIS AND SYNTHESIS OF LUMPED PARAMETER SYSTEMS USING NONLINEAR LEAST SQUARES TECHNIQUES

HAYS, J. R. /BOEING CO./ DATE- DEC. 1969
M-PS-15033

Lumped parametric system models are simplified and computationally advantageous in the frequency domain of linear systems. Nonlinear least squares computer program finds the least square best estimate for any number of parameters in an arbitrarily complicated model.

B69-10591

A POLAR GRAPHIC METHOD FOR DETERMINING THE ATTITUDE OF ROCKET VEHICLES

MILLER, C. F., JR. DATE- OCT. 1969
GSPC-10860

Graphic method of determining rocket attitudes by plotting data obtained by fluxgate magnetometers and solar aspect sensors utilizes polar coordinates. Polar graph paper is used to represent either the horizon system of altitude and azimuth or the celestial system of declination and right ascensions.

B69-10594

AIRBORNE FRAUNHOFER LINE DISCRIMINATOR

GABRIEL, F. C. /PERKIN-ELMER CORP./ MARKLE, D.
A. DATE- NOV. 1969

MSC-13146

Airborne Fraunhofer Line Discriminator enables prospecting for fluorescent materials, hydrography with fluorescent dyes, and plant studies based on fluorescence of chlorophyll. Optical unit design is the coincidence of Fraunhofer lines in the solar spectrum occurring at the characteristic wavelengths of some fluorescent materials.

B69-10604

EXPERIMENTAL DESIGN FOR RESEARCH ON SHOCK-TURBULENCE INTERACTION

RADCLIFFE, S. W. /WYLE LABS./ DATE- NOV. 1969
M-PS-20031

Report investigates the production of acoustic waves in the interaction of a supersonic shock and a turbulence environment. The five stages of the investigation are apparatus design, development of instrumentation, preliminary experiment, turbulence generator selection, and main experiments.

B69-10620

SELF-SUSTAINED HYDRODYNAMIC OSCILLATIONS IN A NATURAL-CIRCULATION TWO-PHASE-FLOW BOILING LOOP

JAIN, K. C. DATE- DEC. 1969

ARG-10461

Results of an experimental and theoretical study of factors affecting self-sustaining hydrodynamic oscillations in boiling-water loops are reported. Data on flow variables, and the effects of geometry, subcooling and pressure on the development of oscillatory behavior in a natural-circulation two-phase-flow boiling loop are included.

B69-10622

FLOW PROPERTIES OF SUSPENSIONS RICH IN SOLIDS

ARMSTRONG, W. P. /WASHINGTON UNIV./ GAY, E. C.
NELSON, P. A. DATE- OCT. 1969

ARG-10481

Mathematical evaluation of flow properties of fluids carrying high concentrations of solids in suspension relates suspension viscosity to physical properties of the solids and liquids, and provides a means for predicting flow behavior. A technique for calculating a suspensions flow rates is applicable to the design of pipelines.

B69-10633

LASER INTERFEROMETER MICROMETER SYSTEM

LOGUE, S. H. /GEN. DYNAMICS/ DATE- NOV. 1969
M-PS-14747

Laser micrometer measures dimensions of precision gyro and gas bearing parts using the principle of measuring light phase changes rather than a direct fringe count. The system uses light beams to eliminate errors due to deformations and surface irregularities, and three interferometers.

B69-10645

MASS-SPECTROMETRIC STUDY OF THE RHENIUM-OXYGEN SYSTEM

BATTLES, J. E. EDWARDS, R. K. GUNDERSEN, G. E.
DATE- NOV. 1969

ARG-10421

Rhenium, having the second highest melting point among the metals, is used for refractory containers. Thermodynamic values for rhenium oxide is determined by mass spectrometry and x-ray diffraction.

B69-10654

CRYOGENIC FLUX-CONCENTRATOR

BAILEY, B. M. /MIT/ BRECHNA, H. HILL, D. A.
DATE- NOV. 1969

ARG-10494

Flux concentrator has high primary to secondary coupling efficiency enabling it to produce high magnetic fields. The device provides versatility in pulse duration, magnetic field strengths and power sources.

B69-10662

TWO-COLOR HOLOGRAPHY

HEFLINGER, L. O. /TRW SYSTEMS/ DATE- DEC. 1969
HQ-10349

Two holograms, made simultaneously, one with a red light component and one with the harmonic UV component to give two fringes in the UV construction due to shortened wavelength. The reconstruction, obtained with a He-Ne laser, could be photographed separately, giving quality interferograms.

B69-10663

FINE-LINE SENSITIVITY FOR HOLOGRAPHIC INTERFEROGRAMS

HEFLINGER, L. O. /TRW SYSTEMS GROUP/ DATE- NOV. 1969

HQ-10348

Improvement in sensitivity of holography, the technique of lensless interferometry, is obtained by enhancing the higher-order structure in the interferogram. By using the light diffracted into higher orders than the first, phase sensitivity is increased over the first order sensitivity by a factor equal to the order number used.

B69-10674

ELECTRON INTERACTION IN MATTER

DANCE, W. E. /LTV RES. CENTER/ RAINWATER, W. J. RESTER, D. H. DATE- DEC. 1969

M-FS-14886

Data on the scattering of 1-MeV electrons in aluminum for the case of non-normal incidence, electron-bremsstrahlung cross-sections in thin targets, and the production of bremsstrahlung by electron interaction in thick targets, are presented both in tabular and graphic form. These results may interest physicists and radiologists.

B69-10700

LONG RANGE HOLOGRAPHIC CONTOUR MAPPING

CONCEPT

BROOKS, R. E. /TRW SYSTEMS GROUP/ DATE- DEC. 1969

HQ-10350

Plan for generating a two dimensional contour map of a distant object with range contour intervals of a few millimeters to a few inches is accomplished by using a laser light source which has a periodically varying coherence function to form a hologram of the object.

B69-10705

HANDBOOK EXPLAINING THE FUNDAMENTALS OF NUCLEAR AND ATOMIC PHYSICS

HANLEN, D. F. /WESTINGHOUSE ASTRONUCL. LAB./ MORSE, W. J. /AEROJET-GENERAL CORP./ DATE- DEC. 1969

NUC-10330

Indoctrination document presents nuclear, reactor, and atomic physics in an easy, straightforward manner. The entire subject of nuclear physics including atomic structure ionization, isotopes, radioactivity, and reactor dynamics is discussed.

B69-10707

TECHNIQUE FOR PREDICTING THE THERMAL EXPANSION COEFFICIENTS OF CRYOGENIC METALLIC ALLOYS

CLARK, A. F. /INST. FOR BASIC STANDARDS, NBS/ DATE- DEC. 1969

NUC-10554

Series of measurements on the thermal expansion coefficients of several aerospace alloys and standard materials establish relationships between related alloys that would aid in predicting their thermal expansion reliability. Thermal expansion data are also necessary for the reduction of electrical resistivity measurements of those same materials.

B69-10712

NATURAL GAS FLOW THROUGH CRITICAL NOZZLES

JOHNSON, R. C. DATE- NOV. 1969

LEWIS-11031

Empirical method for calculating both the mass flow rate and upstream volume flow rate through critical flow nozzles is determined. Method requires knowledge of the composition of natural gas, and of the upstream pressure and temperature.

B69-10714

FLOW DIRECTION MEASUREMENT WITH FIXED PROBES

DUDZINSKI, T. J. KRAUSE, L. N. DATE- DEC. 1969

LEWIS-11044

Fixed-position probes for determination of flow direction in one and two planes are tested over a wide range of Reynolds numbers and Mach numbers. The work is limited to tests of a single probe design for two dimensional flow and a single

design for three dimensional flow.

B69-10716

CHROMATOGRAPHIC DETECTION AND ANALYSIS OF TRACES OF HYDROCARBONS

FICKEY, E. W. /BENDIX CORP./ MULLINS, H. E. DATE- DEC. 1969

KSC-10388

Special analytical column having in series two separate absorption sections charged with beads of porous polymer and a sample of gas detects traces of hydrocarbons. New method requires only 15 minutes for execution.

B69-10733

GAMMA RADIATION CHARACTERISTICS OF PLUTONIUM DIOXIDE FUEL

GINGO, P. J. DATE- DEC. 1969

NPO-11220

Investigation of plutonium dioxide as an isotopic fuel for Radioisotope Thermoelectric Generators yielded the isotopic composition of production-grade plutonium dioxide fuel, sources of gamma radiation produced by plutonium isotopes, and the gamma flux at the surface.

B69-10767

PULSE-HEIGHT DEFECT DUE TO ELECTRON INTERACTION IN DEAD LAYERS OF GE/LI/ GAMMA-RAY DETECTORS

LARSEN, R. N. STRAUSS, M. G. DATE- DEC. 1969

ARG-10362

Study shows the pulse-height degradation of gamma ray spectra in germanium/lithium detectors to be due to electron interaction in the dead layers that exist in all semiconductor detectors. A pulse shape discrimination technique identifies and eliminates these defective pulses.

B69-10771

LIQUID-METAL-PISTON MHD GENERATOR

PALMER, J. P. /ASSOCIATED UNIVERSITIES, INC./ DATE- DEC. 1969

ARG-10500

Magnetohydrodynamic generator uses a slug or piston of liquid potassium as the working fluid. An expanding vapor of the metal is allowed to reciprocate the liquid-metal-piston through a magnetic field and the expansion energy is converted directly into electrical energy.

B69-10772

SURFACE-RENEWAL MODELS FOR HEAT-TRANSFER BETWEEN WALLS AND FLUIDIZED BEDS

PATEL, R. D. DATE- DEC. 1969

ARG-10372

Two surface-renewed film penetration models describe transient heat-transfer between a wall and a fluidized bed. Methods are presented for estimation of mean residence times of particles at the transporting surface, their age densities and the average transport coefficients.

B69-10779

NUMERICAL SOLUTIONS OF DIFFERENTIAL EQUATIONS

WESSON, J. R. /VANDERBILT UNIV./ DATE- DEC. 1969

M-FS-20537

Various numerical methods for solving differential equations were analyzed and refined in an effort to develop a method which was adaptable to a large class of problems. The prime capabilities of the method included accuracy, numerical stability, and economic use of computer time. In multistep processes the corrector was changed at each step.

B69-10781

AERODYNAMIC FORCES OF FLUTTERING CYLINDRICAL AND/OR PLANAR STRUCTURES

YATES, J. E. /AERONAUTICAL RES. ZEYDEL, E. F. E. ASSOCIATES OF PRINCETON, INC./ DATE- DEC. 1969

M-FS-20497

Complexity of the phenomena of panel flutter instability has resulted in the necessity of developing separate design criteria for a variety of flow conditions and panel configurations. Vehicle panel configurations with low aspect ratios are of interest in low supersonic flow, where boundary layer effects are important.

B69-10783

IMAGE POSITION SENSOR

ROSETT, B. /KOLLSMAN INSTRUMENT CORP./ SEIFERT,

L. I. DATE- DEC. 1969

M-FS-14101

Preliminary design calculations for a proposed fine guidance experiment telescope containing a four-sided pyramidal reflector indicate that 0.01 arc sec pointing, at 0.003 arc sec sensing resolution, could be achieved by viewing a +10.0 magnitude star where the total collected light energy would be applied for fine error detection.

B69-10793

ESTIMATING RELIABILITY BY APPLICATION OF

MATRIX REPRESENTATION

AUSTIN, W. L. /GEN. ELECTRIC CO./ DATE- DEC.

1969

HQ-10246

Technique based upon matrix representation and matrix collapsing calculates the probability of successfully completing manned missions and of returning the spacecrew safely to earth. This technique provides analytic expressions for each subsystem, making it possible to relate changes in subsystem reliability directly to mission success and crew safety.

B69-10810

TRAJECTORY OPTIMIZATION USING REGULARIZED

VARIABLES

LEWALLEN, J. M. SZEBEHELY, V. /TEXAS CENTER FOR

RES./ TAPLEY, B. D. DATE- DEC. 1969

MSC-13370

Regularized equations for a particular optimal trajectory are compared with unregularized equations with respect to computational characteristics, using perturbation type numerical optimization. In the case of the three dimensional, low thrust, Earth-Jupiter rendezvous, the regularized equations yield a significant reduction in computer time.

B69-10823

DETERMINATION OF PERMISSIBLE APPLIED LOAD

STRESS IN STRUCTURAL ELEMENTS

LOY, R. E. /N. AM. ROCKWELL CORP./ POSEVER, F.

C. DATE- DEC. 1969

M-FS-16556

Graphic method is used to select allowable stresses in thermally loaded structures. Equations are used for determining the mode of failure for specific materials in order to plot a range of stress curves. Linear assumption and iterative calculations are eliminated resulting in comparatively high accuracy.

03 MATERIALS (CHEMISTRY)

B63-10004

REFERENCE BLACK BODY IS COMPACT, CONVENIENT TO

USE

DIMEFF, J. NEEL, C. B. DATE- APR. 1964

ARC-3

To replace the classical hollow sphere, a compact reference black body has been constructed from stacked razor blades. Treated with a deposit of black oxide on the surfaces or notches between the upper edges of the blades, the device is useful over a wide range of incident angles.

B63-10207

THERMALLY CONDUCTIVE METAL WOOL-SILICONE

RUBBER MATERIAL CAN BE USED AS SHOCK AND

VIBRATION DAMPER

HOUGH, W. W. DATE- APR. 1964

JPL-321

Bronze wool pads, impregnated with silicon rubber, meet the requirement for a thermally conductive, shock and vibration absorbing material. They serve as spacers in equipment mounting and are resistant to high temperatures.

B63-10234

FILTER FOR HIGH-PRESSURE GASES HAS EASY TAKE-DOWN, ASSEMBLY

MAC GLASHAN, W. F. DATE- FEB. 1964

JPL-373

A small metal filter body, for use in tubing supplying sterilization gases, has an inlet end that can be unscrewed. Inside, the high pressure filter is supported on both sides and sealed by an O ring. Design facilitates assembly and disassembly of parts.

B63-10235

CRYOGENIC FILTER METHOD PRODUCES SUPER-PURE

HELIUM AND HELIUM ISOTOPES

HILDEBRANDT, A. F. DATE- MAR. 1964

JPL-374

Helium is purified when cooled in a low pressure environment until it becomes superfluid. The liquid helium is then filtered through iron oxide particles. Heating, cooling and filtering processes continue until the purified liquid helium is heated to a gas.

B63-10263

FRESNEL CUP REFLECTOR DIRECTS MAXIMUM ENERGY

FROM LIGHT SOURCE

LAUE, E. G. YOUNGBERG, C. L. DATE- MAY 1964

JPL-424

To minimize shielding and overheating, a composite Fresnel cup reflector design directs the maximum energy from a light source. It consists of a uniformly ellipsoidal end surface and an extension comprising a series of confocal ellipsoidal and concentric spherical surfaces.

B63-10311

OIL-SMEARED MODELS AID WIND TUNNEL

MEASUREMENTS

KATZOFF, S. LOVING, D. K. DATE- APR. 1964 REAN-

SEE ALSO NASA-MEMO-3-17-59L

LANGLEY-4

For visualizing flow characteristics in wind tunnel tests, model surfaces are smeared with any common petroleum-base oils. These fluoresce under ultraviolet light and the flow patterns are readily visualized.

B63-10318

QUICK-HARDENING PROBLEMS ARE ELIMINATED WITH

SPRAY GUN MODIFICATION WHICH MIXES RESIN AND

ACCELERATOR LIQUIDS DURING APPLICATION

JOHNSON, O. W. DATE- MAR. 1964 REAN- SEE ALSO U.

S. PATENT NO. 2,930,532

LANGLEY-6A

A modified spray gun, with separate containers for resin and additive components, solves the problems of quick hardening and nozzle clogging. At application, separate atomizers spray the liquids in front of the nozzle face where they blend.

B63-10337

GALLIUM USEFUL BEARING LUBRICANT IN

HIGH-VACUUM ENVIRONMENT

BUCKLEY, D. H. DATE- MAY 1964 REAN- SEE ALSO

U.S. PATENT NO. 3,072,574

LEWIS-12

Solid gallium is used as a lubricant on bearings made of compatible materials. Such lubricants perform well in a high vacuum and under low temperature.

B63-10345

APPARATUS FACILITATES HIGH-TEMPERATURE TENSILE

TESTING IN VACUUM

SIKORA, P. F. DATE- JUN. 1964

LEWIS-42

An apparatus for heating refractory materials to high temperatures during tensile testing includes a water-cooled stainless steel vacuum chamber. This contains a resistance heater consisting of a slit tube of tantalum or tungsten to enclose the tensile test rod.

B63-10351

NEW COBALT ALLOYS HAVE HIGH-TEMPERATURE

STRENGTH AND LONG LIFE IN VACUUM

ENVIRONMENTS

ASHBROOK, R. L. FRECHE, J. C. KILMA, S. J.

DATE- MAR. 1964

LEWIS-47

Cobalt refractory metal alloys combine sheet

formability with high temperature strength and low material loss in vacuum.

B63-10365
LOW-COST INSULATION SYSTEM FOR CRYOSTATS
ELIMINATES NEED FOR A VACUUM
CALVERT, H. F. DATE- MAY 1964
LEWIS-64

In order to eliminate the hazard caused by residual air trapped between the concentric shells of a cryostat, these annular spaces are pressurized with helium gas. This system is more economical than the use of powdered insulation maintained at low vacuums.

B63-10378
LIQUID-LEVEL METER HAS NO MOVING PARTS
ESCUE, W. T. /BENDIX CORP./ DATE- JUN. 1964
M-FS-3

An electro-optical system, without moving parts, reliably indicates liquid levels at cryogenic temperatures. Glass prisms, which act as liquid level probes inside the tank, extend from optically aligned photoelectric assemblies mounted on the outside.

B63-10389
LIGHTWEIGHT MAGNESIUM-LITHIUM ALLOYS SHOW PROMISE
ADAMS, W. T. CATALDO, C. E. DATE- JUN. 1964
M-FS-17

Evaluation tests show that magnesium-lithium alloys are lighter and more ductile than other magnesium alloys. They are being used for packaging, housings, containers, where light weight is more important than strength.

B63-10424
VARIABLE LIGHT SOURCE WITH A MILLION-TO-ONE INTENSITY RATIO
SNOW, W. B. SNOW, W. B. /SPACE TECHNOL. LAB./ DATE- MAY 1964
JPL-W00-008

A wide range, variable intensity light source of constant color characteristics has been developed for testing and calibrating photomultiplier tubes. A light attenuator first diffuses light from a constant source, then permits variable attenuation through a series of chambers and adjustable apertures.

B63-10429
WELDED PRESSURE TRANSDUCER MADE AS SMALL AS 1/8TH-INCH IN DIAMETER
COON, G. W. DATE- MAR. 1964 REAN- SEE ALSO U. S. PATENT NO. 3,027,769
ARC-11

A special spot welding technique is used to make miniature capacitance transducers for placing in a wind tunnel model. Rugged and relatively low in cost, they have a flat response up to one-third of the resonant frequency.

B63-10453
MOLYBDENUM DISULFIDE MIXTURES MAKE EFFECTIVE HIGH-VACUUM LUBRICANTS
SPON- INNOVATOR NOT GIVEN /MIDWEST RES. INST./ DATE- NOV. 1964 REAN- SEE ALSO B63-10337, B63-10562, AND B64-10116
M-FS-54

Five different mixtures of molybdenum disulfide are found to be effective bearing lubricants when tested at very low pressures and high temperatures.

B63-10476
CESIUM IODIDE CRYSTALS FUSED TO VACUUM TUBE FACEPLATES
FLECK, H. G. /ELECTRO-MECHANICAL RES./ DATE- MAY 1964
GSFC-67

A cesium iodide crystal is fused to the lithium fluoride faceplate of a photon scintillator image tube. The conventional silver chloride solder is then used to attach the faceplate to the metal support.

B63-10479
IMPROVED MOLYBDENUM DISULFIDE-SILVER MOTOR

BRUSHES HAVE EXTENDED LIFE
HORTON, J. C. KING, H. M. DATE- MAY 1964
M-FS-64

Motor brushes of proper quantities of molybdenum disulfide and copper or silver are manufactured by sintering techniques. Graphite molds are used. These brushes operate satisfactorily for long periods in normal atmosphere or in a high-vacuum environment.

B63-10481
REFRACTORY CERAMIC HAS WIDE USAGE, LOW FABRICATION COST
SPON- INNOVATOR NOT GIVEN /MARSHALL / DATE- APR. 1964
M-FS-67

Particulate, fused amorphous silica is formed into complex shapes by casting in plaster molds. High temperature firing is not required. This ceramic is resistant to thermal shock and exhibits good strength properties.

B63-10528
VARIABLE-TRANSPARENCY WALL REGULATES TEMPERATURES OF STRUCTURES
OSULLIVAN, W. J., JR. DATE- JUN. 1964
LANGLEY-25

An effective temperature regulating wall consists of one layer /e.g., one of the paraffins/ relatively opaque to thermal radiation in the solid state and transparent to it in the molten state and placed between two transparent layers. A mirror coating is applied to back layer.

B63-10546
TEST DEVICE PREVENTS MOLECULAR BOUNCE-BACK
HARDGROVE, W. F. SHAPIRO, H. DATE- JULY 1964
GSFC-82

A test device, which consists of six pyramidal reflectors joined together, acts as a baffle to impede the free path of the molecule to the test item by interposing a slanted surface which imparts an angular vector to the molecule and bounces it back to the chamber wall.

B63-10557
RAPID HELIUM-AIR ANALYZER CAN MEASURE OTHER BINARY GAS MIXTURES
MELFI, L. T. WOOD, G. M. YEAGER, P. R. DATE- FEB. 1964
LANGLEY-16

Instrument comprised of an ionization pressure gage and a diaphragm pressure gage consisting of strain gages to make a four-arm bridge, and a ratimeter is constructed for analyzing gas mixtures. The ratio of the outputs of the two gages is proportional to the mixture composition.

B63-10562
GATE VALVE WITH CERAMIC-COATED BASE OPERATES AT HIGH TEMPERATURES
BRASS, A. DATE- JUL. 1964
ARC-23

A copper base insert coated with a layer of aluminum oxide ceramic prevents frictional binding between the gate and base surfaces of a gate valve which are subject to rapid sliding action and high temperatures.

B63-10612
METALS PLATED ON FLUOROCARBON POLYMERS
FORD, H. KRASINSKY, J. B. VANGO, S. P. DATE- OCT. 1964
JPL-544

Electroplating lead on fluorocarbon polymer parts is accomplished by etching the parts to be plated with sodium, followed by successive depositions of silver and lead from ultrasonically agitated plating solutions. Metals other than lead may be electroplated on the silvered parts.

B64-10068
MECHANICAL PROPERTIES OF PLASTICS PREDETERMINED BY EMPIRICAL METHOD
LOHR, J. J. PARKER, J. A. DATE- JUL. 1964
ARC-28

To predetermine the mechanical properties of rigid plastics as a function of plasticizer content and composition, a set of equations has been

empirically derived. These relate strain rate, yield stress, temperature, and weight fraction of the plasticizer.

B64-10099

REFRACTORY THERMAL INSULATION FOR SMOOTH METAL SURFACES
SPON- INNOVATOR NOT GIVEN /GOODYEAR AEROSPACE CORP./ DATE- OCT. 1964
M-FS-160

To protect rocket metal surfaces from engine exhaust heat, a refractory thermal insulation mixture, which adheres to smooth metals, has been developed. Insulation protection over a wide temperature range can be controlled by thickness of the applied mixture.

B64-10113

ELASTOMERS BONDED TO METAL SURFACES SEAL ELECTROCHEMICAL CELLS
SHERFEY, J. M. DATE- AUG. 1964
GSFC-168

A leakproof seal secondary cell containing alkaline electrolytes was developed by bonding an alkali-resistant elastomer, such as neoprene, to metal contact surfaces. Test results of several different elastomers strongly indicate the feasibility of this sealing method.

B64-10116

LEAD OXIDE CERAMIC MAKES EXCELLENT HIGH-TEMPERATURE LUBRICANT
JOHNSON, R. L. SLINNEY, H. E. DATE- AUG. 1964
LEWIS-144

A dry lubricant coating in ceramic form consisting of 95 percent lead monoxide and 5 percent silicon dioxide withstood a temperature of 1200 deg F, with a bearing operating at various atmospheric pressures. From this testing, there was no galling or metal transfer of the bearing.

B64-10138

NOVEL SHOCK ABSORBER FEATURES VARYING YIELD STRENGTHS
GEIER, D. J. DATE- JUL. 1964
MSC-63A

A shock absorbent webbing of partially drawn synthetic strands is arranged in sections of varying density related to the varying mass of the human body. This is contoured to protect the body at points of contact, when subjected to large acceleration or deceleration forces.

B64-10142

STRINGENT CLEANING TECHNIQUE ASSURES RELIABLE EPOXY BOND
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JUN. 1964
GSFC-161

For reliable aluminum bonding to withstand stress, the mating surfaces are carefully cleaned, etched, rinsed and dried. An epoxy and hardener designed for metal-to-metal bonding is then used for a rigid assembly.

B64-10151

PLASTIC FILMS FOR REFLECTIVE SURFACES REPRODUCED FROM MASTERS
SPON- INNOVATOR NOT GIVEN /MINNEAPOLIS HONEYWELL/ DATE- OCT. 1964
GSFC-188

Accurate reproduction in plastic of the surface of the optical master to which a reflective finish may be applied is done by using backing from any suitable material to which cured plastic will adhere tightly. Plastics used for reflectors should be of the thermosetting or catalytically hardened type.

B64-10166

FILLER DEVICE FOR HANDLING HOT CORROSIVE MATERIALS
SPON- INNOVATOR NOT GIVEN /PRATT AND WHITNEY AIRCRAFT/ DATE- OCT. 1964
MSC-85

A bellows-type bag with its own heating element is developed for safe handling and injection of hot corrosive liquids into modules.

B64-10206

SOLDER FLUX LEAVES CORROSION-RESISTANT COATING ON METAL
BAUMAN, A. J. DATE- OCT. 1964
JPL-611

A soldering flux consisting of perfluoro-octanoic acid hydrazine provides a corrosion resistant film on metal surface, particularly copper. It is ineffective for soldering aluminum.

B64-10270

PRESSURE MOLDING OF POWDERED MATERIALS IMPROVED BY RUBBER MOLD INSERT
SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS CORP./ DATE- NOV. 1964
WOO-100

Pressure molding tungsten microspheres is accomplished by applying hydraulic pressure to a silicone rubber mold insert with several barrel shaped chambers which is placed in a steel die cavity. This technique eliminates castings containing shear fractures.

B64-10282

FINE-MESH SCREEN MADE BY SIMPLIFIED METHOD
SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- DEC. 1964
WOO-104

Strong fine-mesh screens are fabricated by a method involving uniform distribution of fine ferromagnetic particles on a nonmagnetic plate. Such screens are commonly used for grids in electron tubes and ion devices.

B64-10319

GAS DIFFUSION CELL REMOVES CARBON DIOXIDE FROM OCCUPIED AIRTIGHT ENCLOSURES
SPON- INNOVATOR NOT GIVEN /IOWA UNIV./ DATE- DEC. 1964
MSC-118

Small, lightweight permeable cell package separates and removes carbon dioxide from respiratory gas mixtures. The cell is regenerative while chemically inert in the presence of carbon dioxide so that only adsorption takes place.

B65-10004

SCREENING TECHNIQUE MAKES RELIABLE BOND AT ROOM TEMPERATURE
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
M-FS-227

Stainless-steel screen used to lay room temperature curing epoxy adhesive permits reliable bonding of electronic circuits boards. This technique would be useful with thin-walled structures that warp during conventional bonding operations.

B65-10015

IMPROVED CONDUCTIVE PASTE SECURES BIOMEDICAL ELECTRODES
SPON- INNOVATOR NOT GIVEN /BAYLOR UNIV./ DATE- JAN. 1965 REAN- SEE ALSO B64-10025
MSC-107

Nontoxic paste consisting of a dispersion of graphite or silver granules in a mixture of polyvinylpyrrolidone and diluted glycerol secures biomedical electrodes to human skin. Silver paste has a high electrical conductivity and forms a bond between metal and moist or dry skin.

B65-10016

ADHESIVE FOR VACUUM ENVIRONMENTS RESISTS SHOCK AND VIBRATION
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1965
MSC-56

A mixture of a polyamide, an epoxy resin, and fine silica or glass microballoons provides an adhesive which is flexible, resistant to shock and vibration, and has improved heat-transfer characteristics.

B65-10024

FLUID PRESSURE USED TO TEST TURBOPUMP BEARINGS
SPON- INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ DATE- FEB. 1965
NU-0001

03 MATERIALS (CHEMISTRY)

Testing of turbopump bearings operating in an intense radiation field is accomplished by the use of a fluid bearing tester providing radial and axial loading.

B65-10032
WIRE WINDING INCREASES LIFETIME OF OXIDE COATED CATHODES

KERSLAKE, W. VARGO, D. DATE- FEB. 1965 REAN- SEE ALSO AIAA PAPER-64-683
LEWIS-154

Refractory-metal heater base wound with a thin refractory metal wire increases the longevity of oxide-coated cathodes. The wire-wound unit is impregnated with the required thickness of metal oxide. This cathode is useful in magnetohydrodynamic systems and in electron tubes.

B65-10034
GAGE MEASURES ELECTRICAL CONNECTOR PIN RETENTION FORCE

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- FEB. 1965
JPL-SC-071

The retention force of a female connector pin is measured by observing the action of a calibrated spring in a gage consisting of housing, a plunger terminating in a male subminiature connector pin, and the tension spring.

B65-10043
MOUTHPIECE ADAPTER FOR PIPETTES PROTECTS MOUTH FROM HARMFUL LIQUIDS

MC SMITH, D. G. DATE- FEB. 1965
LANGLEY-47

To prevent the laboratory technicians mouth from contacting harmful liquids, a device with a hermetically sealed elastic bellows is attached to a standard pipette.

B65-10044
FLEXIBLE CURTAIN SHIELDS EQUIPMENT FROM INTENSE HEAT FLUXES

SPON- INNOVATOR NOT GIVEN /ARROWHEAD PROD./ DATE- 1965
M-FS-48

Flexible, high strength curtain made of fiber glass silicone elastomer laminate provides thermal shielding for equipment.

B65-10065
SPHERICAL MODEL PROVIDES VISUAL AID FOR CUBIC CRYSTAL STUDY

BACIGALUPI, R. J. SPARKOWSKI, A. E. DATE- MAR. 1965
LEWIS-108

Transparent sphere of polymethylmethacrylate with major zones and poles of cubic crystals is used to make crystallographic visualizations and to interpret Laue X ray diffraction of single cubic crystals.

B65-10083
DIDYMIUM COMPOUND IMPROVES NICKEL-CADMIUM CELL

SPON- INNOVATOR NOT GIVEN /GE/ DATE- MAR. 1965
GSFC-295

Nickel electrodes impregnated with an additive solution of didymium hydrate and nitric acid mixed with nickel nitrate increases ampere-hour capacity of cells and does not affect the voltage characteristics.

B65-10088
FIBER GLASS PARTS CURED DURING FILAMENT WINDING ELIMINATES OVEN, SAVES TIME

CARMODY, R. J. DATE- APR. 1965
M-FS-14

Resistance wire layer is introduced during winding of the fiber glass filaments with simultaneous heating. Emission of heat from the wire layer cures second fiber glass layer.

B65-10092
LIGHTWEIGHT ALUMINUM CASTING ALLOY IS USEFUL AT CRYOGENIC TEMPERATURES

SPON- INNOVATOR NOT GIVEN /M-P+VE-M LAE./ DATE- APR. 1965
M-FS-267

M-45, a lightweight, high purity aluminum casting

alloy has superior tensile properties for use at cryogenic temperatures.

B65-10095
CARBON-ARC ROD HOLDER HAS LONG LIFE, REDUCES ARC SPLATTER

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- APR. 1965
MSC-144

Carbon-arc rod holder with front end of beryllium oxide, a high electrical resistor and good thermal conductor, prevents nonuniform burning of the positive carbon rod and corrosion of the rod holder.

B65-10106
MINIATURE BEARINGS LUBRICATED BY SONIC DISPERSION METHOD

SPON- INNOVATOR NOT GIVEN /LITTON IND./ DATE- APR. 1965
M-FS-202

Evenly distributing a monomolecular film over the balls and tracks of miniature precision ball bearings by sonic dispersion results in precise lubrication which prevents lubricant bleed out to adjacent components. Varying the lubricant to solvent ratio of the mixture causes varying lubricant coating thicknesses.

B65-10107
CRACK DETECTION METHOD IS SAFE IN PRESENCE OF LIQUID OXYGEN

SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- APR. 1965
M-FS-236

Visual flaw detection method for metals utilizes color precipitate. This method can be used safely in the presence of liquid oxygen.

B65-10117
DOUBLE GLOVES REDUCE CONTAMINATION OF DRY BOX ATMOSPHERE

HERBELL, T. P. QUANTINETZ, M. REINHARDT, G. DATE- APR. 1965
LEWIS-211

Pair of encased low permeability hand gloves between which an inert gas circulates reduces dry box contamination. This innovation is applicable to dry boxes using radioactive and alkali metal compounds, submicron powders, and liquid metals.

B65-10136
VAPOR PRESSURE MEASURED WITH INFLATABLE PLASTIC BAG

SPON- INNOVATOR NOT GIVEN /GEOPHYS. CORP. OF AM./ DATE- MAY 1965
GSFC-281

Deflated plastic bag in a vacuum chamber measures initial low vapor pressures of materials. The bag captures the test sample vapors and visual observation of the vapor-inflated bag under increasing external pressures yields pertinent data.

B65-10140
GALVANIC CORROSION REDUCED IN ALUMINUM FABRICATIONS

SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- MAY 1965
M-FS-272

Titanium alloy fasteners dipped at zinc chromate primer are installed while wet in protective coated aluminum panels to reduce galvanic corrosion. Moisture tight seals at fastener points are also provided.

B65-10156
INORGANIC PAINT IS DURABLE, FIREPROOF, EASY TO APPLY

SCHUTT, J. B. DATE- JUN. 1965
GSFC-366

Inorganic paint with a water-potassium silicate base is impervious to water. It is also fireproof and adheres to various surfaces exposed to wide temperature fluctuations.

B65-10162
ELECTROLESS NICKEL RESIST USED IN ALKALI ETCHING OF ALUMINUM

SPON- INNOVATOR NOT GIVEN /SCHJELDAHL /G.T./ CO./ DATE- JUN. 1965

GSFC-284

Electroless nickel resist is unaffected by caustic soda applied as a milling or etching agent on aluminum.

B65-10164

IRRADIATION IMPROVES PROPERTIES OF AN AROMATIC POLYESTER

BELL, V. L., JR. DATE- JUN. 1965

LANGLEY-115

Aromatic polyester, PEN-2,6, is improved through cross-linking effected by radiation. Polymer retains properties of high tensile strength and toughness and stability at high temperatures.

B65-10167

REFRACTORY OXIDES EVALUATED FOR HIGH-TEMPERATURE USE

SPON- INNOVATOR NOT GIVEN /LANGLEY/ DATE- JUN. 1965

LANGLEY-121

Partially calcia-stabilized zirconia used for insulation and heat-storage in high temperature /3000 deg to 4000 deg F/ cyclically operated pebble bed air heater.

B65-10172

ALUMINUM ALLOYS PROTECTED AGAINST STRESS-CORROSION CRACKING

SPON- INNOVATOR NOT GIVEN /ALCOA RES. LABS./ DATE- JUN. 1965

M-PS-235

Topcoat of epoxy-polyamide paint is effective protection for aluminum alloys against stress corrosion cracking. The paint can be used on unpainted surfaces.

B65-10173

PEEL RESISTANCE OF ADHESIVE BONDS ACCURATELY MEASURED

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JUN. 1965

GSFC-320

Strength of adhesive bond between layers of laminated material is tested by peel force to the facing with a tensile testing machine. Testing jig has stainless steel rollers which constrain material to move horizontally while maintaining free end of facing at constant 90 deg angle.

B65-10175

TANTALUM CATHODE IMPROVES ELECTRON-BEAM EVAPORATION OF TANTALUM

SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE- JUN. 1965

JPL-WOO-021

Tantalum cathode is used in assembly for electron beam evaporation of tantalum onto a substrate. The cathode and anode are made of pure tantalum rather than tungsten to prevent contamination of the tantalum film deposited on the substrate.

B65-10179

REUSABLE NEOPRENE JACKET PROTECTS PARTS FOR CHEMICAL MILLING

SPON- INNOVATOR NOT GIVEN /RYAN AERONAUTICAL CO./ DATE- JUN. 1965

WOO-071

Reusable neoprene jacket is used to prepare metal part or panel for chemical milling. Jacket covers back and upper rim of part and is sealed before the masking solution is applied to surface to be milled. This reduces amount of masking material required for milling identical parts and increases production.

B65-10189

TESTING DEVICE SUBJECTS ELASTIC MATERIALS TO BIAXIAL DEFORMATIONS

BECKER, G. W. DATE- JUN. 1965

JPL-616

Testing device stretches elastic materials biaxially over large deformation ranges and varies strain ratios in two perpendicular directions. The device is used in conjunction with a tensile testing machine, which holds the specimen and permits control over the direction and magnitude of the stresses applied.

B65-10190

IR-TRANSMISSION GLASSES FORMED FROM OXIDES OF BISMUTH AND TELLURIUM

ULRICH, D. R. DATE- JUN. 1965

M-PS-279

Bismuth trioxide-tellurium dioxide glasses have improved infrared transmission characteristics.

B65-10214

EMERGENCY SOLAR STILL DESALTS SEAWATER

SPON- INNOVATOR NOT GIVEN /HELPER/ DATE- JUL. 1965

MSC-135

Solar energy apparatus distills seawater into fresh water. The inflatable buoyant still produces two pints of drinking water a day.

B65-10217

THIN TRANSPARENT FILMS FORMED FROM POWDERED GLASS

SPON- INNOVATOR NOT GIVEN /HOFFMAN ELECTRON./ DATE- JUL. 1965

GSFC-352

Glass film less than five mils thick is formed from powdered glass dispersed in an organic liquid, deposited on a substrate, and fused into place. The thin films can be cut and shaped for contact lenses, optical filters and insulating layers.

B65-10220

THORIATED NICKEL BONDED BY SOLID-STATE DIFFUSION METHOD

BALES, T. T. MANNING, R. C., JR. DATE- AUG. 1965

LANGLEY-116

Solid-state diffusion bonding in an inert-gas atmosphere forms high-strength joints between butting or overlapping surfaces of thoriated nickel. This method eliminates inert-phase agglomeration.

B65-10250

COATING METHOD ENABLES LOW-TEMPERATURE BRAZING OF STAINLESS STEEL

SEAMAN, F. D. /WESTINGHOUSE ELEC. CO./ DATE- AUG. 1965

NU-0030

Gold coated stainless steel tubes containing insulated electrical conductors are brazed at a low temperature to a copper coated stainless steel sealing block with a gold-copper eutectic. This produces an effective seal without using flux or damaging the electrical conductors.

B65-10261

BORON CARBIDE WHISKERS PRODUCED BY VAPOR DEPOSITION

SPON- INNOVATOR NOT GIVEN /GE/ DATE- SEP. 1965

HQ-24

Boron carbide whiskers have an excellent combination of properties for use as a reinforcement material. They are produced by vaporizing boron carbide powder and condensing the vapors on a substrate. Certain catalysts promote the growth rate and size of the whiskers.

B65-10270

CERAMIC MATERIALS PURIFIED BY EXPERIMENTAL METHOD

SPON- INNOVATOR NOT GIVEN /IIT RES. INST./ DATE- SEP. 1965

LEWIS-225

Crystalline ceramic materials are purified for use as high-temperature electrical insulators. Any impurities migrate to the cathode when a dc voltage is applied across the material while it is heated in an inert gas atmosphere.

B65-10288

ORGANIC REACTANTS RAPIDLY PRODUCE PLASTIC FOAM

LOOK, G. F. DATE- SEP. 1965 REAN- SEE ALSO B65-10090

LANGLEY-37

Adding trichlorofluoromethane to polyether resin accelerates the reaction between the resin and toluene diisocyanate. This accelerated reaction instantaneously produces a plastic foam of low density and uniform porosity needed to provide buoyancy for flotation recovery of instrument

packages dropped into the sea from spacecraft.

B65-10294

ADHERENT PROTECTIVE COATINGS PLATED ON
MAGNESIUM-LITHIUM ALLOY
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- OCT. 1965
REAN- SEE ALSO B63-10389
M-FS-365

Zinc is plated on a magnesium-lithium alloy by using a modification of the standard zinc-plate immersion bath. Further protection is given the alloy by applying a light plating of copper on the zinc plating. Other metals are plated on the copper by using conventional plating baths.

B65-10302

BURNISHING TECHNIQUE IMPROVES LUBRICATION OF
THREADED FASTENERS
GRUPER, J. L. /LOCKHEED MISSILES AND SPACE CO./
DATE- OCT. 1965
LEWIS-217

Burnishing a molydisulfide coating into the thread surfaces of fasteners eliminates the need for binders and vehicles which ensure coverage and retention of the lubricant during fastening. The coating may be applied by any convenient method.

B65-10303

NICKEL SOLUTION PREPARED FOR PRECISION
ELECTROFORMING
SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL
SYSTEMS/ DATE- OCT. 1965
WOO-070

Lightweight, precision optical reflectors are made by electroforming nickel onto masters. Steps for the plating bath preparation, process control testing, and bath composition adjustments are prescribed to avoid internal stresses and maintain dimensional accuracy of the electrodeposited metal.

B65-10316

REMOVABLE WELL IN REACTION FLASK FACILITATES
CARBON DIOXIDE COLLECTION
SPON- INNOVATOR NOT GIVEN /AMES/ DATE- OCT. 1965
ARC-47

Removable plastic well with a flange that seats on the rim of an Erlenmeyer screwcap flask aids quantitative collection of carbon dioxide liberated in the flask. The well can be removed without danger of cross-contamination. It can collect other gases using appropriate absorbents.

B65-10321

PLATED NICKEL WIRE MESH MAKES SUPERIOR
CATALYST BED
SILL, M. /BELL AEROSYSTEMS CO./ DATE- OCT. 1965
MSC-216

Porous nickel mesh screen catalyst bed produces gas evolution in hydrogen peroxide thrust chambers used for attitude control of space vehicles. The nickel wire mesh disks in the catalyst bed are plated in rugose form with a silver-gold coating.

B65-10335

MAGNETIC FLUID READILY CONTROLLED IN ZERO
GRAVITY ENVIRONMENT
PAPELL, S. S. DATE- NOV. 1965
LEWIS-126

Colloid composed of finely ground iron oxide in a fluid such as heptane, is controlled and directed magnetically in a zero gravity environment. It will not separate on standing for long periods or after exposure to magnetic or centrifugal forces. Because of its low density and low viscosity, it is easily pumped.

B65-10336

ANODIZATION PROCESS PRODUCES OPAQUE,
REFLECTIVE COATINGS ON ALUMINUM
SPON- INNOVATOR NOT GIVEN /LOCKHEED MISSILES AND
AND SPACE CO./ DATE- NOV. 1965
M-FS-348

Opaque, reflective coatings are produced on aluminum articles by an anodizing process wherein the anodizing bath contains an aqueous dispersion of finely divided insoluble inorganic compounds. These particles appear as uniformly distributed occlusions in the anodic deposit on the aluminum.

B65-10337

SPECIAL COATINGS CONTROL TEMPERATURE OF
STRUCTURES
FULK, M. M. MAYER, R. W. /BALL BROTHERS RES.
CORP./ DATE- NOV. 1965
GSFC-444

Special coatings in the form of paints that exhibit controlled ratios of sunlight absorptivity to grey-body emissivity control the temperature of structures in space flight. These finishes exhibit good resistance to ultraviolet radiation and do not discolor.

B65-10341

LIGHTWEIGHT HINGED BELLOWS RESTRAINT HAS
HIGH LOAD CAPACITY
IMUS, E. E. /N. AM. AVIATION/ DATE- NOV. 1965
WOO-151

High angular stresses in fluid-handling ducts are accommodated by a lightweight hinged bellows restraint. This device transmits angular stress to points close to the axis center and spreads it over a rigid configuration.

B65-10344

SOLUBLE UNDERCOATING FACILITATES REMOVAL OF
FOAMED-IN-PLACE INSULATION
DUNCAN, A. C. HILL, C. L., JR. DATE- NOV. 1965
LEWIS-193

Foamed-in-place insulation can be removed and reused by coating the surface with a soluble peel coat before applying the foam mixture. Removal of the insulation is effected by slitting it and pouring a solvent in the slit to dissolve the peel coat. The insulation can then be stripped off intact.

B65-10354

PIGMENTED COATING RESISTS THERMAL SHOCK
HARADA, Y. /IIT RES. INST./ RECHTER, H. L.
DATE- NOV. 1965
JPL-SC-083

Coating pigment composed of zinc oxide and potassium silicate resists the effects of thermal shock and long exposure to direct sunlight.

B65-10357

AIR-CURED CERAMIC COATING INSULATES AGAINST
HIGH HEAT FLUXES
SEITZINGER, V. F. DATE- NOV. 1965
M-FS-150

Reflective insulating ceramic coating protects supporting structures in area adjacent to rocket engines from the intense heat fluxes in the rocket exhaust plumes.

B65-10364

POROUS GLASS MAKES EFFECTIVE SUBSTRATE FOR
OZONE-SENSING REAGENT
SPON- INNOVATOR NOT GIVEN /PARAMETRICS/ DATE-
DEC. 1965
GSFC-388

Porous-glass substrate is used for absorption of a dye used in measuring the concentration of atmospheric ozone at high altitudes. This measurement is based on the chemiluminescence produced in the reaction between ozone and the dye, rhodamine B. The porous glass provides a large interstitial surface area which promotes this reaction.

B65-10366

UNIQUE GEAR DESIGN PROVIDES SELF-LUBRICATION
WINIARSKI, F. J. /SPACE TECHNOL. LAB./ DATE-
DEC. 1965
JPL-SC-079

Composite gear configuration provides a reliable automatic means for replenishing gear mechanism lubricants that dissipate in the harsh environment of space. The center or hub section of the gear consists of a porous, oil impregnated material, and the outer or toothed section has radially drilled passages to cause the oil to gradually flow to the gear teeth surface.

B65-10372

WIRE BUNDLE FORMED INTO GRIDS WITH MINUTE
INTERSTICES
TODD, H. H. /ELECTRO-OPTICAL SYSTEMS/ DATE- DEC.

1965

W00-089

Deforming the ends of a bundle of closely packed parallel wires to restrict the interstices to substantially uniform and minute dimensions produces grids or filters for ion engines. Porous metal structures made by this process are also used as fuel cell electrodes, diffusion membranes, and catalysts.

B65-10374

PLASTIC PLUS STAINLESS-STEEL FIBERS MAKE RESILIENT, IMPERMEABLE MATERIAL

SMIRRA, J. R. /THOMPSON RAMO WOOLDRIDGE/ DATE- DEC. 1965

W00-246

Plastic material combined with stainless-steel fibers and molded under heat and pressure into a desired configuration is both soft enough to deform under a load and resilient enough to return to its original shape when the load is removed.

B65-10384

PROBE SAMPLES COMPONENTS OF ROCKET ENGINE EXHAUST

SCHUMACHER, P. E. /N. AM. AVIATION/ DATE- DEC. 1965

M-FS-485

Water-cooled, cantilevered probe samples the exhaust plume of rocket engines to recover particles for examination. The probe withstands the stresses of a rocket exhaust plume environment for a sufficient period to obtain a useful sample of the exhaust components.

B65-10390

TEST STRIPS DETECT DIFFERENT CO₂ CONCENTRATIONS IN CLOSED COMPARTMENTS

SPON- INNOVATOR NOT GIVEN /MELPAR/ DATE- DEC. 1965

MSC-210

Four different test strips, using crystal violet for one pair of strips and basic fuchsin as a dye for the second pair, give unambiguous colorimetric indications of four different concentrations of carbon dioxide in the atmosphere of a closed compartment. Tetraethylene pentamine is used as a dye decoloring agent.

B65-10397

NEW BRAZING ALLOY ELIMINATES METAL-STRESS CRACKING

HUSCHLER, E., JR. /N. AM. AVIATION/ ROEDER, E. R. DATE- DEC. 1965

W00-249

Silver 15 zinc brazing alloy avoids the liquid-metal stress cracking of base metals when applied to 347, 316, and 410 stainless steels and certain other alloys.

B65-10398

NICKEL/TIN COATING PROTECTS THREADED FASTENERS IN CORROSIVE ENVIRONMENT

CHARLES, J. VEEDER, L. VEEDER, L DATE- DEC. 1965

MSC-253

Threaded fasteners used in corrosive environments are plated with electroless nickel and electroplated, over the nickel, with tin. This provides a corrosion-resistant coating for the fasteners.

B66-10005

FLUORIDE COATINGS MAKE EFFECTIVE LUBRICANTS IN MOLTEN SODIUM ENVIRONMENT

SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- JAN. 1966

REAN- SEE ALSO NASA-TN-D-2348

LEWIS-229

Coating bearing surfaces with calcium fluoride-barium fluoride film provides effective lubrication against sliding friction in molten sodium and other severe environments at high and low temperatures.

B66-10009

COILED SHEET METAL STRIP OPENS INTO TUBULAR CONFIGURATION

PARK, J. J. DATE- JAN. 1966 REAN- SEE ALSO

B64-10011

GSFC-425

Copper alloy is converted into a spring material that can be rolled into a compact coil which will spontaneously open to form a tube in the long direction of the strip. The copper alloy is passed through a furnace at a prescribed temperature while restraining the strip in the desired tubular configuration.

B66-10024

ALUMINIZED FIBER GLASS INSULATION CONFORMS TO CURVED SURFACES

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JAN. 1966

M-FS-477

Layers of fiber glass with outer reflective films of vacuum-deposited aluminum or other reflective metal, provide thermal insulation which conforms to curved surfaces. This insulation has good potential for cryogenic systems.

B66-10027

FLEXIBLE PROTECTIVE COATINGS MADE FROM SILICON-NITROGEN MATERIALS

SPON- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DATE- JAN. 1966

M-FS-528

Flexible protective coatings formed from either of two polymers endure high temperatures for long periods. One polymer is a byproduct in hexaphenylcyclotrisilazane preparation, the other is obtained by heating bis/methylamino/diphenylsilane.

B66-10029

EPOXY BLANKET PROTECTS MILLED PART DURING EXPLOSIVE FORMING

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JAN. 1966

M-FS-307

Epoxy blanket protects chemically milled or machined sections of large, complex structural parts during explosive forming. The blanket uniformly covers all exposed surfaces and fills any voids to support and protect the entire part.

B66-10033

ELECTRON BEAM SEALS OUTER SURFACES OF POROUS BODIES

HERZ, W. R. /KULITE TUNGSTEN CO./ KURTZ, A. D. KURTZ, R. A. DATE- FEB. 1966

M-FS-562

Porous tungsten plugs provide even airflow for frictionless bearings used in air bearing supported gyros. The plugs have their outer cylindrical surface sealed by an electron beam process to ensure unidirectional airflow through their exit ends.

B66-10037

PROCESS REDUCES PORE DIAMETERS TO PRODUCE SUPERIOR FILTERS

TODD, H. H. /ELECTRO-OPTICAL SYSTEMS/ DATE- FEB. 1966

W00-093

Porous metal structure with very small pore diameters is produced by heating the structure in oxygen for an oxidized surface layer, cooling it, and heating it in hydrogen to deoxidize the oxidized portion. Such structures are superior catalyst beds and filters.

B66-10043

POLYMER FILM EXHIBITS THERMAL AND RADIATION STABILITY

BELL, V. L., JR. DATE- FEB. 1966

LANGLEY-100

Aromatic/heterocyclic polymers /Pyrrones/ have the ability to absorb large quantities of photolytic, thermal and radiolytic energies while retaining their useful properties. They are prepared from the room temperature reaction of tetraamines and tetraacids.

B66-10044

PROTECTIVE COATING WITHSTANDS HIGH TEMPERATURE IN OXIDIZING ATMOSPHERE

MELLOR, C. H. /FENWAL, INC./ DATE- FEB. 1966

M-FS-529

03 MATERIALS (CHEMISTRY)

Protective coating containing a plasma arc sprayed mixture of hafnium oxide and zirconium diboride will withstand high temperatures in an oxygen rich atmosphere. Used on a homogeneous tungsten thermocouple, it does not flake or crack on subsequent cooling and reheating, and does not degrade the thermocouple response time.

B66-10053

SPRAY-ON TECHNIQUE SIMPLIFIES FABRICATION OF COMPLEX THERMAL INSULATION BLANKET
BOND, W. E. G. RAYMOND, R. /N. AM. AVIATION/
DATE- FEB. 1966
M-PS-497

Spray-on process constructs molds used in forming sections of thermal insulation blankets. The process simplifies the fabrication of blankets by eliminating much of the equipment formerly required and decreasing the time involved.

B66-10070

REFLECTIVE INSULATOR LAYERS SEPARATED BY BONDED SILICA BEADS
ZUVER, N. T., JR. /GRUMMAN AIRCRAFT CORP./ DATE- FEB. 1966
MSC-215

Nonconductive silica beads are bonded to metallic reflecting insulation sheets prior to fabrication of multilayer reflectors. This eliminates the need for separate nonconductive sheets and simplifies the fabrication process.

B66-10081

POLYTETRAFLUOROETHYLENE LUBRICATES BALL BEARINGS IN VACUUM ENVIRONMENT
SPON- INNOVATOR NOT GIVEN /BENDIX CORP./ DATE- MAR. 1966 REAN- SEE ALSO NASA-SP-5014
M-PS-379

Polytetrafluoroethylene /PTFE/ balls are interspersed among steel ball bearings to provide a dry lubricant in a high vacuum environment. The steel balls are lubricated by the film worn off the PTFE balls.

B66-10083

CRYOSTAT MODIFIED TO AID ROTATING BEAM FATIGUE TEST
DURHAM, T. F. /N. AM. AVIATION/ DATE- MAR. 1966
M-PS-435

Modified stainless steel Dewar aids rotating beam fatigue test in a cryogenic environment. The Dewar is modified to receive extended specimen supporting members through specially designed rotary seals. The test set can be fully enclosed and pressurized with an inert gas to make the system explosion proof.

B66-10087

SOLID-FILM LUBRICANT IS EFFECTIVE AT HIGH TEMPERATURES IN VACUUM
SLINEY, H. E. DATE- MAR. 1966 REAN- SEE ALSO B63-10453 AND B63-LEWIS-228

Calcium fluoride with a suitable inorganic binder forms a stable solid-film lubricant when fused to the surface to be lubricated. It is effective in environments at elevated temperatures and gas pressures ranging from atmospheric to high vacuum. It is not stable in reducing atmospheres.

B66-10090

RADIOACTIVE TRACER SYSTEM DETECTS OIL CONTAMINANTS IN FLUID LINES
ROTH, B. /N. AM. AVIATION/ DATE- MAR. 1966
M-PS-512

Radioactive tracer system continuously detects and monitors lubricating oil contamination in high pressure fluid lines.

B66-10104

VAPOR CONDENSATION PROCESS PRODUCES SLURRY OF MAGNESIUM PARTICLES IN LIQUID HYDROCARBONS
PROK, G. M. WALSH, T. J. WITZKE, W. R. DATE- MAR. 1966
LEWIS-263

Vapor condensation apparatus produces a physically stable, homogeneous slurry of finely divided magnesium and liquid hydrocarbons. The magnesium is vaporized and the resultant vapor is cooled

rapidly with a liquid hydrocarbon spray, which also serves as the dispersing medium for the condensed magnesium particles.

B66-10110

ETCHING PROCESS MILLS PH 14-8 MO ALLOY STEEL TO PRECISE TOLERANCES
CHIPMAN, B. L. /N. AM. AVIATION/ MULLAND, P. W.
DATE- MAY 1966
MSC-270

Chemical milling process, which combines an aqua regia etchant with a sulfonate wetting agent, produces finishes on PH 14-8 molybdenum alloy steel to precise tolerances. This process permits precision removal of excess metal from the steel in annealed and/or aged conditions.

B66-10111

STORAGE-STABLE FOAMABLE POLYURETHANE IS ACTIVATED BY HEAT
SPON- INNOVATOR NOT GIVEN /GOODYEAR/ DATE- MAY 1966
LANGLEY-187

Polyurethane foamable mixture remains inert in storage unit activated to produce a rapid foaming reaction. The storage-stable foamable composition is spread as a paste on the surface of an expandable structure and, when heated, yields a rigid open-cell polyurethane foam that is self-bondable to the substrate.

B66-10119

SMALL, HIGH-INTENSITY FLASHER PERMITS CONTINUOUS CLOSE-IN PHOTOGRAPHY
PASCALE, C. /PRINCETON UNIV./ DATE- MAR. 1966
NU-0043

Compact, high-intensity spark-flash unit is used as a light source for continuous rapid photography. The spark-breakdown flash source is enclosed in polymethylmethacrylate and incorporates a parabolic reflector.

B66-10120

OXYGEN-HYDROGEN TORCH IS A SMALL-SCALE STEAM GENERATOR
MASKELL, C. E. /AEROJET-GEN. CORP./ DATE- MAR. 1966
NU-0042

Standard oxygen-hydrogen torch generates steam for corrosion-rate analysis of various metals. The steam is generated through local combustion inside a test chamber under constant temperature and pressure control.

B66-10131

SURFACTANT FOR DYE-PENETRANT INSPECTION IS INSENSITIVE TO LIQUID OXYGEN
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1966
M-PS-475

LOX insensitive solvent is blended into a mixture of commercially available surfactants to clean metal surfaces which are to be investigated by the dye-penetrant method. The surfactant mixture is applied before and after application of the dye.

B66-10138

BISMUTH ALLOY POTTING SEALS ALUMINUM CONNECTOR IN CRYOGENIC APPLICATION
FLOWER, J. F. /DOUGLAS AIRCRAFT CO./ STAFFORD, R. L. DATE- APR. 1966
WOO-260

Bismuth alloy potting seals feedthrough electrical connector for instrumentation within a pressurized vessel filled with cryogenic liquids. The seal combines the transformation of high-bismuth content alloys with the thermal contraction of an external aluminum tube.

B66-10139

HOT-WIRE DETECTOR FOR CHEMICALLY ACTIVE MATERIALS USED IN GAS CHROMATOGRAPHY
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- APR. 1966
MSC-269

Hot-filament detector analyzes chemically active materials used in gas chromatography. The detector reacts chemically with the effluent vapors in the gas chromatographic apparatus to

change the electrical resistance of the filament as a function of the affluent composition. Due to the changes produced by chemical action on the filament, the system is often calibrated.

B66-10140
CORROSION OF METAL SAMPLES RAPIDLY MEASURED
MASKELL, C. E. /AEROJET-GEN. CORP./ DATE- APR. 1966
NU-0041

Corrosion of a large number of metal samples that have been exposed to controlled environment is accurately and rapidly measured. Wire samples of the metal are embedded in clear plastic and sectioned for microexamination. Unexposed wire can be included in the matrix as a reference.

B66-10165
GALLIUM ALLOY FILMS INVESTIGATED FOR USE AS BOUNDARY LUBRICANTS
SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- APR. 1966
REAN- SEE ALSO NASA-TN-D-2721 and B63-10337

Gallium alloyed with other low melting point metals has excellent lubricant properties of fluidity and low vapor pressure for high temperature or vacuum environments. The addition of other soft metals reduces the corrosivity and formation of undesirable alloys normally found with gallium.

B66-10166
DISPENSER LEAK-TESTS AND STERILIZES RUBBER GLOVES
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- APR. 1966
MSC-285

Portable vacuum-operated apparatus leak-tests and sterilizes rubber gloves. The gloves are fitted to the hands directly from the apparatus without external handling.

B66-10185
IMPROVED ADHESIVE FOR CRYOGENIC APPLICATIONS CURES AT ROOM TEMPERATURE
KLINGER, H. J. SMITH, M. B. /TELECOMPUTING CORP./ DATE- MAY 1966
WOO-132

Adhesive cured at room temperature provides an effective adhesive bond over the range from room temperature down to the temperature of liquid hydrogen. The adhesive consists of one part of 200-mesh powdered nylon filler to two parts of an epoxy-polyamine resin.

B66-10194
SILAZANE POLYMERS SHOW PROMISE FOR HIGH-TEMPERATURE APPLICATION
SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- JUN. 1966
REAN- SEE ALSO NASA-SP-5030
M-FS-466

Several silazane intermediate compounds and polymers have been prepared which are potentially useful as high temperature coatings and elastomers. These silazane polymers exhibit stability in a temperature range of 300 to 400 degrees C.

B66-10196
FIBERS OF NEWLY DEVELOPED REFRACTORY CERAMICS PRODUCED BY IMPROVED PROCESS
SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- MAY 1966
WOO-169

Rods of refractory ceramic material and glasses having relatively high fusion temperatures and tensile strengths are converted to fiber by subjecting these rods to alternate fusion and gas-jet bursts. The refractory, high tensile strength fibers produced are combined with suitable binder to produce heat-resistant fabrics and rigid structures.

B66-10207
WHITE PRIMER PERMITS A CORROSION-RESISTANT COATING OF MINIMUM WEIGHT
ALBRECHT, R. H. JENSEN, D. P. SCHNAKE, P. /SHERWIN WILLIAMS CO./ DATE- MAY 1966
M-FS-304

White primer for coating 2219 aluminum alloy

supplies a base for a top coating of enamel. A formulation of pigments and vehicle results in a primer with high corrosion resistance and minimum film thickness.

B66-10221
SUBMICRON METAL POWDERS PRODUCED BY BALL MILLING WITH GRINDING AIDS
QUATINETZ, M. SCHAFER, R. J. DATE- MAY 1966
REAN- SEE ALSO NASA-TN-D-879
LEWIS-188

In ball milling metal powders to submicron size, various salts are more effective as grinding aids than conventional surfactants. Absolute ethyl alcohol is used as the grinding liquid.

B66-10222
NICKEL-BASE SUPERALLOYS DEVELOPED FOR HIGH-TEMPERATURE APPLICATIONS
FRECHE, J. C. DATE- MAY 1966
REAN- SEE ALSO NASA-MEMO-4-13-59E, NASA-TN-D-260, NASA-TN-D-1531, AND NASA-TN-D-2495
LEWIS-226

Class of nickel-base superalloys containing varying percentages of alloying elements have good workability and high strength at elevated temperatures /1500 to 2200 degrees F/.

B66-10227
CHROMIUM OXIDE COATINGS IMPROVE THERMAL EMISSIVITY OF ALUMINA
UPSHAW, V. /HUGHES AIRCRAFT CO./ DATE- MAY 1966
WOO-263

Chromium oxide coatings improve thermal radiation characteristics of alumina-coated heater-cathode systems in vacuum tubes. Chromium oxide is applied either as a surface layer or as a doping material. The new coatings eliminate the high temperature migration problems of carbon surface treatments.

B66-10230
ELECTRIC ARC HEATER IS SELF STARTING
BROWN, R. D. DATE- MAY 1966
LANLEY-208

Remote method initiates an electric arc over a large range of gaps between two water-cooled electrodes of an arc-heated wind tunnel without disassembling the arc unit. This type of starting system can be used on both three-phase ac arc heaters and dc arc heaters.

B66-10234
STANDARDS FOR ELECTRON PROBE MICROANALYSIS OF SILICATES PREPARED BY CONVENIENT METHOD
WALTER, L. S. DATE- JUN. 1966
GSFC-469

Standard compositions suitable for electron probe microanalysis of various silicates are prepared by coprecipitation of specified salts with colloidal silica to form a gel which is decomposed into a powdered oxide mixture and compressed into thin pellets. These pellets of predetermined standard are compared with a silicate sample to determine its composition.

B66-10256
DRY FILM LUBRICANT IS EFFECTIVE AT EXTREME LOADS
SPON- INNOVATOR NOT GIVEN /MIDWEST RES. INST./ DATE- JUN. 1966
REAN- SEE ALSO NASA-TM-X-53331
M-FS-628

Dry film lubricant protects low speed sliding surfaces under extreme loading. The lubricant in an inorganic binder is applied to substrates with sufficient hardness to prevent surface deformation in the applicable load range.

B66-10259
SUBSTITUTED SILANE-DIOL POLYMERS HAVE IMPROVED THERMAL STABILITY
BYRD, J. D. CURRY, J. E. DATE- JUN. 1966
M-FS-469

Organosilicon polymers were synthesized to produce improved physical and chemical properties, including high thermal stability. Of the polymers produced, poly/4, 4 prime-bisoxypbi-phenylene/diphenylsilane, formed from bis/anilino/diphenylsilane and p, p

03 MATERIALS (CHEMISTRY)

prime-biphenol, was found to have the most desirable properties.

B66-10273
BORON-DEOXIDIZED COPPER WITHSTANDS BRAZING TEMPERATURES
SCHMIDT, E. R. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-762

Boron-deoxidized high-conductivity copper is used for fabrication of heat transfer components that are brazed in a hydrogen atmosphere. This copper has high strength and ductility at elevated temperatures and does not exhibit massive intergranular failure.

B66-10281
VAPOR DIFFUSION ELECTRODE IMPROVES FUEL CELL OPERATION
SMITH, J. O. /MONSANTO RES. CORP./ DATE- JUN. 1966
LEWIS-187

Vapor diffusion type fuel cell electrode presents a nonwetting barrier to the liquid feedstocks so they may contact the electrolyte only in the vapor state. Thus, it effects feedstock mixing with the electrolyte at the electrolyte/catalyst interface but prevents feedstock decomposition and catalyst poisoning from liquid mingling.

B66-10288
IMPROVED THERMAL INSULATION MATERIALS MADE OF FOAMED REFRACTORY OXIDES
MOUNTVALA, A. J. NAKAMURA, H. H. RECHTER, H. L. /IIT RES. INST./ DATE- JUN. 1966 REAN- SEE ALSO B65-10357
M-FS-735

Foamed refractory oxides provide lightweight, reflective thermal insulation materials. The materials have a low bulk density and high thermal shock resistance.

B66-10296
APPARATUS ENABLES ACCURATE DETERMINATION OF ALKALI OXIDES IN ALKALI METALS
DUPRAW, W. A. GAHN, R. F. GRAAB, J. W. MAPLE, W. E. ROSENBLUM, L. DATE- JUL. 1966
LEWIS-256

Evacuated apparatus determines the alkali oxide content of an alkali metal by separating the metal from the oxide by amalgamation with mercury. The apparatus prevents oxygen and moisture from inadvertently entering the system during the sampling and analytical procedure.

B66-10298
ULTRASONIC CLEANING RESTORES DEPTH-TYPE FILTERS
SPON- INNOVATOR NOT GIVEN /LITTLE /ARTHUR D./ INC./ DATE- JUL. 1966
M-FS-540

Cleaning process uses a nonionic surfactant and ultrasonic agitation to restore depth-type fibrous filters to maximum effectiveness.

B66-10299
ELECTROLYTIC ETCHING PROCESS PROVIDES EFFECTIVE BONDING SURFACE ON STAINLESS STEEL
SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JUL. 1966
GSFC-484

Electrolytic etching process prepares surfaces of a stainless steel shell for reliable, high strength adhesive bonding to dielectric materials. The process uses a 25 percent aqueous solution of phosphoric acid.

B66-10305
SIMPLE, NONDESTRUCTIVE TEST IDENTIFIES METALS
DODDS, D. J. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-525

Rapid, nondestructive test for identifying metals measures the characteristic potential difference produced by galvanic reaction between a reference electrode and the test metal. A drop of water is used as an electrolyte.

B66-10312
CHEMICAL MILLING SOLUTION PRODUCES SMOOTH SURFACE FINISH ON ALUMINUM
LORENZEN, H. C. /N. AM. AVIATION/ DATE- JUL.

1966
MSC-549
Elementary sulfur mixed into a solution of caustic soda and salts produces an etchant which will chemically mill end-grain surfaces on aluminum plate. This composition results in the least amount of thickness variation and pitting.

B66-10313
SEA DYE MARKER PROVIDES VISIBILITY FOR 20 HOURS
DE LAAT, P. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-714

Sea dye marker block releases a visible slick which lasts at least twelve hours. The dye marker uses a fluorescent dye in a heat cured binder which, when immersed in seawater, releases the dye at a controlled rate.

B66-10322
VALVE SEAT PORES SEALED WITH THERMOSETTING MONOMER
OLMORE, A. B. /N. AM. AVIATION/ DATE- JUL. 1966
M-FS-900

Hard anodic coating provides a smooth wear resistant valve seating surface on a cast aluminum alloy valve body. Vacuum impregnation with a thermosetting monomer, diallyl phthalate, seals the pores on the coating to prevent galvanic corrosion.

B66-10327
INFLATABLE HOLDING FIXTURE PERMITS X-RAYS TO BE TAKEN OF INNER WELD AREAS
HENDRICKSON, D. R. SPENCE, T. M. /N. AM. AVIATION/ DATE- JUL. 1966
M-FS-856

Inflatable rubber gland positions and holds X ray film in positive contact with inner weld areas of manifold torus assemblies for verifying the weld quality. The gland is constructed to conform to the inside diameter of the manifold torus.

B66-10335
SHOCK-OPERATED VALVE WOULD AUTOMATICALLY PROTECT FLUID SYSTEMS
BRANUM, L. W. WELLS, G. H. /N. AM. AVIATION/ DATE- JUL. 1966
M-FS-801

Glandless valve shuts down high-pressure fluid systems when severe shock from an explosion or earthquake occurs. The valve uses a pendulum to support the valve closure plug in the open position. When jarred, the valve body is moved relative to the pendulum and the plug support is displaced, allowing the plug to seat and be held by spring pressure.

B66-10336
CONCEALED HINGE PERMITS FLUSH MOUNTING OF DOORS AND HATCHES
HOLMAN, E. V. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-623

Hinge assembly permits flush mounting of doors and hatches of considerable thickness so that the axis of instant rotation, produced by the hinge, lies outside the panel surface and beyond the perimeter adjacent to the hinge. In operation, motion of the assembly is initially parallel, changing to angular after clearing the panel perimeter.

B66-10337
SEMI-AUTOMATIC DEVICE TESTS COMPONENTS WITH BIAXIAL LEADS
MARSHALL, T. C. /N. AM. AVIATION/ DATE- AUG. 1966 REAN- SEE ALSO B65-10243
MSC-516

Semiautomatic device with a four-terminal network tests quantities of components having biaxial leads. The four-terminal network permits the testing of components in different environments. This device is easily modified for completely automatic operation.

B66-10340
DEVICE REMOVES HYDROGEN GAS FROM ENCLOSED SPACES
CARSON, W. N. /GE/ DATE- JUL. 1966
GSFC-495

Hydrogen-oxidant galvanic cell removes small amounts of hydrogen gas continually released from equipment, such as vented silver-zinc batteries, in enclosed compartments where air venting is not feasible. These cells are used in satellite compartments.

B66-10358

ELECTROCHEMICAL MILLING REMOVES BURRS AND SOLDER FROM TUBING ENDS

HINSHAW, J. O. /N. AM. AVIATION/ DATE- AUG. 1966
M-FS-714

Electrochemical milling removes burrs and solder from the cut ends of stainless steel capillary tubing. An electrolyte consisting primarily of a solution of sulfuric and phosphoric acids is used.

B66-10373

BEARING ALLOYS WITH HEXAGONAL CRYSTAL STRUCTURES PROVIDE IMPROVED FRICTION AND WEAR CHARACTERISTICS

BUCKLEY, D. H. JOHNSON, R. L. DATE- AUG. 1966
REAN- SEE ALSO NASA-TN-D-2523, NASA-TN-D-2524,
NASA-TN-D-2671, NASA-TN-D-3235
LEWIS-320

Bearings of titanium, cobalt, and other hexagonal crystal alloys are used in vacuum and high temperature environments. These temperature-stabilized alloys have reduced friction and wear characteristics and therefore have potential use in aircraft seals, hydraulic equipment, and artificial human joints.

B66-10380

SUBMICRON HOLES IN THIN FILMS INCREASE SAMPLING RANGE OF MASS SPECTROMETERS

WILLENS, R. H. /CONSOLIDATED SYSTEMS/ DATE- AUG. 1966
JPL-SC-097

Gold film is vapor deposited onto a glass slide containing submicron latex spheres which are removed, leaving submicron holes in the film. These thin-film apertures allow accurate mass spectrometer sampling of gas mixtures at pressures on the order of 100 torr.

B66-10387

SELF-SUPPORTED ALUMINUM THIN FILMS PRODUCED BY VACUUM DEPOSITION PROCESS

NEFF, J. E. TIMME, R. W. DATE- SEP. 1966
ARC-58

Self-supported aluminum thin film is produced by vacuum depositing the film on a polyvinyl formal resin film and then removing the resin by radiant heating in the vacuum. The aluminum film can be used as soon as the resin is eliminated.

B66-10395

COMPOSITE GASKETS ARE COMPATIBLE WITH LIQUID OXYGEN, RESIST COMPRESSION SET

GOSNELL, R. B. /WHITTAKER CORP./ SEP. 1966 DATE- SEP. 1966
M-FS-455

Gaskets fabricated by laminating fluorocarbon polymers with fiber glass cloth have a low compression set. Their flexibility is not subject to drastic changes at the temperature of liquid oxygen with which they are used. The fabrication process is controlled so that the fibers are not impregnated with the polymer.

B66-10398

THIN-FILM FERRITES VAPOR DEPOSITED BY ONE-STEP PROCESS IN VACUUM

HACKSKAYLO, M. /HELPA/ SEP. 1966 DATE- SEP. 1966
MSC-259

Thin-film ferrites are formed by vapor deposition of a mixture of powdered ferrites and powdered boron oxide at controlled temperatures in a vacuum chamber. These films are used in memory devices for computers and as thin-film inductors in communications and telemetry systems.

B66-10400

SYSTEM FOR ETCHING THICK ALUMINUM LAYERS

MINIMIZES BRIDGING AND UNDERCUTTING

SPON- INNOVATOR NOT GIVEN /BENDIX CORP./ DATE-

SEP. 1966

M-FS-1366

Four step photoresist process for etching thick aluminum layers for semiconductor device contacts produces uniform contact surfaces, eliminates bridging, minimizes undercutting, and may be used on various materials of any thickness.

B66-10421

COPPER WIRE PLATED WITH NICKEL AND SILVER

RESISTS CORROSION

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-761

Copper wire for electrical harnesses, when plated with both nickel and silver, resists galvanic corrosion and high temperatures while maintaining electrical properties and solderability.

B66-10445

WELDABLE ALUMINUM ALLOY HAS IMPROVED MECHANICAL PROPERTIES

WESTERLUND, R. W. /ALCOA RES. LABS./ DATE- OCT. 1966
M-FS-295

Weldable aluminum alloy has good resistance to stress-corrosion cracking, shows unchanged strength and formability after storage at room temperature, and can be pre-aged, stretched, and aged. Since toxic fumes of cadmium oxide are evolved when the new alloy is welded, adequate ventilation must be provided.

B66-10448

THERMAL STRESS-RELIEF TREATMENTS FOR 2219

ALUMINUM ALLOY ARE EVALUATED

SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- OCT. 1966
M-FS-1213

Evaluation of three thermal stress relief treatments for 2219 aluminum alloy in terms of their effect on residual stress, mechanical properties, and stress corrosion resistance. The treatments are post aging and stress relieving fullscale and subscale parts formed in the aged T81 condition, and aging subscale parts formed in the unaged T31 condition.

B66-10451

REUSABLE CHELATING RESINS CONCENTRATE METAL IONS FROM HIGHLY DILUTE SOLUTIONS

BAUMAN, A. J. WERTAL, H. H. WELKY, N. DATE- OCT. 1966
JPL-758

Column chromatographic method uses new metal chelating resins for recovering heavy-metal ions from highly dilute solutions. The absorbed heavy-metal cations may be removed from the chelating resins by acid or base washes. The resins are reusable after the washes are completed.

B66-10453

THERMOPLASTIC RUBBERLIKE MATERIAL PRODUCED AT LOW COST

HENDEL, F. J. DATE- OCT. 1966
JPL-793

Thermoplastic rubberlike material is prepared by blending a copolymer of ethylene and vinyl acetate with asphalt and a petroleum distillate. This low cost material is easily molded or extruded and is compatible with a variety of fillers.

B66-10454

GAGE OF 6.5 PER CENT SI-FE SHEET IS

CHEMICALLY REDUCED

GOLDMAN, A. PAVLOVIC, D. M. /WESTINGHOUSE ELRC. CORP./ DATE- OCT. 1966
MSC-537

Chemical milling process aids the production of 6.5 percent silicon-iron soft magnetic-alloy sheets to very thin gages. Following conventional rolling to safe gage limits, the material is chemically reduced to the desired gage.

B66-10458

HEAT TREATMENT STABILIZES WELDED ALUMINUM

JIGS AND TOOL STRUCTURES

03 MATERIALS (CHEMISTRY)

MEHNERT, R. S. /N. AM. AVIATION/ DATE- OCT. 1966
MSC-800

Heat treatment processes, applied after welding but before machining, imparts above normal stability to welded aluminum jigs and tool structures. Weight saving will not be realized in these tools if rigidity equal to that of a comparable steel tool is required.

B66-10467

XENON FORMS STABLE COMPOUND WITH FLUORINE
CLAASSEN, H. H. MALM, J. G. SELIG, H. H. DATE-
OCT. 1966
ARG-4

Experiments show that xenon and fluorine combine readily at 400 deg C to form xenon tetrafluoride, which is colorless, crystalline, chemically stable and solid at room temperature. This process can be used for the separation of xenon from mixtures with other noble gases.

B66-10479

ELECTROLESS NICKEL PLATING ON STAINLESS
STEELS AND ALUMINUM
SPON- INNOVATOR NOT GIVEN /GE/ DATE- NOV. 1966
GSFC-533

Procedures for applying an adherent electroless nickel plating on 303 SE, 304, and 17-7 PH stainless steels, and 7075 aluminum alloy was developed. When heat treated, the electroless nickel plating provides a hard surface coating on a high strength, corrosion resistant substrate.

B66-10487

ADHESIVE FOR POLYESTER FILMS CURES AT ROOM
TEMPERATURE, HAS HIGH INITIAL TACK
CHRISTIAN, C. M. FUST, G. W. WELCHEL, C. J.
/THIokol CHEM. CORP./ DATE- NOV. 1966
M-FS-938

Quick room-temperature-cure adhesive bonds polyester-insulated flat electrical cables to metal surfaces and various other substrates. The bond strength of the adhesive may be considerably increased by first applying a commercially available polyamide primer to the polyester film.

B66-10517

COLD TRAP INCREASES SENSITIVITY OF GAS
CHROMATOGRAPHY
GARRARD, G. G. WESLEY, R. D. /N. AM. AVIATION/
DATE- DEC. 1966
M-FS-1617

Cold trap concentrates oxygen and argon to determine trace amounts /as low as 0.1 ppm/ in helium by gas chromatography.

B66-10519

BRAZE ALLOY HOLDS BONDING STRENGTH OVER WIDE
TEMPERATURE RANGE
SPON- INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./
DATE- NOV. 1966
LEWIS-337

Copper-based quaternary alloys of the solid solution type is used for vacuum furnace brazing of large stainless steel components at a maximum temperature of 1975 deg F. The alloy has high bonding strength and good ductility over a temperature range extending from the cryogenic region to approximately 800 deg F.

B66-10527

CRUCIBLE CAST FROM BERYLLIUM OXIDE AND
REFRACTORY CEMENT IS IMPERVIOUS TO FLUX
AND MOLTEN METAL
JASTRZEBSKI, Z. D. DATE- NOV. 1966
ARG-22

Crucible from a mixture of a beryllium oxide aggregate and hydraulic refractory cement, and coated with an impervious refractory oxide will not deteriorate in the presence of fused salt-molten metal mixtures such as uranium-magnesium-zinc-halide salt systems. Vessels cast by this process are used in the flux reduction of oxides of thorium and uranium.

B66-10528

LOWER-COST TUNGSTEN-RHENIUM ALLOYS
KLOPF, W. D. RAFFO, P. L. WITZKE, W. E. DATE-
DEC. 1966

LEWIS-332

Tungsten-rhenium alloys with a substantially more dilute rhenium content have ductilities and other mechanical properties which compare favorably with the tungsten-rhenium alloys having much higher concentrations of the costly rhenium.

B66-10535

PROCESS YIELDS CO-Fe ALLOYS WITH SUPERIOR
HIGH TEMPERATURE MAGNETIC PROPERTIES
BARRANGER, J. E. DATE- NOV. 1966
LEWIS-333

Cobalt-iron alloys containing from 7.0 to 9.3 percent iron prepared from ultrapure cobalt and iron have the highest Curie point of all known magnetically soft materials. Their high permeability, low hysteresis loss, good saturation induction, and square loop characteristics recommend them for use in power transformers and rotating machinery.

B66-10538

TUNGSTEN INSULATED SUSCEPTOR CUP FOR HIGH
TEMPERATURE INDUCTION FURNACE ELIMINATES
CONTAMINATION
GERINGER, H. J. DATE- NOV. 1966
LEWIS-283

METILUR /Materials Experimental Tungsten Induction Laboratory Unit Replacement/ is an improved, unitized design of a susceptor cup and shielding that uses only one type of construction material /tungsten/ which eliminates contamination. Cycling runs can be accomplished with METILUR.

B66-10540

SILVER-BASE TERNARY ALLOY PROVES SUPERIOR
FOR SLIP RING LEAD WIRES
ERNST, R. H. WILLIAMS, D. N. DATE- NOV. 1966
M-FS-1540

Slip ring lead wires composed of ternary alloys of silver, have high electrical conductivity, a tensile strength of at least 30,000 psi, high ductility, and are solderable and weldable. An unexpected advantage of these alloys is their resistance to discoloration on heating in air.

B66-10551

NEW TUNGSTEN ALLOY HAS HIGH STRENGTH
AT ELEVATED TEMPERATURES
SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- DEC. 1966
REAN- SEE ALSO NASA-TN-D-3248
LEWIS-336

Tungsten-hafnium-carbon alloy has tensile strengths of 88,200 psi at 3000 deg F and 62,500 psi at 3500 deg F. Possible industrial applications for this alloy would include electrical components such as switches and spark plugs, die materials for die casting steels, and heating elements.

B66-10558

TANTALUM ALLOYS RESIST CREEP DEFORMATION AT
ELEVATED TEMPERATURES
BUCKMAN, R. W., JR. /WESTINGHOUSE ELEC. CORP./
DATE- DEC. 1966
LEWIS-350

Dispersion-strengthened tantalum-base alloys possess high strength and good resistance to creep deformation at elevated temperatures in high vacuum environments. They also have ease of fabrication, good weldability, and corrosion resistance to molten alkali metals.

B66-10572

TUNGSTEN FIBER-REINFORCED COPPER COMPOSITES
FORM HIGH STRENGTH ELECTRICAL
CONDUCTORS
MC DANIELS, D. I. SIGNORELLI, R. A. DATE- DEC.
1966 REAN- SEE ALSO NASA-TN-D-3590
LEWIS-338

Tungsten fiber-reinforced copper composites have tensile strength, yield strength, and modulus of elasticity proportional to fiber content. The composites form high strength electrical conductors.

B66-10578

SPRAYABLE BIREFRINGENT COATING ENABLES

STRAIN MEASUREMENTS ON LARGE SURFACES

HUMPHREY, F. T. MC GEE, W. M. /LOCKHEED AIRCRAFT CORP./ DATE- DEC. 1966
M-FS-1484

Birefringent coating for strain measurements on large surfaces contains constituents that can be premixed and sprayed as a single component with conventional paint spray equipment. Elevated temperatures are not required for spraying or curing of the coating material which has long pot life.

B66-10586

GAS CHROMATOGRAPHIC COLUMN ENABLES ANALYSIS OF PROPELLANT HYDRAZINES

WELZ, E. A., JR. /N. AM. AVIATION/ DATE- DEC. 1966

MSC-1161

Stainless steel column is used in gas chromatographic analysis of propellant-grade hydrazine. The column has also been found effective for the separation of other amines and alcohols and nitriles.

B66-10594

USE OF STEEL AND TANTALUM APPARATUS FOR MOLTEN CD-MG-ZN ALLOYS

BENNETT, G. A. BURRIS, L., JR. KYLE, M. L. NELSON, P. A. DATE- DEC. 1966
ARG-199 ARG-200

Steel and tantalum apparatus contains various ternary alloys of cadmium, zinc, and magnesium used in pyrochemical processes for the recovery of uranium-base reactor fuels. These materials exhibit good corrosion resistance at the high temperatures necessary for fuel separation in liquid metal-molten salt solvents.

B66-10609

FILM COATING PERMITS LOW-FORCE SCRIBING

WILLING, E. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-990

Film coating requires low scribing force, is relatively unaffected by aging, and gives off a soft, fine scribe residue containing a proven lubricant.

B66-10616

HEAT-TREATMENT OF METAL PARTS FACILITATED BY SAND EMBEDMENT

BRISCOE, C. C. KELLEY, R. C. /BOEING CO./ DATE- DEC. 1966
M-FS-1543

Embedding metal parts of complex shape in sand contained in a steel box prevents strains and warping during heat treatment. The sand not only provides a simple, inexpensive support for the parts but also ensures more uniform distribution of heat to the parts.

B66-10631

SILVER-PALLADIUM BRAZE ALLOY RECOVERED FROM MASKING MATERIALS

CIERNIAK, R. COLMAN, G. DE CARLO, F. DE CARLO, F. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1845

Method for recovering powdered silver-palladium braze alloy from an acrylic spray binder and rubber masking adhesive used in spray brazing is devised. The process involves agitation and dissolution of masking materials and recovery of suspended precious metal particles on a filter.

B66-10639

PROCESS FOR PREPARING DISPERSIONS OF ALKALI METALS

LANDEL, R. F. REMBAUM, A. DATE- DEC. 1966
JPL-734

Finely divided particles of alkali metals are produced by combining alkali metals with certain aromatic compounds in selected solvents to form low-temperature soluble complexes from which the pure alkali metals precipitate quantitatively when the solutions are warmed. All operations must be carried out in an inert gas atmosphere.

B66-10643

COMBUSTION CHAMBER STRUTS CAN BE EFFECTIVELY TRANSPIRATION COOLED

PALMER, G. H. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1830

Vapor-deposited sintering technique increases the feasible temperature range of transpiration-cooled structural members in combustion chambers. This technique produces a porous mass of refractory metal wires around a combustion chamber structural member. This mass acts as a transpiration-cooled surface for a thick-walled tube.

B66-10646

PROCESS PRODUCES CHLORINATED AROMATIC ISOCYANATE IN HIGH YIELD

TRISCHLER, F. /WHITTAKER CORP./ DATE- DEC. 1966
M-FS-1658

Tetrachloreterephthaloyl chloride reacts with sodium azide in an atmosphere of nitrogen to form a high yield of tetrachloro-p-phenylene diisocyanate. The chlorinated diisocyanate should have application as an intermediate in the preparation of polyurethane foams. The high halogen content would impart added flame resistance to these foams.

B66-10651

INTERGRANULAR METAL PHASE INCREASES THERMAL SHOCK RESISTANCE OF CERAMIC COATING

CARPENTER, H. W. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1862 M-FS-1865

Dispersed copper phase increases the thermal shock resistance of a plasma-arc-sprayed coating of zirconia used as a heat barrier on a metal substrate. A small amount of copper is deposited on the granules of the zirconia powder before arc-spraying the resultant powder composite onto the substrate.

B66-10666

WIRE MATERIAL REDUCES COMPRESSOR BLADE VIBRATION

JOHNSON, R. L. DATE- DEC. 1966
LEWIS-357

Wire material /Inconel/ having high friction and low wear characteristics, reduces vibratory stress and prevents compressor blade failure.

B66-10673

COLD SOLID PROPELLANT MOTOR HAS STOP-RESTART CAPABILITY

HENDEL, F. J. DATE- DEC. 1966
JPL-836

Solid propellant rocket is kept and fired at low temperatures in launch vehicles or spacecraft. The motor is capable of developing a specific impulse comparable to that of liquid propellant motors, is started, stopped, and restarted, and is stored in space without solar radiation causing hot spots on the motor casing.

B66-10681

THIN PLASTIC SHEET ELIMINATES NEED FOR EXPENSIVE PLATING

STREMEL, R. L. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1896

Gasket of a commercially available plastic material is interposed between the mating surfaces in axial joints where a hard and a soft metal are in intimate contact under stress conditions. This eliminates the fretting problem and is quicker and less expensive than the plating process.

B66-10684

IMPROVED METHOD OF EDGE COATING FLAT RIBBON WIRE

SPON- INNOVATOR NOT GIVEN /SCHJELDAHL /G. T. / CO./ DATE- DEC. 1966
M-FS-902

Method to coat the edges of flat ribbon wire is devised by using enamel with modified flow properties due to addition of 2 to 4 percent silicon. Conventional coating procedures several edge coatings to minimize oxidation and additional conventional coats are applied after edge coating to build up thickness.

B66-10701

TRACE LEVELS OF METALLIC CORROSION IN WATER

03 MATERIALS (CHEMISTRY)

DETERMINED BY EMISSION SPECTROGRAPHY

SNELL, H. H. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-1193

Emission spectrographic method determines trace amounts of inorganic impurities in potable water. The capability of this innovation should arouse considerable interest among plant biologists, chemists working in organic synthesis, and pathologists.

B66-10705

GLASS FORMULATION HAS HIGH COEFFICIENT OF THERMAL EXPANSION

DAVIS, E. K. SEIDEL, J. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966 REAN- SEE ALSO B66-10704
NU-0084

Glass formulation has a high coefficient of thermal expansion. The glass makes a good hermetic seal for the end of a stainless steel or copper tube such as a sheath of an instrumentation cable.

B66-10710

RADIOACTIVE METHOD ENABLES DETERMINATION OF SURFACE AREAS RAPIDLY AND ACCURATELY

ROESHER, J. ROLL, J. A. RYMER, G. T. SUNDAY, J. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966
NU-0088

Radioactive krypton adsorption technique is used to determine the surface area of more than one sample of material simultaneously.

B67-10003

NEW ELECTROLYTE MAY INCREASE LIFE OF POLAROGRAPHIC OXYGEN SENSORS

ALBRIGHT, C. F. /GARRETT CORP./ DATE- JAN. 1967
MSC-1049

Electrolyte increases life on oxygen sensors in a polarograph used for measuring the partial pressure of oxygen in a gas mixture. It consists of a solution of lithium chloride, dimethyl acetamide and water.

B67-10007

COMPOSITES OF POROUS METAL AND SOLID LUBRICANTS INCREASE BEARING LIFE

SLINEY, H. E. DATE- JAN. 1967
LEWIS-307

Self-lubricating composites of porous nickel and nickel-chromium alloy impregnated with a barium fluoride-calcium fluoride eutectic, and a thin film of solid lubricant increase wear life of load bearing surfaces.

B67-10012

CRYSTAL MICROBALANCE MEASURES CONDENSABLE MOLECULAR FLUXES

STEPHENS, J. B. DATE- JAN. 1967
JPL-845

Quartz crystal quantitatively measures molecular fluxes emanating from and condensing on spacecraft surfaces. Vibrating in a thickness shear mode, the crystal is frequency sensitive to changes in mass on its surface and can measure a fractional monolayer of a condensate.

B67-10014

ABRADED CADMIUM-PLATED CABLE CONNECTORS REPAIRED BY CONVERSION COATING

SIMMONS, J. R. /BOEING CO./ DATE- JAN. 1967
M-FS-1424

Conversion coating procedure repairs scratched and abraded cadmium-plated aluminum cable connectors while they are in assembly.

B67-10016

DISPERSION OF BORAX IN PLASTIC IS EXCELLENT FIRE-RETARDANT HEAT INSULATOR

EVANS, R. HUGHES, J. SCHMITZ, F. DATE- JAN. 1967
ARG-5

A mix of borax powder and a chlorinated anhydrous polyester resin yields a plastic composition that is fire-retardant, yields a minimum of toxic gases when heated, and exhibits high thermal insulating properties. This composition can be used as a coating or can be converted into laminated or cast shapes.

B67-10026

BERYLLIUM FLUORIDE FILM PROTECTS BERYLLIUM AGAINST CORROSION

ODONNELL, P. M. O'DONNELL, P. M. DATE- FEB. 1967
LEWIS-363

Film of beryllium fluoride protects beryllium against corrosion and stress corrosion cracking in water containing chloride ion concentrations. The film is formed by exposing the beryllium to fluorine gas at 535 degrees C or higher and makes beryllium suitable for space applications.

B67-10032

FLUID-BED FLUORIDE VOLATILITY PROCESS RECOVERS URANIUM FROM SPENT URANIUM ALLOY FUELS

BARGHUSEN, J. J. CHILENSKAS, A. A. GUNDERSON, G. E. HOLMES, J. T. JONKE, A. A. KINCINAS, J. E. LEVITZ, N. M. POTTS, G. L. RAMASWAMI, D. STETHERS, H. TURNER, K. S. DATE- MAR. 1967

REAN- SEE ALSO ANL-6979, ANL-6829, ANL-6830, ANL-6973, ANL-6992, ANL-6994
ARG-232

Fluid-bed fluoride volatility process recovers uranium from uranium fuels containing either zirconium or aluminum. The uranium is recovered as uranium hexafluoride. The process requires few operations in simple, compact equipment, and eliminates aqueous radioactive wastes.

B67-10033

HYDRATED MULTIVALENT CATIONS ARE NEW CLASS OF MOLTEN SALT MIXTURES

ANGELL, C. A. DATE- MAR. 1967
ARG-211

Electrical conductance and activation energy measurements on mixtures of calcium and potassium nitrate show the hydrated form to be a new class of molten salt. The theoretical glass transition temperature of the hydrate varied in a manner opposite to that of the anhydrous system.

B67-10034

TWO TECHNIQUES ENABLE SAMPLING OF FILTERED AND UNFILTERED MOLTEN METALS

BURRIS, L., JR. PIERCE, R. D. TOBIAS, K. R. WINSCH, I. O. DATE- MAR. 1967 REAN- SEE ALSO ANL-7088
ARG-150

Filtered samples of molten metals are obtained by filtering through a plug of porous material fitted in the end of a sample tube, and unfiltered samples are obtained by using a capillary-tube extension rod with a perforated bucket. With these methods there are no sampling errors or loss of liquid.

B67-10044

IRRADIATED GASES TRANSFERRED WITHOUT CONTAMINATION OR DILUTION

BONN, J. L. KERN, W. DATE- MAR. 1967
LEWIS-278

Vacuum chamber apparatus opens sealed canisters of irradiated gases and transfers the contents without contaminating the surrounding area, and without diluting or polluting the contained gases. The apparatus consists of the chamber, a valved piping manifold, and a special drill and sealed drilling access.

B67-10049

CRYOGENIC FATIGUE DATA DEVELOPED FOR INCONEL 718

SCHMIDT, E. H. /N. AM. AVIATION/ DATE- MAR. 1967
M-FS-702

Data were obtained on the cryogenic fatigue properties of Inconel 718 bar using axial loading and rotating beam fatigue tests. Results also disclosed the fatigue properties of Inconel 718 sheet materials.

B67-10050

ZIRCONIUM ALLOYS WITH SMALL AMOUNTS OF IRON AND COPPER OR NICKEL SHOW IMPROVED CORROSION RESISTANCE IN SUPERHEATED STEAM

GREENBERG, S. YOUNGDAHL, C. A. DATE- MAR. 1967
ARG-226

Heat treating various compositions of zirconium

alloys improve their corrosion resistance to superheated steam at temperatures higher than 500 degrees C. This increases their potential as fuel cladding for superheated-steam nuclear-fueled reactors as well as in autoclaves operating at modest pressures.

B67-10051

STUDY MADE OF CORROSION RESISTANCE OF STAINLESS STEEL AND NICKEL ALLOYS IN NUCLEAR REACTOR SUPERHEATERS

GREENBERG, S. HART, R. K. LEE, R. H. RUTHER, W. E. SCHLUETER, R. R. DATE- MAR. 1967
ARG-230

Experiments performed under conditions found in nuclear reactor superheaters determine the corrosion rate of stainless steel and nickel alloys used in them. Electropolishing was the primary surface treatment before the corrosion test. Corrosion is determined by weight loss of specimens after defilming.

B67-10058

ADDITION OF SOLID OXIDIZER INCREASES LIQUID FUEL SPECIFIC IMPULSE

HENDEL, F. J. DATE- APR. 1967
JPL-861

Adding soluble solid oxidizers to hydrazine and similar fuels makes them useful in low temperature bipropellant systems. These oxidizers improve the low specific impulse, high freezing point, low boiling point, and low density of the fuels.

B67-10062

RECOMMENDED VALUES OF THE THERMOPHYSICAL PROPERTIES OF EIGHT ALLOYS, THEIR MAJOR CONSTITUENTS AND OXIDES

TOULOUKIAN, Y. S. /PURDUE UNIV./ DATE- MAR. 1967
NU-0095

Reference work provides in tabular and graphical form the thermophysical properties of basic alloys, their constituents and oxides. This is useful for personnel who deal with extreme temperature environments.

B67-10069

CONTROLLED FERRITE CONTENT IMPROVES WELDABILITY OF CORROSION-RESISTANT STEEL

MALIN, C. O. /N. AM. AVIATION/ DATE- APR. 1967
M-FS-568

Corrosion-resistant steel that adds restrictions on chemical composition to ensure sufficient ferrite content decreases the tendency of CRES to develop cracks during welding. The equations restricting composition are based on the Schaeffler constitution diagram.

B67-10070

RADIAL FURNACE SHOWS PROMISE FOR GROWING STRAIGHT BORON CARBIDE WHISKERS

FEINGOLD, E. /GE/ DATE- APR. 1967
HQ-50

Radial furnace, with a long graphite vaporization tube, maintains a uniform thermal gradient, favoring the growth of straight boron carbide whiskers. This concept seems to offer potential for both the quality and yield of whiskers.

B67-10078

PURIFICATION TRAIN PRODUCES ULTRAPURE HYDROGEN GAS

WALTER, R. J. /N. AM. AVIATION/ DATE- APR. 1967
M-FS-1913

Three-stage purification train produces ultrapure hydrogen gas at 1000 psi from K-bottles of high-purity hydrogen. The continuous process incorporates deoxidation and dehydration units and a molecular sieve.

B67-10079

ARYLENESILOXANE COPOLYMERS

BREED, L. W. ELLIOTT, R. L. /MIDWEST RES. INST./ DATE- APR. 1967
M-FS-1812

Arylenesiloxane copolymers with regularly ordered structures were discovered during efforts to develop organosilicon polymers. Arylenesilane and siloxane monomers were both synthesized in these experiments.

B67-10083

EFFECTS OF HELIUM AND NITROGEN AS PRESSURANTS IN NITROGEN TETROXIDE TRANSFER
BIZJAK, F. SINKIN, D. J. /N. AM. AVIATION/
DATE- APR. 1967

MSC-924 MSC-925

Study investigates effects of helium and nitrogen as pressurants in nitrogen tetroxide transfer from one vessel to another at a higher elevation. Results may contribute to creation of new environmental systems and improved oxygen solubility in water to promote fish life.

B67-10089

MATERIALS DATA HANDBOOKS PREPARED FOR ALUMINUM ALLOYS 2014, 2219, AND 5456, AND STAINLESS STEEL ALLOY 301

SPON- INNOVATOR NOT GIVEN /SYRACUSE UNIV. RES. INST./ DATE- APR. 1967

M-FS-1959 M-FS-1960 M-FS-1961 M-FS-1962

Materials data handbooks summarize all presently known properties of commercially available structural aluminum alloys 2014, 2219, and 5456 and structural stainless steel alloy 301. The information includes physical and mechanical property data and design data presented in tables, illustrations, and text.

B67-10095

IMPROVED CHLORATE CANDLE PROVIDES CONCENTRATED OXYGEN SOURCE

HAUG, R. D. MYERS, D. A. TANZAR, G. F. /GARRETT CORP./ DATE- MAR. 1967
MSC-1137

Improved chlorate candle is used as a solid, portable source of oxygen in emergency situations. It contains sodium chlorate, iron, barium peroxide, and glass mixed in powdered form. The oxygen evolves from the decomposition of the sodium chlorate when an ignition pellet is electrically initiated.

B67-10100

SYNTHESIS OF VARIOUS HIGHLY HALOGENATED MONOMERS AND POLYMERS

HOLLANDER, J. TRISCHLER, F. D. /WHITTAKER CORP./ DATE- APR. 1967 REAN- SEE ALSO B66-10646
M-FS-2143

Halogenated polyurethane and polycarbonate are synthesized and found to be LOX compatible but dependent upon the type nitrogen bonding.

B67-10102

SIMPLIFIED METHOD INTRODUCES DRIFT FIELDS INTO CELLS

GOLDSTEIN, B. RAPPAPORT, P. WYSOCKI, J. J. /RCA/ DATE- APR. 1967
GSFC-572

Drift fields are simply introduced into solar cells at low temperatures in short periods. This is done after their rectifying junctions and output contacts are applied.

B67-10112

THERMODYNAMIC PROPERTIES RELATED TO EXPANSION OF TWO-COMPONENT GAS

BIZJAK, F. /N. AM. AVIATION/ DATE- APR. 1967
MSC-1133

Theoretical equations were derived from basic thermodynamic equations to relate the thermodynamic properties of a two-component gas mixture to the expansion of the gas during tank ullage blowdown.

B67-10113

NONWOVEN GLASS FIBER MAT REINFORCES POLYURETHANE ADHESIVE

ROSELAND, L. M. /DOUGLAS AIRCRAFT CO./ DATE- MAY 1967
M-FS-2309

Nonwoven glass fiber mat reinforces the adhesive properties of a polyurethane adhesive that fastens hardware to exterior surfaces of aluminum tanks. The mat is embedded in the uncured adhesive. It ensures good control of the bond line and increases the peel strength.

B67-10121

PORTABLE FIXTURE FACILITATES PRESSURE

03 MATERIALS (CHEMISTRY)

TESTING OF INSTRUMENTATION FITTINGS

OLSON, G. A. /BOEING CO./ DATE- MAY 1967
M-FS-2032

Portable fixture facilitates pressure testing to detect possible leaks in instrumentation fittings mounted on tank bulkheads. It uses a vacuum cup which seals a pressure regulator adapter around one side of the fitting to be pressure tested. Leakage is detected with a gas sniffer.

B67-10122

EVALUATION OF HIGH TEMPERATURE STRANDED HOOKUP WIRE

DONNELLY, J. H. MOORE, H. J., JR. DATE- MAY 1967
REAN- SEE ALSO NASA-TM-X-53522
M-FS-2478

Tests are performed on wire and insulation materials to determine selection for electronic space assemblies. Wire characteristics of tensile strength, flexibility, conductivity, and general workability are tested. Knowledge of the advantages and limitations of these materials should prevent overspecification.

B67-10124

SILVER PLATING ENSURES RELIABLE DIFFUSION BONDING OF DISSIMILAR METALS

SPON- INNOVATOR NOT GIVEN /BOEING CO. DATE- MAY 1967
M-FS-1975

Dissimilar metals are reliably joined by diffusion bonding when the surfaces are electroplated with silver. The process involves cleaning and etching, anodization, silver striking, and silver plating with a conventional plating bath. It minimizes the formation of detrimental intermetallic phases and provides greater tolerance of processing parameters.

B67-10132

STATIC ELECTRICITY OF POLYMERS REDUCED BY TREATMENT WITH IODINE

HERMANN, A. M. LANDEL, R. F. REMBAUM, A. DATE- MAY 1967
NPO-10062

Treating organic polymers with iodine improves the electrical conductivity. Diffusion enables products of desired properties to be custom formulated. This eliminates a buildup of static electricity and the need for fillers or bound metal salts.

B67-10133

XENON FLUORIDE SOLUTIONS EFFECTIVE AS FLUORINATING AGENTS

HYMAN, H. H. QUARTERMAN, L. A. SHEPT, I. DATE- MAY 1967
ARG-217

Solutions of xenon fluorides in anhydrous hydrogen fluoride have few disruptive effects and leave a residue consisting of gaseous xenon, which can be recovered and refluorinated. This mild agent can be used with materials which normally must be fluorinated with fluorine alone at high temperatures.

B67-10138

STATUS OF ULTRACHEMICAL ANALYSIS FOR SEMICONDUCTORS

DILTS, R. V. HALL, L. C. /VANDERBILT UNIV./ DATE- MAY 1967
M-FS-2254

Status of ultratrace chemical analyses of materials for semiconductors was studied. This study covered atomic absorption spectroscopy, emission spectroscopy, and activation analyses. It makes recommendations to improve sensitivity, reliability and versatility for ultratrace chemical analysis.

B67-10141

STUDY TO MINIMIZE HYDROGEN EMBRITTLEMENT OF ULTRAHIGH-STRENGTH STEELS

ELSEA, S. T. FLETCHER, E. E. GROENEVELD, T. P. /BATTELLE MEM. INST./ DATE- MAY 1967
M-FS-2455

Hydrogen-stress cracking in high-strength steels is influenced by hydrogen content of the material and its hydrogen absorption tendency.

Non-embrittling cleaning, pickling, and electroplating processes are being studied. Protection from this hydrogen embrittlement is important to the aerospace and aircraft industries.

B67-10147

DEGREASING OF TITANIUM TO MINIMIZE STRESS CORROSION

CARPENTER, S. R. /GEN. DYN./CONVAIR DIV./ DATE- MAY 1967
LEWIS-382

Stress corrosion of titanium and its alloys at elevated temperatures is minimized by replacing trichloroethylene with methanol or methyl ethyl ketone as a degreasing agent. Wearing cotton gloves reduces stress corrosion from perspiration before the metal components are processed.

B67-10148

CRACKS IN GLASS ELECTRICAL CONNECTOR HEADERS REMOVED BY DRY BLASTING WITH FINE ABRASIVE

ECKERT, R. W. /GEN. DYN./CONVAIR DIV./ DATE- MAY 1967
LEWIS-381

Cracking that causes pressure leakage in glass connector headers can be alleviated by manipulating the pin bridgewire connectors. This initiates the surface and meniscus cracks. Dry blasting the header surface with a fine abrasive then removes the cracks.

B67-10149

COATING PROTECTS MAGNESIUM-LITHIUM ALLOYS AGAINST CORROSION

SPON- INNOVATOR NOT GIVEN /AM. MACHINE AND FOUNDRY CO./ DATE- MAY 1967 REAN- SEE ALSO NASA-SP-50-68
M-FS-2446

Coating protects newly developed magnesium-lithium alloys against corrosion. The procedure includes heating the ingots in a salt bath and rolling them to the desired sheet thickness. The black coating, which is tough though thin and ductile, is derived mainly from chromium.

B67-10159

HEAT TREATMENT STUDY OF ALUMINUM CASTING ALLOY M-45

LOVOY, C. V. DATE- JUN. 1967 REAN- SEE ALSO B65-10092
M-FS-2397

Study determines the heat treatment cycle of aluminum casting alloy M-45 which will increase the strength levels of the alloy while maintaining optimum stress corrosion resistance. Evidence indicates that present production castings are overaged too severely to take full advantage of the strength of the alloy.

B67-10163

EFFECTS OF HEAT INPUT RATES ON T-1 AND T-1A STEEL WELDS

DAVIS, R. A. OLSEN, M. G. WORDEN, S. W. DATE- JUN. 1967 REAN- SEE ALSO NASA TM-X-53537
M-FS-2475

Technology of T-1 and T-1A steels is emphasized in investigation of their weld-fabrication. Welding heat input rate, production weldment circumstances, and standards of welding control are considered.

B67-10168

ISOSTATIC COMPRESSION PROCESS CONVERTS POLYAROMATICS INTO STRUCTURAL MATERIAL

INGHAM, J. D. LAWSON, D. D. OSTRUM, G. K. DATE- JUN. 1967
JPL-892

Isostatic compression process compacts certain powdered aromatic polymers into homogeneous materials that can be machined to form useful components, such as bearings. It provides for complete removal of air in the interstitial spaces surrounding the granules of the powdered polymer before the powder is subjected to isostatic compression.

B67-10182

STRESS CALCULATOR SPEEDILY CONVERTS STRAIN DATA

CORNETT, D. W. /BOEING CO./ DATE- JUN. 1967
M-FS-2021

Stress calculator permits speedy conversion of strain data directly into maximum and minimum stresses and also determines stress direction. The calculator has a movable slide with logarithmic and linear scales, and an information and grid board. Its size is flexible for easy manipulation.

B67-10184

NEW CLASS OF COMPOUNDS HAVE VERY LOW VAPOR PRESSURES

ANGELL, C. A. GRUEN, D. M. DATE- JUN. 1967
ARG-115

Magnesium hexahydrate tetrachlorometallates are 50-volume-percent water, have a high melting point and possess a low vapor pressure. These new compounds are relatively noncorrosive, thermally stable, and water soluble but not hygroscopic. They may have potential applications as cooling fluids.

B67-10185

XENON FLUORIDES SHOW POTENTIAL AS FLUORINATING AGENTS

CHERNICK, C. L. SHIEH, T. C. YANG, N. C. DATE- JUN. 1967
ARG-113

Xenon fluorides permit the controlled addition of fluorine across an olefinic double bond. They provide a series of fluorinating agents that permit ready separation from the product at a high purity. The reactions may be carried out in the vapor phase.

B67-10186

ALPHA PARTICLE BACKSCATTERING MEASUREMENTS USED FOR CHEMICAL ANALYSIS OF SURFACES

PATTERSON, J. H. DATE- JUN. 1967
ARG-116

Alpha particle backscattering performs a chemical analysis of surfaces. The apparatus uses a curium source and a semiconductor detector to determine the energy spectrum of the particles. This in turn determines the chemical composition of the surface after calibration to known samples.

B67-10187

OXIDE FILM ON METAL SUBSTRATE REDUCED TO FORM METAL-OXIDE-METAL LAYER STRUCTURE

YOUNGDAHL, C. A. DATE- JUN. 1967
ARG-48

Electrically conductive layer of zirconium on a zirconium-oxide film residing on a zirconium substrate is formed by reducing the oxide in a sodium-calcium solution. The reduced metal remains on the oxide surface as an adherent layer and seems to form a barrier that inhibits further reaction.

B67-10189

IRON SERVES AS DIFFUSION BARRIER IN THERMALLY REGENERATIVE GALVANIC CELL

CROUTHANEL, C. E. DATE- JUN. 1967
ARG-29

Pure iron or iron-coated diaphragm provides a hydrogen diffusion electrode for a thermally regenerative galvanic cell. It allows the gas to diffuse through its interatomic spaces and resists the corrosive action of the cell environment.

B67-10191

SOLUBILITY DATA ARE COMPILED FOR METALS IN LIQUID ZINC

DILLON, I. G. JOHNSON, I. DATE- JUN. 1967 REAN- SEE ALSO ANL-7083

ARG-149

Available data is compiled on the solubilities of various metals in liquid zinc. The temperature dependence of the solubility data is expressed using the empirical straight line relationship existing between the logarithm of the solubility and the reciprocal of the absolute temperature.

B67-10194

SEPARATION TECHNIQUE PROVIDES RAPID QUANTITATIVE DETERMINATION OF CESIUM-137 IN IRRADIATED NUCLEAR FUEL

ELLENBURG, E. J. MC COWN, J. J. /WESTINGHOUSE ASTRONUC. LAB./ DATE- JUN. 1967
NUC-10047

Potassium cobalt ferrocyanide is used to determine cesium-137 activity in irradiated fuel samples. It preferentially removes cesium from an acid solution of the fuel material. The residue is filtered and analyzed with a gamma spectrometer.

B67-10197

NEW CLASS OF THERMOSETTING PLASTICS HAS IMPROVED STRENGTH, THERMAL AND CHEMICAL STABILITY

BURNS, E. A. DUBROW, B. LUBOWITZ, H. R. /TRW SYSTEMS/ DATE- JUN. 1967
LEWIS-10108

New class of thermosetting plastics has high hydrocarbon content, high stiffness, thermal stability, humidity resistance, and workability in the precured state. It is designated cyclized polydiene urethane, and is applicable as matrices to prepare chemically stable ablative materials for rocket nose cones of nozzles.

B67-10208

STUDY MADE OF RANEY NICKEL TECHNOLOGY

LEE, W. B. /MARQUADT CORP./ DATE- JUN. 1967
M-FS-2054

Raney nickel study indicates that its improved storage life is due to gaseous hydrogen and that the mechanism of its ignitions is catalytic and due to chemisorbed hydrogen atoms. It shows that reacted Raney nickel powder can be reactivated and can introduce multiple ignitions in a hydrogen gas stream.

B67-10209

POROUS MANDRELS PROVIDE UNIFORM DEFORMATION IN HYDROSTATIC POWDER METALLURGY

GRIPSHOVER, P. J. HANES, H. D. /BATTELLE MEM. INST./ DATE- JUN. 1967
M-FS-1972

Porous copper mandrels prevent uneven deformation of beryllium machining blanks. The beryllium powder is arranged around these mandrels and hot isostatically pressed to form the blanks. The mandrels are then removed by leaching.

B67-10227

PHOTOSENSITIVE FILLER MINIMIZES INTERNAL STRESSES IN EPOXY RESINS

DILLON, J. N. /IBM/ DATE- JUL. 1967
M-FS-1880

Photosensitive filler is added to curable epoxy resins to minimize stress from internal shrinkage during curing or polymerization. Cinnamic acid resins and cinnamal ketones may be added in the amount of 1 to 3 percent by weight of the resin mixture.

B67-10228

SUBSTITUTING GOLD FOR SILVER IMPROVES ELECTRICAL CONNECTIONS

LOYD, J. R. PICKARD, R. F. /ASTRO-SPACE LABS./ DATE- JUL. 1967
M-FS-2390

In attaching external leads to thin film sensors of platinum ribbon, liquid gold is applied to each end of the ribbon and the leads are soldered to the cured gold. The cured and soldered liquid gold shows no tendency to migrate and retains initial resistance characteristics when exposed to elevated temperatures.

B67-10232

WELDING, BONDING, AND SEALING OF REFRACTORY METALS BY VAPOR DEPOSITION

SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE- JUL. 1967
LEWIS-123

Plating process welds, bonds, and seals refractory metals without weakening or changing the structure of the base metals. A metal halide compound in the vapor phase is decomposed to deposit filler

03 MATERIALS (CHEMISTRY)

metal on the base metal. The resulting bond is a true metal-to-metal bond.

B67-10236

URANIUM ISOTOPES QUANTITATIVELY DETERMINED BY MODIFIED METHOD OF ATOMIC ABSORPTION SPECTROPHOTOMETRY

LEE, G. H. DATE- JUL. 1967

ARG-210

Hollow-cathode discharge tubes determine the quantities of uranium isotopes in a sample by using atomic absorption spectrophotometry. Dissociation of the uranium atoms allows a large number of ground state atoms to be produced, absorbing the incident radiation that is different for the two major isotopes.

B67-10243

ANALYTICAL TECHNIQUE CHARACTERIZES ALL TRACE CONTAMINANTS IN WATER

POSTER, J. N. LYSIJ, I. NELSON, K. H. /N. AM. AVIATION/ DATE- JUL. 1967

MSC-11032

Properly programmed combination of advanced chemical and physical analytical techniques characterize critically all trace contaminants in both the potable and waste water from the Apollo Command Module. This methodology can also be applied to the investigation of the source of water pollution.

B67-10265

ALUMINUM-TITANIUM HYDRIDE-BORON CARBIDE COMPOSITE PROVIDES LIGHTWEIGHT NEUTRON SHIELD MATERIAL

POINDEXTER, A. M. /WESTINGHOUSE ASTRONUCI. LAB./ DATE- AUG. 1967

NUC-10069

Inexpensive lightweight neutron shield material has high strength and ductility and withstands high internal heat generation rates without excessive thermal stress. This composite material combines structural and thermal properties of aluminum, neutron moderating properties of titanium hydride, and neutron absorbing characteristics of boron carbide.

B67-10266

SIMPLIFIED METHOD MEASURES CHANGES IN TENSILE YIELD STRENGTH USING LEAST NUMBER OF SPECIMENS

DIXON, C. E. /AEROJET-GEN. CORP./ DATE- AUG. 1967

NUC-10075

Simplified method determines yield strength due to heat treat, irradiation or mechanical treatment. Each specimen in a group of specimens is tested for yield stress point, subjected to heat treat or irradiation, and retested for new yield stress point which is a measure of change in material.

B67-10282

MATERIALS DATA HANDBOOK, INCONEL ALLOY 718

SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES. INST./ DATE- AUG. 1967

M-FS-2348

Materials data handbook on Inconel alloy 718 includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures and other pertinent engineering information required for the design and fabrication of components and equipment utilizing this alloy.

B67-10286

LIQUID CRYSTALS DETECT VOIDS IN FIBER GLASS LAMINATES

HOLLAR, W. T. /GEN. DYN./CONVAIR/ DATE- AUG. 1967

LEWIS-10104

Liquid crystal solution nondestructively detects voids or poor bond lines in fiber glass laminates. A thin coating of the solution is applied by spray or brush to the test article surface, and when heated indicates the exact location of defects by differences in color.

B67-10290

TRACE HYDRAZINES IN AQUEOUS SOLUTIONS ACCURATELY DETERMINED BY GAS CHROMATOGRAPHY

WELZ, E. A., JR. /N. AM. AVIATION/ DATE- AUG.

1967 REAN- SEE ALSO NASA B66-10586

MSC-11222

Trace amounts of hydrazines in aqueous solutions can be determined by using polyethyleneimine /PEI/ in conjunction with the gas chromatographic column. The PEI specifically retains water without altering the separability or elution order of the hydrazine and associated constituents.

B67-10299

LIQUID OXYGEN DUCTING CLEANED BY FALLING FILM METHOD

PAUL, H. I. /BOEING CO./ DATE- AUG. 1967

M-FS-11816

Principle of a vertical falling film is used to clean contaminated large diameter and length liquid oxygen /LOX/ cylindrical ducting. The cleaning cycle is performed by flowing trichloroethylene in a falling film down a vertically mounted duct for approximately one hour.

B67-10301

MATERIALS DATA HANDBOOK, ALUMINUM ALLOY 7075

SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES. INST./ DATE- AUG. 1967

M-FS-2349

Materials data handbook on aluminum alloy 7075 includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures, and other pertinent engineering information required for the design and fabrication of components and equipment utilizing this alloy.

B67-10302

IMPROVED COMPRESSION MOLDING PROCESS

HEIER, W. C. DATE- JUL. 1967

LANGLEY-10027

Modified compression molding process produces plastic molding compounds that are strong, homogeneous, free of residual stresses, and have improved ablative characteristics. The conventional method is modified by applying a vacuum to the mold during the molding cycle, using a volatile sink, and exercising precise control of the mold closure limits.

B67-10312

NEW ELECTRON MICROSCOPE EMPLOYS NEW VIDEO DISPLAY TECHNIQUE

BROOKSHIER, W. K. GILROY, J. DATE- AUG. 1967

ARG-158

Video display system for a scanning electron microscope provides slow scanning rates, a self-generated color gradient technique, and allows leisurely viewing of several hours. It also enables the viewing of areas where selected energy regions contribute relatively few electrons, and the changing of specimen position and magnification without adjustments.

B67-10315

TRITIATED ALUMINA SERVES AS REAGENT FOR SELF-LABELING ANALYSIS

ERENRICH, E. H. KLEIN, P. D. DATE- SEP. 1967

ARG-209

Tritiated alumina, prepared by exchange of the surface hydroxyl groups with tritiated water, is a suitable reagent for exchange-labeling of specific compounds in low concentrations prior to chromatographic analysis. In a chromatographic column, it detects and measures submicrogram quantities of material.

B67-10320

EVAPORANT FEED DEVICE FACILITATES FLASH VAPOR DEPOSITION PROCESS IN VACUUM

HERMANN, W. A. STIRN, R. J. DATE- SEP. 1967

NPO-10232

Mechanism using a helix sequentially feeds prescribed amounts of metal charges into an evaporation boat used for flash vapor deposition of the evaporants onto a substrate in a vacuum chamber. The helix is advanced by external manual controls extending through sealed feed-through devices into the chamber wall.

B67-10322

CHEMICAL MILLING SOLUTION REVEALS STRESS

CORROSION CRACKS IN TITANIUM ALLOY

BRASKI, D. N. DATE- SEP. 1967

LANGLEY-10077

Solution of hydrogen flouride, hydrogen peroxide, and water reveals hot salt stress corrosion cracks in various titanium alloys. After the surface is rinsed in water, dried, and swabbed with the solution, it can be observed by the naked eye or at low magnification.

B67-10324

THERMODYNAMIC PROPERTIES OF SOLID

PALLADIUM-SILVER ALLOYS AND OTHER ALLOYS ARE

INVESTIGATED BY TORSION-EFFUSION TECHNIQUE

MYLES, K. M. DATE- SEP. 1967 REAN- SEE ALSO

ANL-6657

ARG-277

Vapor pressure data obtained by the torsion-effusion method provides the thermodynamic properties of several transition-metal alloy systems. The vapor pressure of silver over solid silver and over palladium-silver alloys was measured and the results were more accurate than those found previously by other techniques.

B67-10340

HIGH-STRENGTH TUNGSTEN ALLOY WITH IMPROVED

DUCTILITY

KLOPP, W. D. RAFFO, P. L. RUBENSTEIN, L. S.

WITZKE, W. R. DATE- AUG. 1967

LEWIS-10257

Alloy combines superior strength at elevated temperatures with improved ductility at lower temperatures relative to unalloyed tungsten. Composed of tungsten, rhenium, hafnium, and carbon, the alloy is prepared by consumable electrode vacuum arc-melting and can be fabricated into rod, plate, and sheet.

B67-10346

THERMODYNAMIC PROPERTIES OF SATURATED LIQUID

PARAHYDROGEN CHARTED FOR IMPORTANT

TEMPERATURE RANGE

MC CARTY, R. D. /NATL. BUR. OF STD./ ECDER, H.

M. DATE- SEP. 1967

NUC-10018

Six entropy diagrams for parahydrogen in or near the saturated liquid state cover the temperature range from 29.16 degrees to 42.48 degrees R with pressures to 100 psia and mixtures of the liquid and vapor phases to 0.003 quality. The diagrams are printed in color, are 19 by 30 inches in size, and are suitable for wall mounting.

B67-10349

EXCELLENT SPRING PROPERTIES DEVELOPED IN TWO

NICKEL ALLOYS FOR USE AT CRYOGENIC

TEMPERATURES

DESSAU, P. P. /AEROJET-GEN. CORP./ REHN, I. M.

DATE- SEP. 1967

NUC-10084

Cold working and aging prepares nickel alloys for coiling into springs with properties acceptable in a cryogenic environment.

B67-10350

SOFT METAL PLATING ENABLES HARD METAL SEAL TO

OPERATE SUCCESSFULLY IN LOW TEMPERATURE,

HIGH PRESSURE ENVIRONMENT

LANVERMEYER, D. J. /AEROJET-GEN. CORP./ DATE-

SEP. 1967

NUC-10083

Soft metal plating of hard metal lip seal enables successful operation of seal in a cryogenic fluid line under high pressure. The seal is coated with a thin film of 24 carat gold on the lip area to provide antigall and seal properties.

B67-10351

METAL FLAME SPRAY COATING PROTECTS ELECTRICAL

CABLES IN EXTREME ENVIRONMENT

BRADY, R. D. FOX, H. A. /AEROJET-GEN. CORP./

BRADY, R. D. /METCO, INC./ DATE- OCT. 1967

NUC-10077

Metal flame spray coating prevents emf measurement error in sheathed instrumentation cables which are externally attached to cylinders

which were cooled on the inside, but exposed to gamma radiation on the outside. The coating provides a thermoelectrode path for radiation induced high temperatures within the cables.

B67-10354

CUT-THROUGH TESTER ACCURATELY MEASURES

INSULATION FAILURE RATES

BAKER, E. U. /DOUGLAS AIRCRAFT/ DATE- OCT. 1967

M-FS-12506

Cut-through tester electronically measures the rate of failure of various wire and cable insulating materials both as to time and the amount of applied pressure. The force /weight/ acting on the penetrator can be applied through a near infinite range.

B67-10365

MAGNESIUM-LITHIUM ALLOYS DEVELOPED FOR LOW

TEMPERATURE USE

DUNKERLEY, F. J. LEAVENWORTH, H. W., JR.

DUNKERLEY, F. J. /AM. MACHINE AND FOUNDRY CO./

DATE- OCT. 1967 REAN- SEE ALSO NASA-SP-5068

M-FS-1541

Three new magnesium-lithium alloys have been developed for application at cryogenic temperatures. These lightweight alloys have approximately doubled the tensile and yield strengths at room temperature of previously described magnesium-lithium alloys.

B67-10366

STUDY MADE OF DIELECTRIC PROPERTIES OF

PROMISING MATERIALS FOR CRYOGENIC

CAPACITORS

MATHES, K. N. /GE/ MINNICH, S. H. DATE- OCT.

1967

M-FS-13620

Experimental investigations were conducted to determine dielectric properties of promising materials for cryogenic capacitors to be used in energy storage and pulse applications. The three classes of materials investigated were inorganic bonded ferroelectric materials, anodic coatings on metal foils, and polar low temperature liquids.

B67-10374

HANDBOOKS DESCRIBE EDDY CURRENT TECHNIQUES

USED IN NONDESTRUCTIVE TESTING OF METAL

PARTS AND COMPONENTS

SPON- INNOVATOR NOT GIVEN /GEN. DYN./CONVAIR/

DATE- OCT. 1967

M-FS-13172

Handbooks describe eddy current techniques used in nondestructive testing of metal parts and components.

B67-10375

ANALYSIS OF STABILITY-CRITICAL ORTHOTROPIC

CYLINDERS SUBJECTED TO AXIAL COMPRESSION

FINLEY, R. L. /BOEING CO./ LIU, L. S. YANG, P.

B. DATE- OCT. 1967

M-FS-12869

Analytical procedure for determining critical buckling loads of orthotropic cylinders subjected to axial compression loading has been defined. Three modes of instability have been considered - general instability, local instability caused by panel and interframe buckling, and local instability caused by yielding and crippling in areas of stress concentration.

B67-10381

MACHINING HEAVY PLASTIC SECTIONS

STALKUP, O. M. /N. AM. AVIATION/ DATE- OCT. 1967

M-FS-12720

Machining technique produces consistently satisfactory plane-parallel optical surfaces for pressure windows, made of plexiglass, required to support a photographic study of liquid rocket combustion processes. The surfaces are machined and polished to the required tolerances and show no degradation from stress relaxation over periods as long as 6 months.

B67-10383

POLARIZED LIGHT REVEALS STRESS IN MACHINED

LAMINATED PLASTICS

FRANKOWSKI, J. /GEN. DYN./CONVAIR/ DATE- OCT.

03 MATERIALS (CHEMISTRY)

1967

LEWIS-10018

Polarized light applied to drilled laminated plastic components exposes to the human eye the locked-in stresses that will result in fractures and delaminations when the soldering procedure takes place. This technique detects stresses early in the production cycle before appreciable man-hours are invested in an item destined for rejection.

B67-10392

STUDY MADE OF DUCTILITY LIMITATIONS OF ALUMINUM-SILICON ALLOYS

BAILEY, W. A. /DOUGLAS AIRCRAFT CO./ FREDERICK, S. F. DATE- OCT. 1967

M-PS-12524

Study of the relation between microstructure and mechanical properties of aluminum-silicon alloys determines the cause of the variations in properties resulting from differences in solidification rate. It was found that variations in strength are a consequence of variations in ductility and that ductility is inversely proportional to dendrite cell size.

B67-10397

EXPERIMENTS SHED NEW LIGHT ON NICKEL-FLUORINE REACTIONS

FISCHER, J. GUNTER, W. JARRY, R. L. DATE- OCT. 1967 REAN- SEE ALSO ANL-6684

ARG-10008

Isotopic tracer experiments and scale-impingement experiments show fluorine to be the migrating species through the nickel fluoride scale formed during the fluorination of nickel. This is in contrast to nickel oxide scales, where nickel is the migrating species.

B67-10409

SCRIBABLE COATING FOR PLASTIC FILMS

CLARK, R. T. /N. AM. AVIATION/ DATE- OCT. 1967

MSC-11194

Scribable opaque coating for transparent plastic film tape is not affected by aging, vacuum, and moderate temperature extremes. It consists of titanium dioxide, a water-compatible acrylic polymer emulsion, and a detergent. The coating mixture is readily dispersed in water before it is dried.

B67-10417

TECHNIQUE FOR MEASURING MAGNETIC TAPE INTERLAYER ADHESION

CLEMENT, W. G. DATE- OCT. 1967

NPO-10011

Technique measures interlayer adhesion in spacecraft data storage tape to avoid blocking. An unwind force is exerted on the spool, and the displacement before breakaway of the weighted outer layer is used to calculate the peel-off force necessary. This technique also can have terrestrial applications.

B67-10421

SODIUM PERKEXATE PERMITS RAPID OXIDATION OF MANGANESE FOR EASY SPECTROPHOTOMETRIC DETERMINATION

BANE, R. W. DATE- OCT. 1967

ARG-262

Sodium perexenate oxidizes manganese to permanganate almost instantaneously in dilute acid solution and without a catalyst. A solution is prepared by dissolving 200 mg of sodium perexenate in distilled water and diluting to 100 ml.

B67-10429

ADHESIVES FOR LAMINATING POLYIMIDE INSULATED FLAT CONDUCTOR CABLE

MONTENOS, J. C. /QUANTUM, INC./ SAXTON, T. R. TAYLOR, R. L. DATE- NOV. 1967

M-PS-12066

Polymer adhesive laminates polyimide-film flat conductor cable. It is obtained by reacting an appropriate diamine with a dianhydride. The adhesive has also been used in the lamination of copper to copper for the preparation of multilayer circuit boards.

B67-10432

VIBRATION DAMPING COMPOSITION HAS FLUSH-AWAY FEATURE

FELIN, J. F. /N. AM. AVIATION/ DATE- NOV. 1967

M-PS-597

Vibration damping compound nullifies resonant frequencies in structures that support critical components undergoing vibration testing. The main feature of this damping composition is the ability to remove it with a flush of plain tap water.

B67-10436

FUEL CELL LIFE IMPROVED BY METALLIC SINTER ACTIVATION AFTER ELECTRODE ASSEMBLY WELDING

TAYLOR, W. A. /PRATT AND WHITNEY/ DATE- NOV. 1967

MSC-10965

Technique improves the service life of fuel cell electrodes. The welding is done before the metallic sinter is activated by depositing finely divided metal within the sinter structure from a solution with corrosion inhibiting ions. The activator solution flows through the porous sinter while attached to the backup plate.

B67-10437

STUDY MADE OF PNEUMATIC HIGH PRESSURE PIPING MATERIALS /10,000 PSI/

LOEB, M. B. /BOEING CO./ SMITH, J. C. DATE- NOV. 1967

KSC-10133

Evaluations of five types of steel for use in high pressure pneumatic piping systems include tests for impact strength, tensile and yield strengths, elongation and reduction in area, field weldability, and cost. One type, AISI 4615, was selected as most advantageous for extensive use in future flight vehicles.

B67-10439

STUDY MADE OF LARGE AMPLITUDE FUEL SLOSHING

DI MAGGIO, O. D. /N. AM. AVIATION/ SALZMAN, R. N. DATE- NOV. 1967

M-PS-12381

Study of resonant oscillations of an ideal fluid in a cylindrical tank is used to obtain a better understanding of fuel sloshing in large liquid booster. More realistic structural design criteria may be formulated when the dynamic response of the liquid in a cylindrical tank can be predicted analytically.

B67-10440

FLUID PROPERTIES HANDBOOK

GERSHMAN, R. /DOUGLAS AIRCRAFT CO./ SHERMAN, A. DATE- NOV. 1967

M-PS-13462

Single source compilation handbook, has been made of the most accurate available physical property data pertaining to helium, hydrogen, oxygen, and nitrogen.

B67-10441

NEWLY DEVELOPED FOAM CERAMIC BODY SHOWS PROMISE AS THERMAL INSULATION MATERIAL AT 3000 DEG F

BLOCKER, E. W. /UNITED AIRCRAFT CORP./ PAUL, R. D. DATE- NOV. 1967

M-PS-11968

Optimized zirconia foam ceramic body shows promise for use as a thermal insulation material. The insulating media displays low density and thermal conductivity, good thermal shock resistance, high melting point, and mechanical strength.

B67-10442

CORROSION OF ALUMINUM ALLOYS BY CHLORINATED HYDROCARBON/METHANOL MIXTURES

DE FOREST, W. S. /N. AM. AVIATION/ DATE- NOV. 1967

MSC-11365

Laboratory investigations show that water-free mixtures of Freon MF /trichlorofluoromethane/ and methanol vigorously attack aluminum alloys which contain significant amounts of copper. Freon MF alone did not attack the aluminum alloys at room temperature. Pure methanol had

only a slight corrosive effect on the alloy.

B67-10451

**STUDY MADE OF PROCEDURES FOR EXTERNALLY
LOADING AND CORROSION TESTING STRESS
CORROSION SPECIMENS**

HUMPHRIES, T. S. DATE- NOV. 1967 REAN- SEE ALSO
NASA-TN-X-53483
M-FS-12064

Study was initiated to determine methods or test specimens for evaluating stress corrosion cracking characteristics of common structural materials. It was found that the methods of externally loading and corrosion testing were reliable in yielding reproducible results for stress corrosion evaluation.

B67-10454

**WARPAGE ELIMINATED IN COPPER-CLAD
MICROWAVE CIRCUIT LAMINATES**

BOONE, W. L., JR. /IBM/ DATE- NOV. 1967
M-FS-13892

Cryogenic treatment of laminated copper-clad microwave circuit boards eliminates stresses that cause warpage when a circuit is etched on one side of the board. After etching, the stresses may be eliminated to reduce warpage.

B67-10455

**A METHOD OF DETERMINING COMBUSTION GAS
FLOW**

BON TEMPI, P. J. BON TEMPI, P. J. /N. AM. AVIATION/
DATE- DEC. 1967
M-FS-13757

Zirconium oxide coating enables the determination of hot gas flow patterns on liquid rocket injector face and baffle surfaces to indicate modifications that will increase performance and improve combustion stability. The coating withstands combustion temperatures and due to the coarse surface and coloring of the coating, shows the hot gas patterns.

B67-10463

**ACID SPRAY TECHNIQUE MILLS ALUMINUM ALLOY
MATERIALS WITHOUT IMMERSION**

DUFOUR, G. /LOCKHEED MISSILES AND SPACE CO./
DATE- NOV. 1967
M-FS-12500

Acid spray machining technique chemically mills aluminum alloy panels without immersing them in an etchant. The spray does not require artificial heating to initiate the etching process.

B67-10484

**METALLOGRAPHIC SAMPLES MOUNTED WITH
ROOM-TEMPERATURE, CURABLE, POLYESTER
CASTING RESINS**

HUGHES, J. KRUGER, O. SCHMITZ, F. DATE- DEC.
1967 REAN- SEE ALSO ANL-6712
ARG-10025

Study of epoxies and polyesters determines which type of resin would satisfy the desirable prerequisites of a metallographic mount. Investigated were Polylyte 8063, Polylyte 8173, PE-169, and PE-228. The results were compared to the standard thermosetting mounting material, Bakelite, and found to be favorable.

B67-10491

**MATERIAL FATIGUE DATA OBTAINED BY
CARD-PROGRAMMED HYDRAULIC LOADING SYSTEM**

DAVIS, W. T. DATE- DEC. 1967
LANGLEY-10042

Fatigue tests using load distributions from actual loading histories encountered in flight are programmed on punched electronic accounting machine cards. With this hydraulic loading system, airframe designers can apply up to 55 load levels to a test specimen.

B67-10501

**NEUTRON IRRADIATION AM241 EFFECTIVELY
PRODUCES CURIUM**

ANDERSON, R. W. MILSTEAD, J. STEWART, D. C.
DATE- DEC. 1967 REAN- SEE ALSO ANL-6932 ANL-6933
ARG-10030

Computer study was made on the production of multicurie amounts of highly alpha-active curium

242 from americium 241 irradiation. The information available includes curium 242 yields, curium composition, irradiation data, and production techniques and safeguards.

B67-10502

**REACTION OF STEAM WITH MOLYBDENUM IS
STUDIED**

KILPATRICK, M. LOTT, S. DATE- DEC. 1967 REAN-
SEE ALSO ANL-6257
ARG-295

Comprehensive report studies the reaction of flowing steam with refractory metals /in particular molybdenum/, in the temperature range of 1100 degrees C. The reaction products are hydrogen gas and molybdenum oxide vapor.

B67-10527

**QUANTUM MECHANICAL CALCULATIONS OF REACTIVE
SCATTERING CROSS SECTIONS IN BIMOLECULAR
ENCOUNTERS**

PIRKLE, J. C., JR. /GEORGIA INST. OF TECH./
DATE- DEC. 1967
M-FS-13594

Study applies the nonequilibrium collision theory of reaction rates to the estimation of rate constants for simple reactions. The complications in the quantum mechanical description of chemical reactions and the care needed in approximating the exact wave function for the collision are shown.

B67-10532

**COPPER AND NICKEL ADHERENTLY ELECTROPLATED
ON TITANIUM ALLOY**

BROWN, E. E. /BOEING CO./ DATE- DEC. 1967
M-FS-13952

Anodic treatment of titanium alloy enables electroplating of tightly adherent coatings of copper and nickel on the alloy. The alloy is treated in a solution of hydrofluoric and acetic acids, followed by the electroplating process.

B67-10533

**STUDY OF STRESS CORROSION IN ALUMINUM
ALLOYS**

BRUMMER, S. B. /TYCO LABS./ DATE- DEC. 1967
M-FS-13906

Mechanism of the stress corrosion cracking of high-strength aluminum alloys was investigated using electrochemical, mechanical, and electron microscopic techniques. The feasibility of detecting stress corrosion damage in fabricated aluminum alloy parts by nondestructive testing was investigated using ultrasonic surface waves and eddy currents.

B67-10551

**GAS PRESSURE IN SEALED ELECTROCHEMICAL CELLS
MEASURED EXTERNALLY**

SHERFEY, J. M. DATE- DEC. 1967
GSFC-10004

Piezoresistive transducer measures gas pressure inside sealed secondary electrochemical cells without breaking the seal. This method is based on the observed fact that the force exerted by the cell faces on the clamp tightening them against the transducer is a function of the gas pressure inside the cell.

B67-10570

**RADIANT HEAT SOURCE, VACUUM BAG, PROVIDE
PORTABLE BONDING OVEN**

NICHOLLS, A. H. /N. AM. AVIATION/ DATE- DEC.
1967

MSC-11342

Portable bonding oven is formed to any desired size or configuration to attach doublers and brackets to the surfaces of large structures. A radiant heat source is used in combination with a heat resistant transport vacuum bag and a black heat absorbing cloth.

B67-10573

**SPECTROPHOTOMETRIC TECHNIQUE QUANTITATIVELY
DETERMINES NABET INHIBITOR IN ETHYLENE
GLYCOL-WATER SOLUTIONS**

GARRARD, G. G. /N. AM. AVIATION/ DATE- DEC. 1967
MSC-11496

Spectrophotometric method, using a ratio-recording ultraviolet-absorption spectrophotometer, permits analysis of NaMBT in ethylene glycol-water solutions with high accuracy. It reduces analysis time, requires smaller samples, and is able to detect extremely small concentrations of mercaptobenzothiazole.

B67-10577
PURE XENON HEXAFLUORIDE PREPARED FOR THERMAL PROPERTIES STUDIES
 MALM, J. G. CSBORNE, D. W. SCHREINER, F. DATE- DEC. 1967
 ARG-10056

Preparation of a xenon hexafluoride and sodium fluoride salt yields a sample of the highest possible purity for use in thermal measurements. The desired hexafluoride can easily be freed from the common contaminants, xenon tetra-fluoride, xenon difluoride, and xenon oxide tetrafluoride, because none of these compounds reacts with sodium fluoride.

B67-10578
STUDY OF CORROSION OF 1100 ALUMINUM
 DRALEY, J. E. LOESS, R. E. MORI, S. DATE- DEC. 1967

ARG-10045
 Corrosion of 1100 aluminum in oxygen-saturated water at 70 degrees C under experimental conditions was studied, emphasizing effects of exposure interruption, the number of specimens, and the refreshment rate. A logarithmic equation was derived to express the corrosion rate.

B67-10579
MAGNESIUM-ZINC REDUCTION IS EFFECTIVE IN PREPARATION OF METALS
 KNIGHTON, J. B. STEUNBERG, R. K. DATE- DEC. 1967

ARG-10050
 Uranium, thorium, and plutonium are effectively prepared by magnesium-zinc reduction, using uranium oxides, thorium dioxide, and plutonium dioxide as starting materials. This technique is also useful in performing reduction of metals such as zirconium and titanium.

B67-10580
SIMPLE COLORIMETRIC METHOD DETERMINES URANIUM IN TISSUE
 DORAN, D. /ST. PROCOPIUS COLL./ PRIGERIO, N. A. DATE- DEC. 1967 REAN- SEE ALSO ANL-7136
 ARG-10039

Simple colorimetric micromethod determines concentrations of uranium in tissue. The method involves dry ashing organic extraction, and colorimetric determination of uranyl ferrocyanide. This uranium determination technique could be used in agricultural research, tracer studies, testing of food products, or medical research.

B67-10582
STUDY MADE OF RESISTANCE OF STAINLESS STEELS TO ZINC-VAPOR CORROSION
 BENNETT, G. A. BURRIS, L., JR. NELSON, P. A. DATE- DEC. 1967
 ARG-10055

Study of the corrosion resistance of several stainless steels to zinc vapor revealed that some stainless steels could be employed for use in zinc processing equipment housings or vapor lines.

B67-10583
STUDY OF CREVICE-GALVANIC CORROSION OF ALUMINUM
 DRALEY, J. E. LOESS, R. E. MORI, S. DATE- DEC. 1967 REAN- SEE ALSO ANL-6236
 ARG-10013

Corrosion effects of aluminum-copper and aluminum-nickel couples in oxygenated distilled water, and aluminum alloys in oxygenated copper sulfate solution were studied. One of each of the couples had a water tight seal, and showed no substantial corrosion, and of the unsealed couples, only the aluminum-copper developed corrosion.

B67-10584
FOGGING TECHNIQUE USED TO COAT MAGNESIUM WITH PLASTIC
 MROZ, T. S. DATE- DEC. 1967
 LEWIS-10316

Cleaning process and a fogging technique facilitate the application of a plastic coating to magnesium plates. The cleaning process removes general organic and inorganic surface impurities, oils and greases, and oxides and carbonates from the magnesium surfaces. The fogging technique produces a thin-filmlike coating in a clean room atmosphere.

B67-10586
DEVICE MEASURES STATIC FRICTION OF MAGNETIC TAPE
 COLE, P. T. DATE- DEC. 1967 REAN- SEE ALSO NASA-TN-D-3399
 GSFC-10360

Device measures the coefficient of static friction of magnetic tape over a range of temperatures and relative humidities. It uses a strain gage to measure the force of friction between a reference surface and the tape drawn at a constant velocity of approximately 0.0001 inch per second relative to the reference surface.

B67-10589
EXPLOSIVE-TRAIN INITIATED THROUGH SOLID BULKHEAD BY PRESSURE CARTRIDGE
 WILKOWSKI, J. C. /N. AM. AVIATION/ DATE- DEC. 1967
 MSC-11395

Explosive-train initiated pressure cartridge transmits a shock wave igniting a main charge of explosive through a solid bulkhead without destroying or damaging the seal or the bulkhead. The main charge could be an explosive, a pyrotechnic, or a propellant.

B67-10592
MATHEMATICAL RELATION PREDICTS ACHIEVABLE DENSITIES OF COMPACTED PARTICLES
 AYER, J. E. SCPPET, F. E. DATE- DEC. 1967
 ARG-10082

Series of mathematical relationships predicts compact densities of spherical shapes in a cylinder as a function of particle dimension, and compact density of angular shapes as a function of particle shape and absolute size.

B67-10593
SOLVENT PERMITS SOLID CURING AGENTS TO BE USED AT ROOM TEMPERATURES
 ST. CYR, M. C. /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1967
 M-FS-13434

Solvent system dissolves the solid curing agents used with polyurethane resins in adhesive systems. The system developed yields bond strengths comparable to 100 percent solid formulations. The optimum solvent chosen was a 55.5 percent solution in anhydrous tetrahydrofuran.

B67-10596
EPOXY RESINS PRODUCE IMPROVED PLASTIC SCINTILLATORS
 MARKLEY, F. W. DATE- DEC. 1967
 ARG-241

Plastic scintillator produced by the substitution of epoxy resins for the commonly used polystyrene is easy to cast, stable at room temperature, and has the desirable properties of a thermoset or cross-linked system. Such scintillators can be immersed directly in strong solvents, an advantage in many chemical and biological experiments.

B67-10599
BACTERIOSTATIC CONFORMAL COATING FOR ELECTRONIC COMPONENTS
 BLAND, C. LE DOUX, F. N. DATE- DEC. 1967
 GSFC-10007

Coating for electronic components used in space applications has bacteriostatic qualities capable of hindering bacterial reproduction, both vegetative and sporulative viable microorganisms. It exhibits high electrical resistivity, a low outgassing rate, and is capable of restraining

electronic components when subjected to mechanical vibrations.

B67-10600

DYNAMIC CAPTIVE PLASTIC SEAL

DRYER, E. O. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-12988

Fluoroplastic material held captive between valve sealing surfaces of 16 to 125 rms microns provides zero leakage to a high-pressure line at high cryogenic temperatures, when the plastic material is subjected to sufficient stress. This sealing technique makes unnecessary the use of superfinished valve sealing surfaces.

B67-10608

A CERAMIC COMPOSITE THERMAL INSULATION

SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- DEC. 1967
REAN- SEE ALSO NASA-TN-X-53646
M-FS-13991

Ceramic composite thermal insulation comprised of alumina-silica fibers, pigmentary potassium titanate, and asbestos fibers, bonded with a colloidal silica sol has improved insulating capabilities to both radiant and convective heat. Gelation of the colloidal silica sol prevents binder migration.

B67-10627

THORIATED TUNGSTEN TUBE PROVIDES IMPROVED

HIGH TEMPERATURE THERMOCOUPLE SHEATH

ZELLNER, G. J. /WESTINGHOUSE ASTRONUC. LAB./
DATE- DEC. 1967
NUC-10145

Thermocouple tubing of thoriated tungsten with a very fine grain structure produces a small-diameter sheath capable of operating up to 5000 degrees R in a hydrogen and graphite environment. This tubing remains ductile and resists both grain growth and carbiding even after prolonged exposure to temperature.

B67-10634

PHOTOVOLTAIC EFFECT IN ORGANIC

POLYMER-IODINE COMPLEX

HERMANN, A. M. REMBAUM, A. DATE- DEC. 1967
REAN- SEE ALSO B66-10682 AND B67-10132
NPO-10373

Certain charge transfer complexes formed from organic polymers and iodine generate appreciable voltages at relatively low impedances upon exposure to light. These films show promise in applications requiring chemically and electrically stable films as detectors of optical radiation and as energy converters in photovoltaic cells.

B67-10641

COMPILATION OF DETECTION SENSITIVITIES IN THERMAL-NEUTRON ACTIVATION

WAHLGREN, M. A. WING, J. DATE- DEC. 1967 REAN-
SEE ALSO ANI-6953
ARG-10068

Detection sensitivities of the chemical elements following thermal-neutron activation have been compiled from the available experimental cross sections and nuclear properties and presented in a concise and usable form. The report also includes the equations and nuclear parameters used in the calculations.

B67-10645

EDDY CURRENT PROBE MEASURES SIZE OF CRACKS IN NONMETALLIC MATERIALS

MUSSER, C. W. /BOEING CO./ DATE- JAN. 1968
M-FS-14059

Nondestructive method uses powdered iron and eddy current probe to measure the depth/width ratio of cracks in electrically nonconductive materials. The eddy current probe measures the mass of metal in the crack after it has been filled with the powdered iron.

B67-10647

SYNTHESIS OF PURE AROMATIC GLYCIDYL ESTERS FOR USE AS ADHESIVES

SPON- INNOVATOR NOT GIVEN /BORDEN CHEM. CO./
DATE- JAN. 1968
M-FS-12705
SPON- INNOVATOR NOT GIVEN

Laboratory study was conducted to synthesize pure glycidyl esters of aromatic acids and to convert the resultant epoxy esters to polymers for use as adhesive over a range of temperatures down to minus 423 degrees F.

B67-10659

BUCKLING STRENGTH OF FILAMENT-WOUND CYLINDERS UNDER AXIAL COMPRESSION IS INVESTIGATED

SPON- INNOVATOR NOT GIVEN /NASA WASHINGTON/ DATE-
DEC. 1967 REAN- SEE ALSO NASA-CR-266
HQ-10032

Analytical study was made of the effects of axial compression on buckling strength of filament-wound cylinders having diameter-to-wall thickness ratios of 167 to 643. Analytical predictions for buckling loads were obtained by using linear anisotropic shell theory.

B67-10660

STUDY MADE OF MECHANICS OF DEFORMATION AND FRACTURE OF FIBROUS COMPOSITES

ROSEN, B. W. /GE/ DATE- DEC. 1967
HQ-10035

Report summarizes the findings of studies made of the influence of both fiber and matrix characteristics upon the mechanics of deformation and fracture of fibrous composites. The major portion of the report is devoted to a study of the mechanics of tensile failure of a fibrous composite.

B68-10020

DISTILLATION DEVICE SUPPLIES CESIUM VAPOR AT CONSTANT PRESSURE

BASIULIS, A. SHEFSIEK, P. K. /RCA/ DATE- FEB. 1968
XNP-08124

Distillation apparatus in the form of a U tube supplies small amounts of pure cesium vapor at constant pressure to a thermionic converter. The upstream leg of the U tube is connected to a vacuum pump to withdraw noncondensable impurities, the bottom portion serves as a reservoir for the liquid cesium.

B68-10023

HASTELLOY X PROPERTIES, DATA, AND METALLURGICAL CHARACTERISTICS

GLASIER, L. F., JR. /AEROJET-GEN. CORP./ DATE-
FEB. 1968
NUC-10302

Literature survey and testing program were initiated to obtain pertinent information for Hastelloy X, a nickel-base alloy, through the temperature range of minus 423 degrees to 1800 degrees F. A report has been prepared which includes the tensile properties, mechanical properties, and the manufacturing and fabrication processes.

B68-10029

HEAT TREATMENT PROCEDURE TO INCREASE DUCTILITY OF DEGRADED NICKEL ALLOY

PRAGER, M. /N. AM. AVIATION/ DATE- FEB. 1968
M-FS-12410

Tests demonstrate the room temperature ductility of degraded Rene 41 can be increased to acceptable values by solution heat treatment at a temperature of 2050 degrees to 2150 degrees F /1 to 2 hours/ and cooling through a controlled temperature range followed by normal aging in air /16 hours at 1400 degrees F/.

B68-10031

PANELIZED HIGH PERFORMANCE MULTILAYER INSULATION

BURKLEY, R. A. SHRIVER, C. B. /GOODYEAR AEROSPACE CORP./ STUCKEY, J. M. DATE- FEB. 1968
M-FS-14023

Multilayer insulation coverings with low conductivity foam spacers are interleaved with quarter mil aluminized polymer film radiation shields to cover flight type liquid hydrogen tankage of space vehicles with a removable, structurally compatible, lightweight, high performance cryogenic insulation capable of surviving extended space mission environments.

B68-10032

SURVEY MADE OF REFRACTORY METALS

AULT, G. M. DATE- FEB. 1968

LEWIS-10380

Survey reviews the structural applications of

03 MATERIALS (CHEMISTRY)

refractory metals and the special problems they present in manufacture, evaluation, and application. The unique facilities required for their processing and evaluation, a summary of accomplishments in achieving commercial products, and the present status of the most advanced refractory materials are presented.

B68-10034

CONTINUOUS DETONATION REACTION ENGINE

LANGE, O. H. STEIN, R. J. TUBBS, H. E. DATE- FEB. 1968

M-FS-14019

Reaction engine operates on the principles of a controlled condensed detonation rather than on the principles of gas expansion. The detonation results in reaction products that are expelled at a much higher velocity.

B68-10043

CURE OF EPOXY RESINS DETERMINED BY SIMPLE TESTS

LADAKI, M. NIGH, W. G. /N. AM. AVIATION/ DATE- FEB. 1968

M-FS-13131 M-FS-13132

Rapid visual and simple quantitative tests indicate the degree of cure of particular epoxy resin binders in prepreg stock. It is possible that these tests may be extended to a number of different epoxy formulations.

B68-10046

SURVEY OF FRACTURE TOUGHNESS TEST METHODS

BROWN, W. F., JR. JONES, M. H. SRANLEY, J. E. DATE- MAR. 1968 REAN- SEE ALSO NASA-TN-D-2599 AND ASTM-NASA-STP-410

LEWIS-10379

Comprehensive survey presents current methods of fracture toughness testing that are based on linear elastic fracture mechanics. General principles of the basic two dimensional crack stress field model are discussed in relation to real three dimensional specimens. Methods of test instrumentation and procedure are described.

B68-10048

SIMPLE TEST FOR PHYSICAL STABILITY OF CRYOGENIC TANK INSULATION

ROSSELLO, D. /DOUGLAS AIRCRAFT CO./ DATE- MAR. 1968

M-FS-12547

Qualitative test determines the ability of insulation liners used on liquid hydrogen tanks to withstand stresses produced by the thermal shocks imparted to the insulation during tank filling and drainage. Test specimens are bonded to metal plates with a low thermal expansion coefficient and are immersed in liquid hydrogen.

B68-10049

METHOD OF MAINTAINING ACTIVITY OF HYDROGEN-SENSING PLATINUM ELECTRODE

HARMAN, J. N., III /BECKMAN INSTR./ DATE- MAR. 1968

M-FS-1422

Three-electrode hydrogen sensor containing a platinum electrode maintained in a highly catalytic state, operates with a minimal response time and maximal sensitivity to the hydrogen gas being sensed. Electronic control and readout circuitry reactivates the working electrode of the sensor to a state of maximal catalytic activity.

B68-10062

PYROTECHNIC DEVICE PROVIDES ONE-SHOT HEAT SOURCE

HALLER, H. C. LALLI, V. R. /TRW EQUIPMENT LABS./ DATE- MAR. 1968

LEWIS-10131

Pyrotechnic heater provides a one-shot heat source capable of creating a predetermined temperature around sealed packages. It is composed of a blend of an active chemical element and another compound which reacts exothermically when ignited and produces fixed quantities of heat.

B68-10066

STATIC STRUCTURAL ANALYSIS OF SHELL-TYPE STRUCTURES

BAKER, E. H. CAPPELLI, A. P. KOVALEVSKY, L. RISH, F. L. VERRETTE, R. M. /N. AM. AVIATION/ DATE- MAR. 1968 REAN- SEE ALSO NASA-CR-912 MSC-11555

Shell analysis manual provides methods for determining static deflections and internal load and stress distributions in shells under various loading conditions, and methods of analyzing static instability of shell structures. Also included are methods for determining the lightest shell wall for various constructions.

B68-10085

REINFORCED THERMAL-SHOCK RESISTANT CERAMICS

CRUMP, D. N. /THOMPSON RAMO WOOLDRIDGE/ DATE- MAY 1968

LEWIS-10376

Composite material, made by dispersing short tungsten-rhenium fibers randomly throughout zirconium oxide, is highly resistant to oxidizing environments at temperatures above 2000 degrees F. This reinforced ceramic is also thermal stress resistant.

B68-10092

MOLDING A HIGH-DENSITY LAMINATE

HARAWAY, W. M. HEIER, W. C. KING, C. B. DATE- MAR. 1968

LANGLEY-10051

Molding press is used to form phenolic resin impregnated glass fiber cloth into a high-density, cylindrical-ring laminate. The press applies clamping pressure and heat to a mold containing the glass fiber cloth laminate, which has hydrostatic pressure applied to it by means of a specially designed pressure plug.

B68-10094

HIGH STRENGTH NICKEL-BASE ALLOY WITH IMPROVED OXIDATION RESISTANCE UP TO 2200 DEGREES F

FRECHE, J. C. WATERS, W. J. DATE- APR. 1968

LEWIS-10115

Modifying the chemistry of the NASA TAZ-8 alloy and utilizing vacuum melting techniques provides a high strength, workable nickel base superalloy with improved oxidation resistance for use up to 2200 degrees F.

B68-10095

COBALT-TUNGSTEN, FERROMAGNETIC HIGH-TEMPERATURE ALLOY

ASHBROOK, R. L. DRESHFIELD, R. L. FRECHE, J. C. HOFFMAN, A. C. SANDROCK, G. D. DATE- APR. 1968

REAN- SEE ALSO NASA-TN-D-4338

LEWIS-10378

Cobalt-base alloy which combines high temperature strength and magnetic properties has a composition in weight percent of 7-1/2 tungsten, 2-1/2 iron, 1 titanium, 1/2 zirconium, 1/2 carbon, and the balance cobalt. It may be used as construction material for electric motors and generators operating at high temperatures.

B68-10101

REACTION RATES OF GRAPHITE WITH OZONE MEASURED BY ETCH DECORATION

HENNIG, G. R. MONTET, G. L. DATE- APR. 1968

ARC-10086

Etch-decoration technique of detecting vacancies in graphite has been used to determine the reaction rates of graphite with ozone in the directions parallel and perpendicular to the layer planes. It consists essentially of peeling single atom layers off graphite crystals without affecting the remainder of the crystal.

B68-10102

ANALYTICAL TECHNIQUES FOR DETERMINING BORON IN GRAPHITE

HENNIG, G. R. MONTET, G. L. DATE- APR. 1968

ARC-10087

Two analytical techniques, a gold nucleation and an etch-decoration technique have been developed for determining the presence and mobility of boron in graphite.

B68-10103

GLASSY MATERIALS INVESTIGATED FOR NUCLEAR

REACTOR APPLICATIONS

LYNCH, E. D. DATE- APR. 1968 REAN- SEE ALSO
ANL-7062
ARG-10075

Studies determine the feasibility of preparing fuel-bearing glasses and glasses bearing neutron-absorbing materials for use as crystalline fuel and control rods for reactors. Properties investigated were devitrification resistance, uranium solubility, and density.

B68-10104

DECOMPOSITION VESSEL

BERNAS, B. /NATL. ACAD. OF SCI./ DATE- MAR. 1968
GSPC-10343

Stainless steel crucible-shaped vessel permits rapid decomposition of silicates and other refractory compounds by acids at relatively low temperatures. The vessel is lined with tetrafluoroethylene fluorocarbon resin and sealed by a sheet of the same material retained in a stainless steel screw cap.

B68-10105

BLAST DEFLECTOR TRAPS SMOKE AND DEBRIS FROM EXPLOSIVE TRAINS

WILKOWSKI, J. C. /N. AM. AVIATION/ DATE- MAR. 1968
MSC-11241

Blast deflector protects interior areas and personnel from the smoke and debris of explosive trains. It contains open-cell foam to absorb the pressure loads generated by explosive charges and control the smoke and debris.

B68-10109

TUNGSTEN-RHENIUM ALLOY THERMOCOUPLES EFFECTIVE FOR HIGH-TEMPERATURE MEASUREMENT

BROOKS, E. J. KRAMER, W. C. DATE- APR. 1968
REAN- SEE ALSO ANL-6981
ARG-10059

Tungsten-rhenium alloy thermocouples, specifically, insulated, sheathed W/W plus 26 Re and W plus 5 Re/W plus 26 Re thermocouples, are effective for temperature measurement in excess of 2920 degrees C. These thermocouples have a high thermoelectric output and excellent relationship to temperatures up to 2760 degrees C.

B68-10142

DEVICE PROVIDES CONTROLLED GAS LEAKS

KAMI, S. K. KING, H. J. /HUGHES AIRCRAFT CO./ DATE- APR. 1968
NPO-10298

Modified palladium leak device provides a controlled release /leak/ of very small quantities of gas at low or medium pressures. It has no moving parts, requires less than 5 watts to operate, and is capable of releasing the gas either continuously or in pulses at adjustable flow rates.

B68-10146

LAMINATED SHEET COMPOSITES REINFORCED WITH MODULAR FILAMENT SHEET

REECE, O. Y. DATE- MAY 1968
M-PS-14575

Aluminum and magnesium composite sheet laminates reinforced with low density, high strength modular filament sheets are produced by diffusion bonding and explosive bonding. Both processes are accomplished in normal atmosphere and require no special tooling or cleaning other than wire brushing the metal surfaces just prior to laminating.

B68-10153

STUDY OF CRACK INITIATION PHENOMENA ASSOCIATED WITH STRESS CORROSION OF ALUMINUM ALLOYS

HUNTER, M. S. /ALUMINUM CO. OF AM./ DATE- MAY 1968
M-PS-14283

Study of stress corrosion cracks in aluminum alloys reveals that crack initiation is greatly influenced by boundary orientation and directionality of the structure. In all crack susceptible materials, intergranular corrosion and

stress corrosion cracking started and progressed in boundaries oriented perpendicularly to the stressing direction.

B68-10167

EVALUATION OF IGNITION MECHANISMS IN SELECTED NONMETALLIC MATERIALS

GERSTEIN, M. MC LAIN, M. ROSS, W. /DYN. SCI. CORP./ DATE- MAY 1968
MSC-11645 MSC-11646 MSC-11647

Test program evaluates thermal and electric ignition mechanisms in selected nonmetallic materials found in spacecraft with concentrated oxygen atmospheres. The phenomena evaluated were spontaneous ignition, ignition of flammable vapor by a spark, and ignition by an arc where the arc produces the combustible vapor and the ignition source.

B68-10172

STUDY REVEALS EFFECT OF ALUMINUM ON SATURATION MOMENT OF FE-NI ALLOYS

ALDRED, A. T. BARDOS, D. I. BECK, P. A. /ILLINOIS UNIV./ DATE- MAY 1968
ARG-90259

Study of saturation magnetization, important in the investigation of the electronic structure of alloys, reveals the effect of aluminum on the saturation moments of iron-nickel alloys. The saturation magnetizations were extrapolated to the absolute zero of temperature for calculating average atomic moments.

B68-10177

SARAN FILM IS FIRE-RETARDANT IN OXYGEN ATMOSPHERE

GOODWIN, J. T. HERRERA, W. R. /SOUTHWEST RES. INST./ DATE- JUN. 1968
MSC-11604

Saran was tested for flammability as a wrapping on TPE-insulated electrical wire bundles in oxygen gas at pressures of 7.5 psia and 14.7 psia. It was found to be fire retardant or self-extinguishing in most instances.

B68-10184

STRESS-CORROSION CHARACTERISTICS OF ALUMINUM CASTING ALLOY M-45

LOVOY, C. V. DATE- JUN. 1968 REAN- SEE ALSO
B65-10092 AND B67-10159
M-PS-14817

Evaluation of the stress-corrosion characteristics of aluminum alloy M-45 shows that the most favorable artificial aging cycle for this alloy, with regard to optimum strength and stress-corrosion resistance, appears to be 400 degrees F for 12 hours.

B68-10189

REACTION STUDIED OF STEAM WITH NIOBIUM AND TANTALUM

KILPATRICK, M. LOTT, S. K. DATE- JUN. 1968
ARG-10051

Study reveals the kinetics of niobium and tantalum with steam at elevated temperatures to determine the suitability of high melting metals for fabrication of equipment for temperature steam environments. Niobium obeyed linear kinetics from 1050 degrees to 1500 degrees C but tantalum followed a parabolic rate law.

B68-10191

EVALUATION OF METHODS FOR NONDESTRUCTIVE TESTING OF BRAZED JOINTS

KANNO, A. DATE- JUN. 1968 REAN- SEE ALSO
ANL-6924
ARG-90175

Evaluation of nondestructive methods of testing brazed joints reveals that ultrasonic testing is effective in the detection of nonbonds in diffusion bonded samples. Radiography provides excellent resolutions of void or inclusion defects, and the neutron radiographic technique shows particular advantage for brazing materials containing cadmium.

B68-10192

WELDING OF COMMERCIAL BASE PLATES IS INVESTIGATED

03 MATERIALS (CHEMISTRY)

CHEEVER, D. L. MARTIN, D. C. MISHLER, H. W.
MONROE, R. E. /BATTELLE MEM. INST./ DATE- JUN.
1968
M-FS-13649

Investigation of aluminum alloy welds reveals that the combinations of metallic elements with hydrogen are not capable of producing weld porosity themselves, rather they tend to increase the amount of porosity only in the presence of arc contamination by water vapor.

B68-10194
SUSCEPTIBILITY OF IRRADIATED STEELS TO
HYDROGEN EMBRITTLEMENT

ROSSIN, A. D. DATE- JUN. 1968 REAN- SEE ALSO
ANL-7266
ARG-10115

Investigation determined whether irradiated pressure-vessel steels 4340 and 212-B are susceptible to hydrogen embrittlement and to catastrophic failure. Hydrogen-charging conditions which completely embrittled 4340 steel had negligible effect on 212-B steel in tensile and delayed-failure tests.

B68-10195
ELEMENTARY REVIEW OF ELECTRON MICROPROBE
TECHNIQUES AND CORRECTION REQUIREMENTS

HART, R. K. DATE- JUN. 1968 REAN- SEE ALSO
ANL-7078
ARG-10062

Report contains requirements for correction of instrumented data on the chemical composition of a specimen, obtained by electron microprobe analysis. A condensed review of electron microprobe techniques is presented, including background material for obtaining X ray intensity data corrections and absorption, atomic number, and fluorescence corrections.

B68-10196
FUNDAMENTAL ELECTRODE KINETICS

ELDER, J. P. DATE- JUN. 1968 REAN- SEE ALSO
ANL-7072
ARG-10067

Report presents the fundamentals of electrode kinetics and the methods used in evaluating the characteristic parameters of rapid-charge transfer processes at electrode-electrolyte interfaces. The concept of electrode kinetics is outlined, followed by the principles underlying the experimental techniques for the investigation of electrode kinetics.

B68-10197
STUDY OF MECHANICAL PROPERTIES OF URANIUM
COMPOUNDS

BEALS, R. J. DRAGEL, G. M. HANDWERK, J. H.
TOTTLE, C. R. DATE- JUN. 1968 REAN- SEE ALSO
ANL-7070
ARG-10074

Study determines the mechanical properties, including brittleness and ductility of several uranium compounds. These include uranium dioxide, uranium sulfide, and uranium phosphide.

B68-10198
CRYSTAL STRUCTURE ANALYSIS OF INTERMETALLIC
COMPOUNDS

CONNER, R. A., JR. DOWNEY, J. W. DWIGHT, A. E.
DATE- JUN. 1968
ARG-10092

Study concerns crystal structures and lattice parameters for a number of new intermetallic compounds. Crystal structure data have been collected on equiatomic compounds, formed between an element of the Sc, Ti, V, or Cr group and an element of the Co or Ni group. The data, obtained by conventional methods, are presented in an easily usable tabular form.

B68-10199
STUDIES IN ZIRCONIUM OXIDATION

DRALEY, J. E. DRUNEN, C. J. LEVITAN, J. DATE-
JUN. 1968 REAN- SEE ALSO ANL-7252
ARG-10099

Study provides insight into the oxidation mechanism of zirconium by combining electrical measurements with oxidation data. The

measurement of electrical potential across growing scale on zirconium and the determination of conventional weight-change oxidation data were carried out at 550, 700, and 800 degrees C.

B68-10200
RESISTIVITY MEASUREMENTS OF NEUTRON-IRRADIATED
PURE METALS AND AL-ZN ALLOYS

HORAK, J. A. DATE- JUN. 1968 REAN- SEE ALSO
ANL-7185
ARG-10108

Report presents resistivity measurements and their interpretation for neutron-irradiated pure metals and Al-Zn alloys. The influence of temperature, the role of point defects, and the aging behavior on resistivity are considered. The experimental procedures and results are discussed in detail.

B68-10201
TECHNOLOGICAL SURVEY OF TELLURIUM AND ITS
COMPOUNDS

STEINDLER, H. J. VISSERS, D. R. DATE- JUN. 1968
REAN- SEE ALSO ANL-7142
ARG-10119

Review includes data on the chemical and physical properties of tellurium, its oxides, and fluorides, pertinent to the process problem of handling fission product tellurium in fluoride form. The technology of tellurium handling in nonaqueous processing of nuclear fuels is also reviewed.

B68-10204
MANGANESE-ALUMINA-CERAMIC GLASS ELIMINATES
RIGID CONTROLS NECESSARY IN BONDING METALS
TO CERAMICS

HOLLAR, E. L. DATE- JUN. 1968
SAN-10012

Matrix of manganese-alumino-silicate glass simplifies the processes of metallizing alumina ceramics. Because the manganese in the glass is preoxidized to the 2 plus state by firing in nitrogen, the ceramic can be metallized in dry hydrogen. Lengthening the firing time permits a lower metallizing temperature.

B68-10212
ION PLATING TECHNIQUE IMPROVES THIN FILM
DEPOSITION

MATTOX, D. M. DATE- JUN. 1968
SAN-10006

Ion plating technique keeps the substrate surface clean until the film is deposited, allows extensive diffusion and chemical reaction, and joins insoluble or incompatible materials. The technique involves the deposition of ions on the substrate surface while it is being bombarded with inert gas ions.

B68-10214
REDUCING BUBBLES IN GLASS COATINGS IMPROVES
ELECTRICAL BREAKDOWN STRENGTH

BANKS, E. DATE- JUN. 1968
LEWIS-10278

Helium reduces bubbles in glass coatings of accelerator grids for ion thrusters. Fusing the coating in a helium atmosphere creates helium bubbles in the glass. In an argon atmosphere, entrapped helium diffuses out of the glass and the bubbles collapse. The resultant coating has a substantially enhanced electrical breakdown strength.

B68-10215
GLASS COATED SINGLE GRID FOR CHARGED
PARTICLE ACCELERATION

BANKS, B. A. NAKANISHI, S. DATE- JUN. 1968
LEWIS-10106

Glass coating is used on a single grid accelerator system for ion thrusters. The uniformly thin, smooth, dense, impervious glass coating has a high dielectric strength and is firmly bonded to the accelerator grid.

B68-10221
LIQUID CRYSTAL CALIBRATOR

COHEN, S. E. /LOCKHEED-GEORGIA CO./ DATE- JUN.
1968

M-PS-14151

Calibration apparatus determines the operating temperature range /sensitivity/ of liquid crystals. The calibrator maintains a precisely controlled test surface temperature. It permits a measurement accuracy of plus or minus 0.5 degrees F and a sensitivity of plus or minus 0.15 degrees F.

B68-10251

WELD MICROFISSURING IN INCONEL 718

MINIMIZED BY MINOR ELEMENTS

MORRISON, T. J. SHIRA, C. S. WEISENBERG, L. A. /N. AM. ROCKWELL CORP./ DATE- JUL. 1968 REAN-SEE ALSO B67-10049

M-PS-18185

Manganese, silicon, and magnesium markedly reduce the tendency of Inconel 718 to weld microfissuring. By combining a manganese, 0.20 percent by content, with silicon, greater than 0.25 percent content, or by adding 20 ppm of magnesium, the weld microfissuring decreased in the standard alloy.

B68-10253

HIGH TEMPERATURE ALLOY

FRANK, R. G. SEMMEL, J. W., JR. /GE/ DATE- JUL. 1968

LEWIS-10377

Molybdenum is substituted for tungsten on an atomic basis in a cobalt-based alloy, S-1, thus enabling the alloy to be formed into various mill products, such as tubing and steels. The alloy is weldable, has good high temperature strength and is not subject to embrittlement produced by high temperature aging.

B68-10256

GRAPHITE CLOTH FACILITATES VACUUM

EVAPORATION OF SILICON MONOXIDE

CARITHERS, M. D. /GEORGIA INST. OF TECH./ DATE- JUL. 1968

M-PS-14764

Woven graphite cloth facilitates the vacuum deposition of thin films of silicon monoxide on substrate surfaces. The cloth serves both as a container and electric heating element for the silicon monoxide. It minimizes and prevents the silicon monoxide particle ejection, provides uniform heat distribution, and cools rapidly by radiation.

B68-10271

PREPARATION OF SILVER-ACTIVATED ZINC SULFIDE

THIN FILMS

FELDMAN, C. SWINDELLS, F. E. /MELPAR/ DATE- AUG. 1968

GSFC-10687

Silver improves luminescence and reduces contamination of zinc sulfide phosphors. The silver is added after the zinc sulfide phosphors are deposited in thin films by vapor evaporation, but before calcining, by immersion in a solution of silver salt.

B68-10274

VISCOSITY AND DENSITY OF METHANOL/WATER

MIXTURES AT LOW TEMPERATURES

AUSTIN, J. G. KURATA, F. SWIFT, G. W. /KANSAS UNIV./ DATE- AUG. 1968

M-PS-14991

Viscosity and density are measured at low temperatures for three methanol/water mixtures. Viscosity is determined by a modified falling cylinder method or a calibrated viscometer. Density is determined by the volume of each mixture contained in a calibrated glass cell placed in a constant-temperature bath.

B68-10278

CHARACTERISTICS OF FLUIDIZED-PACKED BEDS

GABOR, J. D. MECHAN, W. J. DATE- AUG. 1968 REAN-SEE ALSO ANL-6859

ARG-10049

Study of fluidized-packed bed includes investigation of heat transfer, solids-gas mixing, and elutriation characteristics. A fluidized-packed bed is a system involving the fluidization of small particles in the voids of a

packed bed of larger nonfluidized particles.

B68-10279

A 100 ANGSTROM NIOBIUM WIRE

CLINE, H. E. ROSE, R. M. WULFF, J. /MIT/ LEWIS-10128

Composite of fine niobium wires in copper is used to study the size and proximity effects of a superconductor in a normal matrix. The niobium rod was drawn to a 100 angstrom diameter wire on a copper tubing.

B68-10281

STUDY OF BEHAVIOR OF STEROLS AT INTERFACES

KLEIN, P. D. KNIGHT, J. C. SZCZEPANIK, P. A. DATE- AUG. 1968

ARG-10085

Behavior of sterols and sterol acetates on various types of interfaces indicates that the function of a sterol depends upon a surface orientation and surface energy of the interface. Column-chromatographic techniques determine the retention volume of various sterols under standard conditions.

B68-10285

PRE-WELD HEAT TREATMENT IMPROVES WELDS IN

RENE 41

PRAGER, M. /N. AM. ROCKWELL CORP./ DATE- AUG. 1968

M-PS-18174

Cooling of Rene 41 prior to welding reduces the incidence of cracking during post-weld heat treatment. The microstructure formed during the slow cooling rate favors elevated temperature ductility. Some vestiges of this microstructure are apparently retained during welding and thus enhance strain-age crack resistance in air.

B68-10302

EFFECTS OF SURFACE PREPARATION ON QUALITY

OF ALUMINUM ALLOY WELDMENTS

KIZER, D. SAPERSTEIN, Z. /IIT RES. INST./ DATE- AUG. 1968

M-PS-13152

Study of surface preparations and surface contamination effects on the welding of 2014 aluminum involves several methods of surface analysis to identify surface properties conducive to weld defects. These methods are radioactive evaporation, spectral reflectance mass spectroscopy, gas chromatography and spark emission spectroscopy.

B68-10334

MICROPROBE INVESTIGATION OF BRITTLE

SEGREGATES IN ALUMINUM MIG AND TIG WELDS

LARSEN, P. A. MILLER, E. L. /MCDONNELL DOUGLAS CORP./ DATE- SEP. 1968

M-PS-14720

Quantitative microprobe analysis of segregated particles in aluminum MIG /Metal Inert Gas/ and TIG /Tungsten Inert Gas/ welds indicated that there were about ten different kinds of particles, corresponding to ten different intermetallic compounds. Differences between MIG and TIG welds related to the individual cooling rates of these welds.

B68-10340

APPLICATION OF THE SOLID LUBRICANT

MOLYBDENUM DISULFIDE BY SPUTTERING

PRZYBYSZEWSKI, J. SPALVINS, T. DATE- SEP. 1968

LEWIS-10544

Molybdenum disulfide lubricant film is deposited on two substrates, niobium and nickel-chromium alloys, by means of physical direct-current sputtering. The sputtering system uses a three-electrode /triode/ geometry - a thermionic cathode, an anode, and the target, all enclosed in a vacuum chamber.

B68-10344

NICKEL BASE ALLOY WITH IMPROVED STRESS

RUPTURE PROPERTIES

COLLINS, H. E. QUIGG, R. J. /TRW/ DATE- SEP. 1968

LEWIS-10283

Nickel base superalloy with improved stress

03 MATERIALS (CHEMISTRY)

rupture properties is used for jet aircraft turbine blades. This alloy is capable of maintaining its strength and its creep, oxidation, and thermal fatigue resistance at high temperature.

B68-10351
THERMAL CONDUCTIVITY AND DIELECTRIC CONSTANT OF SILICATE MATERIALS
 SIMON, I. WECHSLER, A. E. /ARTHUR D. LITTLE, INC./ DATE- SEP. 1968
 M-FS-14856

Report on the thermal conductivity and dielectric constant of nonmetallic materials evaluates the mechanisms of heat transfer in evacuated silicate powders and establishes the complex dielectric constant of these materials. Experimental measurements and results are related to postulated lunar surface materials.

B68-10355
EXPERIMENTS WITH CERAMIC COATINGS
 LYNN, E. K. ROLLINS, C. T. /N. AM. ROCKWELL CORP./ DATE- SEP. 1968
 M-FS-18150

Report describes the procedures and techniques used in the application of a ceramic coating and the evaluation of test parts through observation of the cracks that occur in this coating due to loading.

B68-10358
FIRE RETARDANT FOAMS DEVELOPED TO SUPPRESS FUEL FIRES
 FISH, R. GILWEE, W. J. PARKER, J. A. RICCITIELLO, S. R. DATE- SEP. 1968
 ARC-10098

Heat insulating polyurethane foam retards and suppresses fuel fires. Uniformly dispersed in the foam is a halogenated polymer capable of splitting off hydrogen halide upon heating and charring of the polyurethane.

B68-10360
FIBER GLASS REINFORCED STRUCTURAL MATERIALS FOR AEROSPACE APPLICATION
 BARTLETT, D. H. BARTLET, D. H. /BOEING CO./ DATE- SEP. 1968
 M-FS-14806

Evaluation of fiber glass reinforced plastic materials concludes that fiber glass construction is lighter than aluminum alloy construction. Low thermal conductivity and strength makes the fiber glass material useful in cryogenic tank supports.

B68-10368
CONSOLIDATION AND FABRICATION TECHNIQUES FOR VANADIUM-20 W/O TITANIUM /TV-20/
 BURT, W. R. KARASEK, F. J. KRÄNER, W. C. MAYFIELD, R. H. MC GOWAN, R. D. DATE- OCT. 1968
 REAN- SEE ALSO ANL-7127 AND ANL-6928
 ARG-10148

Tests of the mechanical properties, fuel compatibility, sodium corrosion and irradiation behavior were made for vanadium and vanadium alloy. Improved methods for consolidation and fabrication of bar, rod, sheet, and high-quality, small diameter, thin-wall tubing of vanadium-20 without titanium are reported.

B68-10369
TUNGSTEN FIBER-REINFORCED NICKEL SUPERALLOY
 PETRASEK, D. W. SIGNORELLI, R. A. WETTON, J. W. DATE- OCT. 1968 REAN- SEE ALSO NASA-TN-D-4787 AND NASA-TN-X-52342
 LEWIS-10424

Tungsten fiber-reinforced nickel superalloy combines the strength of refractory metals with the oxidation resistance of superalloys. Knowledge of the relationship between fabrication technique, matrix compositions and fiber sizes minimized fiber-matrix reaction. Potential application includes high temperature turbine components.

B68-10373
PRODUCT IDENTIFICATION TECHNIQUES USED AS TRAINING AIDS FOR ANALYTICAL CHEMISTS
 GRILLO, J. F. DATE- OCT. 1968

SAN-10025
 Laboratory staff assistants are trained to use data and observations of routine product analyses performed by experienced analytical chemists when analyzing compounds for potential toxic hazards. Commercial products are used as examples in teaching the analytical approach to unknowns.

B68-10378
NONDESTRUCTIVE METHOD FOR MEASURING RESIDUAL STRESSES IN METALS, A CONCEPT
 SCHWEBEL, C. D. /BOEING CO./ DATE- OCT. 1968
 KSC-10237

Nondestructive direct measurement of residual surface stresses in metals can be made because metal under stress has a different electrochemical solution potential than in the unstressed condition. The method uses two matched electrolytic cells to cancel extraneous effects on the actual solution potential of the metal specimen.

B68-10380
NICKEL-BASE SUPERALLOY*S EXCELLENT PROPERTIES PROMOTE ITS SERVICE TO 2200 DEGREES F
 FRECHE, J. C. WATERS, W. J. DATE- OCT. 1968
 REAN- SEE ALSO NASA-TN-D-4390, B66-10222, AND B68-10094
 LEWIS-10355

Nickel base alloy with high strength, ductility, good impact and oxidation resistance, microstructural stability, workability potential, and the ability to show improved strength and ductility when directly solidified has recently been developed for high temperature applications.

B68-10381
HIGH-EMITTANCE COATINGS ON METAL SUBSTRATES
 EMANUELSON, R. C. LUOMA, W. L. WALEK, W. J. /PRATT AND WHITNEY AIRCRAFT CORP./ DATE- OCT. 1968
 LEWIS-10325

High-emittance coatings of iron, calcium, and zirconium titanates thermally sprayed on stainless steel, columbium-1 percent zirconium, and beryllium substrates promote and control radiative heat transfer from the metal substrates. Adherence, compatibility and emittance stability at elevated temperature and high vacuum were evaluated.

B68-10385
ELECTROMOTIVE SERIES ESTABLISHED FOR METALS USED IN AEROSPACE TECHNOLOGY
 KUSTER, C. A. /N. AM. ROCKWELL CORP./ DATE- OCT. 1968
 M-FS-18327

Electromotive series has been established for approximately 130 commonly used aerospace metals. For most metals an initial potential and a service related potential was obtained.

B68-10390
IMPROVED PROCESS FOR EPITAXIAL DEPOSITION OF SILICON ON PREDIFFUSED SUBSTRATES
 CLARKE, M. G. HALSOR, J. L. WORD, J. C. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1968
 M-FS-14910

Process for fabricating integrated circuits uniformly deposits silicon epitaxially on prediffused substrates without affecting the sublayer diffusion pattern. Two silicon deposits from different sources, and deposited at different temperatures, protect the sublayer pattern from the silicon tetrachloride reaction.

B68-10391
TRAINING MANUALS FOR NONDESTRUCTIVE TESTING USING MAGNETIC PARTICLES
 SPON- INNOVATOR NOT GIVEN /GEN. DYN./CONVAIR/ DATE- OCT. 1968
 M-FS-20187

Training manuals containing the fundamentals of nondestructive testing using magnetic particle as detection media are used by metal parts inspectors and quality assurance specialists. Magnetic particle testing involves magnetization of the test specimen, application of the magnetic

particle and interpretation of the patterns formed.

B68-10392

CONTAMINATION CONTROL HANDBOOK

SPON- INNOVATOR NOT GIVEN /SANDIA CORP./ DATE- OCT. 1968

M-PS-20185

Contamination Control Handbook provides technical information on avoiding contamination of physical, chemical or biological systems or products. The book includes control methods for product design, gases and liquids, airborne and surface contamination, radiation, packaging handling, storage and personnel.

B68-10394

NONDESTRUCTIVE TESTING OF BRAZED ROCKET

ENGINE COMPONENTS

ADAMS, C. J. HAGEMAIER, D. J. MEYER, J. A. /N. AM. ROCKWELL CORP./ DATE- OCT. 1968

M-PS-18191

Report details study made of nondestructive radiographic, ultrasonic, thermographic, and leak test methods used to inspect and evaluate the quality of the various brazed joints in liquid-propellant rocket engine components and assemblies. Descriptions of some of the unique equipment and methods developed are included.

B68-10408

THE THERMODYNAMIC PROPERTIES OF THE WUSTITE PHASE ARE STUDIED

ACKERMAN, R. J. SANDFORD, R. W., JR. DATE- DEC. 1968 REAN- SEE ALSO ANL-7250

ARG-10200

Study of the precise location of the wustite phase boundaries and the dependence of the partial pressure of oxygen on the temperature and composition of the solid phase was made. From the pressure of oxygen, the temperature and the composition thermodynamic quantities can be determined.

B68-10409

THE PREPARATION, IDENTIFICATION AND PROPERTIES OF CHLOROPHYLL DERIVATIVES

KATZ, J. J. PENNINGTON, F. C. STRAIN, H. R. SVEC, W. A. DATE- DEC. 1968

ARG-10205

In the investigation of 10-hydroxy chlorophylls a and b novel techniques included modification of chromatography and the use of fully-deuterated compounds isolated from fully-deuterated autotrophic algae to determine the molecular structure of the chlorophylls.

B68-10414

TITANIUM-NITROGEN REACTION INVESTIGATED FOR APPLICATION TO GETTERING SYSTEMS

ARNTZEN, J. D. COLEMAN, L. F. KYLE, M. I. PIERCE, R. E. DATE- NOV. 1968 REAN- SEE ALSO ANL-7167

ARG-10208

Titanium is one of several gettering materials available for removing nitrogen from inert gases. The reaction rate of titanium-metal sponge and nitrogen in argon-nitrogen mixtures was studied at 900 degrees C. The rate was found to depend upon the partial pressure of nitrogen in the gas phase. Mathematical relationships simulate titanium systems.

B68-10419

CHEMISTRY LABORATORY SAFETY MANUAL

AVAILABLE

ELSBROCK, R. G. DATE- NOV. 1968

SAN-10030

Chemistry laboratory safety manual outlines safe practices for handling hazardous chemicals and chemistry laboratory equipment. Included are discussions of chemical hazards relating to fire, health, explosion, safety equipment and procedures for certain laboratory techniques and manipulations involving glassware, vacuum equipment, acids, bases, and volatile solvents.

B68-10425

NITRIC ACID-ORGANIC MIXTURES SURVEYED FOR

USE IN SEPARATION BY ANION EXCHANGE METHODS

BLOOMQUIST, C. A. A. FARIS, J. P. STEWART, D. C. DATE- NOV. 1968 REAN- SEE ALSO ANL-6999

ARG-10065

Column elution-spectrographic analysis technique compares certain solvents directly to the methanol system, using inert rare earths instead of actinides. Distribution ratios for americium between 90 percent solvent, 10 percent 5 M nitric acid and Dowex 1 nitrate form resin for a large group of organics miscible in water was determined.

B68-10433

AN ECONOMICAL METHOD FOR THE CONTINUOUS PRODUCTION OF IODINE-123

BLUE, J. W. SMITH, W. R. SODD, V. J. DATE- DEC. 1968

LEWIS-10518

Simple and inexpensive method produces iodine 123, in a conventional cyclotron. Tellurium 122, a stable isotope available in enrichments exceeding 95 percent, is held on a porous metal plate by a flowing stream of helium and bombarded with either alpha particles or helium 3.

B68-10454

HYDROGEN PEROXIDE ETCHING PROVES USEFUL FOR GERMANIUM

DAYAL, Y. /IIT RES. INST./ KAMPWIRTH, R. PRIMAK, W. DATE- DEC. 1968

ARG-10170

Influence of process variations in the etching of germanium with hydrogen peroxide has been studied, along with damage effects due to radiation. The work advances the knowledge of the etching process for germanium.

B68-10455

GRAIN-BOUNDARY MIGRATION IN KCL BICRYSTALS

GIBBON, C. F. DATE- DEC. 1968 REAN- SEE ALSO ANL-7232

ARG-10181

Boundary migration in melt-grown bicrystals of KCl containing pure twist boundaries was investigated. The experiments involve the use of bicrystal specimens in the shape of right-triangular prisms with the boundary parallel to one side.

B68-10520

AMBIENT TEMPERATURE CATALYST FOR HYDROGEN

IGNITION

ROBERTS, R. W. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968

LEWIS-10551

Low cost, ambient temperature catalyst for reacting hydrogen gas with air in a catalytic cell near the point of evolution at a controlled rate is announced.

B68-10522

METHOD FOR REMOVING SURFACE-DAMAGED LAYERS

FROM NICKEL ALLOYS

FAWLEY, R. W. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968

M-PS-18151

Electrical discharge machining /EDM/ damaged layer can be effectively removed from Rene 41, Inconel 625, Inconel 718, and Monel K-500 by abrasive-grit blasting or electropolishing /at room temperature/ at a current density of 5A/inches squared in a water solution of phosphoric and sulfuric acids.

B68-10523

EVALUATION OF A FLUOROCARBON PLASTIC USED

IN CRYOGENIC VALVE SEALS

CIERNIAK, R. E. LIEB, J. H. MOWERS, R. E. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968

M-PS-18189

Effects of strain rate, temperature, crystallinity, and surface finish /smoothness/ on the tensile strength of a commercial chlorotrifluoroethylene plastic /CTFE/ used for lipseals in very fast-acting liquid oxygen valves.

B68-10524

DISPENSING GRADUATE FOR BUTADIENE

03 MATERIALS (CHEMISTRY)

HIRSHFIELD, S. M. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968
NPO-10070

Graduate was designed for dispensing small volumes of liquid 1,3-butadiene or other volatile liquids which are in the gaseous state at room temperature.

B68-10526

PRECISE DOPING OF METALS BY SMALL GAS FLOWS
BARRETT, C. A. DATE- NOV. 1968
LEWIS-10444

Simple method was developed for doping refractory metals with oxygen. The metal specimens are heated in a dynamic high-vacuum system. The system can be used for other oxygen absorption processes /such as low-pressure oxidation measurements/ and for gases other than oxygen.

B68-10527

GRAIN GROWTH INHIBITOR FOR POROUS TUNGSTEN MATERIALS

TODD, H. H. /ELECTRO-OPT. SYSTEMS/ DATE- NOV. 1968

LEWIS-10535

Boron, either uncombined or combined with nitrogen or carbon added to tungsten powder prior to processing, effectively inhibits grain growth. The tungsten material is stable up to 1800 degrees C.

B68-10528

METHOD FOR CONTROLLING DENSITY AND PERMEABILITY OF SINTERED POWDERED METALS

TODD, H. H. /ELECTRO-OPT. SYSTEMS/ DATE- NOV. 1968

LEWIS-10393

Improved, relatively low-cost method has been developed to produce porous metals with predetermined pore size, pore spacing, and density, utilizing powder-metal processes. The method uses angular not spherical tungsten powder.

B68-10532

MASS LOADING EFFECTS ON VIBRATED RING AND SHELL STRUCTURES

LEE, S. Y. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968

M-FS-14979

Efficient methods for predicting the effects of attached masses on the vibration characteristics of ring and shell structures have been developed and substantiated with experimental data.

B68-10536

A RAPID STRESS-CORROSION TEST FOR ALUMINUM ALLOYS

HELFRICH, W. J. /KAISER ALUMINUM AND CHEM. CORP./ DATE- DEC. 1968

M-FS-20175

Stressed alloy specimens are immersed in a salt-dichromate solution at 60 degrees C. Because of the minimal general corrosion of these alloys in this solution, stress corrosion failures are detected by low-power microscopic examination.

B68-10552

SIMULATED HAILSTONE FABRICATION AND USE IN TESTING WEATHERABILITY OF STRUCTURES

STOLLER, F. W. DATE- DEC. 1968

NPO-10783

Equipment fabricates and uses simulated hailstones to test the weatherability of exposed structures. The equipment projects the hailstones at velocities experienced in hailstorms.

B68-10553

STRUCTURAL THERMAL-CONTROL COATINGS

STOLLER, F. W. DATE- DEC. 1968

NPO-10785

Specifications have been formulated for application of thermal-control paints on large radar antenna structures exposed to solar radiation. The paint minimizes thermally induced mechanical deflections and glare of incident solar radiation.

B68-10557

SEPARATOR FOR ALKALINE BATTERIES

HOYT, H. W. PFLUGER, H. L. /BORDEN CO./ DATE- DEC. 1968
GSFC-10173

Separator compositions have been tested as components of three-plate silver-zinc oxide cells in a standard cycling test. Six materials meet imposed requirements, giving cycling performance superior to cellophane.

B68-10561

WELD JOINT STRENGTH AND MECHANICAL PROPERTIES IN 2219-T81 ALUMINUM ALLOY

KROPP, C. J. WITZELL, W. E. /GEN. DYN./CONVAIR/ DATE- DEC. 1968

LEWIS-10479

Plate and sheet were welded using automatic TIG /Tungsten Inert Gas/ weld techniques and manual repair weld techniques. Yield strength of 2219-T81 sheet and plate decreases significantly when welded.

B68-10568

STRESS-CORROSION-INDUCED PROPERTY CHANGES IN ALUMINUM ALLOYS

BANKSTON, B. F. CLOTFELTER, W. N. DATE- DEC. 1968

M-FS-20209

Measurements of electrical conductivity, ultrasonic surface wave attenuation, and internal friction loss were made on aluminum alloys 7079-T6, 2219-T31, and 2219-T81 as a function of the onset of stress corrosion.

B69-10004

STUDY OF ACTINIDE CHEMISTRY IN SATURATED POTASSIUM FLUORIDE SOLUTION

COHEN, D. THALMAYER, C. E. DATE- JAN. 1969

ARG-10204

Study concerning the chemistry of actinides in saturated KF solution included work with neptunium, uranium, and americium. Solubilities, absorption spectra, oxidation-reduction reactions, and solid compounds which can be produced in KF solution were examined. The information is used for preparation of various materials from salts of the actinides.

B69-10006

LEVITATION-MELTING TECHNIQUE FOR METALS AND ALLOYS

DOWNNEY, J. W. DATE- JAN. 1969

ARG-10240

Experimentation resulted in an improved levitation-melting technique for metals and alloys which quickly produces a completely homogeneous melt. Also developed were two levitation coils that permit a wide variety of metals to be levitated in the molten state and a helium quenching method which minimizes contamination and segregation.

B69-10010

SUPERCONDUCTIVITY IN ZIRCONIUM-RHODIUM ALLOYS

ZEGLER, S. T. DATE- JAN. 1969

ARG-10223

Metallographic studies and transition temperature measurements were made with isothermally annealed and water-quenched zirconium-rhodium alloys. The results clarify both the solid-state phase relations at the Zr-rich end of the Zr-Rh alloy system and the influence upon the superconducting transition temperature of structure and composition.

B69-10025

EVALUATION OF LUBRICANTS FOR BALL BEARINGS AT HIGH TEMPERATURES

JOHNSON, R. L. SLINNEY, H. E. DATE- FEB. 1969

LEWIS-10578

Calcium fluoride-barium fluoride coating on ball bearing cages or as fillers in porous bearing cages lubricate bearings successfully for operations in air at temperatures of 1200 to 1500 degrees F.

B69-10026

TWO SYSTEMS DEVELOPED FOR PURIFYING INERT ATMOSPHERES

FOSTER, M. S. JOHNSON, C. E. KYLE, M. L. DATE-
FEB. 1969
ARG-10234

Two systems, one for helium and one for argon, are used for purifying inert atmospheres. The helium system uses an activated charcoal bed at liquid nitrogen temperature to remove oxygen and nitrogen. The argon system uses heated titanium sponge to remove nitrogen and copper wool beds to remove oxygen. Both use molecular sieves to remove water vapor.

B69-10029
CORROSION REDUCTION OF ALUMINUM ALLOYS IN
FLOWING HIGH-TEMPERATURE WATER

DRALEY, J. E. RUTHER, W. E. DATE- FEB. 1969
REAN- SEE ALSO ANL-7227
ARG-10244

Report describes a technique for reducing the corrosion rate of aluminum by adding colloidal substances in a closed-loop system. Experimental work shows that the addition of graphite and colloidal hydrated aluminum oxide significantly reduces the corrosion rate in flowing high-temperature water.

B69-10033
ELECTROCHEMICAL STUDY OF ALUMINUM
CORROSION IN BOILING HIGH PURITY WATER

DRALEY, J. E. LEGAULT, R. A. DATE- APR. 1969
ARG-10306

Electrochemical study of aluminum corrosion in boiling high-purity water includes an equation relating current and electrochemical potential derived on the basis of a physical model of the corrosion process. The work involved an examination of the cathodic polarization behavior of 1100 aluminum during aqueous oxidation.

B69-10048
STUDY OF FLUORIDE CORROSION OF NICKEL ALLOYS
GUNTHER, W. H. STEINDLER, M. J. DATE- FEB. 1969
REAN- SEE ALSO ANL-7241

ARG-10224
Report contains the results of an investigation of the corrosion resistance of nickel and nickel alloys exposed to fluorine, uranium hexafluoride, and volatile fission product fluorides at high temperatures. Survey of the unclassified literature on the subject is included.

B69-10049
TEFLON-PACKED FLEXIBLE JOINT
BELMONT, G. E. DATE- FEB. 1969
LEWIS-90252

Teflon-packed flexible joint separates the movement of the shaker from the liquid nitrogen hose during the ground testing of cryogenic zero-g equipment. The joint allows the hose to lie on the floor in a stationary position as the shaker moves back and forth, thus, the hose is not subject to violent motion.

B69-10053
REFRACTORY OXIDE INSULATED THERMOCOUPLE
DESIGNED AND ANALYZED FOR HIGH TEMPERATURE
APPLICATIONS
POPPER, G. F. ZEREN, T. Z. DATE- FEB. 1969
ARG-10202

Study establishes design criteria for constructing high temperature thermocouple to measure nuclear fuel pin temperature. The study included a literature search to determine the compatibility of material useful for thermocouples, a hot zone error analysis, and a prototype design for hot junction and connector pin connections.

B69-10054
TRANSPUTONIUM ELEMENTS PROCESSED FROM ROCK
DEBRIS OF UNDERGROUND DETONATIONS
BLOOMQUIST, C. A. A. HARVEY, H. W. HOH, J. C.
HORWITZ, E. P. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7134
ARG-10222

Six-step chemical processing method extracts minute quantities of transplutonium elements found in rock debris following a nuclear detonation. The process consists of dissolution of rock, feed preparation, liquid-liquid extraction, final

purification of transplutonium elements and plutonium, and separation of the transplutonium elements.

B69-10055
THERMAL EXPANSION PROPERTIES OF AEROSPACE
MATERIALS

GREEN, E. F. /N. AM. ROCKWELL CORP./ DATE- MAR.
1969
M-FS-18335

Thermal expansion properties of materials used in aerospace systems are compiled into a single handbook. The data, derived from experimental measurements supplemented by information from literature sources, are presented in charts and tables arranged in two sections, covering cryogenic and elevated temperatures.

B69-10058
SINTERING CHARACTERISTICS AND PROPERTIES
OF PUS AND PUP ARE DETERMINED
KRUGER, O. L. MOSER, J. B. DATE- MAR. 1969
ARG-10228

Report on the preparation of plutonium monosulphide and plutonium monophosphide includes a description of the sintering characteristics and properties of these high-temperature compounds. data on weight loss, microstructure, density, melting point, thermal expansion, microhardness, Seebeck coefficient, and thermal diffusion are included.

B69-10061
INSERTION DEVICE FOR PRESSURE TESTING
HOWLAND, B. T. MAURIN, A. L. /N. AM. ROCKWELL
CORP./ DATE- MAR. 1969
MSC-15185

Test device which introduces either pressure or vacuum into a test pipe or tube, is insertable into the tested item where it secures itself into position and requires no external support. The unit has an operating range from zero to 25,000 psig and to any vacuum level that available equipment can reach.

B69-10065
MATERIALS DATA HANDBOOK, ALUMINUM ALLOY
6061
SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES.
INST./ DATE- MAR. 1969
M-FS-20381

Comprehensive compilation of technical data on aluminum alloy 6061 is presented in handbook form. The text includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures and other pertinent information required for the design and fabrication of components and equipment utilizing this alloy.

B69-10066
FRACTOGRAPHY CAN BE USED TO ANALYZE FAILURE
MODES IN POLYTETRAFLUOROETHYLENE
NERREN, B. H. DATE- MAR. 1969
M-FS-20294

Fractographic principles used for analyzing failure in metals are applied to the analysis of the microstructure and fracture of polytetrafluoroethylene. This material is used as seals in cryogenic systems.

B69-10067
DIFFUSION OF TRACE GASES FOR LEAK DETECTION -
A STUDY
BROWN, J. L. DATE- MAR. 1969
M-FS-20254

Study reveals quantitative measurements of the diffusion of trace gases /Freon and helium/ injected into systems by different methods. Results show that uniform mixing does not always occur, thus evaluation of the system under test and establishment of the method of trace gas injection are mandatory.

B69-10068
TENSILE AND FATIGUE PROPERTIES OF INCONEL
718 AT CRYOGENIC TEMPERATURES
MALIN, C. O. SCHMIDT, E. H. /N. AM. ROCKWELL
CORP./ DATE- MAR. 1969
M-FS-18192

03 MATERIALS (CHEMISTRY)

Tests to determine the tensile and fatigue properties of Inconel 718 at cryogenic temperatures show that the alloy increases in strength at low temperatures, with very little change in toughness. The effect of surface finish and grain size on the fatigue properties was also determined.

B69-10072

REFRACTORY-METAL COMPOUND IMPREGNATION OF POLYTETRAFLUOROETHYLENE

LEIBICKI, H. F. DATE- MAR. 1969

LEWIS-10733

Process impregnates polytetrafluoroethylene /PTFE/ with rhenium or molybdenum compounds. The refractory metals impregnated PTFE combines chemical inertness with electrical conductivity. They are useful for electro-chemical cells, chemical processing equipment, catalysts, electrostatic charge removal, RF gasketing, and cable shielding.

B69-10074

ADHESIVE FOR CRYOGENIC TEMPERATURE APPLICATIONS

DOYLE, H. M. /MCDONNELL DOUGLAS CORP./ DATE- MAR. 1969

LEWIS-10264

Adhesive, which bonds a metal liner to a filament wound composite structure used for cryogenic pressure vessels, prevents the metal liner from buckling under depressurization. The adhesive consists of adducts of urethane and epoxy resins.

B69-10079

PREPARATION OF THORIUM MAGNESIUM-ZINC REDUCTION

HARIHARAN, A. V. KNIGHTON, J. B. STEUNENBERG, R. K. DATE- MAR. 1969 REAN- SEE ALSO ANL-7058

ARG-10245

Magnesium-zinc reduction of thorium dioxide is used for the preparation of thorium metal. Potential economic advantages of this technique include use of relatively inexpensive reagents for the metal and flux phases, and production of metal of acceptable quality in good yield.

B69-10081

SPECTROGRAPHIC ANALYSIS OF BISMUTH-TIN EUTECTIC ALLOYS BY SPARK-IGNITED,

LOW-VOLTAGE AC-ARC EXCITATION

HUFF, E. A. KULPA, S. J. DATE- APR. 1969 REAN- SEE ALSO ANL-7331

ARG-10288

Spectrographic method determines individual stainless steel components in molten bismuth-42 w/o tin eutectic to determine the solubility of Type 304 stainless steels. It utilizes the high sensitivity and precision of the spark-ignited, low-voltage ac-arc excitation of samples rendered homogeneous by dissolution.

B69-10084

IMPROVED PH BUFFERING AGENT FOR SODIUM HYPOCHLORITE

NASH, J. R. VEEDER, L. N. /N. AM. ROCKWELL CORP./ DATE- MAR. 1969

MSC-15443

Sodium citrate/citric acid was found to be an effective buffer for pH control when used with sodium hypochlorite. The mixture does not corrode aluminum. The buffer appears to form a type of conversion coating that may provide corrosion-resistant properties to aluminum in other applications.

B69-10092

DIRECT MEASUREMENT OF CARBON-14 IN CARBON DIOXIDE BY LIQUID SCINTILLATION COUNTING

HORROCKS, D. L. DATE- APR. 1969

ARG-10237

Liquid scintillation counting technique is applied to the direct measurement of carbon-14 in carbon dioxide. This method has high counting efficiency and eliminates many of the basic problems encountered with previous techniques. The technique can be used to achieve a percent substitution reaction and is of interest as an analytical technique.

B69-10098

CORROSION PROTECTION OF ALUMINUM ALLOYS IN CONTACT WITH OTHER METALS

KUSTER, C. A. /N. AM. ROCKWELL CORP./ DATE- APR. 1969

M-FS-18526

Study establishes the quality of chemical and galvanized protection afforded by anodized and alodized coatings applied to test panels of various aluminum alloys. The test panels, placed in firm contact with panels of titanium alloys, were subjected to salt spray tests and visually examined for corrosion effect.

B69-10108

HANDBOOKS FOR NONDESTRUCTIVE TESTING USING ULTRASONICS

SPON- INNOVATOR NOT GIVEN /GEN. DYN./CONVAIR/ CONVAIR/ DATE- APR. 1969 REAN- SEE ALSO

NASA-CR-61209, NASA-CR-61210, NASA-CR-61211, AND NASA-CR-61228

M-FS-20409

Four handbooks have been prepared for use in teaching metal parts inspectors and quality assurance technicians the fundamentals of nondestructive testing using ultrasonic detection methods. The handbooks may be used in the shop or laboratory, or as study texts in technical schools and in the home.

B69-10118

NEW RAPID-CURING, STABLE POLYIMIDE POLYMERS WITH HIGH-TEMPERATURE STRENGTH AND THERMAL STABILITY

BURNS, E. A. JONES, J. P. KENDRICK, W. R. LUBOWITZ, H. R. THORPE, R. S. WILSON, E. R. /TRW, INC./ DATE- MAY 1969

LEWIS-10576

Additive-type polymerization reaction forms thermally stable polyimide polymers, thereby eliminating the volatile matter attendant with the condensation reaction. It is based on the utilization of reactive alicyclic rings positioned on the ends of polyimide prepolymers having relatively low molecular weights.

B69-10123

PRODUCTION OF METALS AND COMPOUNDS BY RADIATION CHEMISTRY

MARSIK, S. J. PHILIPP, W. H. DATE- MAY 1969

LEWIS-10231

Preparation of metals and compounds by radiation induced chemical reactions involves irradiation of metal salt solutions with high energy electrons. This technique offers a method for the preparation of high purity metals with minimum contamination from the container material or the cover gas.

B69-10136

PREPARATION OF HIGH PURITY COPPER FLUORIDE BY FLUORINATING COPPER HYDROXYFLUORIDE

KING, R. B. LUNDQUIST, J. R. /BATELLE NORTHWEST/ DATE- MAY 1969

LEWIS-10794

Copper fluoride containing no more than 50 ppm of any contaminating element was prepared by the fluorination of copper hydroxyfluoride. The impurity content was obtained by spark source mass spectrometry. High purity copper fluoride is needed as a cathode material for high energy density batteries.

B69-10138

LIQUID GALLIUM ROTARY ELECTRIC CONTRACT PRZYBYSZESKI, J. S. DATE- MAY 1969

LEWIS-10828

Due to its low vapor pressure, gallium, when substituted for mercury in a liquid slip ring system, transmits substantial amounts of electrical current to rotating components in an ultrahigh vacuum. It features low electrical loss, little or no wear, and long maintenance-free life.

B69-10147

TORSION SYSTEM FOR CREEP TESTING WITH MULTIPLE STRESS REVERSALS

LILIENTHAL, P. A. /ILLINOIS UNIV./ DATE- MAY

1969

HQ-10039

Torsion system proves exploratory data on accelerated creep due to multiple stress reversals. Torsional testing of tubular specimens is best suited for reversed stress creep tests since large strains are obtainable while maintaining specimen geometry.

B69-10154

FUEL ELEMENT CONCEPT FOR LONG LIFE HIGH

POWER NUCLEAR REACTORS

MCDONALD, G. E. ROM, F. E. DATE- MAY 1969

LEWIS-10309

Nuclear reactor fuel elements have burnups that are an order of magnitude higher than can currently be achieved by conventional design practice. Elements have greater time integrated power producing capacity per unit volume. Element design concept capitalizes on known design principles and observed behavior of nuclear fuel.

B69-10168

SEPARATION OF TRACES OF METAL IONS FROM

SODIUM MATRICES

KORKISCH, J. ORLANDINI, K. A. DATE- JUN. 1969

REAN- SEE ALSO ANL-7421

ARG-10341

Method for isolating metal ion traces from sodium matrices consists of two extractions and an ion exchange step. Extraction is accomplished by using 2-thenyltrifluoroacetone and dithizone followed by cation exchange.

B69-10170

REDUCTION BY MONOVALENT ZINC, CADMIUM, AND

NICKEL CATIONS

MEYERSTEIN, D. MULAC, W. A. DATE- JUN. 1969

ARG-10328

Understanding of chemical properties of monovalent transition metal cations in aqueous solutions was obtained by a study of kinetics of reduction of different inorganic substrates by zinc, cadmium, and nickel.

B69-10176

COATINGS DECREASE METAL FATIGUE FAILURE

SUMSION, H. T. DATE- JUN. 1969

ARG-10015

Metal test specimens were coated with suitable materials to limit the rate of attack of fresh metal surfaces by the atmosphere. The fatigue properties of coated metals were superior to those which were uncoated and approached the properties observable in vacuum.

B69-10179

MANUAL OF TYPICAL LOW TEMPERATURE

MECHANICAL PROPERTIES OF SEVERAL MATERIALS

MALIN, C. O. /ROCKETDYNE/ DATE- JUN. 1969

M-PS-18331

Manual contains information resulting from tests regarding low temperature properties of a number of materials commonly used in aerospace. The mechanical properties data are presented for 54 commonly used materials. The data is taken from many sources and is averaged and adjusted to represent the properties of typical material.

B69-10192

DETECTING HYDROGEN-CONTAINING CONTAMINANTS

ON METAL SURFACES

GROVE, E. L. LOSELE, W. A. /IIT RES. INST./

DATE- JUN. 1969

M-PS-20456

Spark emission spectroscopy analyzes surface contamination of metals. This technique controls the quality of surface preparations and is useful in fundamental investigations of surface properties of metals.

B69-10195

EFFECT OF INTERPARTICLE FORCES ON THE

FLUIDIZATION OF FINE PARTICLES

BAERNS, M. G. RAMASWAMI, D. DATE- JUN. 1969

REAN- SEE ALSO ANL-7086

ARG-10264

Report studies elucidation and description of

effect of interparticle forces on feasibility of gaseous fluidization of particles below 50 microns in diameter. Interparticle forces are determined by inclined-plane method. Study indicated that fluidizability is related to the interparticle adhesive force.

B69-10196

IDENTIFICATION AND EVALUATION OF LINEAR

DAMPING MODELS IN BEAM VIBRATIONS

BOERS, B. L. ROSENBERG, G. S. WAMBSGANSS, M. W.,

JR. DATE- JUL. 1969 REAN- SEE ALSO ANL-7292

ARG-10275

Sensitive method, identifying effective damping mechanisms, involves comparing experimentally determined ratio of first to second mode magnification factors related to common point on beam. Cluster size has little effect on frequencies of elements, magnification factor decreases with cluster size, and viscous and stress damping are dominant damping mechanisms.

B69-10198

RECENT DEVELOPMENT IN ORGANIC SCINTILLATORS

HORROCKS, D. L. WIRTH, H. O. DATE- JUL. 1969

ARG-10344 ARG-10346

Discussion on recent developments of organic scintillators includes studies of organic compounds that form glass-like masses which scintillate and are stable at room temperature, correlations between molecular structure of organic scintillators and self-quenching, recently developed fast scintillators, and applications of liquid-scintillation counters.

B69-10200

HIGH TEMPERATURE COATINGS FOR GAS BEARINGS

MURRAY, S. F. /MECH. TECHNOL./ DATE- JUL. 1969

LEWIS-10793

Aluminum oxide and nickel-chrome bonded chrome carbide coatings enhance the performance of gas bearings at temperatures up to 1400 degrees F. A plasma-sprayed aluminum-oxide coating is applied to the bearing surface and a plasma-sprayed 25 percent nickel-chrome bonded chrome carbide coating is applied to the journal surface.

B69-10206

MEASUREMENTS OF THERMOELECTRIC POWER IN

ANNEALED AND QUENCHED GOLD-PLATINUM ALLOYS

BAARLE, C. V. HUEBENER, R. P. DATE- JUL. 1969

ARG-10303

Report gives measurements of absolute thermoelectric powers of dilute gold-platinum alloys and influence of quenched-in lattice vacancies on their thermoelectric powers. It investigates phonon-drag component of thermoelectric power as a function of platinum concentration, and change in phonon-drag thermoelectric power by lattice vacancies.

B69-10235

TECHNIQUE FOR ABRASIVE CUTTING OF

THICK-FILM CONDUCTORS FOR HYBRID CIRCUITS

NUGENT, J. B. PALERMO, J. S. /MIT/ DATE- AUG.

1969

MSC-13242

Abrasive jet technique, producing prototype conductor networks for thick-film hybrid microcircuits, does not require screening and fixing procedures. Pantograph engraver is used to perform abrasive cutting of the conductor network.

B69-10237

DIFFUSION BOND METHOD OF JOINING STEEL AND

A TFE-BRONZE COMPOSITE

LALACONA, F. P. DATE- JUL. 1969

M-PS-20482

Diffusion bonding method does not affect the mechanical properties of steel nor the strength of Teflon. It alleviates problems of adhesive outgassing, radiation damage, and delamination.

B69-10240

THERMOPHYSICAL PROPERTIES OF SODIUM

GOLDEN, G. H. TOKAR, J. V. DATE- AUG. 1969

REAN- SEE ALSO ANL-7323

ARG-10363

03 MATERIALS (CHEMISTRY)

Assessment is given of physical and thermodynamic properties of sodium. FORTRAN subroutine computes enthalpy and entropy of sodium in given state, and composition, molecular weight, volume, and compressibility factor of corresponding vapor. Tabular results for saturated liquid and vapor are presented for a 500-2500 degree F range.

B69-10241

ZONE PURIFICATION OF POTASSIUM CHLORIDE

SUSMAN, S. DATE- AUG. 1969

ARG-10377

Procedure for removal of sodium and bromine from KCl involves zone refining in dilute halogen atmosphere. Distribution of Na and Br at concentrations of parts per million is followed by neutron-activation analyses.

B69-10250

A NEW SOLID LUBRICANT

FUSARO, R. L. SLINNEY, H. E. DATE- AUG. 1969

LEWIS-10812

Friction and wear life studies on burnished films of the compound graphite fluoride have demonstrated its potential as a solid lubricant material. It is effective in moist air, dry air, or in dry argon at temperatures up to approximately 400 degrees C.

B69-10252

STUDY OF HIGH TEMPERATURE BEARING MATERIALS

FRANK, R. G. /GE/ DATE- AUG. 1969

LEWIS-10829

Experimental investigation identifies materials suitable for use in potassium lubricated turbo-generator journal bearing and shaft applications at high temperatures. Attention is given to nonrefractory metals and alloys, refractory metals and alloys, Fe-Ni-Co bonded carbides, refractory compounds, and refractory metal bonded carbides.

B69-10254

CONTINUOUS ANALYSIS OF NITROGEN DIOXIDE

IN GAS STREAMS OF PLANTS

DURKIN, W. T. /NATL. LEAD CO. OF OHIO/ KISPERT,

R. C. DATE- JUL 1969 REAN- SEE ALSO NLCO-1025

ARG-10356

Analyzer and sampling system continuously monitors nitrogen dioxide concentrations in the feed and tail gas streams of a facility recovering nitric acid. The system, using a direct calorimetric approach, makes use of readily available equipment and is flexible and reliable in operation.

B69-10256

INDUCTION PROBE DETERMINES LEVELS OF

LIQUID METALS

JOHNSON, T. R. PIERCE, R. D. TEATS, F. G. DATE-

JUL. 1969 REAN- SEE ALSO ANL-7153

ARG-10348

Mutual-inductance probe accurately measures liquid levels in a variety of liquid metals at elevated temperatures. It can be used in pyrochemical processes for the recovery of spent reactor fuel.

B69-10257

METHOD FOR COPPER STAINING OF GERMANIUM

CRYSTALS

RIVET, E. J. DATE- JUL. 1969

ARG-10403

Proper conditions for copper staining of germanium crystals include a low solution temperature of 3 degrees C, illumination of the sample by infrared light, and careful positioning of the light source relative to the sample so as to minimize absorption of the infrared light.

B69-10262

THERMAL RADIATION SHIELDS FOR PIPING IN

VACUUM ENVIRONMENTS

SPAGNUOLO, A. C. DATE- AUG. 1969

LEWIS-10899

System of thermal radiation shielding reduces radiant heat transfer in vacuum installations containing piping which carries working fluids. Method employs successive layers of spacers and rolled metal shields which are easily installed or removed, expedites efficient removal of entrapped

gases, and adapts easily to small pipings.

B69-10265

TECHNIQUE FOR ANCHORING FASTENERS TO

HONEYCOMB PANELS

BROWN, W. J. SPAGNUOLO, A. C. STONEBRAKER, J. C.

DATE- AUG. 1969

LEWIS-10888

Two-piece fastener bushing provides mounting surface for components on a three-inch thick honeycomb structure. Specially constructed starter drill and sheet metal drill permit drilling without misalignment. Tapered knife-edge cutting tool removes honeycomb core material without tearing the adjacent material.

B69-10266

IMPROVED HIGH-TEMPERATURE SILICIDE COATINGS

KLOPP, W. D. STEPHENS, J. R. STETSON, A. R.

/INTERN. HARVESTER CO./ WIMBER, R. T. DATE- AUG.

1969

LEWIS-10817

Special technique for applying silicide coatings to refractory metal alloys improves their high-temperature protective capability. Refractory metal powders mixed with a baked-out organic binder and sintered in a vacuum produces a porous alloy layer on the surface. Exposing the layer to hot silicon converts it to a silicide.

B69-10283

AUTOMATED MEASUREMENT OF THERMAL

CONDUCTIVITY

HALE, D. V. /LOCKHEED MISSILES AND SPACE CO./

DATE- AUG. 1969

M-FS-20454

Testing technique permits accurate measurement of temperature-dependent thermal conductivity, by virtue of the small temperature differential required across a specimen. The permissible mean insulation temperature ranges from cryogenic to 10 degrees F for the insulation under test.

B69-10287

TECHNIQUE FOR ASSESSING POTENTIAL FIRE

HAZARDS

LAMPERT, H. M. /GE/ DATE- AUG. 1969

HQ-10279

Combustion hazard modeling technique limits the fire evaluation to a description of only thermal energy exchanges which are involved in the burning process, and the calculation of temperatures, temperature changes, and weight losses as a result of these energy changes.

B69-10292

APPARATUS AUTOMATICALLY MEASURES SOLUBLE

RESIDUE CONTENT OF VOLATILE SOLVENTS

OSWALT, F. W. DATE- AUG. 1969

SAN-10032

Solvent Purity Meter /SPM/ automatically measures the soluble residue in volatile solvents used in cleaning or extraction of oils, greases, and other nonvolatile materials. The SPM gives instantaneous and continuous readout of soluble contaminant residues in concentrations as low as one part per million of solution.

B69-10293

HIGH STRENGTH, SUPERPLASTIC SUPERALLOY

ASHBROOK, R. L. FRECHE, J. C. WATERS, W. J.

DATE- AUG. 1969

LEWIS-10805

High strength superplastic superalloys are produced by extruding a pre-alloyed powder. The cast nickel base superalloy was remelted and converted to pre-alloyed powder by inert gas atomization. The superalloy shows high tensile strength and superplasticity and finds use in hot working and casting.

B69-10299

HEPARIN INSOLUBILIZED WITH CROSSLINKING

AGENT

REHBAUM, A. DATE- AUG. 1969

NPO-10834

New plastic compositions, involving the synthesis of a polymeric system containing heparin insolubilized with crosslinking agents, show

appreciable promise in human body implant technology.

B69-10309

METALLIC DIFFUSION MEASURED BY A MODIFIED KNUDSEN TECHNIQUE

FRAY, D. J. /MIT/ DATE- SEP. 1969
HQ-10145

Diffusion coefficient of a metal in high temperature system is determined. From the measurement of the weight loss from a Knudsen cell, the vapor pressure of the escaping species can be calculated. If the only way this species can enter the Knudsen cell is by diffusion through a foil, the weight loss is diffusion flux.

B69-10330

SIMPLE TEST INDICATES DEGREE OF CURE OF POLYIMIDE COATINGS

URIBE, J. R. /N. AM. ROCKWELL CORP./ WALLAUCH, J. R. DATE- SEP. 1969
MSC-15487

Qualitative test involves immersing a coated cable in methyl-2-pyrrolidone and removing it in one to three minutes. Evidence of any cracking, peeling, or other defects that shows under 20-power magnification indicates that the coating has not been completely cured.

B69-10339

DEVELOPMENT AND TEST OF FLEXIBLE FILM COUPON STRIPS FOR USE AS A SAMPLING TECHNIQUE

ALDRIDGE, C. /MCDONNELL DOUGLAS ASTRONAUTICS CO./ DATE- SEP. 1969
M-FS-20448

Film consisting of a gelatin base serves as a flexible, water soluble microbiological assay coupon for clean room use. It is nontoxic to microorganisms and capable of remaining unchanged during periods of storage.

B69-10352

IMPROVED HIGH-TEMPERATURE-STRENGTH NICKEL-BASE SUPERALLOY

FRECHE, J. C. WATERS, W. J. DATE- SEP. 1969
LEWIS-10874

Nickel-base superalloy has a strength of 20,000 psi at 2,200 degrees F, approximately double the strength of the strongest available cast nickel-base alloys. It is not subject to the formation of embrittling phases upon long time exposure at intermediate temperatures.

B69-10357

SPIRAL-FLOW APPARATUS FOR MEASURING PERMEATION OF SOLIDS BY GASES

MITCHELL, S. M. /N. AM. ROCKWELL CORP./ WILLIAMS, B. B. DATE- SEP. 1969
M-FS-16517

Test assembly measures the rate of permeation of a solid by a gas. Test gas is forced, under pressure, into a cylindrical plug containing the solid to be tested. Gas chromatograph detects the presence of the test gas.

B69-10360

IMPROVED GYRO-FLOTATION /DAMPING/ FLUIDS

JACOBS, S. S. /M AND T CHEMICALS, INC./ DATE- SEP. 1969
MSC-13217

Synthesis of a metal-stabilized halophosphazene compound with a density of 3 gm/cc at 137 degrees F serves as an improved stabilizer fluid for floated gyros. Gyro sensitivity can be increased with a fluid of higher density which could support a heavier float.

B69-10366

INSTRUMENTATION FOR NONDESTRUCTIVE TESTING OF COMPOSITE HONEYCOMB MATERIALS

MARTIN, G. /N. AM. ROCKWELL CORP./ MOORE, J. F. DATE- SEP. 1969
M-FS-20405

Program develops instrumentation for nondestructive testing of adhesive-bond strength in honeycomb materials and air coupled inspection methods suitable for large tankage.

B69-10372

EFFECTS OF HYDROGEN ON METALS

CATALDO, C. E. DATE- SEP. 1969
M-FS-20364

Several rules to guide choice of materials, and methods of welding, electroplating, and heat treatment will provide a method for minimizing failures in storage tanks and related hardware. Failures are caused by high-pressure hydrogen effects, the formation of hydrides in titanium, and hydrogen absorption through various metals processing techniques.

B69-10377

SEPARATION OF THE RARE EARTHS BY ANION-EXCHANGE IN THE PRESENCE OF LACTIC ACID

PARIS, J. P. DATE- SEP. 1969
ARG-10436

Investigation of adsorption of rare earths and a few other elements to an anion-exchange resin from mixed solvents containing lactic acid shows that the lanthanides are absorbed more strongly than from the alpha-hydroxyisobutyric acid system, but with less separation between adjacent members of the series.

B69-10397

MAGNETIC FORMING OF RESISTIVE MATERIALS

WANIEK, R. W. /ADVANCED KINETICS INC./ DATE- SEP. 1969
M-FS-20417

Necessary theoretical foundation is given for the treatment of magnetic stresses applied to cylindrical boundaries and swaging of metallic tubing. Emphasis is placed on the use of high-resistivity materials such as stainless steel and Hastelloy.

B69-10406

QUICK-SET TEMPORARY BONDING CLAMPS

BAKER, C. D. DATE- SEP. 1969
NPO-10695 NPO-10696

Method of bonding materials to a flat surface eliminates the use of bolts to hold the pieces together. Two adhesives are used, the primary or permanent bonding material and a quick setting adhesive. No permanent aftereffects are left on the surfaces to which the materials are bonded.

B69-10412

DIRECT IN-VIAL COLLECTION FOR LIQUID-SCINTILLATION ASSAY OF CARBON-14 AND TRITIUM

HUEBNER, L. G. KISIELESKI, W. E. DATE- SEP. 1969
REAN- SEE ALSO ANL-7278
ARG-10424

Dissolution of biological materials combines the simplicity of oxygen-flask combustion with the reproducibility and purity of the final product, and convenience of direct in-vial collection of the sample by the sealed-tube method. It assures quantitative and reproducible recoveries.

B69-10413

INSTRUMENTATION FOR POTENTIOSTATIC CORROSION STUDIES WITH DISTILLED WATER

LOESS, R. E. YOUNGDAHL, C. A. DATE- SEP. 1969
ARG-10409

Corrosion is studied potentiostatically in the corroding environment of distilled water with an instrument that measures the potential of the corroding specimen immediately after interruption of the polarizing current. No current is flowing. The process permits compensation for Ir drops when potentiostatic control is used in high resistance systems.

B69-10414

POSSIBLE CORRELATION BETWEEN WORK-HARDENING AND FATIGUE-FAILURE

RETTUNEN, P. O. KOCKS, U. F. DATE- SEP. 1969
ARG-10371

Conceptual theory proposes that cyclic hardening due to non-uniform strain and stress amplitudes during testing, especially during the initial application of stress to a specimen, may correlate positively with the ultimate strength of the specimen under test.

03 MATERIALS (CHEMISTRY)

B69-10417

DEVELOPMENT OF STRUCTURAL TEST ARTICLES FROM MAGNESIUM-LITHIUM AND BERYLLIUM; ALARIO, R. /FAIRCHILD HILLER/ DATE- NOV. 1969 M-FS-14959

Study on the fabrication and testing of a magnesium-lithium box beam shows the formability and machinability characteristics of that alloy to be excellent. Results of forming tests for shrink and stretch flanges show values for both flange heights that may be used in future beryllium design.

B69-10423

COORDINATION CHEMISTRY IN FUSED-SALT SOLUTIONS

GRUEN, D. M. DATE- SEP. 1969 ARG-10469

Spectrophotometric work on structural determinations with fused-salt solutions is reviewed. Constraints placed on the method, as well as interpretation of the spectra, are discussed with parallels drawn to aqueous spectrophotometric curves of the same materials.

B69-10425

COMPARATIVE CHROMATOGRAPHY OF CHLOROPLAST PIGMENT

GRANDOLFO, M. SHERMA, J. STRAIN, H. H. DATE- SEP. 1969 ARG-10415

Methods for isolation of low concentration pigments of the cocklebur species are described. The methods entail two step chromatography so that the different sorption properties of the various pigments in varying column parameters can be utilized. Columnar and thin layer methods are compared. Many conditions influence separability of the chloroplasts.

B69-10430

PRODUCTION OF SOLVATED ELECTRONS

THOMAS, J. K. DATE- SEP. 1969 ARG-10416

Current research, both theoretical and experimental, relating to the production and kinetics of interactions of solvated electrons is reviewed. Particular attention is focused on solvated electrons generated by ionizing radiation in water, alcohols, and organic systems.

B69-10451

IMPROVED INORGANIC ION EXCHANGE MEMBRANES

ARRANCE, F. C. /MC DONNELL DOUGLAS CORP./ BERGER, C. KEMMERS, A. D. DATE- SEP. 1969 LEWIS-10737

New method makes solid ion exchange membrane electrolytes for use in hydrocarbon-oxygen and hydrogen-oxygen fuel cells. The membrane is a sintered composite of zirconia, phosphoric acid, and zeolite.

B69-10457

ABRASION AND FRACTURE TESTING IN A HIGH-PRESSURE HYDROGEN ENVIRONMENT

SWRESBY, G. V. /ROCKETDYNE/ WALKER, R. J. DATE- SEP. 1969 M-FS-18480 M-FS-18488

Two devices are necessary for abrasion and fracture testing of materials evaluated for storage of hydrogen at high pressure for long periods. The first device abrades tensile specimens. The second device tests for fracture toughness of metals. Both devices permit testing in both yield and failure modes in high pressure hydrogen.

B69-10464

NONDESTRUCTIVE DETERMINATION OF COHESIVE STRENGTH OF ADHESIVE-BONDED COMPOSITES

THOMPSON, D. O. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969 M-FS-20397

Systematic plan determines vibration responses and modes of honeycomb composites, correlates vibrational responses of composite specimens varying in strength of cohesive bond, determines effects of thickness variation of the face sheet over the frequency range, optimizes the

characteristics of the excitation transducer, and measures bond strength.

B69-10468

IMPROVED RETORT FOR CLEANING METAL POWDERS WITH HYDROGEN

ARIAS, A. DATE- SEP. 1969 LEWIS-10718

Improved cleaning retort produces uniform temperature distribution in the heated zone and minimizes hydrogen channeling through the powder bed. Retort can be used for nonmetallic powders, sintering in a reducing atmosphere, and for cleaning powders in reduction atmospheres other than hydrogen.

B69-10488

BASAL-PLANE METALLOGRAPHY OF DEFORMED PYROLYTIC CARBON

ADKINS, J. M. FISCHBACH, D. B. DATE- SEP. 1969 NPO-11196

Cleavage technique is recommended over the normal polishing technique in preparing pyrolytic carbon for metallographic examination of basal-plane surfaces. After careful removal of torn basal-plane fragments and other cleavage debris with cellulose tape, the true structure is clearly revealed.

B69-10501

IONENE MEMBRANE BATTERY SEPARATOR

MOACANIN, J. TOR, H. Y. DATE- OCT. 1969 NPO-11091

Ionic transport characteristics of ionenes, insoluble membranes from soluble polyelectrolyte compositions, are studied for possible application in a battery separator. Effectiveness of the thin film of separator membrane essentially determines battery lifetime.

B69-10511

THERMALLY CONDUCTING ELECTRON TRANSFER POLYMERS

BYRD, M. R. /MC DONNELL DOUGLAS CORP./ JENKINS, R. K. LISTER, J. L. DATE- OCT. 1969 GSPC-10703

New polymeric material exhibits excellent physical shock protection, high electrical resistance, and thermal conductivity. It is especially useful for electronic circuitry, such as subminiaturization of components and modular construction of circuits.

B69-10522

MEASUREMENT OF GAS FLOW AT EXTREMELY LOW PRESSURES

BITTERLY, J. G. /MC DONNELL DOUGLAS CORP./ DATE- SEP. 1969 MSC-13261

Method accurately measures the flow of gases produced by evaporation or sublimation at pressures approaching total vacuum. Measurement of heat rejection in terms of flow of steam is taken with water as the liquid undergoing change in phase.

B69-10530

A METHOD FOR OBSERVING GAS EVOLUTION DURING PLASTIC LAMINATE CURE

NICHOLLS, A. H. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969 MSC-15592

Polyimide, phenolic, and other resins which develop volatiles during laminating or molding cure are studied using optimum cure cycles. The specimen is placed on a platen and sealed in a plastic bag, then heated and observed for gas evolution using a binocular microscope. A cover plate is added to simulate an autoclave.

B69-10531

TESTING THE FLAMMABILITY OF MATERIALS EXPOSED TO ARCS

HANLETT, B. J. /N. AM. ROCKWELL CORP./ KRUPSKI, A. L. DATE- OCT. 1969 MSC-15225

Apparatus tests flammability and ignition characteristics of materials in close proximity to incandescent metal fragments or spalls ejected

from intermittent short circuit arcs in air or oxygen rich atmospheres. It simulates a situation where an exposed live wire makes contact with a grounded member in areas containing organic matter.

B69-10536

IMPROVED METHOD OF PRODUCING OXIDE-DISPERSION-STRENGTHENED ALLOYS

GRANT, N. J. /MIT/ SCHILLING, W. F. DATE- OCT. 1969

HQ-10461

Dispersion strengthened alloys having the required properties are produced by a process in which the refractory particles are less than 100 to 500 Å thick. These are fine enough to ensure the strength characteristics without appreciable degradation of other characteristics. The alloy consists of a matrix metal and a dispersoid metal.

B69-10540

IMPROVED PRIMER FOR BONDING POLYURETHANE ADHESIVES TO METALS

CONSTANZA, I. J. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969

M-FS-90591

Primer ensures effective bonding integrity of polyurethane adhesives on metal surfaces at temperatures ranging from minus 423 degrees to plus 120 degrees F. It provides greater metal surface protection and bond strengths over this temperature range than could be attained with other adhesive systems.

B69-10543

BURST DIAPHRAGM LEAK DETECTOR

PASCOLLA, J. A. /ROCKETDYNE/ DATE- OCT. 1969

M-FS-14500

New method replaces flowmeter approach with readily available burst diaphragm leak detector assembly mounted to all drain ports. This allows simultaneous leak detection of all flange seals under operating conditions.

B69-10552

TECHNIQUE FOR ULTRASONIC CLEANING WITH VOLATILE SOLVENTS ELIMINATES NEED FOR HOODS OR CONDENSERS

PPERSKY, E. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969

MSC-15611

Technique ultrasonically cleans small quantities of small mechanical parts in organic solvents without the need for vapor removal equipment. Parts are placed in a thin plastic bag with the solvent and then suspended in a cleaning tank containing the water-detergent solution.

B69-10559

DEVELOPMENT OF IMPROVED POTTING AND CONFORMAL COATING COMPOUNDS

WEBSTER, J. A. /MONSANTO RES. CORP./ DATE- OCT. 1969

M-FS-20219 M-FS-20223

Improved organic potting and conformal coating materials protect fragile electronic components and circuitry from mechanical shock and vibration, moisture, and corrosion. These materials meet specifications covering resistance to cycling, radiation, flammability, and sterilizing agents for certain space applications.

B69-10564

A NEW METHOD FOR FABRICATION OF FLEXIBLE VACUUM PURGE JACKETS

SHEIVER, C. B. /GOODYEAR AEROSPACE CORP./ DATE- NOV. 1969

M-FS-12646

Polyurethane-coated synthetic fabric is fitted with a filament-glass mat exterior which gives it a high degree of springback ability. Material is capable of maintaining its springback capability in a temperature range from ambient to cryogenic.

B69-10572

A COMPARISON OF TWO METHODS OF MEASURING PARTICLE SIZE OF AL2O3 PRODUCED BY A SMALL ROCKET MOTOR

DOBBINS, R. A. STRAND, L. D. DATE- NOV. 1969

NPO-11198

The size of aluminum oxide particles produced by small rocket motors is determined by tank collection and spectrophotometry. The size of the particulate determines loss in thrust due to particle lag, particulate radiant heat transfer, acoustic attenuation and impingement and rocket plume structure and properties.

B69-10580

SILPHENYLENE ELASTOMERS HAVE HIGH THERMAL STABILITY AND TENSILE STRENGTH

SPON- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DATE- OCT. 1969

M-FS-20250

Two polymeric silphenylene ethers, when cured by reactions with ethyl silicates and metal salts at room temperature, form elastomers having excellent thermal stability and tensile properties. The highest tensile strength obtained in a reinforced elastomer was 2800 psi.

B69-10581

A METHOD FOR PRECISION ANODIZE STRIPPING

PETERS, R. L. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969

MSC-15040

Felt templates saturated with etch solution remove anodized finish from aluminum without damage to the surface. The solution is a combination of nitric acid, chromic acid, and hydrofluoric acid.

B69-10592

EFFECTS OF STERILIZATION ON THE ENERGY-DISSIPATING PROPERTIES OF BALSA WOOD

SORKIN, A. B. DATE- DEC. 1969

NPO-11207

Technical report on the effects of sterilization on the energy-dissipating properties of balsa wood is given. Sterilization by ethylene oxide plus heat enhances the average specific energy of balsa while plastic impregnation followed by irradiation-induced polymerization does not.

B69-10595

A METHOD FOR USING SURFACE TENSION TO DETERMINE THE SIZE OF HOLES IN HARDWARE

HINES, W. J. /N. AM. ROCKWELL CORP./ DATE- NOV. 1969

MSC-15194

To check the size of small holes in injectors, flow control orifices, filters, and similar hardware, a surface tension technique is used. The liquid surface tension causes it to act as a membrane when pressure is applied. This bubble pressure is a function of hole diameter and surface tension.

B69-10596

AUTOMATIC SAMPLE ROTATOR FOR METALLOGRAPHIC POLISHING

ADKINS, J. M. BERNETT, E. C. DATE- NOV. 1969

NPO-11015

Simple, inexpensive device can be attached to most metallographic sample polishing tables. It provides a suitable surface finish for microscopic examination or photography of surface details of the samples.

B69-10599

LIQUID OXYGEN-COMPATIBLE INSULATION SYSTEM

JONES, J. S. /N. AM. ROCKWELL CORP./ DATE- NOV. 1969

M-FS-16113

To provide insulation for tees, elbows, sumps, and valves that are used to pass or store fluids at cryogenic temperatures, individual parts are insulated in an environmentally controlled facility. It is desirable that such insulation be liquid oxygen compatible and be easily removable and reinstallable.

B69-10602

PROGRAMMED SCHEDULE HOLDS FOR IMPROVING LAUNCH VEHICLE HOLDS

GRALOW, F. H. /BOEING CO./ HAYES, J. D. STREIFF, M. A. TEMPLE, A. G. VENDITTI, R. A. DATE- NOV. 1969

03 MATERIALS (CHEMISTRY)

M-FS-14502

Baseline definition and system optimization are used for the analysis of programmed holds developed through prelaunch system analysis. Identification of design specifications for ground support equipment and maintenance concepts, and design specifications are used to describe the functional utilization of the overall flow process.

B69-10605

STRAIN-AGE CRACKING IN RENE 41 ALLOY
PRAGER, M. /ROCKETDYNE/ THOMPSON, E. G. DATE- NOV. 1969 REAN- SEE ALSO ROCKETDYNE REPT. NO. 66-20

M-FS-18650

Weldability test determines the effects of material and process variables on the occurrence of strain-age cracking, and demonstrates effective and practical means for its reduction. Studies consist of tensile, impact, and stress-rupture tests.

B69-10606

LITERATURE REVIEW ON PICKLING INHIBITORS AND CADMIUM ELECTROPLATING PROCESSES
ELSEA, A. R. /BATTELLE MEM. INST./ FLETCHER, E. E. GROENEVELD, T. P. DATE- NOV. 1969

M-FS-14421

Because introduction of hydrogen during bright-cadmium electroplating of high strength steels causes hydrogen-stress cracking, a program was undertaken to evaluate various processes and materials. Report describes effectiveness of inhibitors for reducing hydrogen absorption by steels.

B69-10611

DIRECT DETERMINATION OF LEAD-210 BY LIQUID-SCINTILLATION COUNTING
FAIRMAN, W. D. SEIDLET, J. DATE- DEC. 1969 ARG-10462

Soft betas, the internal conversion electrons, and unconverted gamma rays from lead-210 are efficiently detected in a liquid scintillation counting system with efficiency of 97 percent. The counter is interfaced with a multichannel pulse height analyzer. The spectra obtained is stored on paper tape and plotted on an x-y plotter.

B69-10616

RETENTION OF DUCTILITY IN HIGH-STRENGTH STEELS
PARKER, E. R. /LAWRENCE RADIATION LAB./ ZACKAY, V. F. DATE- NOV. 1969 ARG-10497

To produce high strength alloy steel with retention of ductility, include tempering, cooling and subsequent tempering. Five parameters for optimum results are pretempering temperature, amount of strain, strain rate, temperature during strain, and retempering temperature.

B69-10627

ANALYSIS OF CELL PERFORMANCE AND THERMAL REGENERATION OF A LITHIUM-TIN CELL HAVING AN IMMOBILIZED FUSED-SALT ELECTROLYTE
CAIRNS, E. J. SHIMOTAKE, H. DATE- OCT. 1969 ARG-10453

Cell performance and thermal regeneration of a thermally regenerative cell uses lithium and tin and a fused-salt electrolyte. The emf of the Li-Sn cell, as a function of cathode-alloy composition, is shown to resemble that of the Na-Bi cell.

B69-10629

GLASS FABRIC FIRE BARRIER FOR SILICONE RUBBER PARTS
BLACKMER, K. L. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969 MSC-15555

Preformed knitted glass-fabric covers are placed about silicone rubber items in such a way as to completely isolate them from the effects of adjacent fire. These covers permit retention of the desirable resilient properties of the silicone rubber while forming a very effective fire

barrier.

B69-10635

DEVICE SEPARATES HYDROGEN FROM SOLUTION IN WATER AT AMBIENT TEMPERATURES
ALBRIGHT, C. F. /GARRETT CORP./ DATE- NOV. 1969 MSC-13335

Separator decreases the partial pressure of hydrogen gas dissolved in the water produced by fuel cells containing an alkaline electrolyte. The unit eliminates the hazards associated with the release of hydrogen from water solution when the hydrostatic pressure is rapidly decreased.

B69-10636

SYNTHESIS OF POLYETHERS OF HEXAFLUOROBENZENE AND HEXAFLUOROPENTANEDIOL
HARRISON, E. S. /WHITTAKER CORP./ HOLLANDER, J. LEVINE, H. H. TRISCHLER, F. D. DATE- DEC. 1969 M-FS-14962 M-FS-14964

Two new polyethers, poly /hexafluoropentamethylene tetrafluoro-p-phenylene ether/ and a completely hydroxyl-terminated polyether, is prepared by reactions of hexafluorobenzene with hexafluoropentanediol. The polyethers can be prepared as low molecular weight oils, as intermediate molecular weight waxes, or as high molecular weight elastomers.

B69-10641

NIObIUM-URANIUM ALLOYS WITH VOIDS OF PREDETERMINED SIZE AND TOTAL VOLUME
MC CLUSKEY, J. K. /IOWA STATE UNIV./ WILHELM, H. A. DATE- NOV. 1969 ARG-10490

Mixture of uranium oxide, niobium oxide, and graphite of various carbon-to-oxygen ratios is heated to a temperature below the melting point of the niobium-uranium alloy. The alloy is produced by this method with voids predetermined as to size and total volume.

B69-10642

ELECTROLYTIC SEPARATION OF CRYSTALS OF TRANSITION-METAL OXIDES
ARNOTT, R. J. /BROOKHAVEN NATL. LAB./ FERETTI, A. KUNNAMANN, W. DATE- NOV. 1969 ARG-10506

Versatile flux system grows large, well-formed, stoichiometric single crystals of mixed oxides of the transition-metal elements. These crystals have important uses in the microwave field, and applications as lasers and masers in communications.

B69-10647

SYNTHESIS OF PERBROMATES
APPELMAN, E. H. STUDIER, M. H. DATE- NOV. 1969 ARG-10459

Salts of heptavalent bromine were synthesized by a hot atom process, the beta decay of radioactive selenium-83 incorporated into a selenate. Formation of an unreactive perbromate ion led to preparation of macro amounts of perborate. A rubidium salt was isolated.

B69-10660

FINITE ELEMENT FORMULATION FOR LINEAR THERMOVISCOELASTIC MATERIALS
CHEN, J. C. HEER, E. DATE- NOV. 1969 NPO-11229

Report presents the finite difference equations in time and finite element matrix equations in space for general linear thermoviscoelastic problems. The equations are derived for a general three-dimensional body but are applicable to one and two-dimensional configurations with minor changes.

B69-10682

SEALED CONTAINER SAMPLING DEVICE
HENNIGAN, T. J. DATE- DEC. 1969 GSFC-10690

Sampling device, by means of a tapered needle, pierces a sealed container while maintaining the seal and either evacuates or pressurizes the container. This device has many applications in the chemical, preservative and battery-manufacturing industries.

B69-10692

ELIMINATION OF DISSOLVED GASES IN
HYPERGOLIC ENGINE PROPELLANTS
MONROE, E. W. /N. AM. ROCKWELL CORP./ DATE- DEC.
1969

M-FS-16179

Exposure to ultrasonic vibration eliminates
dissolved gases in hypergolic propellants. A
manometer connected to the ullage of the
propellant container measures the volume of gases
freed.

B69-10711

PROPERTIES OF AIR AND COMBUSTION PRODUCTS
OF FUELS WITH AIR
LEWANDOWSKI, K. FOFERL, D. J. SVEVLA, R. DATE-
DEC. 1969

LEWIS-11030

Thermodynamic and transport properties include
ratio of specific heats, molecular weight,
viscosity, heat capacity, thermal conductivity,
and Prandtl number. Properties are calculated
from 300 to 2500 degrees K and for pressures of
three and ten atmospheres.

B69-10730

EFFECTS OF HIGH-PRESSURE HYDROGEN ON
STORAGE VESSEL MATERIALS
CHANDLER, W. T. /N. AM. ROCKWELL CORP./ WALTER,
R. J. DATE- NOV. 1969

M-FS-18605

Tensile tests on welded plates of three grades of
steel indicate an appreciable decrease of tensile
strength and ductility of notched specimens and a
decrease in ductility of unnotched samples.
Surface cracking, evident in unnotched specimens,
is conducive to breakdown in tensile strength and
ductility.

B69-10737

MIXED ETHER BATH FOR ELECTRODEPOSITION OF
ALUMINUM
LUI, K. /ELECTRO-OPTICAL SYSTEMS, INC./ DATE-
DEC. 1969

LANGLEY-10200

Anisole added to the bath mixture improves
Brenner aluminum plating bath technique. Mixture
has lower bath vapor-pressure and the
electro-deposits obtained have greater physical
strength than deposits from the Brenner bath.

B69-10740

BURN-RATE TESTING APPARATUS
DAWN, F. S. GILL, W. L. DATE- DEC. 1969

MSC-10947

Combustibility tester fits into a sealed chamber
so that tests may be performed under controlled
atmospheric pressure and composition. Support
frame allows rotation of the test sample so that
ignition combustion may be tested in various
orientations from horizontal to vertical.

B69-10744

PRODUCTION OF CRYSTALLINE POLYMERS VIA
LIQUID CRYSTAL MONOMERS
LABES, M. /DREXEL INST. OF TECHNOLOGY/ PALOS, C.
DATE- DEC. 1969

HQ-10235

Method produces crystalline polymers through a
liquid crystalline phase of monomers. The
monomer is polymerized while held in the liquid
crystalline phase either thermally,
photolytically, catalytically, or by X ray or
gamma ray irradiation, and can be performed in an
electric or magnetic field that influences the
molecular orientation.

B69-10749

IMPROVED CURE METHOD FOR SINGLE COMPONENT
SILICONE RUBBER
LIPPITT, M. W. DATE- DEC. 1969

MSC-12230

Water is incorporated in a carrier and then
thoroughly mixed with the single component
silicone rubber containing acetic anhydride as a
curing agent. Because curing occurs with the
water supplied internally, controlled curing is
possible within a reasonable period of time,
regardless of the thickness of the material.

B69-10780

THERMAL CONDUCTIVITY PROBE
NAVICKAS, J. /MC DONNELL DOUGLAS CORP./ DATE-
DEC. 1969

M-FS-20566

Low-mass probe accurately measures the thermal
conductivity of polyurethane foam /and other
thermal insulating materials/ while exposed to
either hydrogen or helium permeation in
temperature ranges from ambient to cryogenic.
The thermal conductivity of a specimen is
determined from an experimentally determined
increase in temperature.

B69-10788

GAS CHROMATOGRAPH INJECTION PORT PROTECTIVE
DEVICE

ROBERTSON, M. D. /N. AM. ROCKWELL CORP./ WELZ,
E. A. DATE- DEC. 1969

M-FS-18585

To prevent samples containing foreign matter from
poisoning the gas chromatographic columns, a
pre-filter insertion is placed in the injection
port. The packing becomes a variable reactant,
for example, acids are removed by using an
alkaline liquid.

04 LIFE SCIENCES

B63-10003

NEW LOW-LEVEL A-C AMPLIFIER PROVIDES
ADJUSTABLE NOISE CANCELLATION AND AUTOMATIC
TEMPERATURE COMPENSATION

SMITH, J. R., JR. DATE- MAR. 1964

ARC-2

Circuit utilizing a transistorized differential
amplifier is developed for biomedical use. This
low voltage operating circuit provides adjustable
cancellation at the input for unbalanced noise
signals, and automatic temperature compensation is
accomplished by a single active element across the
input-output ends.

B64-10025

IMPROVED ELECTRODE GIVES HIGH-QUALITY
BIOLOGICAL RECORDINGS
DAY, J. L. LIPPITT, M. W. DATE- MAY 1964

MSC-17

To obtain high quality waveforms from a subject
engaged in physical activity, an improved
electrode assembly has been devised. This
consists of a cup containing an electrically
conductive paste and a silver electrode. The
paste maintains contact between the skin and the
plate.

B64-10108

DEVICE INDUCES LUNGS TO MAINTAIN KNOWN
CONSTANT PRESSURE
LIPPITT, M. W. REED, J. H. DATE- JUL. 1964

MSC-50

This device requires the use of thoracic muscles
to maintain prescribed air pressure in the lungs
for brief periods. It consists of a clear
plastic hollow cylinder fitted with a mouthpiece,
a spring-loaded piston, and a small vent for
escaping air when exhalation into the mouthpiece
displaces the piston.

B64-10146

TECHNIQUE SIMULATES EFFECT OF REDUCED GRAVITY
HEWES, D. E. SPADY, A. A., JR. DATE- JUN. 1964

LANGLEY-44

To simulate the effects of lunar gravity, an
arrangement of near-vertical cables has been
devised. These suspend the test subject
perpendicular to an inclined walkway to give the
effect of reduced gravitational pull.

B65-10332

TEST MONKEYS ANESTHETIZED BY ROUTINE PROCEDURE
SPON- INNOVATOR NOT GIVEN /SPACE/DEFENSE CORP./
DATE- NOV. 1965

HQ-18

Test monkeys are safely anesthetized for five
minutes by confining them for less than six

04 LIFE SCIENCES

minutes in enclosures containing a controlled volume of ether. Thus the monkeys can be properly and safely positioned on test couches and fitted with electrodes or other devices prior to physiological tests.

B66-10049

IMPROVED ELECTRODE PASTE PROVIDES RELIABLE MEASUREMENT OF GALVANIC SKIN RESPONSE
DAY, J. L. DATE- FEB. 1966 REAN- SEE ALSO
B64-10025 AND B65-10015
MSC-146

High-conductivity electrode paste is used in obtaining accurate skin resistance or skin potential measurements. The paste is isotonic to perspiration, is nonirritating and nonsensitizing, and has an extended shelf life.

B66-10117

MICROORGANISMS DETECTED BY ENZYME-CATALYZED REACTION
VANGO, S. P. WEETALL, H. H. WELIKY, N. DATE-
MAR. 1966
JPL-782

Enzymes detect the presence of microorganisms in soils. The enzyme lysozyme is used to release the enzyme catalase from the microorganisms in a soil sample. The catalase catalyzes the decomposition of added hydrogen peroxide to produce oxygen which is detected manometrically. The partial pressure of the oxygen serves as an index of the samples bacteria content.

B66-10118

INTEGRAL SKIN ELECTRODE FOR ELECTROCARDIOGRAPHY IS EXPENDABLE
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
MAR. 1966
MSC-299

Inexpensive, expendable skin electrode for use in electrocardiography combines an electrical contact, conductive paste, and a skin-attachment adhesive. Application of the electrode requires only degreasing of the skin area.

B66-10154

PHONOCARDIOGRAPH SYSTEM MONITORS HEART SOUNDS
SPON- INNOVATOR NOT GIVEN /BECKMAN INSTR., INC./
DATE- APR. 1966
MSC-185

Phonocardiograph system monitors the mechanical activity of the heart in extreme environments. It uses a piezoelectric-crystal microphone with an integral preamplifier, and a signal conditioner having special frequency characteristics. The output signals can be recorded on tape, presented aurally, or transmitted telemetrically to a remote station.

B66-10184

SELF-INFLATING LIFEVEST STORES IN SMALL PACKAGE
RADNOSKY, M. I. DATE- MAY 1966
MSC-5A

Emergency lifevest is inflated with carbon dioxide from a self-contained cartridge in 10 seconds. When deflated, it fits into a package occupying less than 20 cubic inches and weighing less than one pound.

B66-10252

SEMICONDUCTOR FORMS BIOMEDICAL RADIATION PROBE
BURNS, F. P. FRIEDERICKS, J. E. /SOLID STATE RADIATION, INC./ DATE- JUN. 1966
MSC-320

Semiconductor radiation dosimeter in the form of a slender probe is easily inserted into body tissue. The probe has a signal-to-noise ratio that is acceptable to recording equipment and provides realistic measurements of the spatial and energy distributions of radiant electrons and protons.

B66-10314

PHONOCARDIOGRAPH MICROPHONE IS RUGGED AND MOISTUREPROOF
YOUNG, W. J. DATE- JUL. 1966
MSC-212

Microphone used as a phonocardiograph transducer monitors small amplitude audio signals in the

presence of large shock loads and high humidity. It contains a lead zirconate-lead titanate piezoelectric plate encapsulated in a flexible polyurethane resin. The resin is contained in a sealed nylon case having a diameter of less than one inch.

B66-10332

BELLOWS JOINT ABSORBS TORSIONAL DEFLECTIONS IN DUCT SYSTEM
DANIELS, C. M. /N. AM. AVIATION/ DATE- JUL. 1966
M-FS-882

Long, thin-walled bellows compressed into a short length absorbs the same amount of torsional deflection as the same tube in full length condition and saves in cost, complexity and space. This bellows has lower torsional spring rate to absorb the bulk of the duct assembly torsional deflections, leaving the other bellows free to absorb axial and angular deflections.

B66-10406

PLANT RESPIROMETER ENABLES HIGH RESOLUTION OF OXYGEN CONSUMPTION RATES
POSTER, D. L. /SPACE DEFENSE CORP./ DATE- SEP. 1966
HQ-47

Plant respirometer permits high resolution of relatively small changes in the rate of oxygen consumed by plant organisms undergoing oxidative metabolism in a nonphotosynthetic state. The two stage supply and monitoring system operates by a differential pressure transducer and provides a calibrated output by digital or analog signals.

B66-10468

RADON GAS, USEFUL FOR MEDICAL PURPOSES, SAFELY FIXED IN QUARTZ
FIELDS, P. R. STEIN, I. ZIRIN, M. H. DATE- NOV. 1966
ARG-2

Radon gas is enclosed in quartz or glass ampules by subjecting the gas sealed at a low pressure in the ampules to an ionization process. This process is useful for preparing fixed radon sources for radiological treatment of malignancies, without the danger of releasing radioactive gases.

B66-10515

APPARATUS ENABLES AUTOMATIC MICROANALYSIS OF BODY FLUIDS
SOFFEN, G. A. STUART, J. L. DATE- NOV. 1966
JPL-962

Apparatus will automatically and quantitatively determine body fluid constituents which are amenable to analysis by fluorometry or colorimetry. The results of the tests are displayed as percentages of full scale deflection on a strip-chart recorder. The apparatus can also be adapted for microanalysis of various other fluids.

B66-10647

MODIFIED ALGESIMETER PROVIDES ACCURATE DEPTH MEASUREMENTS
TURNER, D. P. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-616

Algesimeter which incorporates a standard sensory needle with a sensitive micrometer, measures needle point depth penetration in pain tolerance research. This algesimeter provides an inexpensive, precise instrument with assured validity of recordings in those biomedical areas with a requirement for repeated pain detection or ascertaining pain sensitivity.

B66-10649

SPRAY-ON ELECTRODES ENABLE EKG MONITORING OF PHYSICALLY ACTIVE SUBJECTS
SPON- INNOVATOR NOT GIVEN /FRC/ DATE- DEC. 1966
REAN- SEE ALSO NASA-TN-D-3414

Easily applied EKG electrodes monitor the heart signals of human subjects engaged in various physical exercises. The electrodes are formed from an air drying, electrically conductive cement mixture that can be applied to the skin by means of a modified commercially available spray gun.

B67-10005

DIGITAL COMPUTER PROCESSING OF X-RAY PHOTOS
NATHAN, R. SELZER, R. H. DATE- JAN. 1967
JPL-792

Digital computers correct various distortions in medical and biological photographs. One of the principal methods of computer enhancement involves the use of a two-dimensional digital filter to modify the frequency spectrum of the picture. Another computer processing method is image subtraction.

B67-10056

ADJUSTABLE HINGE PERMITS MOVEMENT OF KNEE IN PLASTER CAST
MALEY, W. E. DATE- MAR. 1967
M-FS-1756

Metal knee hinge with an adjustable sleeve worn on the outside of a leg cast facilitates movement of the knee joint. This helps eliminate stiffness of the knee and eliminates bulkiness and adjustment difficulty.

B67-10114

INTEGRATED MOBILITY MEASUREMENT AND NOTATION SYSTEM
ROEBUCK, J. A., JR. /N. AM. AVIATION/ DATE- MAY 1967
MSC-726

System for description of movements and positions facilitates design of space suits with more mobility. This measurement and notation system gives concise and unequivocal descriptions, compatible with engineering analysis and applicable to specific needs.

B67-10129

ION EXCHANGE DETERMINES IODINE-131 CONCENTRATION IN AQUEOUS SAMPLES
FAIRMAN, W. D. SEDLET, J. DATE- MAY 1967
ARG-208

Inorganic radiiodide in aqueous media is analyzed by separating the radioactive iodine-131 as the iodide ion on a silver chloride column. The activity in the final precipitate may be determined by beta or gamma counting.

B67-10188

URANYL PHTHALOCYANINES SHOW PROMISE IN THE TREATMENT OF BRAIN TUMORS
FRIGERIO, N. A. DATE- JUN. 1967 REAN- SEE ALSO ANL-6910
ARG-100

Processes synthesize sulfonated and nonsulfonated uranyl phthalocyanines for application in neutron therapy of brain tumors. Tests indicate that the compounds are advantageous over the previously used boron and lithium compounds.

B67-10207

SELF-SEALING CLOSURE ENABLES ACCESS TO SEVERAL FLUID CONTAINERS
WHEELER, S. B. DATE- JUN. 1967
NFO-10123

Self-sealing closure enables small amounts of specific biochemical solutions to be withdrawn from or added to containers in inaccessible or small spaces. It uses a self-sealing septum of a silicone elastomer through which a hypodermic needle can be inserted.

B67-10245

AUTOMATED URINALYSIS TECHNIQUE DETERMINES CONCENTRATION OF CREATINE AND CREATININE BY COLORIMETRY
RHO, J. H. DATE- JUL. 1967
NFO-10149

Continuous urinalysis technique is useful in the study of muscle wastage in primates. Creatinine concentration in urine is determined in an aliquot mixture by a color reaction. Creatine is determined in a second aliquot by converting it to creatinine and measuring the difference in color intensity between the two aliquots.

B67-10252

BLOOD OXYGEN SATURATION DETERMINED BY TRANSMISSION SPECTROPHOTOMETRY OF HEMOLYZED BLOOD SAMPLES

MALIK, W. M. /INST. OF MED. SCIENCES/ DATE- AUG. 1967

MSC-11018

Use of the Lambert-Beer Transmission Law determines blood oxygen saturation of hemolyzed blood samples. This simplified method is based on the difference in optical absorption properties of hemoglobin and oxyhemoglobin.

B67-10304

CYTOLOGY IS ADVANCED BY STUDYING EFFECTS OF DEUTERIUM ENVIRONMENT
BOSE, S. CRESEPI, H. I. FLAUMENHAFT, E. /UNIV. OF AKRON/ KATZ, J. J. BOSE, S. DATE- AUG. 1967
ARG-205

Research of deuterium effects on biological systems shows deuteration is not incompatible with life. With the successful cultivation of deuterated bacteria, work is now being done on extraction of deuterio-compounds from bacteria.

B67-10305

LIQUID MICRURGY CHAMBER AND MICROSYRINGE DESIGNS ALLOW MORE EFFICIENT MICROMANIPULATIONS
DANIELS, E. W. DATE- AUG. 1967
ARG-251

More efficient micromanipulations on large amoebae achieved by liquid micrurgy chamber and microsyringe. These innovations move the system closer to the specimen, and flatten the specimen for a clear view of the nuclei, also eliminating spherical aberration and evaporation.

B67-10332

HAND-HELD INSTRUMENT SHOULD RELIEVE HEMATOMA PRESSURE
RAGGIO, L. J. /N. AM. AVIATION/ ROBERTSON, T. L. DATE- SEP. 1967
MSC-599

Portable instrument relieves hematomas beneath fingernails and toenails without surgery. This device simplifies the operative procedure with an instant variable heating tip, adjustable depth settings and interchangeable tip sizes for cauterizing small areas and relieving pressurized clots.

B67-10395

LARGE VOLUME CONTINUOUS COUNTERFLOW DIALYZER HAS HIGH EFFICIENCY
MANDELES, S. /CALIF. UNIV./ WOODS, E. C. DATE- OCT. 1967
HQ-10055

Dialyzer separates macromolecules from small molecules in large volumes of solution. It takes advantage of the high area/volume ratio in commercially available 1/4-inch dialysis tubing and maintains a high concentration gradient at the dialyzing surface by counterflow.

B67-10408

IMPROVED SAMPLE CAPSULE FOR DETERMINATION OF OXYGEN IN HEMOLYZED BLOOD
MALIK, W. M. /PRESBYTERIAN ME. CENTER/ DATE- OCT. 1967
MSC-11017

Sample capsule for determination of oxygen in hemolyzed blood consists of a measured section of polytetrafluoroethylene tubing equipped at each end with a connector and a stopcock valve. This method eliminates errors from air entrainment or from the use of mercury or syringe lubricant.

B67-10500

EFFECT OF PREPARATION PROCEDURES ON INTENSITY OF RADIOAUTOGRAPHIC LABELING IS STUDIED
BASERGA, R. KISIELESKI, W. E. DATE- DEC. 1967
ARG-10032

Effects of tissue preparation and extractive procedures on the intensity of radioautographic labeling are presented in terms of mean grain count per cell in cells labeled with tritiated precursors of proteins or nucleic acids. This information would be of interest to medical researchers and cytologists.

B67-10556

CONTINUOUS MICROBIAL CULTURES MAINTAINED
BY ELECTRONICALLY-CONTROLLED DEVICEEISLER, W. J., JR. WEBB, R. B. DATE- DEC. 1967
ARG-177

Photocell-controlled instrument maintains microbial culture. It uses commercially available chemostat glassware, provides adequate aeration through bubbling of the culture, maintains the population size and density, continuously records growth rates over small increments of time, and contains a simple, sterilizable nutrient control mechanism.

B67-10590

ULTRAVIOLET MICROSCOPY AIDS IN CYTOLOGICAL
AND BIOMEDICAL RESEARCHSCHLENK, F. SVIHLA, B. DATE- DEC. 1967 REAN-
SEE ALSO ANL-6971
ARG-178

Ultraviolet microscopy is used by cytologists and biochemists to study the morphological and physiological changes in the living cell under varied culture conditions. The yeast cell is used because of its content of ultraviolet absorbing materials and its lack of motility.

B67-10604

STUDY MADE OF RELATIONSHIP BETWEEN GROWTH
AND METABOLISMSURREY, K. DATE- DEC. 1967
ARG-10046

Study shows that the growth of X irradiated sunflower seeds is inversely related to the metabolism of the seeds. The actual magnitudes of the relation between the two differed for various ranges of X ray exposure. The results of the study suggested that the X rays affected the embryo.

B67-10663

REVIEW OF BIOLOGICAL MECHANISMS FOR
APPLICATION TO INSTRUMENT DESIGNHEALER, J. /ALLIED RES. ASSOCIATES/ DATE- DEC.
1967

HQ-33

Biological sensors are the mechanisms which enable a living organism to monitor its environment. Ways in which the functional mechanism of biosensors can be applied to develop new concepts of instrumentation, enhance and extend the human senses, and improve the sensitivity of existing instrumentation are described in a review of these mechanisms.

B68-10076

METABOLIC AND TOXICOLOGICAL EFFECTS OF
WATER-SOLUBLE XENON COMPOUNDS ARE STUDIEDFINKEL, A. J. KATZ, J. J. MILLER, C. E. DATE-
APR. 1968
ARG-90239

Biological properties of water-soluble xenon compounds are the moderate toxicity of these substances, their rapid decomposition in the body, the speed with which the xenate appeared to be reduced to xenon gas, and the very rapid elimination of this gas from the body.

B68-10169

RADIATION EFFECTS ON BACTERIAL CELLS

POWERS, E. L. DATE- JUN. 1968
ARG-10064

Study reveals the physicochemical and biochemical mechanisms which alter or modify the effects of high-energy radiation on living cells. An in-depth discussion is presented emphasizing the importance of optimizing bacterial treatment with glycerol.

B68-10206

INFRARED VIEWING PERMITS HUMAN IRIS
RESPONSE STUDIESSCHNASS, E. R. /N. AM. AVIATION/ DATE- JUN. 1968
ERC-10003

Infrared image converter tube and a filtered light source monitor and measure the eye of a subject during experimental task-work operations to obtain a more natural measurement of unimpeded iris response. The device permits observation in the

near infrared region, with little stimulation to the eye except by normal ambient lighting.

B68-10231

VACUUM PROBE SAMPLER REMOVES MICRON-SIZED
PARTICLES FROM SURFACESWHITFIELD, W. J. DATE- JUL. 1968
SAN-10003

Vacuum probe sampler removes micron-sized particles from sensitive surfaces, without damage to the surface. The probe has a critical orifice to ensure an optimum airflow rate that disturbs the boundary layer of air and raises bacteria from the surface into the probe with the moving air stream.

B68-10320

EXPERIMENTAL STUDY AND EVALUATION OF
RADIOPROTECTIVE DRUGSSMITH, D. E. THOMSON, J. F. DATE- AUG. 1968
ARG-10196

Experimental study evaluates radioprotective drugs administered before exposure either orally or intravenously. Specifically studied are the sources of radiation, choice of radiation dose, choice of animals, administration of drugs, the toxicity of protective agents and types of protective drug.

B68-10324

FOOD PRODUCTS FOR SPACE APPLICATIONS

COPE, P. S. LARSON, R. W. /WHIRLPOOL CORP./
DATE- AUG. 1968

MSC-11697 MSC-11698 MSC-11699

Specially-prepared foodstuffs supply an astronaut with a diet containing his basic nutritional requirements in a form that is useful in his environment. Several edible coatings preserve foods and give loose foods form and firmness. These coatings aid in packaging and give the food slip for easy removal from the package.

B68-10366

STRATIFICATION OF CENTRIFUGED AMOEBA NUCLEI
INVESTIGATED BY ELECTRON MICROSCOPYBREYER, E. P. DANIELS, E. W. DATE- OCT. 1968
ARG-10161

Study establishes a relationship between radioresistance and the nucleolar stratification characteristics of various amoeba species. Two species of fresh water amoeba are studied with the electron microscope. The report discusses the nature of nucleolar layers and their possible relationship to the differences in radiosensitivity of the two amoeba species.

B68-10424

RATE CONSTANTS MEASURED FOR HYDRATED
ELECTRON REACTIONS WITH PEPTIDES AND
PROTEINSBRAAMS, R. DATE- NOV. 1968
ARG-10195

Effects of ionizing radiation on the amino acids of proteins and the reactivity of the protonated amino group depends upon the pK subscript a of the group. Estimates of the rate constants for reactions involving the amino acid side chains are presented. These rate constants gave an approximate rate constant for three different protein molecules.

B68-10427

COMPOUND EQUATION DEVELOPED FOR POSTNATAL
GROWTH OF BIRDS AND MAMMALSLAIRD, A. K. DATE- NOV. 1968
ARG-10192

Compound growth equation was developed in which the rate of this linear growth process is regarded as proportional to the mass already attained at any instant by an underlying Gompertz process. This compound growth model was fitted to the growth data of a variety of birds and mammals of both sexes.

B68-10500

BIOLOGICAL ISOLATION GARMENT

SPROSS, F. R. DATE- NOV. 1968
MSC-12206

Biological Isolation Garment /BIG/ is a

one-piece loose fitting garment fabricated from a tightly woven, permeable, 100 percent-cotton fabric. Its headpiece, incorporates an integral oronasal respirator with 0.3-micron-particle filters, and a full width visor. All fabrication seams are sealed on the inside of the garment.

B68-10554

A MICROLAGOON TECHNIQUE FOR THE CULTURE OF MAMMALIAN CELLS

CONE, C. D., JR. PEDDREW, K. H. DATE- DEC. 1968
LANGLEY-10407

Technique obtains micropartitioning in a simple and reproducible manner by forming a field of tiny ponds or lagoons on the surface of a suitable culturing vessel. The technique allows free access of the common culture to all parts of the field.

B69-10022

INVESTIGATION OF TEMPERATURE DEPENDENCE OF DEVELOPMENT AND AGING

SACHER, G. A. DATE- FEB. 1969
ARG-10145

Temperature dependence of maturation and metabolic rates in insects, and the failure of vital processes during development were investigated. The paper presented advances the general hypothesis that aging in biological systems is a consequence of the production of entropy concomitant with metabolic activity.

B69-10087

CARBON OFFERS ADVANTAGES AS IMPLANT MATERIAL IN HUMAN BODY

BENSON, J. /N. AM. ROCKWELL CORP./ DATE- APR. 1969

M-FS-18207 M-FS-18208 M-FS-18204 M-FS-18205
M-FS-18206 M-FS-18209 M-FS-18210

Because of such characteristics as high strength and long-term biocompatibility, aerospace carbonaceous materials may be used as surgical implants to correct pathological conditions in the body resulting from disease or injury. Examples of possible medical uses include bone replacement, implantation splints and circulatory bypass implants.

B69-10088

MICROSCOPES AND COMPUTERS COMBINED FOR ANALYSIS OF CHROMOSOMES

BUTLER, J. W. BUTLER, M. K. STROUD, A. N. DATE- APR. 1969

ARG-10256

Scanning machine CHLOE, developed for photographic use, is combined with a digital computer to obtain quantitative and statistically significant data on chromosome shapes, distribution, density, and pairing. CHLOE permits data acquisition about a chromosome complement to be obtained two times faster than by manual pairing.

B69-10124

IMPROVED MOUSE CAGE PROVIDES VERSATILITY AND EASE IN HANDLING LABORATORY MICE

JONES, N. D. DATE- MAY 1969

MSC-12250

Mouse cage system provides versatility and ease in handling laboratory mice, cleaning their cages, and collecting uncontaminated metabolic test specimens. The cage, compact and free standing, contains a screened bottom and funnel channel to collect waste. The feed is in the cage top and thereby separates the food and waste.

B69-10160

RAPID AND PRECISE ANALYSIS FOR CALCIUM IN BLOOD SERUM

HOLTZMAN, R. B. ILCEWICZ, P. H. DATE- JUN. 1969

ARG-10246

Differential absorption spectrophotometric technique, using nurexide, gives a highly precise analysis of calcium in volumes of blood serum as small as 0.01 ml. The method of additions and proper timing allows compensation to be made for fading, variation in type of serum or plasma, and aging of the specimen.

B69-10163

AGGREGATION OF METALLOCHLOROPHYLLS - EXAMINATION BY SPECTROSCOPY

BOUCHER, L. J. KATZ, J. J. DATE- JUN. 1969
ARG-10273

Nuclear magnetic resonance measurements determine which metallochlorophylls, besides magnesium-containing chlorophylls, possess coordination aggregation properties. Infrared spectroscopy reveals that only zinc pheophytin and zinc methyl pheophorbide showed significant coordination aggregation, whereas divalent nickel and copper did not.

B69-10177

QUALITATIVE AND QUANTITATIVE ANALYSIS OF MIXTURES OF COMPOUNDS CONTAINING BOTH HYDROGEN AND DEUTERIUM

CRISPI, H. L. HARKNESS, L. KATZ, J. J. NORMAN, G. SAUR, W. DATE- JUN. 1969

ARG-10312

Method allows qualitative and quantitative analysis of mixtures of partially deuterated compounds. Nuclear magnetic resonance spectroscopy determines location and amount of deuterium in organic compounds but not fully deuterated compounds. Mass spectroscopy can detect fully deuterated species but not the location.

B69-10188

DIRECT READING OF ELECTROCARDIOGRAMS AND RESPIRATION RATES

WISE, J. P. DATE- AUG. 1969
KSC-10233

Technique for reading heart and respiration rates is more accurate and direct than the previous method. Index of a plastic calibrated card is aligned with a point on the electrocardiogram. Complexes are counted as indicated on the card and heart or respiration rate is read directly from the appropriate scale.

B69-10197

SUBSTITUTION OF STABLE ISOTOPES IN CHLORELLA

FLAUMENHAFT, E. KATZ, J. J. UPHAUS, R. A. DATE- JUL. 1969

ARG-10258

Replacement of biologically important isotopes in the alga Chlorella by corresponding heavier stable isotopes produces increasingly greater deviations from the normal cell size and changes the quality and distribution of certain cellular components. The usefulness of isotopically altered organisms increases interest in the study of such permuted organisms.

B69-10203

NEUTRON THERAPY OF CANCER

FRIGERIO, N. A. NELLANS, H. N. SHAW, M. J. DATE- JUL. 1969 REAN- SEE ALSO ANL-6971,

ANL-7136, AND ANL-7409

ARG-10310

Reports relate applications of neutrons to the problem of cancer therapy. The biochemical and biophysical aspects of fast-neutron therapy, neutron-capture and neutron-conversion therapy with intermediate-range neutrons are presented. Also included is a computer program for neutron-gamma radiobiology.

B69-10205

INTERNAL AND ANCESTRAL CONTROLS OF CELL-GENERATION TIMES

KUBITSCHER, H. E. DATE- JUL. 1969
ARG-10326

Lateral and longitudinal correlations between related cells reveal associations between the generation times of cells for an intermediate period /three generations in bacterial cultures/. Generation times of progeny are influenced by nongenetic factors transmitted from their ancestors.

B69-10207

PURIFICATION AND CHARACTERIZATION OF TWO FULLY DEUTERATED ENZYMES

CRISPI, H. L. KATZ, J. J. FARNERTER, S. ROKOP,

04 LIFE SCIENCES

S. DATE- JUL. 1969

ARG-10314

Comparative data reveal little difference between kinetic and thermal stabilities of pure preparations of two ordinary enzymes and their fully deuterated counterparts. The effects of temperature on the enzymes proved to be consistent with earlier results.

B69-10208

COMBUSTION METHOD FOR ASSAY OF BIOLOGICAL MATERIALS LABELED WITH CARBON-14 OR TRITIUM, OR DOUBLE-LABELED

HUEBNER, L. G. KISIELESKI, W. E. DATE- JUL. 1969

REAN- SEE ALSO ANL-7409

ARG-10331

Dry catalytic combustion at high temperatures is used for assaying biological materials labeled carbon-14 and tritium, or double-labeled. A modified oxygen-flask technique is combined with standard vacuum-line techniques and includes convenience of direct in-vial collection of final combustion products, giving quantitative recovery of tritium and carbon-14.

B69-10223

AUTOMATED MICROORGANISM SAMPLE COLLECTION MODULE

GALL, L. S. /IBM/ GRAHAM, M. D. UMBREIT, W. DATE- JUL. 1969

HQ-10421

Modified Gelman Sampler obtains representative sample of microorganism population. Proposed Sample Collection Module is based on direct inoculation of selected solid growth media encased in a cartridge at all times except during inoculation. Cartridge can be handled with no danger of contamination to sample or operator.

B69-10236

IMPRINTING OF CONFINING SITES FOR CELL CULTURES ON THERMOPLASTIC SUBSTRATES

CONE, C. D. FLEENOR, E. N. DATE- AUG. 1969

LANGLEY-10495

Prevention of test cell migration beyond the field of observation involves confining cells or cultures in microlagoons made in either a layer of grease or a thermoplastic substrate. Thermoplastic films or dishes are easily imprinted with specifically designed patterns of microlagoons.

B69-10268

HEALTH HAZARDS OF ULTRAFINE METAL AND METAL OXIDE POWDERS

BOYLEN, G. W., JR. CHAMBERLIN, R. I. VILES, F. J. /VILES, CHAMBERLAIN, AND BOYLEN/ DATE- AUG. 1969

LEWIS-10878

Study reveals that suggested threshold limit values are from two to fifty times lower than current recommended threshold limit values. Proposed safe limits of exposure to the ultrafine dusts are based on known toxic potential of various materials as determined in particle size ranges.

B69-10273

TECHNIQUE FOR HIGHLY EFFICIENT RECOVERY OF MICROBIOLOGICAL CONTAMINANTS

GODWIN, W. W. /MARTIN MARIETTA CORP./ DATE- AUG. 1969

MSC-13250

Collecting and recovery small assay samples of viable microbiological contaminants in a gas stream involves use of a commercially available water-soluble paper. This paper is nontoxic to a number of microbiological organisms and can be dry-heat-sterilized.

B69-10277

STERILIZATION TRAINING MANUAL

QUINN, E. A. /HAYES INTERN. CORP./ DATE- AUG. 1969

M-FS-20437

Spacecraft sterilization training manual provides a basic understanding of microbiological techniques and presents scientific information in language intelligible to shop personnel.

B69-10294

MASS CULTURE OF PHOTOBACTERIA TO OBTAIN LUCIFERASE

CHAPPELLE, E. W. PICCIOLO, G. L. RICH, E., JR. DATE- AUG. 1969

GSFC-10563

Inoculating preheated trays containing nutrient agar with photobacteria provides a means for mass culture of aerobic microorganisms in order to obtain large quantities of luciferase. To determine optimum harvest time, growth can be monitored by automated light-detection instrumentation.

B69-10304

SAMPLING AND HANDLING OF DESERT SOILS

BLANK, G. B. CAMERON, R. E. DATE- AUG. 1969

NPO-11171

Report on sampling and handling desert soils includes sections on selection, characterization, and photography of area, site, and soil, sterilization of sampling equipment and containers, and soil sample collection, transport, storage, and dispersal.

B69-10317

MICRODETERMINATION OF UREA IN URINE USING P-DIMETHYLAMINO BENZALDEHYDE /PDAB/

GEIGER, P. J. DATE- AUG. 1969

NPO-10715

Adaptation of the p-dimethylaminobenzaldehyde method for determining urea concentration in urine is an improved micromechanical method. Accuracy and precision are satisfactory. This method avoids extra steps of deproteinizing or removing normal urinary chromogens.

B69-10319

MINIATURE OXYGEN RESUSCITATOR

JOHNSON, G. TEEGEN, J. T. WADDELL, H. /N. AM. ROCKWELL CORP./ JOHNSON, G. /BOEING CO./

DATE- AUG. 1969

KSC-10398

Miniature, portable resuscitation system is used during evacuation of patients to medical facilities. A carrying case contains a modified resuscitator head, cylinder of oxygen, two-stage oxygen regulator, low pressure tube, and a mask for mouth and nose.

B69-10475

LIFE DETECTION

MARTIN, W. H. /MCDONNELL DOUGLAS CORP./ DATE- OCT. 1969

NPO-10510

Compact automated laboratory unit has 60 independently treatable culture chamber assemblies for metabolic studies of cultured microorganisms on the surface of Mars or other planets.

B69-10493

INHIBITION OF BROWNING IN FOODSTUFFS

ROSENTHAL, N. A. /SCHWARZ BIORESEARCH, INC./ DATE- SEP. 1969

HQ-10177

Addition of water-soluble sulfur-containing compounds, thio compounds or potential thio compounds, to a mixture of carbohydrates, and either proteins, peptides, or amino acids can retard or completely eliminate the browning process. Determining factor is dependent upon the concentration of the anti-browning agent in the aqueous media.

B69-10571

DESERT SOIL COLLECTION AT THE JPL SOIL SCIENCE LABORATORY

BLANK, G. B. CAMERON, R. E. DATE- NOV. 1969

NPO-11206

Collection contains desert soils and other geologic materials collected from sites in the United States and foreign countries. Soils are useful for test purposes in research related to extraterrestrial life detection, sampling, harsh environmental studies, and determining suitable areas for training astronauts for lunar exploration.

B69-10593

MICROBIOLOGICAL ASPECTS OF STERILIZATION
DEVELOPMENT LABORATORIESPAIK, W. W. STERN, J. A. DATE- NOV. 1969
NPO-11197

Report deals with an investigation of vertical laminar flow clean rooms for use in spacecraft assembly. A reduction of particulate and microbial contamination occurs in the application.

B69-10598

QUICK DON-DOFF ELECTRODE PASTES

MOSIER, B. /INST. FOR RESEARCH, INC./ DATE- NOV. 1969

MSC-13249

Evaluation of electrode pastes for use in electrocardiographs and electroencephalographs found that the one having the desired don-doff properties had to be water soluble or a water dispersible base. Poly /methyl vinyl ether/maleic anhydride/ or starch gels of the gum drop variety are two such bases.

B69-10715

QUANTITATIVE DETERMINATION OF FLAVIN NUCLEOTIDE
USING THE BACTERIAL BIOLUMINESCENT REACTIONCHAPPELLE, E. W. PICCIOLO, G. L. DATE- DEC. 1969
GSFC-10565

Photometric method based on the use of bacterial luminiscent reaction quantitatively detects the presence of flavin compounds in all forms of life. Aqueous cellular dispersion of a biological sample with an aqueous perchloric acid ruptures the cells and frees the flavin coenzymes from their proteins.

05 MECHANICAL

B63-10007

HIGH PURITY ELECTROFORMING YIELDS SUPERIOR
METAL MODELSHAEPFELI, R. M. HOUSTON, J. P. DATE- JAN. 1964
ARC-6

Ultrasonic electroforming has proven successful in making high purity metal models for heat transfer studies. This process provides smooth, pit-free models.

B63-10008

VACUUM FORMING OF THERMOPLASTIC SHEET RESULTS
IN LOW-COST INVESTMENT CASTING PATTERNSCLARKE, A. E., JR. DATE- MAR. 1964
ARC-7

Vacuum forming of a sheet of thermoplastic material around a mandrel conforming to the shape of the finished object provides a pattern for an investment mold. The thickness of the metal part is determined by the thickness of the plastic pattern.

B63-10009

CHAIN FRICTION SYSTEM GIVES POSITIVE,
REVERSIBLE DRIVEDAVIDSEN, J. S. DATE- APR. 1964
ARC-8

By cementing a strip of an elastomer to the smooth metal rim of the pulley and neoprene covered idlers providing suitable tension to the chain around the pulley, a positive reversible drive is accomplished more quietly and with less vibration.

B63-10023

V-SLOTTED SCREW HEAD AND MATCHING DRIVING TOOL
FACILITATE INSERTION AND REMOVAL OF SCREW
FASTENERSHANDLEY, M. G. DATE- JAN. 1964
FRC-16

A V-slotted designed screw and a screwdriver with a V-shaped tang facilitate driving the screw into difficult locations and minimize axial forces thus avoiding damage to the screw.

B63-10123

ELASTIC ORIFICE AUTOMATICALLY REGULATES GAS
BEARINGS

BATSCH, F. LAUB, J. L. DATE- JUN. 1964

JPL-135

Elastic, pressure-sensitive orifice is used to automatically regulate the rate of gas flow into bearings under varying loads. Formed of a molded elastomer, these orifices increase the stability of gas bearings.

B63-10139

METHOD OF WELDING JOINT IN CLOSED VESSEL
IMPROVES QUALITY OF SEAMFREEMAN, R. LEVOE, C. DATE- MAY 1964
JPL-170

To facilitate welding of closed vessels, a metal backup strip is used at the junction inside the vessel. After welding from the outside, this strip is dissolved by a chemically reactive solvent poured through a filler hole into the vessel.

B63-10141

VENTED PISTON SEAL PREVENTS FLUID LEAKAGE
BETWEEN TWO CHAMBERSMAC GLASHAN, W. F. MORRISON, R. DATE- DEC. 1964
JPL-179

To prevent fluid leakage around piston seals separating two fluids under differential pressure, a venting system has been devised. Two methods may be used for venting seals through internal passages to an external low-pressure area, O-ring or split-ring seals.

B63-10143

COINCIDENT SWITCH CLOSING REDUCES ERROR IN
MOTOR-DRIVEN TIMERRICH, S. DATE- DEC. 1964
JPL-182

To cut the lag-lead in motor-driven timing devices, the timing circuit has been extended to include a second switch. This is actuated in time with the first but driven directly at a speed x times faster than the first.

B63-10170

HIGH-PRESSURE REGULATING SYSTEM PREVENTS
PRESSURE SURGESKELLER, O. F. MAC GLASHAN, W. F. DATE- JUN. 1964
REAN- SEE ALSO U. S. PATENT NO. 3,105,515
JPL-231

Gas flow is controlled by means of a pressure regulating system which prevents pressure surges. A high-pressure fluid source, a spring-loaded fluid-damped regulator valve, an accumulator, a conventional normally closed command valve, and a control valve are the main components.

B63-10198

DEVICE TRANSMITS ROTARY MOTION THROUGH
HERMETICALLY SEALED WALLPORTER, R. N. DATE- APR. 1964
JPL-303

A wobble plate, metal bellows, and two shafts, assembled in a four-section housing, make it possible to transmit rotary motion through a hermetically sealed wall. In operation a rotational torque is developed by the wobble plate.

B63-10200

APPARATUS OF SMALL SIZE CAN BE EXTENDED INTO
LONG, RIGID BOOMMILLER, J. V. DATE- MAY 1964
JPL-305

Three metal sheets, having prenotched edges, are interlocked as they are unrolled from three feed rollers which form a triangle. The apparatus is relatively small, and the sheets can be erected into a rigid triangular boom of considerable length.

B63-10226

SELF SEALING DISCONNECT FOR TUBING FORMS METAL
SEAL AFTER BREAKAWAYGERNANDT, H. H. DATE- JAN. 1964
JPL-354

Disconnect fittings form a positive metal seal when the fill tube pulls against a metal sleeve when disconnected by force. A specially designed sleeve surrounds the fill tube. O-rings in the shoulder of the sleeve and near the outer end of

05 MECHANICAL

the fill tube seal against leakage.

B63-10228

PACKLESS VALVE WITH ALL-METAL SEAL HANDLES
WIDE TEMPERATURE, PRESSURE RANGE
MAC GLASHAN, W. F. DATE- MAR. 1964

JPL-361

A durable line valve utilizes stacked metal disks to seal off an inlet port. No packing or shaft sealing is needed, and the valve operates satisfactorily over a wide temperature and pressure range.

B63-10236

LIGHTWEIGHT UNIVERSAL JOINT TRANSMITS BOTH
TORQUE AND THRUST
BAMFORD, R. M. DATE- JAN. 1964

JPL-375

A lightweight universal joint uses a thin steel flexure plate to transmit torque and a steel rod to transmit thrust. Both the plate and rod are independently mounted and can act individually.

B63-10237

SUPERCOLD TECHNIQUE DUPLICATES MAGNETIC FIELD
IN SECOND SUPERCONDUCTOR
HILDEBRANDT, A. F. DATE- NOV. 1964

JPL-376

A superconductor cylinder, charged with a high magnetic field, can be used to create a similar field in a larger cylinder. The uncharged cylinder is precooled, lowered into a helium dewar system, and fitted around the cylinder with the magnetic field. Magnetic flux lines pass through the two cylinders.

B63-10240

SLEEVE AND CUTTER SIMPLIFY DISCONNECTING
WELDED JOINT IN TUBING
PERKINS, G. S. DATE- APR. 1964

JPL-384

To test equipment, welded tubing joints may have to be disconnected and rewelded. To eliminate rewelding, a nonstandard welding sleeve permits the tubing to be welded and then disconnected by a specially designed sleeve cutter. Use of this tool assures that only the sleeve is cut.

B63-10241

VEITCH DIAGRAM PLOTTER SIMPLIFIES BOOLEAN
FUNCTIONS

RUBIN, D. K. DATE- APR. 1964

JPL-385

This device for simplifying the plotting of a Veitch diagram consists of several overlays for blocking out the unwanted squares. This method of plotting the various input combinations to a computer is used in conjunction with the Boolean functions.

B63-10247

NEW PACKAGE FOR BELLEVILLE SPRING PERMITS RATE
CHANGE, EASY DISASSEMBLY

MAC GLASHAN, W. F. DATE- MAR. 1964

JPL-392

A spring package, with grooves to hold the spring washers at the inner and outer edges, reduces hysteresis to a minimum. Three-segment retainers permit easy disassembly so that the spring rate can be changed.

B63-10251

HELICAL TUBE SEPARATES NITROGEN GAS FROM
LIQUID NITROGEN

STEPHENS, J. B. DATE- JUN. 1964

JPL-398

To prevent a boiloff problem, liquid nitrogen flowing from a storage tank to a container, is separated into liquid and gaseous components. This is accomplished by centrifugal and venting action, using a section of perforated helical aluminum tubing.

B63-10289

FRICTIONAL WEDGE SHOCK MOUNT IS INEXPENSIVE,
HAS GOOD DAMPING CHARACTERISTICS

TENER, W. M. DATE- MAY 1964

JPL-IT-1001

A wedge-shaped shock mount uses rubber for energy

absorption, and the frictional characteristics of ordinary brake material for damping.

B63-10291

SPECIAL PLIERS CONNECT HOSE CONTAINING LIQUID
UNDER PRESSURE

BLAYDES, R. A. DATE- MAR. 1964

JPL-IT-1003

For speed and safety in handling disconnect fittings on a hose carrying liquid under pressure, special pliers have been constructed. A gear and rack mechanism is combined with two or more wide-opening U-shaped jaws which are placed over the quick-disconnect fittings.

B63-10292

HEAVY-DUTY STAPLE REMOVER OPERATED BY HAND
MORRISON, T. BENNER, R. DATE- MAR. 1964

JPL-IT-1004

To remove staples from thick reports, a rooter, bending hook and post are incorporated into a heavy duty hand tool. This makes possible one-step extraction of long staples.

B63-10304

BREAK-UP OF METAL TUBE MAKES ONE-TIME SHOCK
ABSORBER, BARS REBOUND

HATHAWAY, M. MC GEHEE, J. R. ZAVADA, E. DATE-
FEB. 1964 REAN- SEE ALSO NASA-TN-D-1477

LANGLEY-1A

A frangible metal tube has the capability to dissipate the energy generated when a vehicle lands with excessive velocity. The tube is so placed that, at impact, it is forced against a die and, as it fragments, energy is absorbed.

B63-10340

CRYOPUMPING OF HYDROGEN IN VACUUM CHAMBERS IS
AIDED BY CATALYTIC OXIDATION OF HYDROGEN

CHILDS, J. H. GROBMAN, J. RAYLE, W. DATE- JUN.
1964 REAN- SEE NASA-TN-D-863

LEWIS-15

Vacuum test facilities are required for high speed cryopumping of gaseous hydrogen at low pressures. One method involves the catalytic oxidation of hydrogen and condensation of the resulting water on a liquid nitrogen-cooled surface.

B63-10341

DESIGN OF VALVE PERMITS SEALING EVEN IF THE
STEM IS MISALIGNED

SCHMIDT, H. W. DATE- JAN. 1964

LEWIS-38

A conical-walled valve plug is designed to seal against a recessed spherical valve seat. This insures proper sealing during numerous seating cycles even though the valve stem is misaligned or forced out of its proper axis.

B63-10354

RAPID BILLET LOADER AIDS EXTRUSION OF
REFRACTORY METALS

DOLINSHEK, A. F. HERMAN, L. E. DATE- APR. 1964

LEWIS-50

A combination gravity and manually powered rapid billet loader reduces the time required for transferring hot metal billets from a heating furnace to an extrusion press. Positioned between the furnace and extrusion press, this loader is a simple slide-delivery device.

B63-10367

CONNECTOR FOR VACUUM-JACKETED LINES CUTS
TUBING SYSTEM COST

CALVERT, H. F. DATE- MAY 1964

LEWIS-66

A low-cost fitting, fabricated from standard connectors, is used for disconnecting flow lines in cryogenic systems. Utilizing vacuum-jacketed lines made from two sizes of tubing welded at the ends, the connectors are stronger and setup time is reduced.

B63-10368

COMPOSITE, VACUUM-JACKETED TUBING REPLACES
BELLOWS IN CRYOGENIC SYSTEMS

CALVERT, H. F. DATE- JUN. 1964

LEWIS-67

For reliability control of high pressure cryogenic

systems, one or more 90 degree elbow expansion devices are substituted for the metal bellows normally used. The device consists of a conducting tube inside a support tube, with the space between the tubes evacuated for insulation.

B63-10376

NOVEL CLAMPS ALIGN LARGE ROCKET CASES,
ELIMINATE BACK-UP BARS

FRANKLIN, W. J. MARTIN, N. C. DATE- JAN. 1964
M-FS-1

Welding clamps, placed inside and outside a rocket case, hold it in proper alignment during tungsten inert gas welding. These metal blocks, connected by a stainless steel band, eliminate the need for backup bars.

B63-10384

VACUUM-TYPE BACKUP BAR SPEEDS WELD REPAIRS
CARMODY, R. J. DATE- AUG. 1964

M-FS-12

A backup bar designed to use both vacuum and air pressure provides a method of sealing the weld root of a faulty section of seam weld. With slight redesign, the bar can be made sufficiently flexible to fit any large cylindrical surface.

B63-10385

FLEXIBLE HONEYCOMB STRUCTURE CAN BEND TO FIT
COMPOUND CURVES

CARMODY, R. J. DATE- APR. 1964
M-FS-13

For flexibility in forming a curved surface, a honeycomb configuration using multiple pleats has proved superior to the usual core structures. The partial pleats formed in individual cell walls permit movements to and from the central axis without tearing.

B63-10387

PORTABLE FLOORING PROTECTS FINISHED SURFACES,
IS EASILY MOVED

CARMODY, R. J. DATE- MAR. 1964
M-FS-15

To protect curved, finished surface and provide support for workmen, portable flooring has been made from rigid plastic foam blocks, faced with aluminum strips. Held together by nylon webbing, the flooring can be rolled up for easy carrying.

B63-10420

SIMPLE MECHANISM COMBINES POSITIVE LOCKING AND
QUICK-RELEASE FEATURES

CLAYTON, L. B. /HUGHES AIRCRAFT CO./ DATE- FEB.
1964
WOO-4

For secure locking and quick release of two objects, this device uses a spring-loaded slotted bolt, locked in position by two retainer arms. When these retainer arms are freed from contact, the bolt is ejected and the objects released.

B63-10431

HIGH-TEMPERATURE, HIGH-PRESSURE SPHERICAL
SEGMENT VALVE PROVIDES QUICK OPENING

GIOVANNETTI, A. HIMMELRIGHT, R. MEYER, K.
NITTA, H. DATE- APR. 1964
ARC-13

A hollow spherical segment valve with an eccentric permits non-rubbing closure and provides a means for gas-cooling the seal. The design allows quick opening at high temperatures and discharge pressures.

B63-10435

PORTABLE DISPLAY PANELING HAS WIDE USE, EASY
TAKE DOWN AND ASSEMBLY

DE VOTO, H. J. DATE- MAR. 1964
ARC-17

Design for a modular display panel is based on a cross-shaped corner connector and wooden lattice bars. The bars are fitted into the arms of the metal connector and a pocket slot holds a modular-size panel.

B63-10442

KINETIC-ENERGY ABSORBER EMPLOYS FRICTIONAL
FORCE BETWEEN MATING CYLINDERS

CONRAD, E. W. DATE- MAY 1964

LEWIS-75

A kinetic energy absorbing device uses a series of coaxial, mating cylindrical surfaces. These surfaces have high frictional resistance to relative motion when axial impact forces are applied. The device is designed for safe deceleration of vehicles impacting on landing surfaces.

B63-10489

FINE-PARTICLE FILTER PREVENTS DAMAGE TO VACUUM
PUMPS

HARLAMERT, P., JR. DATE- APR. 1964
LEWIS-106

A filter system for mechanical pumps is designed with a baffle assembly that rotates in a circulating oil bath which traps destructive particles. This prevents severe damage to the pump and is serviceable for long periods before it requires cleaning.

B63-10497

INTEGRAL COOLANT CHANNELS SUPPLY MADE BY
MELT-OUT METHOD

ESCHER, W. J. D. DATE- JUN. 1964
M-FS-91

Melt-out method of constructing strong, pressure-tight fluid coolant channels for chambers is accomplished by cementing pins to the surface and by depositing a melt-out material on the surface followed by two layers of epoxy-resin impregnated glass fibers. The structure is heated to melt out the low-melting alloy.

B63-10502

FLUID-PRESSURE METER CAN BE CALIBRATED WITHOUT
REMOVAL FROM FLOW LINE

MELTON, D. E. DATE- MAR. 1964
M-FS-98

The construction of a fluid pressure meter with two inlet ports, flexible diaphragms and a pressure-responsive transducer is described. One port can be connected to the line and the other to a source of standard pressures for calibration.

B63-10517

MINIATURE OXYGEN-HYDROGEN CUTTING TORCH
CONSTRUCTED FROM HYPODERMIC NEEDLE

SHLICHTA, P. DATE- APR. 1964
JPL-545

A miniature cutting torch consisting of a main body member, upon which the hydrogen and oxygen containers are mounted, valves for controlling gas flow, and a hypodermic needle that acts as a mixing tube and flame tip is constructed.

B63-10519

TOOL FACILITATES SEALING OF METAL FILL TUBES

COOLEY, H. H., JR. /UNITED AIRCRAFT CORP./ DATE-
JUL. 1964
MSC-24

A hand tool is designed for sealing metal fill tubes containing corrosive or inflammable liquids without the use of heat or open flame. The tool aligns the fill tube into which a tapered sealing pin is dropped and driven below the neck of tube.

B63-10526

BUILT-IN TEMPLATES SPEED UP PROCESS FOR MAKING
ACCURATE MODELS

SPON- INNOVATOR NOT GIVEN /LANGLEY/ DATE- FEB.
1964
LANGLEY-23

From accurate scale drawings of a model, photographic negatives of the cross sections are printed on thin sheets of aluminum. These cross-section images are cut out and mounted, and mahogany blocks placed between them. The wood can be worked down using the aluminum as a built-in template.

B63-10530

NEW ANEMOMETER HAS FAST RESPONSE, MEASURES
DYNAMIC PRESSURE DIRECTLY

LYNCH, J. W. REED, W. H., III DATE- OCT. 1964
LANGLEY-28

A simple anemometer having a fast response to high frequency wind fluctuations by direct measurement of two drag-force components in orthogonal planes

05 MECHANICAL

is described. It may be used to determine wind profiles to extensive heights and would be helpful in takeoff and landing of light planes.

B63-10547
ELLIPSOIDAL OPTICAL REFLECTORS REPRODUCED BY ELECTROFORMING
HUNGERFORD, W. J. LARMER, J. W. LEVINSOHN, M.
DATE- OCT. 1964
GSFC-92

An accurately dimensioned convex ellipsoidal surface, which will become a master after polishing, is fabricated from 316L stainless steel. When polishing of the master is completed, it is suspended in a modified watt bath for electroforming of nickel reflectors.

B63-10556
LATHE CONVERTED FOR GRINDING ASPHERIC SURFACES
LARMER, J. W. LEVINSOHN, M. MC CRAW, D.
PESSAGNO, E. H. TAUB, F. J. DATE- JUL. 1964
GSFC-115

A standard overarm tracing lathe converted by the addition of an independently driven diamond grinding wheel is used for grinding aspheric surfaces. The motion of the wheel is controlled by the lathe air tracer following the template which produces the desired aspheric profile.

B63-10558
NEW METHOD FORMS BOND LINE FREE OF VOIDS
KING, C. B. DATE- OCT. 1964
LANGLEY-20

A new bonding method using vacuum, pressure and heat, which produces a bond line free of voids, is described. This method is very successful in bonding ablation shields to a magnesium structural component in simulated reentry tests involving great heat and air turbulence.

B63-10560
CAMERA SHUTTER IS ACTUATED BY ELECTRIC SIGNAL
NEFF, J. E. DATE- NOV. 1964
ARC-20

Rotary solenoid energized by an electric signal opens a camera shutter, and when the solenoid is de-energized a spring closes it. By the use of a microswitch, the shutter may be opened and closed in one continuous, rapid operation when the solenoid is actuated.

B63-10564
A TECHNIQUE FOR MAKING ANIMAL RESTRAINTS
CLARKE, A. E., JR REITHAN, J. DATE- SEP. 1964
ARC-25

A contoured shell for restraining animals is made by thermoforming plastic over the anesthetized, frozen specimen. It may be vented, or pieces may be cut out to facilitate working in localized areas.

B63-10568
PLASTIC MOLDS REDUCE COST OF ENCAPSULATING ELECTRIC CABLE CONNECTORS
KNOTT, D. DATE- NOV. 1964
M-FS-69

Resin casting of the aluminum master pattern forms a plastic mold for encapsulating a cable connector. An elastomer is injected into the mold and cured. The mold is disassembled leaving an elastomeric encapsulation around the connector.

B63-10571
SELF-BALANCING BEAM PERMITS SAFE, EASY LOAD HANDLING UNDER OVERHANG
EDWARDS, O. H. DATE- MAR. 1964
M-FS-84

The use of a self-balancing I-beam with a counterweight and motor simplifies moving heavy loads that are inaccessible for cranes. The beam cannot be overloaded, as the counterweight will not balance the load, and thus acts as an automatic safety device.

B63-10590
STAINLESS-STEEL ELBOWS FORMED BY SPIN FORGING
SPON- INNOVATOR NOT GIVEN /CHANCE-VOUGHT CORP./
DATE- DEC. 1964
M-FS-122

Large seamless austenitic stainless steel elbows are fabricated by spin forging /rotary shear forming/. A specially designed spin forging tool for mounting on a hydrospin machine has been built for this purpose.

B64-10001
NEW INFLATABLE LIFERAFT IS NONTIPPABLE
RADNOFSKY, M. I. SHEWMAKE, G. A. DATE- MAR. 1964
REAN- SEE ALSO NASA-TN-D-1083
MSC-4A

A one-seamed lightweight life raft has three underwater ballast buckets as stabilizers. Nontippable, it can be compactly packaged and inflated with carbon dioxide.

B64-10006
SPEED-SENSING DEVICE AIDS CRANE OPERATORS
SPON- INNOVATOR NOT GIVEN /WALLOPS/ DATE- OCT. 1964
WS-4

So that crane operators can judge payload movements accurately, a friction-driven multilobed cam device energizes a buzzer and indicator lamp in the crane cab. The signal frequency of this speed sensor has a sensitivity to hoist movement of 1/8 inch.

B64-10011
METAL STRIP FORMS 21 FOOT BOOM, ROLLS UP FOR COMPACT STORAGE
SPON- INNOVATOR NOT GIVEN /CANADIAN COMMERCIAL CORP./ DATE- MAY 1964
GSFC-151

An extensible boom, carrying three separate electric conductor tapes, can be rolled into a compact storage drum. The tape is curved in cross section so that the boom automatically forms a tube as it is extended.

B64-10014
GUIDE FOR EXTRUSION DIES ELIMINATES STRAIGHTENING OPERATION
GYORGAK, C. A. HOOVER, R. J. DATE- NOV. 1964
LEWIS-152

To prevent distortion of extruded metal, a guidance assembly is aligned with the die. As the metal emerges from the extrusion dies, it passes directly into the receiver and straightening tube system, and the completed extrusion is withdrawn.

B64-10015
COMFORTABLE, LIGHTWEIGHT SAFETY HELMET HOLDS RADIO TRANSMITTER, RECEIVER
ATLAS, N. D. /N. AM. AVIATION/ DATE- MAY 1964
MSC-53

For two-way radio communication where safety gear is required, a lightweight helmet with few protrusions has been designed. The electronics components and power supply are mounted between the inner and outer shells, and resilient padding is used for the lining.

B64-10021
PRESSURE TRANSDUCER 3/8-INCH IN SIZE CAN BE FAIRED INTO SURFACE
SCHAEFFER, R. J. /N. AM. AVIATION/ DATE- MAY 1964
WOO-065

To measure fluid pressure with minimum disturbance to fluid flow, a miniature pressure transducer can be imbedded and faired into the test surface. Incorporated in the design are piezoresistive elements mounted on a diaphragm, which transform pressure strains into an electrical signal.

B64-10028
QUICK-ACTING CLUTCH DISENGAGES IDLE DRIVE MOTOR
STARK, K. W. DATE- AUG. 1964
GSFC-143

Positive-drive, no drag, over-running clutch is developed to conserve power of idle motor in a low-power system using multiple drive motors. This device is useful where a number of shaft speeds are required with frequent shifting.

B64-10031
MULTIPLE PORT PRESSURE SCANNER VALVE FEATURES

GREATER ACCURACY, QUICKER DATA
VINCENT, E. R. DATE- SEP. 1964
JPL-555

Fast, accurate, multipressure measuring system, which employs a multiple port pressure scanning valve that connects a pressure transducer to many pressures, is described.

B64-10050
MODIFIED GAS BEARING IS ADJUSTABLE TO OPTIMUM STIFFNESS RATIO

EVANS, J. L. DATE- AUG. 1964
M-FS-145

Inexpensive and rapid-adjustments of the radial to axial stiffness ratio of a spherical gas bearing are achieved by a series of gas passages in the equatorial plane of the sphere which feed into orifices that can be readily changed in size.

B64-10058
INSULATED WELD TOOLING PERMITS UNIFORM, HIGH-QUALITY WELD
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- AUG. 1964
MSC-42

The application of a ceramic material coating to all surfaces contacting parts to be welded permits greater weld strength than the conventional weld tooling method.

B64-10066
ENCAPSULATION PROCESS STERILIZES AND PRESERVES SURGICAL INSTRUMENTS
MONTGOMERY, L. C. MORELLI, F. A. DATE- JUL. 1964
JPL-484

Ethylene oxide is blended with an organic polymer to form a sterile material for encapsulating surgical instruments. The material does not bond to metal and can be easily removed when the instruments are needed.

B64-10069
METAL-BENDING BRAKE FACILITATES LIGHTWEIGHT, CLOSE-TOLERANCE FABRICATION
ERCOLINE, A. L. WILTON, K. B. DATE- OCT. 1964
ARC-29

A lightweight, metal bending brake ensures very accurate bends. Features of the brake that adapt it for making complex reverse bends to close tolerances are a pronounced relief or cutaway of the underside of the bodyplate combined with modification in the leaf design and its suspension.

B64-10084
MOLDED ELASTOMER PROVIDES COMPACT FERRITE-CORE HOLDER, SIMPLIFIES ASSEMBLY
HAYDEN, R. R. DATE- NOV. 1964
JPL-584

A ferrite-core holder, fabricated by casting an elastomer in a simple mold, simplifies the assembly of modular matrix units for computers. Use of the device permits the core leads to be multiply threaded and soldered to terminals, without requiring intermediate terminals.

B64-10119
BUCKLE JOINS WEB STRAPS QUICKLY, ADJUSTS EASILY
WILKINSON, J. E. /CHANCE VUGHT CORP./ DATE- JUN. 1964
LANGLEY-21

To join web straps used to hoist heavy loads, a novel buckle permits two straps to be quickly joined and held by the combined forces of strap load tension and friction.

B64-10121
ELECTRONIC ASSEMBLY RACK PANELS SNAP ON AND OFF
BAILEY, J. W. DATE- JUN. 1964
GSFC-59

Snap fasteners on each side of an electronic assembly rack blank panel give quick access to the interior. Guide pins extending from the inside face easily slip into standard screw holes on the frame and provide additional support.

B64-10124
ATTACHMENT CONVERTS MICROSCOPE TO POINT SOURCE AUTOCOLLIMATOR

SHLICHTA, P. J. DATE- JUL. 1964
JPL-499

A low-power microscope or telescope provides a simple means of autocollimation. This is done by fitting the instrument with a light source to permit alignment from a reflecting surface normal to the optic axis of the instrument.

B64-10130
BEARING TRANSMITS ROTARY AND AXIAL MOTION
DOW, N. F. PETERS, R. W. DATE- SEP. 1964
LANGLEY-27

A low friction, two-component bearing comprised of a pair of ball-bearing races for transmitting rotary motion and an inner series of ball bearing assemblies for transmitting axial motion is described and should be useful in mechanisms such as stress-strain testing machines.

B64-10141
PNEUMATIC POWER IS TRANSMITTED THROUGH AIR BEARING
JOHNSON, H. I. WOBIG, O. A. DATE- JUL. 1964
MSC-8

A more efficient method for supplying high pressure air to an air bearing and pneumatic equipment mounted on it has been developed. The system uses a conventional air bearing and an air-supported sphere with a central passage. High pressure air is channeled through it into the pneumatic equipment on the sphere.

B64-10145
FLEXIBLE FASTENER ALLOWS THERMAL EXPANSION
CRUMPLER, W. B. DATE- JUN. 1964
LANGLEY-40

A flexible fastener permits thermal expansion of model skin sections which are rigidly attached to supporting structures in wind tunnel tests. The device uses a modified ball joint contact between the fastener and a skin section.

B64-10164
UPSETTING BUTT EDGE INCREASES WELD-JOINT STRENGTH
VESCO, D. DATE- OCT. 1964
M-FS-175

Mechanical upsetting /a mode of cold forging/ of butt edges to be welded is accomplished by the use of hydraulic rams and pressure rollers. The mechanical upsetting increases the thickness of the material in the heat-affected zone and compensates for the lower specific strength per unit thickness common to this area.

B64-10170
BALL BEARING USED IN DESIGN OF RUGGED FLOWMETER
MINKIN, H. L. DATE- JAN. 1965
LEWIS-159

A volumetric flowmeter which has a small magnet imbedded in the outer perimeter of the turbine wheel or in the bearing permits measurement of liquid flow rates in the presence of wide ranges and violent surges.

B64-10178
MACHINE TESTS CREASE DURABILITY OF SHEET MATERIALS
JONES, L. K. STANFORD, H. B. DATE- NOV. 1964
JPL-604

To test the crease resistance of sheet materials, the mid-section is folded over crease-control blades. One end is clamped to a motor-driven eccentric, the other to a spring, and durability is measured by the cycles required to produce failure.

B64-10185
THREADING HOOK FACILITATES SAFE RECOVERY OF HEAVY LOADS
ARTHUR, J. S. WILLIAMS, D. C. DATE- OCT. 1964
MSC-46

A C-shaped threading hook and shuttle mounted on a spring-loaded driving rod located inside the long-handled pole are developed for recovering

05 MECHANICAL

massive loads afloat in the sea.

B64-10188

BLADE VALVE ISOLATES COMPARTMENT IN PIPE,
OPENS TO ALLOW FREE FLOW
INUS, R. DATE- NOV. 1964
JPL-585

Two thin blades are incorporated into a valve which, when closed, form a sealed compartment in the shock-tube portion of a pipeline. When forced open by an actuator, gas flows through the system.

B64-10211

MICROMACHINING PRODUCES OPTICAL APERTURES TO
MICRON DIMENSIONS
WALCH, A. J. DATE- OCT. 1964
GSFC-206

Micron dimensioned rectangular optical aperture is formed under a high powered toolmakers microscope by laying two knife edged blocks over the miniature knife-edged hole in the base.

B64-10223

TWO-PART VALVE ACTS AS QUICK COUPLING
MAC GLASHAW, W. F. DATE- NOV. 1964
JEL-478

A two-part valve simplifies the problem of filling large tanks from smaller ones. One part acts as a check valve and remains integral to the recipient system, while the other part is integral to the donor system.

B64-10249

INSTRUMENT ADJUSTMENT KNOB LOCKS TO PREVENT
ACCIDENTAL MALADJUSTMENT
SPON- INNOVATOR NOT GIVEN /LEAR SIEGLER CORP./
DATE- NOV. 1964
M-FS-190

A device, incorporating a collar with a hexagonal opening which fits snugly over a hexagonal nut used to engage instrument panel components, keeps the adjustment knob locked. A quick release mechanism frees the knob for rotational adjustment.

B64-10272

VISCOUS-PENDULUM DAMPER SUPPRESSES STRUCTURAL
VIBRATIONS
REED, W. H., III DATE- NOV. 1964
LANGLEY-45

The viscous pendulum damper consists of a cylinder containing round trays on which round lead slugs rest. When assembled, the container is filled with a viscous liquid and attached, with axis vertical, to the structure. The device permits varying the damping of structural vibrations.

B64-10277

APPARATUS ALTERS POSITION OF OBJECTS TO
FACILITATE DEMAGNETIZATION
RINARD, G. WATSON, J. D. DATE- NOV. 1964
GSFC-234

An apparatus consisting of pulleys, a drive shaft and an inner compartment, in which components to be demagnetized are mounted, is constructed. Due to the speed ratio of the three frames, every point on a component in the inner compartment is cycled through an optimum locus in the demagnetization field.

B64-10278

SENSITIVE LOW-PRESSURE RELIEF VALVE HAS
POSITIVE SEATING AGAINST LEAKAGE
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
NOV. 1964
WOO-041

A pilot-operated relief valve which provides positive seating against leakage in cryogenic systems is described. The principal advantage is that the pilot poppet is unaffected by variations in control pressures in the pilot cavity, and results in a more accurate sensing of inlet pressure conditions.

B64-10284

APPARATUS MEASURES VERY SMALL THRUSTS
SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./
DATE- NOV. 1964

WOO-048

Measurement of very small thrusts of an ion engine are made by mounting the engine on a platform supported by leaf springs which are loaded to have a zero spring constant. Measuring apparatus includes an inductive sensor, servo amplifier, and a counterthrust feedback system.

B64-10306

COMPRESSED GAS SYSTEM OPERATES SEMITRAILER
BRAKES DURING WINCHING OPERATION
TUPPER, W. E. DATE- DEC. 1964
JPL-0036

To move van-type semi-trailers into and out of confined spaces, an auxiliary braking system is mounted on a standard dolly converter. Compressed nitrogen is used to actuate the brakes which are used in conjunction with a power winch.

B64-10327

CONNECTOR SEALS FLUID LINES AT CRYOGENIC
TEMPERATURES AND HIGH VACUUMS
KITTS, W. T. PLATT, P. K. DATE- JAN. 1965
GSFC-253

A connector that will serve as a seal for fluids at cryogenic temperatures and in high vacuums is constructed by installing a metal disk between two sets of mating serrations to form two sealing surfaces. Compression on both sealing surfaces is ensured by spring action of the disk.

B64-10348

SAFETY RESTRAINER PREVENTS WHIPPING OF
RUPTURED HIGH-PRESSURE HOSE
THOMPSON, W. E. DATE- DEC. 1964
LEWIS-99

The braid at each end of a standard electric cable puller is modified to reinforce high pressure, flexible, fluid transfer hoses. This safety device acts as a restraint if the line ruptures.

B64-10406

POLYCHART CONTOUR PLOTTER ENABLES DATA
EXTRAPOLATION FROM MULTIPLE PLOTTING CHARTS
SWINDALL, P. M. WISE, T. E. DATE- JUL. 1964
M-FS-37

A polychart contour plotter is used to reduce the data from all 19 antenna pattern charts to a one-chart form.

B65-10003

ILLUMINATED DISPLAY PANEL IS EASILY CHANGED
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
MSC-108

Photographic negative placed between two plastic sheets and back-lighted in selected areas prepares illuminated multicolored display panels. The device is inexpensive, easily changed, and quickly fabricated.

B65-10007

THERMOCOMPRESSION BONDING PRODUCES EFFICIENT
SURFACE-BARRIER DIODE
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
JPL-SC-066

Thermocompression bonding of a gold wire to a gallium-arsenide wafer produces a quality surface barrier diode with fast recovery times. The properties of this combination may be useful in semiconductor devices.

B65-10008

SHOCK ABSORBER PROTECTS MOTIVE COMPONENTS
AGAINST OVERLOADS
SPON- INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./
DATE- JAN. 1965
WOO-092

Shock absorber with an output shaft, hollow gear, and a pair of springs forming a resilient driving connection between shaft and gear, operates when abnormally high torques are applied. This simple durable frictional device is valuable in rotating mechanisms subject to sudden overloads.

B65-10009

FORMING BLOCKS SPEED PRODUCTION OF STRAIN GAUGE
GRIDS
BONN, J. L. GARDNER, D. E. DATE- FEB. 1965
LEWIS-182

A tool is designed which facilitates the forming of wire grids used in manufacturing strain gage grids. Flattening the grid wire by a cold working process produces a stabilized grid which can be readily handled for storage or shipment.

B65-10014

USE OF TEAR RING PERMITS REPAIR OF SEALED MODULE CIRCUITRY

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
M-FS-210

Improved packaging technique for modular electronic circuitry utilizes a tear ring which may be removed for repair and resealed. The tear ring is put over the container and header to which the electronic circuit assembly has been attached.

B65-10017

EXPLOSIVES ACTUATE NONMAGNETIC INDEXING DEVICE
BAUERNSCHUB, J. P., JR. DATE- JAN. 1965
GSFC-237

Nonmagnetic explosive-actuated indexing device creates magnetic field that can be tolerated by a sensor.

B65-10019

WIDE-ANGLE SENSOR MEASURES RADIANT HEAT ENERGY IN CORROSIVE ATMOSPHERES

SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- JAN. 1965
REAN- SEE ALSO B63-10004
M-FS-228

Ellipsoidal cavity device measures radiant heat energy over wide incident angles in corrosive atmospheres. The instrument consists of a cavity in copper heat sink sealed with sapphire window to protect thermocouple.

B65-10020

OPTICAL ARRANGEMENT INCREASES USEFUL LIGHT OUTPUT OF SEMICONDUCTOR DIODES

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
REAN- SEE ALSO B64-10297
JPL-SC-064

Useful light output of semiconductor diodes increased by incorporating the diode in an integral reflector and lens assembly. This reduces normal reflection losses between the diode and the air.

B65-10021

PICKUP DEVICE READS PRESSURES FROM PORTS IN ROTATING MECHANISMS

JANAS, B. DATE- JAN. 1965
REAN- SEE ALSO B64-10031
LEWIS-158

Indexing pickup monitors fluid pressures from ports at various angles on high or low speed rotating mechanisms in operation. By a simple axial movement of a takeoff connector, angle changing takes place. This device can be adapted for electric current monitoring.

B65-10022

KNOB LINKAGE PERMITS ONE-HAND CONTROL OF SEVERAL OPERATIONS

CODDING, G. C. LAVENDER, C. E. DATE- JAN. 1965
MSC-30

Electromechanical device with single knob provides one-hand control of numerous electrical or mechanical functions. The principle of this design may have application to remote-control switching devices.

B65-10027

FLUID-PRESSURE MEASUREMENT APPARATUS USES SHORT-LENGTH MANOMETER TUBES

SATHER, B. I. DATE- MAR. 1965
LEWIS-28

System of short length U-tube manometers with a proportionally divided reference pressure measures high fluid pressures.

B65-10029

SEISMIC TRANSDUCER MEASURES SMALL HORIZONTAL DISPLACEMENTS

GREENWOOD, T. L. DATE- MAR. 1965
M-FS-81

Pendular seismic transducer mounted on base plate measures small horizontal displacements of

structures subjected to vibration where no fixed reference point is available. Enclosure of transducer in transparent plastic case prevents air currents from disturbing the pendulum balance.

B65-10031

SPRING LOADED BEADED CABLE MAKES EFFICIENT WIRE PULLER

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- FEB. 1965
WOO-108

An efficient wire puller consists of a steel probe with a hole in one end fastened to a steel cable which is strung with metal beads compressed by spring loaded ferrules. This device allows cables to be pulled or forced around bends and elbows in pipes or tubes.

B65-10035

OCEANBORNE TRANSPONDER PLATFORM HAS GOOD STABILITY

SPON- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965
M-FS-171

Determination of space vehicle range and orbit is aided by a stable subsurface oceanic transponder. This device consists of a buoy held below the surface by a three-point system of anchors and mooring lines with an above surface antenna.

B65-10037

IMPROVED HOLDER PROTECTS CRYSTAL DURING HIGH ACCELERATION AND IMPACT

LE VAY, K. H. DATE- FEB. 1965
JPL-463

A plastic holder, which retains a crystal blank with standard silvered contacts sandwiched between two copper contacts, protects the crystal against vibration during high acceleration and impact.

B65-10038

FASTENER PROVIDES COOLING AND COMPENSATES FOR THERMAL EXPANSION

SPON- INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ DATE- FEB. 1965
NU-0003

A fastener composed of a concentric bellows welded to two plates forming an annular cavity provides cooling and thermal expansion compensation in a high temperature environment.

B65-10039

NONRESONANT SUPPORT FACILITATES VIBRATION TESTING OF STRUCTURES

SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- FEB. 1965
M-FS-224

An essentially frictionless four-point support system which utilizes bearings and pistons allows for determination of vibration frequencies of large structures. Retardation of vertical or horizontal motion is due to the viscous damping by the hydrostatic pressure of the oil or by adjustment of the gas volume in the accumulator.

B65-10040

VALVE DESIGNED WITH ELASTIC SEAT
MAC GLASHAN, W. F., DATE- FEB. 1965

JPL-442

Absolute valve closure is accomplished by a machined valve with an axially annular channel which changes the outlet passage into a thin tubular elastic seat member with a retainer backup ring. The elasticity of the seat provides tight conformity to ball irregularity.

B65-10042

FLEXURE SUPPORT SYSTEM PROTECTS THERMALLY AND DYNAMICALLY LOADED MODELS

CRUMPLER, W. B. DATE- FEB. 1965
LANGLEY-39

The design of an eight legged flexure support system which permits differential thermal expansion of thin skinned models subjected to high temperatures is done by setting the lengthwise axes of the supporting legs approximately normal to the line of absolute motion of the model supported.

05MECHANICAL

B65-10049

SCREW LOCKING CUPS QUICKLY AND NEATLY CRIMPED
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- FEB. 1965
NU-0009

A tool consisting of a positioning pin which is engaged in the screw and depressed until the tool body contacts the locking cup permits quick and neat crimping.

B65-10053

SEAL ALLOWS BLIND ASSEMBLY AND THERMAL EXPANSION OF COMPONENTS
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- FEB. 1965
NU-0005

The design of a seal consisting of two concentric cylinders with outer and inner threaded elements attached to each side of the system interface withstands large temperature changes and allows for blind assembly.

B65-10060

NEW ALLOY BRAZES TITANIUM TO STAINLESS STEEL
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1965
MSC-102

Brazing alloy of palladium, silver and silicon is used in brazing titanium to stainless steel without embrittling metals at the brazed interfaces.

B65-10063

CERAMIC-COATED BOAT IS CHEMICALLY INERT, PROVIDES GOOD HEAT TRANSFER
SPITZER, C. R. DATE- MAR. 1965
LANGLEY-90

Refractory metal foil sprayed with ceramic coating serves as evaporating boat for inorganic materials. The high thermal conductivity of this boat makes it useful with ohmic heaters.

B65-10064

DEVICE MEASURES CURVED SURFACE FINISH ON GEAR TEETH
SPON- INNOVATOR NOT GIVEN /GE/ DATE- MAR. 1965
WOO-112

Measurement of the curved surface finish on gear teeth is made by a device used in conjunction with a conventional profilometer.

B65-10070

SIMPLE SCALE INTERPOLATOR FACILITATES READING OF GRAPHS
FETTERMAN, D. E., JR. DATE- MAR. 1965
LANGLEY-88

Simple transparent overlay with interpolation scale facilitates accurate, rapid reading of graph coordinate points. This device can be used for enlarging drawings and locating points on perspective drawings.

B65-10074

NITROGEN DIOXIDE PRODUCED BY SELF-SUSTAINED PYROLYSIS OF NITROUS OXIDE
SABOL, A. P. DATE- MAR. 1965
LANGLEY-32

Apparatus is developed for achieving continuous self-sustaining pyrolysis reaction in the production of nitrogen dioxide from nitrous oxide. The process becomes self-sustaining because of the exothermic reaction and the regenerative heating of the gases in the pyrolysis chamber.

B65-10075

TENSION IS SERVO CONTROLLED IN FILM ADVANCE SYSTEM
SPON- INNOVATOR NOT GIVEN /AM. OPT. CO./ DATE- MAR. 1965
LANGLEY-54

Servocontrol device feeds film into a roller system. Two linear potentiometers connected to spring loaded tension rollers furnish servo input signal. Can be used in any continuous material transport system.

B65-10077

NEW COUPLING COMPENSATES FOR SHAFT MISALIGNMENT

SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- MAR. 1965
NU-0013

Coupling of splined shafts with slight misalignment is accomplished by means of a crown spline and sleeve arrangement.

B65-10078

FABRICATION METHOD PRODUCES HIGH-GRADE ALUMINA CRUCIBLES
PALMOUR, H. DATE- MAR. 1965
M-FS-216

Alumina-binder mixture, which has been dry pressed in a die using a mating punch, forms crucibles of various configurations and after firing results in a ceramic structure for use in diffusion experiments.

B65-10090

COMPACT ASSEMBLY GENERATES PLASTIC FOAM, INFLATES FLotation BAG
DATE- APR. 1965
LANGLEY-96

Device for generating plastic foam consists of an elastomeric bag and two containers with liquid resin and a liquid catalyst. When the walls of the containers are ruptured the liquids come into contact producing foam which inflates the elastomeric bag.

B65-10094

CUTTER AND STRIPPER REDUCES COAXIAL CABLE CONNECTION TIME
THOMPSON, F. E. DATE- APR. 1965
ARC-40

Consisting of three pivoted members, this hand cutter and stripper positions to cut shielding and insulation at the right distance and depth. Coaxial cable is prepared quickly and accurately for connector attachment.

B65-10098

CONTACT STRESSES CALCULATED FOR MINIATURE SLIP RINGS
ALBRIGHT, F. G. DOMEREST, K. E. HORTON, J. C. DATE- APR. 1965
M-FS-280

Using mathematical formulations to plot the graphs of the contact preload versus the Hertzian load, calculations of unit loading of the preloaded brushes on slip rings can be made. This optimizes the design of contact brushes and miniature slip rings.

B65-10099

SLIT FEEDS REDUCE UNBALANCED TORQUES IN GAS-LUBRICATED BEARINGS
BATSCH, F. F. LAUB, J. H. DATE- APR. 1965 REAN- SEE ALSO B63-10123 AND B64-10050
JPL-264

Gas-lubricated journal bearing with narrow radial slits forming circular gas-feed passages regulates gas flow in precision instruments. Asymmetrical flow pattern and unbalanced torques are prevented.

B65-10101

JIG AND FIXTURE AID FABRICATION OF TUNGSTEN RIVETS
CHATTIN, J. H. DATE- APR. 1965
LEWIS-185

Jig and fixture that holds several lengths of tungsten rods produces rivets simply and inexpensively. The apparatus allows sufficient tungsten to be exposed for heating and forging into a rivet head.

B65-10104

LEAF-SPRING SUSPENSION PROVIDES ACCURATE PARALLEL DISPLACEMENTS
MC CREARY, R. A. DATE- APR. 1965
JPL-480

Leaf-spring suspension device with the springs symmetrically mounted on suspension frames provides accurate parallel displacements of loads over short linear distances.

B65-10109

ROCK BIT REQUIRES NO FLUSHING MEDIUM TO MAINTAIN DRILLING SPEED

SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./
DATE- APR. 1965
JPL-WOO-031

Steel drill bit having terraces of teeth intersected by spiral grooves with teeth permits the boring of small holes through rock with low power. The cuttings are stored in a chamber behind the cutting head. Could be used as sampling device.

B65-10110
MAGNETS POSITION X-RAY FILM FOR WELD INSPECTION
WAGNER, R. P. DATE- APR. 1965
M-FS-253

Film-positioning device uses magnets to hold X-ray film for weld inspection in nonferrous structures, such as tanks, where access to interior points is difficult.

B65-10111
PROBE TESTS MICROWELD STRENGTH
SPON- INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./
DATE- APR. 1965
WOO-118

Probe is developed to test strength of soldered, brazed or microwelded joints. It consists of a spring which may be adjusted to the desired test pressure by means of a threaded probe head, and an indicator lamp. Device may be used for electronic equipment testing.

B65-10113
SHOCK MOUNT ISOLATES PRESSURE TRANSDUCERS FROM VIBRATION
ROGERS, R. S., JR. DATE- APR. 1965
JPL-631

Pressure transducer is isolated from shock and vibration forces by a pressure-compensated shock mount. Silicone elastomer O-rings within the shock mount serve as shock and vibration-damping pads.

B65-10114
AVERAGING PROBE REDUCES STATIC-PRESSURE SENSING ERRORS
RITCHIE, V. S. DATE- APR. 1965
LANGLEY-36

Averaging the high and low pressure admitted to a plenum through circumferentially spaced orifices provides a probe that accurately senses the free-stream static pressure on an aerodynamic surface. This surface does not have a preferred angle of inclination to the direction of the airstream cross flow.

B65-10115
INERT GAS SPRAYING DEVICE AIDS IN REPAIR OF HAZARDOUS SYSTEMS
TELEHA, S. DATE- APR. 1965
LEWIS-8B

Inert gas spraying device aids in safely making mechanical repairs to a cryogenic fluid system without prior emptying of the system. This method can be applied to any natural or bottled gas system and with modifications to gasoline transports.

B65-10116
LOW-COST TOOL MINIMIZES DAMAGE TO O-RINGS DURING INSTALLATION
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- APR. 1965
MSC-140

Tapered cylindrical tool enables O-ring installation over threaded fasteners without seal damage.

B65-10121
FLOW CONTROL VALVE IS INDEPENDENT OF PRESSURE DROP
SPON- INNOVATOR NOT GIVEN /THIOLKOL CHEM. CORP./
DATE- APR. 1965
JPL-WOO-039

Remote control of fluid flow in a low-power system is established by a flow control valve with a flapper and nozzle flow control. Constant rates are maintained despite fluctuating pressure across the valve.

B65-10126
COLLAPSIBLE TRUSS STRUCTURE IS AUTOMATICALLY EXPANDABLE
SPON- INNOVATOR NOT GIVEN /GE/ DATE- MAY 1965
GSFC-265

Coil springs wound with maximum initial tension in a three-truss, closed loop structure form a collapsible truss structure. The truss automatically expands and provides excellent rigidity and close dimensional tolerance when expanded.

B65-10130
COLLAR POSITIONS STRIP STOCK USED TO FORM COIL ON MANDREL
BLAZE, C. J. DATE- MAY 1965
JPL-198

Guide collar fastened to a mandrel helps form a coil of strip sheet metal stock. The collar maintains the strip stock in its proper position during winding of each turn of the coil.

B65-10131
APPARATUS FACILITATES PRESSURE-TESTING OF METAL TUBING
GYORGAK, C. A. DATE- MAY 1965
LEWIS-174

Burst-testing of refractory metal tubing is conducted in an apparatus in which tubular specimens are firmly gripped and test pressures and temperatures are applied. Porosity, flaw, and fatigue-stress rupture are also tested.

B65-10134
HIGH PERMEABILITY SEMICONDUCTORS PERMIT CLOSE-TOLERANCE SOLDERING
SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./
DATE- MAY 1965
GSFC-319

High permeability semiconductors concentrate magnetic field energy in small areas to allow soldering of small components. This device can be used in microminiature parts in thin-film fabrication.

B65-10135
COILED SPRING MAKES SELF-LOCKING DEVICE FOR THREADED FASTENERS
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAY 1965
MSC-149

Coiled spring device provides both easy self-locking and disassembly for screw-threaded fasteners. When the fastener turns in one direction the spring grips one of the fastener threads and releases when the fastener turns in the opposite direction.

B65-10141
INTEGRAL RIBS FORMED IN METAL PANELS BY COLD-PRESS EXTRUSION
BRADIE, P. R. SCHUERER, P. H. DATE- MAY 1965
M-FS-230

Metal panels with integral ribs are formed by the cold-press extrusion method without material loss. Integral ribs in aluminum-alloy panels are formed by this process.

B65-10144
LIGHTWEIGHT LOAD SUPPORT SERVES AS VIBRATION DAMPER
LAYMAN, W. E. DATE- MAY 1965
JPL-661

Omnidirectional antennas and solar panels can be supported by a thin-walled tubular strut. Silicon grease is used as the vibration-damping medium and a coil spring supports static loads.

B65-10147
IMPROVED FLUID CONTROL VALVE EXTENDS DIAPHRAGM LIFE
MAC GLASHAN, W. F. DATE- MAY 1965
JPL-345

Wear resistance of flexible diaphragms in fluid control valves is increased by incorporating a soft rubber washer at the bottom of the piston, a flexible buffer between the diaphragm and the valve seat, and a fluid feedback arrangement. The stress and wear of components at the valve seat

05 MECHANICAL

are minimized.

B65-10148

BIDIRECTIONAL TORQUE FILTER ELIMINATES
BACKLASH

BAKER, R. VEILETTE, L. WILLIAMS, S. DATE- MAY
1965

GSFC-335

Two elastic springs connecting a hub and two spur
gears absorb bidirectional step torque
differentials and provide antibacklash
characteristics between input and output shafts.
This device is used in precise control systems.

B65-10149

CANTILEVER SPRINGS MAINTAIN TENSION IN
THERMALLY EXPANDED WIRES

TERSELCIC, R. A. DATE- MAY 1965

LEWIS-136

Two deflected cantilever springs strung with wire
provide force displacement compensation to
maintain tension in the wires as they undergo
thermal expansion. This method of maintaining
tension in thermally expanded wires is used in
electric space heaters and residential heat
exchangers.

B65-10150

METAL BELLOWS CUSTOM-FABRICATED FROM TUBING
DATE- MAY 1965

LEWIS-192

Mandrel assembly mounted in a lathe chuck is used
with a forming wheel to roll-form bellows from
standard sheet metal tubing. Spacers and
mandrels of various sizes custom-fabricate bellows
of any desired dimensions.

B65-10153

TITANIUM TREATMENT IMPROVES BRAZED JOINTS

SPON- INNOVATOR NOT GIVEN /MIT/ DATE- MAY 1965

MSC-127

Pretreating metal with a thin coating of pure
titanium improves the wettability and flow of
brazing alloys. This can be used in the
manufacturing of aviation and aerospace components
where high strength-to-weight ratio must be
achieved.

B65-10154

SYSTEM MEASURES UNIDIRECTIONAL FORCES,
EXCLUDES EXTRANEOUS FORCES

BEHRENDT, D. R. HEGLAND, D. E. DATE- MAY 1965

LEWIS-170

System measures unidirectional force without
interference from other directional forces. The
measuring apparatus is mounted so that it only
moves vertically and is constrained from
horizontal and rotational movement. This system
can be used to accurately measure small forces in
one direction, or as an analytic balance.

B65-10160

LOW-COST SEAL COMPENSATES FOR SURFACE
IRREGULARITIES

SPON INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./
DATE- JUN. 1965

NU-0016

Seal assembly consisting of a steel V ring and a
perforated tubular fluorocarbon polymer O ring
provides a barrier to gaseous and liquid hydrogen
under high pressure.

B65-10163

DEVICE DISCONNECTS SEVERAL COUPLINGS
SIMULTANEOUSLY

FORSYTHE, A. K. DATE- JUN. 1965

JPL-226

Actuator assembly disconnects electric cable and
fluid-line coupling from a rocket. The
disconnecter incorporates interconnected hydraulic
cylinders which effect an equal and simultaneous
displacement of pistons upon admission of
compressed air through a solenoid control valve.

B65-10166

SPlice PLATE DESIGN ASSURES STRUCTURAL
SEPARATION BY MILD EXPLOSIVE

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
JUN. 1965

MSC-137

Splice plate with mechanical joint is separated by
expanding gases of a mild detonating fuse. The
gas pressures of the low-yield explosive eliminate
component fragmentation and achieve excellent
control of the separation line.

B65-10168

LATHE ATTACHMENT USED TO MACHINE ELLIPTICAL
CONES

ALLEN, J. H., SR. WOBIG, O. A. DATE- JUN. 1965

MSC-100

Close-tolerance elliptical cones are fabricated by
cutting-tool guide assembly used with conventional
tracer cartridge on turret lathe accurately
produced in two machine operations.

B65-10170

METAL PARTS HYDROSIZED BY EXPLOSIVE FORCE

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
JUN. 1965

M-FS-289

Large metal parts are sized by a charge exploded
above a sealed container filled with evacuated die
and water. Explosive hydrosizing achieves close
dimensional tolerances, eliminates damage to the
surface, and allows longer force application and
more even pressure distribution.

B65-10174

PRESSURE TRANSDUCER SYSTEM IS FORCE-BALANCED,
HAS DIGITAL OUTPUT

SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- JUN.
1965

M-FS-154

Forced-balanced pressure transducer and associated
circuitry controls pressure testing of space
equipment systems under actual operating
conditions. The transducer and circuitry
automatically converts the sensed pressure to
digital form.

B65-10176

DEVICE ENABLES MEASUREMENT OF MOMENTS OF
INERTIA ABOUT THREE AXES

CONN, J. DATE- JUN. 1965

GSFC-49

Device measures moments of inertia of an
irregularly shaped mass about three mutually
perpendicular axes by the standard pendulum and
torque methods. A fixture suspends the test mass
at one point and can be adjusted to allow
oscillation of the mass.

B65-10177

EPOXY-RESIN PATTERNS SPEED SHELL-MOLDING OF
ALUMINUM PARTS

SPON- INNOVATOR NOT GIVEN /ALABAMA UNIV./ DATE-
JUN. 1965

M-FS-303

Half patterns cast from commercial epoxy resin
containing aluminum powder are used for
shell-molding of aluminum parts. The half
patterns are cast in plastic molds of the original
wooden pattern. Ten serviceable sand resin molds
are made from each epoxy pattern.

B65-10180

NEW NUT AND SLEEVE IMPROVE FLARED CONNECTIONS

GARRARD, J. S. DATE- JUN. 1965

M-FS-194

Improved nut and sleeve of standard stainless
steel flared tube connection allows forces on the
mating surfaces to be uniformly applied. This can
be applied to pressurized fluid systems such as
refrigeration, air conditioning, and hydraulic
systems.

B65-10181

HAND TOOL BENDS COMPONENT LEADS ACCURATELY

SPON- INNOVATOR NOT GIVEN /CHRYSLER CORP./ DATE-
JUN. 1965

M-FS-308

Hand-operated die set bends, without damage,
electrical component leads to perfectly match
holes in printed circuit board. This tool speeds
up printed circuit fabrication and reduces the
number of component rejections.

B65-10185

DISPENSING SYSTEM ELIMINATES TORSION IN
DEPLOYED HOSESSPON- INNOVATOR NOT GIVEN /IIT RES. INST./ DATE-
JUN. 1965

MSC-80

Dispensing system uses a rotating drum, transfer arm, and stationary drum to deploy, reel in, and store an attached hose. This system which eliminates torsion and minimizes strain and wear of flexible hoses, is used for handling flexible cables that have one end permanently attached to an outlet or connector.

B65-10191

EXTENDIBLE COLUMN CAN BE STOWED ON DRUM

HOLTZ, G. M. HOWARD, E. A. DATE- JUN. 1965

JPL-686

Column formed from a series of segments held together by an internal spring or cable can be coiled on a drum or extended into a rigid structure. This storable coil is useful in boring for soil samples and supporting electrical and optical sensors.

B65-10192

SPIRAL HEATER COILS HAND-FORMED WITH FIXTURE

CHATTIN, J. H. DATE- JUN. 1965

LEWIS-208

Bench model jig and fixture used for hand fabricating spiral coils of various lengths from flat strip stock. This tool is used to make springs and coils to custom lengths.

B65-10198

SELF-ALIGNING FIXTURE USED IN LATHE CHUCK JAW

REFACING

LINN, C. C. DATE- JUN. 1965

FRC-21

Self-aligning tool positions and rigidly holds lathe chuck jaws for refacing and truing of the clamping surface. The jaws clamp the fixture in the manner of clamping a workpiece. The fixture can be modified to accommodate four-jawed checks.

B65-10201

ELECTRICAL CABLE CONNECTOR-CLAMP HAS SMOOTH

EXTERIOR SURFACE

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

JUN. 1965

MSC-154

Electrical cable connector-clamp fitted with a collet has a smooth exterior surface that can be easily gripped. The collet clamps a portion of the cable and provides for connecting it to a standard electrical connector.

B65-10205

BALL AND SOCKET JOINTS PROVIDE ACCURATE

BIAXIAL GIMBAL

ROUZE, E. R. DATE- JUL. 1965

JPL-658

Ball-and-socket joints are used to connect two rotating inputs to orthogonally pivoted outputs. This provides an accurate biaxial gimbal which will operate in continuous motion without backlash.

B65-10207

FLUID CHECK VALVE HAS FAIL-SAFE FEATURE

GAUL, L. C. DATE- JUL. 1965

JPL-0019

Check valve ensures unidirectional fluid flow and, in case of failure, vents the downstream fluid to the atmosphere and gives a positive indication of malfunction. This dual valve consists of a master check valve and a fail-safe valve.

B65-10210

FIBER GLASS DIES SPEED FORMING OF LARGE METAL

SHEETS

BROWN, R. L. SCHUERER, P. DATE- JUL. 1965

M-FS-214

Fiberglass tooling dies accelerate forming of large metal sheets. The dies, fabricated to fit over and fasten to the die bases, are lightweight, quickly replaced and have nongalling surfaces.

B65-10216

WIRE MESH ISOLATOR PROTECTS SENSITIVE
ELECTRONIC COMPONENTS

KERLEY, J. J., JR. DATE- JUL. 1965

GSFC-347

Sensitive electronic components are enclosed in wire mesh for protection. The wire mesh isolates the component from shock and vibration. It acts as a heat sink and as a screen against RF interference.

B65-10219

FLEXIBLE MAGNETIC PLANNING BOARDS ARE EASILY
TRANSPORTED

SPON- INNOVATOR NOT GIVEN /GEN. DYN.

/ASTRONAUTICS/ DATE- AUG. 1965

M-FS-340

Easily transportable preprinted magnetic planning boards are made by coating thin sheet steel with clear plastic. Flexible magnetic boards used with paper charts are constructed from close mesh steel screen.

B65-10222

INEXPENSIVE CHECK VALVE IS INSTALLED IN
STANDARD AN FITTINGS

MARTINEZ, J. S. DATE- AUG. 1965

JPL-2A

Check valve with a cylindrical flanged tube body is used in standard AN fittings. The valve also has an easily removable spring-loaded piston.

B65-10227

DIAPHRAGM ELIMINATES LEAKAGE IN CRYOGENIC
FLUID DUCT COUPLING

SPON- INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./

DATE- AUG. 1965

WOO-142

Duct coupling with nickel steel diaphragm of low thermal expansivity is leakproof when used with cryogenic fluids. The diaphragm, located between the two flanges of the coupling, reduces axial shrinkage at the coupling flanges to a minimum.

B65-10229

SCOOP ATTACHMENT MAKES HELICOPTER RECOVERIES
EASIER AND SAFER

KOONS, W. E. DATE- AUG. 1965

MSC-130

Helicopter with rigid boom and net attachment performs rescue or recovery operations easily and safely. The attachment in the front of the helicopter scoops objects from difficult and otherwise inaccessible areas and pivots to the side hatch of the aircraft so that no crew member need leave the craft.

B65-10230

HYDRAULIC DEVICE PROVIDES ACCURATE

DISPLACEMENTS TO MICROINCHES

TSUTSUMI, K. /MIT/ DATE- AUG. 1965

MSC-112

Hydraulic drive device translates microinch deviation measurements into precise corrective displacements. The unit is driven by a servomotor activated by the output of an attitude sensing device.

B65-10231

HANDTOOL FACILITATES EXTRACTION OF CIRCUIT

MODULES

LUSBY, T. K., JR. DATE- AUG. 1965

LANGLEY-38

Compact handtool extracts electronic modules from circuit board socket. It is used on modules that have four small notches in the base of the plastic housing.

B65-10235

ANGULAR GLASS TUBING DRAWN FROM ROUND TUBING

SPON- INNOVATOR NOT GIVEN /DEBELL AND RICHARDSON/

DATE- AUG. 1965

HQ-20

Round glass tubing softened in a furnace is drawn over a shaped plug or mandrel to form shapes with other than a circular cross section. Irregularly shaped tubing is formed without limitations on tube length or wall thickness.

05 MECHANICAL

B65-10236

BURST DIAPHRAGM PROTECTS VACUUM VESSEL FROM INTERNAL PRESSURE TRANSIENTS

HOTZ, G. M. HOWARD, E. A. DATE- AUG. 1965
JPL-687

Supported dual-mode burst diaphragm protects vacuum vessels from transient internal pressures. It forms the interface between the vacuum in the vessel and an external pressure.

B65-10241

SHOCK ABSORBER OPERATES OVER WIDE RANGE

CREASY, W. K. JONES, J. C. DATE- AUG. 1965
MSC-168

Piston-type hydraulic shock absorber, with a metered damping system, operates over a wide range of kinetic energy loading rates. It is used for absorbing shock and vibration on mounted machinery and heavy earth-moving equipment.

B65-10245

CAPTIVE NUT FASTENER SECURELY JOINS BRITTLE MATERIALS

SACCOCIO, R. M. /WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
NU-0008

Extension tube captive nut with a standard bolt joins assemblies with an inaccessible nut location. This fastener is excellent for joining brittle materials.

B65-10246

THERMOCOUPLE-TO-INSTRUMENTATION CONNECTOR FEATURES QUICK ASSEMBLY

HENSHAW, E. /WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
NU-0022

Rigid thermocouple leads are connected to flexible instrumentation leads by a crimping and bridging process. This method eliminates the need for expensive transition sections and can be accomplished in about five minutes.

B65-10248

SYSTEM TRANSMITS MECHANICAL VIBRATION INTO HAZARDOUS ENVIRONMENT

ARMSTRONG, D. G. /WESTINGHOUSE ELEC. CO./ GAAL, A. E. DATE- AUG. 1965
NU-0025

Vibration transducers are tested in a hazardous environment using a single axis transmission system with an electromagnetic shaker table and vibrating wires which drive identical rocker arms, one in the test cell and the other outside. This system can be modified for a multiaxis configuration.

B65-10251

CONTROL OF COMPONENT DIFFERENTIAL HARDNESS INCREASES BEARING LIFE

ANDERSON, W. J. PARKER, R. J. ZARETSKY, E. V. DATE- AUG. 1965
LEWIS-190

Bearing fatigue life is maximized when the bearing ball or roller hardness is between one and two points greater than that of the bearing race as measured on the Rockwell C scale.

B65-10254

REMOTELY OPERATED CLAMPING TOOL HAS POSITIVE GRIP

ADUCCI, S. A. /WESTINGHOUSE ELEC. CORP./ SEWALD, A. W. DATE- AUG. 1965
NU-0020

Jaw-type clamping tool inserts or removes objects in a hazardous environment. It has a strong, positive gripping force which is remotely operated by means of a wedge-screw mechanism.

B65-10256

HOLLOW PLASTIC HOOPS PROTECT THERMOCOUPLE IN STORAGE AND HANDLING

OSMOND, L. H. /WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
NU-0023

Thermocouples are shipped and stored in hollow plastic hoops. The hoop is an inexpensive but efficient method of protection.

B65-10262

ROTATING HOLDER PERMITS ACCURATE GRINDING OF METALLURGICAL MICROSAMPLES

CHAMER, D. L. DATE- SEP. 1965
LEWIS-131

Metallurgical microsamples are held in a fixture which rotates the sample across a rotating grinding wheel. The dual rotation results in a level, flat surface on the sample.

B65-10266

ONE-SHOT VALVE MAY BE REMOTELY ACTUATED

KAMI, S. /HUGHES AIRCRAFT CO./ DATE- SEP. 1965
WOO-195

One-shot valve, with spring-loaded plunger and sealing diaphragm, incorporates an emergency release actuated by a remote sensor. The plunger is released by the electrical melting of a fuse link and pierces the valve seal. The valve lowers fluid pressure in a container without losing the contained fluid.

B65-10285

DIFFERENTIAL PRESSURE GAUGE HAS FAST RESPONSE

WEBER, H. S. /ARMOUR RES. FOUND./ DATE- SEP. 1965
M-FS-358

Differential pressure gage with semiconductor type strain gage elements measures rapidly changing pressure. Output of the strain gage elements is a dc voltage that is directly proportional to the pressure difference being measured.

B65-10312

AIR BRAKE-DYNAMOMETER ACCURATELY MEASURES TORQUE

SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- OCT. 1965
LEWIS-163

Air brake-dynamometer assembly combines the principles of the air turbine and the air pump to apply braking torque. The assembly absorbs and measures power outputs of rotating machinery over a wide range of shaft speeds. It can also be used as an air turbine.

B65-10319

REFRACTORY METALS WELDED OR BRAZED WITH TUNGSTEN INERT GAS EQUIPMENT

WISNER, J. P. DATE- OCT. 1965
LEWIS-219

Appropriate brazing metals and temperatures facilitate the welding or brazing of base metals with tungsten inert gas equipment. The highest quality bond is obtained when TIG welding is performed in an inert atmosphere.

B65-10323

VOLUMETRIC SYSTEM CALIBRATES METERS FOR LARGE FLOW RATES

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- NOV. 1965
WOO-130

Volumetric system calibrates meters used for large liquid flow rates. The system employs trip probes and equipment to time the flow of liquid from a tare vessel into a calibrated vessel. This calibration system is used in the petroleum and chemical industries.

B65-10326

ROUGH SURFACE IMPROVES STABILITY OF AIR-SOUNDING BALLOONS

SCOGGINS, J. R. DATE- NOV. 1965
M-FS-320

Aerodynamic stability of balloons used for measuring the intensity and direction of atmospheric winds at various elevations is improved by incorporating a rough surface on the balloons. The rough-surfaced balloon is useful for collecting wind profiles and other meteorological data.

B65-10327

PRESSURE RESPONSIVE SEAL HANDLES STATIC AND DYNAMIC LOADS

MARSH, H. W. /N. AM. AVIATION/ DATE- NOV. 1965
GSPC-441

Ported ball valves are sealed under both static and dynamic load conditions by a line-pressure

responsive double-acting seal. The top of the seal engages the ported ball at the outer circumferential edge of the seal upper end, and the bottom of the seal seats on a flat circular land with a continuous wall.

B65-10334
FREQUENCY DIVIDER IS FREE OF SPURIOUS OUTPUTS
MC DERMOND, D. DATE- NOV. 1965
GSFC-308

Frequency divider provides sixteen output states free of spurious pulses from four input circuits. The input is binary coded, and a change of one in the input only changes the number of output states by one.

B65-10338
INERT-GAS WELDING AND BRAZING ENCLOSURE
FABRICATED FROM SHEET PLASTIC
WISNER, J. P. DATE- NOV. 1965
LEWIS-220

Custom-fabricated plastic bag maintains an inert-gas atmosphere for welding and brazing certain metals. The bag fits over part of the workpieces and the welding and brazing tools. It is also used for metal brazing and fusion plating which require an inert-gas atmosphere.

B65-10339
DISK CALCULATOR INDICATES LEGIBLE LETTERING
SIZE FOR SLIDE PROJECTION
HULTBERG, R. R. DATE- NOV. 1965
GSFC-409

Hand-operated disk calculator indicates the minimum size of letters and numbers in relation to the width and height of a working drawing. The lettering is legible when a slide of the drawing is projected.

B65-10342
ELECTROMAGNETIC HAMMER REMOVES WELD
DISTORTIONS FROM ALUMINUM TANKS
SCHWINGHAMER, R. J. DATE- NOV. 1965
M-FS-287

Distortions around weld areas on sheet-aluminum tanks and other structures are removed with a portable electromagnetic hammer. The hammer incorporates a coil that generates a controlled high-energy pulsed magnetic field over localized areas on the metal surface.

B65-10346
IMPROVED POPPET VALVE PROVIDES POSITIVE
DAMAGEPROOF SEAL
WALLACE, E. D. DATE- NOV. 1965
M-FS-293

Soft-seat poppet valve provides positive closure against fluid without damage to the seating surface on repeated cycling. It incorporates two compressible soft rings and a retaining ring of hard metal. Sealing is effected when the poppet seat is forced into intimate contact with a mating surface on one of the soft rings.

B65-10348
STANDOFF TOOL SPEEDS PLACEMENT OF FRICTION-FIT
ELECTRICAL TERMINALS
MOORE, D. J. SKIESTROM, W. W. /SPACE TECHNOL.
LABS./ DATE- NOV. 1965
WOO-029

Hand operated tool inserts terminals through compartment walls in electronic equipment. The tool is in the configuration of a modified pair of pliers with jaws consisting of a split chuck and anvil.

B65-10351
HYDRAULIC DRIVE SYSTEM PREVENTS BACKLASH
ACORD, J. D. DATE- NOV. 1965
JPL-371

Hydraulic drive system uses a second drive motor operating at reduced torque. This exerts a relative braking action which eliminates the normal gear train backlash that is intolerable when driving certain heavy loads.

B65-10358
FASTENER DISTRIBUTES STRESS EVENLY FROM
SANDWICH-PANEL-HUNG ITEMS

SHAPIRO, J. /N. AM. AVIATION/ DATE- NOV. 1965
MSC-236

Items are attached externally to cellular-core sandwich panels by a fastener anchored in the panel by a constant amount of adhesive. The changes caused to the core cells and skin sheets are minimized.

B65-10360
PORTABLE TOOL REMOVES BURRS FROM PIPE AND
TUBING
HEADLEY, C. A. PADILLA, V. E. SCHOPPMAN, R. A.
/MCDONNELL AIRCRAFT CORP./ DATE- NOV. 1965
MSC-237

Portable tool cleanly removes burrs that remain on tubing when it is cut. It restores the cut end to its original configuration, and carries away all chips and pieces. This tool is used in places of limited access where a larger tool could not be used.

B65-10367
FLEXIBLE PLASTIC RING ASSEMBLY MAKES DURABLE
SHAFT SEAL
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
DEC. 1965
WOO-227

Stacked flexible rings interleaved with solid metal rings of smaller width provide a durable seal ring for rotating shafts used in vacuum or pressure pumps.

B65-10370
BRAZING METHOD PRODUCES SOLID-SOLUTION BOND
BETWEEN REFRACTORY METALS
SPON- INNOVATOR NOT GIVEN /AVCO CORP./ DATE- DEC.
1965
LEWIS-212

Brazing two refractory metals by diffusion bonding minimizes distortion and avoids excessive grain growth in the metals. This method requires the selection of an interface metal that forms intermediate low-melting eutectics or solid solutions with the metals to be brazed.

B65-10371
UNIVERSAL BELLOWS JOINT RESTRAINT PERMITS
ANGULAR AND OFFSET MOVEMENT
KUHN, R. F., JR. /N. AM. AVIATION/ DATE- DEC.
1965
WOO-102

Universal joint-type restraint that employs ball joints permits maximum angular and lateral offset movement in a bellows joint without danger of rupture or pressure drop in the line. It is used in high pressure and high temperature applications in refineries, steam plants, or stationary power plants.

B65-10375
PORTABLE TOOL CLEANS PIPES AND TUBING
HEADLEY, C. A. /MCDONNELL AIRCRAFT CORP./
HEADLEY, R. JONES, D. D. DATE- DEC. 1965
MSC-238

Portable tool cleans and polishes the external surfaces of tubes and pipes without contaminating the interior areas with loose particles. The tool is driven by an electric drill and is connected to a vacuum source that removes debris resulting from the cleaning and polishing action.

B65-10378
REINFORCEMENT CORE FACILITATES O-RING
INSTALLATION
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
DEC. 1965
WOO-228

Reinforcement core holds O-ring in place within a structure while adjacent parts are being assembled. The core in the O-ring adds circumferential rigidity to the O-ring material. This inner core does not appreciably affect the sectional elasticity or gland-sealing characteristics of the O-ring.

B65-10383
THREADED SPLIT RING CONNECTOR SEPARATES
STRUCTURAL SECTIONS
MAYO, J. W. DATE- JUL. 1965

05 MECHANICAL

LANGLEY-145

Threaded split ring connector quickly and cleanly separates two structural members by remote control. The connector is retained in an expanded position by spring plates that are deflected and held by an explosive bolt. Ignition of the bolt effects the separation. This conceptual approach lends itself to various configurations and sizes of structures.

B65-10385

RACK MOUNT DEVICE QUICKLY INSERTS OR EXTRACTS CHASSIS UNITS

HAERTHER, L. W. ZIMMERMAN, P. A. /COLLINS RADIO CO./ DATE- DEC. 1965
MSC-244

Rack mounted chassis units are quickly inserted or extracted by a device which is driven in either direction by turning a simple hand crank. This device is used in aircraft and water craft.

B65-10386

DRILL BIT DESIGN ASSURES CLEAN HOLES IN LAMINATED MATERIALS

TILLOTSON, R. N. /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1965
WOO-098

Drill bit eliminates delamination when drilling laminated material. It cuts or shaves the material as it progresses through it. The bit acts to hold down the material during drilling to prevent tearing or ripping and produces a clean, smooth and defect-free hole. It prevents chipping in stretched plastic windows for high-altitude, high-performance aircraft.

B65-10388

STRAINER FITS INSIDE FLARED-TUBE FITTINGS

PARKER, O. J. DATE- DEC. 1965

LANGLEY-180

Cylindrical wire-mesh strainer which fits inside flare-tube fittings is readily installed and easily replaced. It has a collar that seats on the tapered shoulder of the male fitting.

B65-10391

TUNGSTEN WIRE AND TUBING JOINED BY NICKEL

BRAZING

SPON- INNOVATOR NOT GIVEN /AUTO-CONTROLS LABS./ DATE- DEC. 1965
M-FS-394

Thin tungsten wire and tungsten tubing are brazed together using a contacting coil of nickel wire heated to its melting point in an inert-gas atmosphere. This method is also effective for brazing tungsten to tungsten-rhenium parts.

B65-10393

DIE AND TELESCOPING PUNCH FORM CONVOLUTIONS IN THIN DIAPHRAGM

SPON- INNOVATOR NOT GIVEN /HONEYWELL/ DATE- DEC. 1965

JPL-SC-135

Die and punch set forms convolutions in thin dished metal diaphragm without stretching the metal too thin at sharp curvatures. The die corresponds to the metal shape to be formed, and the punch consists of elements that progressively slide against one another under the restraint of a compressed-air cushion to mate with the die.

B65-10394

CENTRIFUGAL DEVICE SEPARATES LIQUID FROM GAS

HANDLEWICH, R. M. /UNITED AIRCRAFT CORP./

STROUP, K. E. DATE- DEC. 1965

MSC-282

Liquid-to-gas ratio is reduced from maximum efficiency of jet engine fuel by a centrifugal separator. The amount of liquid removed from the fuel is controlled by the separator-screen mesh size and its rotational speed.

B65-10401

PHOTOSENSORS USED TO MAINTAIN WELDING

ELECTRODE-TO-JOINT ALIGNMENT

BOWEN, J. B. /N. AM. AVIATION/ DATE- DEC. 1965

MSC-243

Photosensors maintain electrode-to-joint alignment in automatic precision arc welding. They detect

the presence and relative position of a joint to be welded and actuate a servomechanism to guide the welding head accordingly thus permitting alignment for more than straight line or true circle joints.

B65-10402

LIGHTWEIGHT DOOR SEALS CRYOGENIC CONTAINER AGAINST DIAPHRAGM TYPE LOADING

ENGLEHART, R. C., JR. /N. AM. AVIATION/ DATE- DEC. 1965

M-FS-476

Lightweight, removable, sealed joint access door for a spherical or semispherical pressure vessel containing cryogenic materials uses a joint overlock design to take the shear and moment loads. Oversize bolt holes are used so that the attaching bolts are in tension only.

B66-10001

FORMING TOOL IMPROVES QUALITY OF TUBING FLARES

SPON- INNOVATOR NOT GIVEN /GEN. DYN.

/ASTRONAUTICS/ DATE- JAN. 1966

WOO-231

Punch and die set improves the quality of tubing flares for use with standard flared-tube fittings in high-pressure systems. It forges a dimensionally accurate flare in the tubing and forces more tubing material into the high-stress areas to improve the strength and tightness of the tubing connection.

B66-10003

IMPROVED TOOL EASILY REMOVES BRAZED TUBE CONNECTORS

SCHOPPMAN, R. A. /MCDONNELL AIRCRAFT CORP./

DATE- JAN. 1966

MSC-263

Portable, compact tool quickly and cleanly removes brazed connectors from system tubes. The tool uses an induction coil to melt the braze and a compression spring to automatically separate the connection. An inert gas is force-fed about the heated area to prevent oxidation of the tube.

B66-10007

FLOATING DEVICE ALIGNS BLIND CONNECTIONS

RESEL, J. E. /N. AM. AVIATION/ DATE- JAN. 1966

MSC-256

Panel-mounted connectors overcome the misalignment of blind connectors in electronic rack mounted equipment. The connector is free to move in the vertical direction by the action of a parallelogram mount. This freedom of motion maintains the guide pin hole centerline parallel to the guide pin centerline at all times.

B66-10011

TORQUE WRENCH DESIGNED FOR RESTRICTED AREAS

FAGERBERG, E. B. /LOCKHEED MISSILES AND SPACE

CO./ DATE- JAN. 1966

LEWIS-246

Wrench with twisting handle grip applies torque to a fastener in a restricted area. The wrench handle may be any length without affecting output torque.

B66-10014

EXPLOSIVE FORCE OF PRIMACORD GRID FORMS LARGE SHEET METAL PARTS

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JAN. 1966

REAN- SEE ALSO NASA-SP-5017

M-FS-316

Primacord which is woven through fish netting in a grid pattern is used for explosive forming of large sheet metal parts. The explosive force generated by the primacord detonation is uniformly distributed over the entire surface of the sheet metal workpiece.

B66-10018

COMPACT RETRACTOR PROTECTS CABLING LOOPS

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JAN. 1966

M-FS-561

Core and swivel retractor mechanism combined with cable stiffeners provides compact, long-wearing protection for cabling loops in cabinet-mounted electronic equipment drawers.

B66-10019

**BUOYANT STOKES LITTER ASSEMBLY USED FOR SEA
RESCUE OPERATIONS**

 POLLARD, R. A. SHEWMAKE, G. A. DATE- JAN. 1966
MSC-131

Standard stokes litter is fastened to inflatable flotation units for sea rescue operations. The assembly keeps an injured person immobilized during transportation to a first aid station.

B66-10020

**O-RING TUBE FITTINGS FORM LEAKPROOF SEAL IN
HYDRAULIC SYSTEMS**

 SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
JAN. 1966
M-FS-481

Leakproof fittings for hydraulic systems are designed to be welded to the ends of the tubing to be joined and mated to form a seal with one o-ring at the joint. Since the fittings are coupled at only one joint, they tend to be more reliable than standard fittings coupled at two joints.

B66-10022

**RING VALVE RESPONDS TO DIFFERENTIAL PRESSURE
CHANGES**

 SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
JAN. 1966
WOO-247

Pressure valve has a moving annular ring seal that automatically reacts to differential pressure changes across the seat. This valve has good potential for the petroleum and chemical industries.

B66-10023

SIMPLE KEY LOCKS TURBINE ROTOR BLADES

 SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
JAN. 1966
WOO-103

Symmetrical, cruciform key has end tabs which bend up to lock turbine rotor blades against axial displacement. The key locks without introducing aerodynamic resistance or upsetting rotor balance.

B66-10030

**FRICTION DEVICE DAMPS LINEAR MOTION OF
ROTATING SHAFT**

 SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
JAN. 1966
WOO-214

Damping device checks the axial motion of a rotating shaft by exerting a controllable, radial frictional load to the outer race of the ball bearing in which the shaft is mounted. The device can be used as a soft bearing mount to damp resonant frequencies at critical shaft speed.

B66-10032

**SHEET METAL STRIP UNROLLS TO FORM CIRCULAR
BOOM**

 SPON- INNOVATOR NOT GIVEN /MELPAR, INC./ DATE-
JAN. 1966
GSPC-423

Preformed metal strip, coiled flat on a storage drum, unrolls to form a cylindrical boom. Tabs and slots on opposite sides of the strip interlock to form a continuous circular cross section. This retractable boom can be used as a spacecraft antenna, gravity gradient, or positioning device.

B66-10035

**RESILIENT CLAMP HOLDS FUEL CELL STACK THROUGH
THERMAL CYCLE**

 SHINN, B. H. /UNITED AIRCRAFT CORP./ DATE- FEB.
1966
MSC-313

Resilient clamping device holds a stack of fuel cells during thermal expansion and contraction periods. The clamp has torsion bar action which maintains seal integrity over a wide stress range.

B66-10040

**ASSEMBLY JIG ASSURES RELIABLE SOLAR CELL
MODULES**

 OFARRELL, H. O. /TRW SPACE TECHNOL. LABS./ DATE-
FEB. 1966
GSPC-455

Assembly jig holds the components for a solar cell

module in place as the assembly is soldered and bonded by the even heat of an oven. The jig is designed to the configuration of the planned module. It eliminates uneven thermal conditions caused by hand soldering methods.

B66-10047

HEATED DIE FACILITATES TUNGSTEN FORMING

 CHATTIN, J. H. HAYSTRICK, J. E. LAUGHLIN, J. C.
LEIDY, R. A. DATE- FEB. 1966
LEWIS-25A

Tungsten forming in a press brake employs a bottom die assembly with a heating manifold between two water-cooled die sections. The manifold has hydrogen-oxygen burners spaced along its length for even heat during forming.

B66-10052

**COMBUSTION CHAMBER INLET MANIFOLD SEPARATES
VAPOR FROM LIQUID**

 BAKER, D. I. /N. AM. AVIATION/ DATE- FEB. 1966
REAN- SEE ALSO B63-10251
M-FS-531

Circular manifold with tangential orifices at the inner circumference provides for the vapor constituent of a vaporized cryogenic propellant to enter a rocket combustion chamber before the liquid constituent. The vapor is separated from the liquid by centrifugal action and precedes it into the chamber through carefully positioned orifices.

B66-10054

**MODIFIED POWER TOOL RAPIDLY DRIVES SERIES
TORQUE BOLTS**

 SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
FEB. 1966
MSC-221

Feeder attachment, which fits on a standard power driver, drives a series of longitudinally attached torque bolts into place with great speed. It allows loading of a series of bolts and then positions individual bolts in the driving head for assembly. The attachment contains a socket gun which may be modified to accommodate different types and sizes of bolts.

B66-10055

**HYDROGEN-ATMOSPHERE INDUCTION FURNACE HAS
INCREASED TEMPERATURE RANGE**

 CAVES, R. M. GRESSLIN, C. H. DATE- FEB. 1966
LEWIS-153

Improved hydrogen-atmosphere induction furnace operates at temperatures up to 5,350 deg F. The furnace heats up from room temperature to 4,750 deg F in 30 seconds and cools down to room temperature in 2 minutes.

B66-10056

**BENCH VISE ADAPTER GRIPS TUBING SECURELY AND
SAFELY**

 HOWLAND, B. T. JONES, A. S., JR. /N. AM.
AVIATION/ DATE- FEB. 1966
MSC-279

Plastic self-compressing adapter with grooves, attached to the jaws of a bench vise, secures thin-wall tubing vertically or horizontally during cutting and flaring operations without marring or damaging it. Magnets incorporated in both sections of the adapter prevent detachment from the jaws when the vise is opened.

B66-10059

**CALIBRATED CLAMP FACILITATES PRESSURE
APPLICATION**

 SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
FEB. 1966
MSC-298

Spring-loaded clamp applies specific pressure to hold materials together during bonding, welding, and machining. The clamp has two adjustable legs terminating in suction cups for easy attachment to a surface.

B66-10061

**INSTRUMENT QUICKLY TRANSPOSES GROUND REFERENCE
TARGET TO EYE LEVEL**

 GREEN, B. E. VAN DEVENTER, E. L. /N. AM.
AVIATION/ DATE- FEB. 1966

05 MECHANICAL

MSC-275

Optical alignment of equipment is facilitated by a traverse target with a string suspending a plumb bob to transpose the ground level point to eye level operation. This instrument appreciably decreases the time required from the present method but achieves the same degree of precision.

B66-10063

TENSILE-STRENGTH APPARATUS APPLIES HIGH STRAIN-RATE LOADING WITH MINIMUM SHOCK
COTRILL, H. E., JR. MAC GLASHAN, W. F.
DATE- FEB. 1966
JPL-28 JPL-29

Tensile-strength testing apparatus employs a capillary bundle through which a noncompressible fluid is extruded and a quick-release valve system. This apparatus applies the test loads at relatively constant very high strain rates with minimal shock and vibration to the tensile specimen and apparatus.

B66-10065

T-HANDLE WRENCH HAS TORQUE-LIMITING ACTION
KEMPLE, S. B. /N. AM. AVIATION/ DATE- FEB. 1966
MSC-280

T-handle wrench can be preset to release when a certain torque value is exceeded by means of a spring-loaded roller and groove torque-limiting mechanism contained in the handle of the wrench. The wrench is also equipped with a push button in the handle that permits the operator to lock the handle to the spindle shaft, thus eliminating the torque-limiting function.

B66-10069

RUN-IN WITH CHEMICAL ADDITIVE PROTECTS GEAR SURFACE
HARTMAN, M. A. /N. AM. AVIATION/ DATE- FEB. 1966
M-FS-548

Run-in treatment provides a protective coating on turbopump gear surfaces so that they are capable of operation under marginal conditions in mineral oil and diester lubricants. This treatment protects highly loaded gears during relatively short-term operation.

B66-10071

MECHANISM ISOLATES LOAD WEIGHING CELL DURING LIFTING OF LOAD
HAIGLER, J. S. /N. AM. AVIATION/ DATE- FEB. 1966
MSC-297

Load weighing cell used in conjunction with a hoist is isolated during lifting and manipulation of the load. A simple mechanism, attached to a crane hook, provides a screw adjustment for engaging the load cell during weighing of the load and isolating it from lift forces during hoisting of the load.

B66-10073

CALCULATIONS ENABLE OPTIMUM DESIGN OF MAGNETIC BRAKE
KOSMAHL, H. G. DATE- FEB. 1966
LEWIS-251

Mathematical analysis and computations determine optimum magnetic coil configurations for a magnetic brake which controllably decelerates a free falling load to a soft stop. Calculations on unconventionally wound coils determine the required parameters for the desired deceleration with minimum electrical energy supplied to the stationary coil.

B66-10074

THREADED PILOT INSURES CUTTING TOOL ALIGNMENT
GOLDMAN, R. /N. AM. AVIATION/ SCHNEIDER, W. E.
DATE- FEB. 1966
M-FS-527

Threaded pilot allows machining of a port component, or boss, after the reciprocating hole has been threaded. It is used to align cutting surfaces with the boss threads, thus insuring precision alignment.

B66-10076

SHOULDER ADAPTER STEADIES SPOT WELDING GUN
LOVE, T. H. DATE- MAR. 1966

M-FS-321

Shoulder adapter fits on one end of a hand-held spot welding gun. With the adapter, the operator can hold the gun steadily at uniform pressure to ensure defect-free welds.

B66-10077

PLUGGED HOLLOW SHAFT MAKES FATIGUE-RESISTANT SHEAR PIN
HANKINSON, T. W. E. DATE- MAR. 1966
LANGLEY-195

Shear pin coupling with plugged hollow shaft provides required load capacity for shaft protection and has no groove to induce fatigue failure.

B66-10078

THERMAL MOTOR POSITIONS MAGNETOMETER SENSORS
KERNIN, W. J. SCOTT, S. G. DATE- MAR. 1966
ARC-51

Reversing, thermal, motor-driven device positions magnetometer sensors for checking zero offset. The device alternately positions two sensors at fixed positions 90 degrees apart. The thermal motor is fabricated completely of nonmagnetic materials.

B66-10080

NYLON SHOCK ABSORBER PREVENTS INJURY TO PARACHUTE JUMPERS
MANDEL, J. A. /GOODYEAR AEROSPACE CORP./ DATE- MAR. 1966
MSC-226

Nylon shock absorbers reduce the canopy-opening shock of a parachute to a level that protects the wearer from injury. A shock absorber is mounted on each of the four risers between the shroud lines and the harness. Because of their size and location, they pose no problem in repacking the chute and harness after a jump.

B66-10092

FINGERTIP CURRENT CONTROL FACILITATES USE OF ARC WELDING GUN
ROTH, B. /N. AM. AVIATION/ DATE- MAR. 1966
MSC-289

Fingertip-operated trigger accurately controls the current supplied to an arc welding gun. The trigger is mounted directly on the handle of the gun.

B66-10093

TOOL PROVIDES CONSTANT PURGE DURING TUBE WELDING
LANG, E. R. /N. AM. AVIATION/ DATE- MAR. 1966
M-FS-547

Tool provides a constant purge of inert gas during in-place welding of tubular components to prevent contamination and oxidation. It also permits self-jiggings of the tube and sleeve to be welded.

B66-10100

QUEUEING REGISTER USES FLUID LOGIC ELEMENTS
SPON- INNOVATOR NOT GIVEN /UNIVAC DIV. OF SPERRY RAND/ DATE- MAR. 1966
M-FS-317

Queueing register /a multistage bit-shifting device/ uses a series of pure fluid elements to perform the required logic operations. The register has several stages of three-state pure fluid elements combined with two-input NOR gates.

B66-10102

PIPE CUTTING TOOL IS USEFUL IN LIMITED SPACE
HEADLEY, C. A. /MCDONNELL AIRCRAFT CORP./
JONES, D. D. DATE- MAR. 1966
MSC-36

Portable pipe cutting tool is used in areas of limited space. The pipe is clamped in the tool and then cut by a rotating cutter assembly that is internally connected to a drive shaft engaged in the chuck of a portable electric drill. The tool is held in a fixed position during the cutting operation.

B66-10107

MECHANISM CONTINUOUSLY MEASURES STATIC AND DYNAMIC CABLE LOADS
SPON- INNOVATOR NOT GIVEN /HOUSTON/ DATE- MAR. 1966

MSC-217

Pulley mechanism measures the tensile loads on a cable under static and dynamic conditions, without disturbing the continuity of operation of the system. A set of takeoff pulleys are mounted on a pivoted frame that is linked to a strain gage which measures the frame displacement as a function of the static or dynamic tensile load on the cable.

B66-10115

SOLDERING TOOL HEATS WORKPIECES AND APPLIES
SOLDER IN ONE OPERATION

GUDKESE, V. W. DATE- MAY 1966

LEWIS-247

Fountain-pen type soldering iron heats workpieces and applies solder to joints in densely packed electronics assemblies. The basic soldering tool is used with different-sized orifice tips, eliminating the need for an assortment of conventional soldering guns.

B66-10116

TELESCOPING OF INSTRUMENTATION TUBING
ELIMINATES SWAGING

MC CLELLAN, E. L. /N. AM. AVIATION/ DATE- MAY 1966

M-FS-546

Short sections of stainless steel tubing of slide-fit sizes fitted together and silver-soldered at the junctions form small-diameter tubing assemblies with accurately stepped-down dimensions. This method of fabrication eliminates the costly swaging operations formerly used.

B66-10123

HAND DRILL ADAPTER LIMITS HOLES TO DESIRED
DEPTH

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1966

MSC-346

Adjustable adapter fastened to the shank of a drill bit limits the depth of bored holes. The adapter may be made in sizes appropriate for bits of different diameters.

B66-10124

ECONOMICAL AND MAINTENANCE-FREE GAS SYSTEM
OPERATES RAILROAD SWITCHES

VISSING, G. S. DATE- MAR. 1966

NU-0045

Remote control system that uses bottled nitrogen as a power source operates infrequently used railroad switches. This system is economical and maintenance free.

B66-10125

ALUMINUM OXIDE FILLER PREVENTS OBSTRUCTIONS
IN TUBING DURING WELDING

OKELLY, K. P. DATE- MAR. 1966

MSC-222

Granular aluminum oxide is used as filler in serpentine tubing while welding the tubing to a flat surface. The filler eliminates obstructions in the tubes formed by molten weld nuggets and is porous enough to allow gases to escape from the welding area.

B66-10132

EXPANDABLE INSERT SERVES AS SCREW ANCHOR

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1966

MSC-301

Expandable self-locking adapter secures components to panels having one accessible side. Mounting holes in the panels may not be threaded to accommodate screws, therefore, the adapter contains a female thread that will mate a mounting screw.

B66-10135

CHART CASE OPENS TO FORM BRIEFING EASEL

NELSON, R. A. /N. AM. AVIATION/ DATE- APR. 1966

MSC-349

Aluminum carrying case protects charts during transit and opens to form a rigid easel for their presentation. Looseleaf clamps hold the charts in place for both carrying and displaying them.

B66-10136

CRYOGENIC TRAP VALVE HAS NO MOVING PARTS

BRANUM, L. W. WELLS, G. /N. AM. AVIATION/ DATE- APR. 1966

M-FS-487

Aluminum-body trap valve with an invar stem keeps cryogenic materials in the liquid state while entering the final component of a system. The valve has no moving parts and is self-actuated and self-monitoring.

B66-10137

ROTATING MANDREL SPEEDS ASSEMBLY OF PLASTIC
INFLATABLES

MAC PADDEN, J. A. /SCHJELDAHL /G.T./ CO./

STENLUND, S. J. DATE- APR. 1966

LANGLEY-155

Rotating mandrel permits the accurate cutting, forming, and sealing of plastic gores for assembly of an inflatable surface of revolution. The gores remain on the mandrel until the final seam is reached. Tolerances are tightly controlled by the mandrel configuration.

B66-10145

PORTABLE POWER TOOL MACHINES WELD JOINTS IN
FIELD

SPIER, R. A. DATE- APR. 1966

M-FS-258

Portable routing machine for cutting precise weld joints required by nonstandard pipe sections used in the field for transfer of cryogenic fluids. This tool is adaptable for various sizes of pipes and has a selection of router bits for different joint configurations.

B66-10146

EXTENDABLE MAST USED IN ONE SHOT SOIL
PENETROMETER

HOTZ, G. M. HOWARD, G. A. DATE- APR. 1966

JPL-685

Penetrometer to test soil characteristics has a piercing head with soil instrumentation equipment attached to an expandable mast actuated by compressed air. The penetrometer gives continuous measurements as the mast pushes the piercing head through the soil.

B66-10149

DEPTH INDICATOR AND STOP AID MACHINING TO
PRECISE TOLERANCES

LAVERY, J. L. /N. AM. AVIATION/ DATE- APR. 1966

M-FS-553

Attachment for machine tools provides a visual indication of the depth of cut and a positive stop to prevent overcutting. This attachment is used with drill presses, vertical milling machines, and jig borers.

B66-10150

MOUNTING FACILITATES REMOVAL AND INSTALLATION
OF FLAME-DETECTOR RODS

CASTLE, F. /N. AM. AVIATION/ DATE- APR. 1966

M-FS-555

Flame-detector-rod holder is easily removed from the wall of a gas-fired furnace for maintenance or replacement of the detector rod without requiring shutdown of the furnace. The holder consists of an externally threaded outer bushing, a sleeve which is held inside the outer bushing with a set screw, and a detector rod assembly which screws into the sleeve.

B66-10151

SPLIT GLASS TUBE ASSURES QUALITY IN ELECTRON
BEAM BRAZING

KRESSIN, W. J. /N. AM. AVIATION/ DATE- APR. 1966

M-FS-564

Sealed enclosure of heat-resistant glass tubing and silicone rubber molds provide good visibility for electron beam brazing of metal tubes in an inert gas atmosphere. The glass tubing and rubber molds, which are bonded together, are easily applied to and removed from the brazing area by operation of a clamp.

B66-10152

NYLON BIT REMOVES CORK INSULATION WITHOUT
DAMAGE TO SUBSTRATE

05 MECHANICAL

CRANDALL, J. C. /N. AM. AVIATION/ DATE- APR. 1966
MSC-381

Nylon router bit in an electric hand-held drill removes small quantities of cork insulation from a metal or fiber glass surface without cutting or scratching the surface.

B66-10155
SIMPLE DEVICE FACILITATES INERT-GAS WELDING OF TUBES

CARRITHERS, K. V. /N. AM. AVIATION/ KELLEY, W. B. DATE- APR. 1966
M-FS-558

Metal Y-tube simultaneously directs argon streams over weld areas on both sides of tubes being joined along a line on their outer periphery. The device is advanced along the junction in step with the welding operation.

B66-10167
DUAL REGULATOR CONTROLS TWO GASES FROM A SINGLE REFERENCE

JACKSON, K. /GARRETT CORP./ DATE- APR. 1966
MSC-227

Dual-pressure regulator uses single reference for parallel control of two gases. The regulator uses an external fluid pressure to modulate the flow of one gas, and the regulated flow of the first gas to modulate the flow of the second.

B66-10168
SAFETY SWITCH PERMITS EMERGENCY BRIDGE CRANE SHUTDOWN

LONG, E. J. R. /N. AM. AVIATION/ DATE- APR. 1966
M-FS-549

Safety switch on a crane control pendant must be held closed to operate the crane. This provides for immediate power cutoff to the crane in an emergency or a pendant circuit failure.

B66-10169
MODIFIED DRILL PERMITS ONE-STEP DRILLING OPERATION

LIBERTONE, C. /N. AM. AVIATION/ DATE- APR. 1966
M-FS-559

Drill with modified cutting faces permits one-step drilling operation without chatter upon contact and premature wear. The modification of the drill, which has the same diameter as that of the desired hole, consists of a groove across the bottom of each of the cutting faces of the drill flutes.

B66-10171
MULTISURFACE FIXTURE PERMITS EASY GRINDING OF TOOL BIT ANGLES

JONES, C. R. /N. AM. AVIATION/ DATE- APR. 1966
M-FS-586

Multisurface fixture with a tool holder permits accurate grinding and finishing of right and left hand single point threading tools. All angles are ground by changing the fixture position to rest at various references angles without removing the tool from the holder.

B66-10172
FLEXIBLE COILED SPLINE SECURELY JOINS MATING CYLINDERS

COPPERNOL, R. W. /GEN. DYN./ASTRONAUTICS/ DATE- APR. 1966
WOO-270

Mating cylindrical members are joined by spline to form an integral structure. The spline is made of tightly coiled, high tensile-strength steel spiral wire that fits a groove between the mating members. It provides a continuous bearing surface for axial thrust between the members.

B66-10174
EPOXY-COATED CONTAINERS EASILY OPENED BY WIRE BAND

MC COY, J. W. /N. AM. AVIATION/ DATE- APR. 1966
M-FS-592

Epoxy coating reduces punctures, abrasions, and contamination of synthetic cellular containers used for shipping and storing fragile goods and equipment. A wire band is wound around the closure joint, followed by the epoxy coating. The

container can then be easily opened by pulling the wire through the epoxy around the joint.

B66-10175
DEVICE SPOT-LAPS SPHERES TO VERY CLOSE TOLERANCES

AVERY, H. W. /GE/ DATE- MAY 1966
JPL-SC-119

Device laps precise amounts of metal from high spots on a spherical body to correct minute surface imperfections. The device generates the lapped surface with reference to an existing true surface on the spherical workpiece. Lapping is performed by applying a rotary and oscillatory motion to the workpiece while the lapping tool is held on the workpiece high spot.

B66-10176
LIFTING CLAMP POSITIVELY GRIPS STRUCTURAL SHAPES

REINHARDT, E. C. DATE- MAY 1966
M-FS-593

Welded steel clamps securely grip structural shapes of various sizes for crane operations. The clamp has adjustable clamping jaws and screw-operated internal v-jaws and provides greater safety than hoisting slings presently used. The structural member can be rotated in any manner, angle, or direction without being released by the clamp.

B66-10188
CONTROL SYSTEM MAINTAINS COMPARTMENT AT CONSTANT TEMPERATURE

LINDBERG, J. G. /N. AM. AVIATION/ DATE- MAY 1966
JPL-SC-145

Gas-filled permeable insulating material maintains an enclosed compartment at a uniform temperature. The material is interposed between the two walls of a double-walled enclosure surrounding the compartment.

B66-10189
PNEUMATIC SHUTOFF AND TIME-DELAY VALVE OPERATES AT CONTROLLED RATE

HORNING, J. L. TOMLINSON, L. E. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-602

Shutoff and time delay valve, which incorporates a metering spool that moves at constant velocity under pneumatic pressure and spring compression, increases fluid-flow area at a uniform rate. Diaphragm areas, control cavity volume, and bleed-orifice size may be varied to give any desired combination of time delay and spool travel time.

B66-10190
BELLows DESIGN FEATURES LOW SPRING RATE AND LONG LIFE

LUSIC, R. F. /N. AM. AVIATION/ DATE- MAY 1966
MSC-521

High pressure bellows has high strength rigid hoops for strength and stability and sheet stock for low spring rate effects. The simplicity of this bellows design facilitates mass production.

B66-10191
TOOL POST MODIFICATION ALLOWS EASY TURRET LATHE CUTTING-TOOL ALIGNMENT

FOOTS, L. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-581

Modified tool holder and tool post permit alignment of turret lathe cutting tools on the center of the spindle. The tool is aligned with the spindle by the holder which is kept in position by a hydraulic lock in feature of the tool post. The tool post is used on horizontal and vertical turret lathes and other engine lathes.

B66-10195
SEGMENTED BALL VALVE IS EASY TO OPEN AND CLOSE

PRONO, E. SHINAULT, L. H. /N. AM. AVIATION/ SPEISMAN, C. DATE- JUN. 1966
WOO-248

Segmented ball valve and flowmeter in the same spherical housing provide a valve that will handle large fluid volume without bulkiness and weight of

blade valves or conventional ball valves. The valve is easily opened or closed and the flowmeter remains stationary, so errors are eliminated.

B66-10197

INTERMEDIATE ROTATING RING IMPROVES
RELIABILITY OF DYNAMIC SHAFT SEAL
MESNY, P. R. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-575

Intermediate rotating ring improves the reliability of dynamic shaft seals whose rubbing surfaces wear down rapidly at high shaft speeds. The rotating ring is placed between the rotating shaft sealing surfaces and the stationary surface, and driven at one-half the shaft speed.

B66-10201

SELF-CONTAINED CLOTHING SYSTEM PROVIDES
PROTECTION AGAINST HAZARDOUS ENVIRONMENTS
SPON- INNOVATOR NOT GIVEN /GARRETT CORP./ DATE-
MAY 1965
M-FS-536

Self-contained clothing system protects personnel against hazardous environments. The clothing has an environmental control system and a complete protection envelope consisting of an outer garment, inner garment, underwear, boots, gloves, and helmet.

B66-10202

BODY-FITTED HARNESS PROVIDES SAFE AND EASY
COMPONENT HANDLING
MILLER, E. G. ROTHWELL, G. E. /IBM/ DATE- MAY
1966
M-FS-533

Body-fitted restraint harness enables workers to safely and conveniently handle critical components during their installation or removal. Since the harness supports the components, the worker is able to maneuver through restricted areas with his hands free. It is easily put on, adjusted, and removed, or comfortably worn without interfering with normal activities.

B66-10204

TORQUE WRENCH ALLOWS READINGS FROM
INACCESSIBLE LOCATIONS
DE BARNARDO, M. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-598

Torque wrench with an adjustable drive shaft permits indicator to remain in view when used on sections of equipment with limited access. The shaft is capable of protruding from either side of the wrench head by means of spring loaded balls.

B66-10206

LOW POWER HEATING ELEMENT PROVIDES THERMAL
CONTROL DURING SWAGING OPERATIONS
CROWELL, J. W. /CHRYSLER CORP./ DATE- MAY 1966
M-FS-457

Low power, cylindrical heating element in a swaging anvil assembly heats the material being worked on. The increased ductility of heated material results in crack-free deformation.

B66-10208

TOOL ENABLES PROPER MATING OF ACCELEROMETER
AND CABLE CONNECTOR
STEED, C. N. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-611

Tool supports accelerometer in axial alignment with an accelerometer cable connector and permits tightening of the accelerometer to the cable connector with a torque wrench. This is done without damaging the components or permitting them to work loose under sustained, high-level vibrations.

B66-10209

SPECIAL TOOL SEALS CONDUCTORS WITH COMBINATION
OF PLASTIC SLEEVES
YOUNG, S. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-579

Special tool seals electrical conductors connecting instrumentation within space vehicle cryogenic fuel tanks and oxidizer tanks. An inner sleeve of fluorinated ethylene-propylene and an outer sleeve of tetrafluoroethylene enclose a bundle of conductors and are heated with the tool

to form a tight seal of the bundle and each individual wire.

B66-10210

ADJUSTABLE CUTTING GUIDE ALIGNS AND POSITIONS
STACKS OF MATERIAL
THIEL, A. M. DATE- MAY 1966
MSC-321

Adjustable guide tool aligns and positions stacks of material for cutting at various angles. The device adapts its shape to stacks of any corner angle, adjusts to any cutting angle, and quickly aligns the stacks for repeated cutting. With this device, an operator need not place his hands under the knife during alignment.

B66-10211

PRESSURE SEAL RING MAY BE EFFECTIVE OVER WIDE
TEMPERATURE RANGE
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-
MAY 1966
M-FS-486

Positive pressure seal rings seal bolted flange joints in pressure vessels containing fluids whose temperatures can vary over a wide range. The seal rings mate with grooves in the flanges and compensate for the excessive thermal expansion or contraction of a gasketed joint.

B66-10212

LIQUID TRAP SEALS THERMOCOUPLE LEADS
RUPPE, E. P. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-688

Liquid trap seals thermocouple leads coming out of a brazing retort that operates with a controlled atmosphere so that air cannot enter the retort and hydrogen cannot escape. The trap is fastened to a duct welded to the retort. Thermocouple leads are led out through the duct and trap, with the fluid forming a gastight seal between the atmosphere and the retort.

B66-10213

CYLINDRICAL CLAW CLAMP HAS QUICK RELEASE
FEATURE
GOODWIN, G. D. /CHRYSLER CORP./ DATE- MAY 1966
M-FS-513

Claw clamp grasps cylindrical shapes by pressing its jaws around the object. The clamp is released by retraction of a release pin which extends beyond the clamp handle on both sides for better purchase.

B66-10214

COLLOIDAL SUSPENSION SIMULATES LINEAR
DYNAMIC PRESSURE PROFILE
MC CANN, R. J. /LOCKHEED MISSILES AND SPACE CO./
DATE- JUN. 1966
WOO-266

Missile nose fairings immersed in colloidal suspension prepared with various specific gravities simulate pressure profiles very similar to those encountered during reentry. Stress and deflection conditions similar to those expected during atmospheric reentry are thus attained in the laboratory.

B66-10215

ELECTRON BEAM WELDING OF COPPER-MONEL
FACILITATED BY CIRCULAR MAGNETIC SHIELDS
LAMB, J. N. /N. AM. AVIATION/ DATE- MAY 1966
M-FS-569

High permeability, soft magnetic rings are placed on both sides of electron beam weld seams in copper-Monel circular joint. This eliminates deflection of the electron beam caused by magnetic fields present in the weld area.

B66-10216

SOFT-SEAL VALVE HOLDS HAZARDOUS FLUIDS
SAFELY
DATE- MAY 1966 REAN- SEE ALSO NASA-TN-D-1727
LEWIS-275

Valve assembly allows transfer of hazardous or reactive fluids such as liquid fluorine without corrosion of valve face and seat material. The assembly consists of a plug to block bulk flow and a soft-seal outer seat to effect zero-leak stoppage.

B66-10217

FIBERGLASS CONTAINER SHELLS FORM
CONTAMINATION-FREE STORAGE UNITSKRAUS, H. M. /N. AM. AVIATION/ DATE- JUN. 1966
WOO-275

Interchangeable molded fiberglass shells are locked together to form storage units of various depths. These units can hold components weighing 1500 pounds, are easily transportable, and protect contents from contamination.

B66-10218

PRESSURE VESSELS FABRICATED WITH HIGH-STRENGTH
WIRE AND ELECTROFORMED NICKELROTH, B. /N. AM. AVIATION/ DATE- JUN. 1966
M-PS-580

Metal pressure vessels of various shapes having high strength-to-weight ratios are fabricated by using known techniques of filament winding and electroforming. This eliminates nonuniform wall thickness and unequal wall strength which resulted from welding formed vessel segments together.

B66-10219

TOOL PERMITS DAMAGE-FREE REMOVAL OF SOLAR CELL
BECKLEY, J. E., JR. /COMPREHENSIVE DESIGNERS/
DATE- MAY 1966

GSFC-467

Modified soldering iron extracts a wrap-around solar cell that is attached with solder or adhesive to a substrate without destroying the cell removed or damaging adjacent cells. Heat, vacuum, and compressed air, operated from a special head attached to the soldering iron, loosen, extract, and protect the cell.

B66-10226

A CONCEPTUAL DESIGN FOR SQUEEZE FILM BEARINGS
SPON- INNOVATOR NOT GIVEN /BENDIX CORP./ DATE-
JUN. 1966

M-PS-573

Squeeze film bearings which require at least one of two adjacent surfaces to oscillate at high frequency and low amplitude have the oscillating /strain-producing/ member on a double gas film. This means of support allows dynamic changing of the gap between the bearing surfaces without the disadvantages produced when the oscillator is affixed to the bearing base itself.

B66-10228

STUDIES REVEAL EFFECTS OF PIPE BENDS ON FLUID
FLOW CAVITATION

STONEMETZ, R. E. DATE- MAY 1966

M-PS-516

Incipient cavitation in liquids flowing in pipes curved in one plane are affected by the pipe bend radii and pipe diameters, but little by pipe bend angles ranging from 60 to 120 degrees. Critical cavitation indices decrease with higher Reynolds number and pressure ratio. Bulk liquid temperature increase lowers the mean critical velocity at which cavitation occurs.

B66-10229

EXPANDABLE RUBBER PLUG SEALS OPENINGS FOR
PRESSURE TESTING

DATE- MAY 1966

NU-0048

Plug assembly seals openings in piping systems, vessels, and chambers for low pressure leak testing. The assembly, which consists of a rubber sealing plug and the mechanism for expanding it into a pressure-tight configuration, adequately seals irregular diameters without damage to mating surfaces.

B66-10233

QUICK-CLOSING VALVE IS ACTUATED BY EXPLOSIVE
DISCHARGE

MAJESKI, S. J. DATE- JUN. 1966

ARC-55

Remotely controlled plug-type valve shuts off a high-pressure, high-temperature gas flow in a few milliseconds. The valve is actuated by a commercially available electrically initiated squib of low explosive power. More rapid closure is attainable with squibs containing heavier explosive charges.

B66-10235

KEY-LOCKED GUARD PREVENTS ACCIDENTAL SWITCH
ACTUATIONHAWTHORNE, K. C. /N. AM. AVIATION/ DATE- JUN.
1966

MSC-419

Switch guard, which locks in place on a panel, protects individual switches from accidental activation. The guard consists of a cup to cover the switch lever, a standard screw lock tumbler, and a stud that mates with a threaded adapter in the panel.

B66-10236

AUTOMATIC REEL CONTROLS FILLER WIRE IN
WELDING MACHINES

MILLET, A. V. /N. AM. AVIATION/ DATE- JUN. 1966

MSC-416

Automatic reel on automatic welding equipment takes up slack in the reel-fed filler wire when welding operation is terminated. The reel maintains constant, adjustable tension on the wire during the welding operation and rewinds the wire from the wire feed unit when the welding is completed.

B66-10237

ADJUSTABLE KNIFE CUTS HONEYCOMB MATERIAL TO
SPECIFIED DEPTH

RAUSCH, J. A. /N. AM. AVIATION/ DATE- JUN. 1966

MSC-475

Calibrated, adjustable knife cuts aluminum honeycomb or other soft materials to a desired depth. The frame of the device accommodates standard commercial blades. Since the blade is always visible to the operator, the device can be used on any straight or irregular layout line.

B66-10238

INSERT SLEEVE PREVENTS TUBE SOLDERING
CONTAMINATION

STEIN, J. /N. AM. AVIATION/ DATE- JUN. 1966

MSC-552

Teflon sleeve insert prevents contamination of internal tube surfaces by solder compound during soldering operations that connect and seal the tube ends. The sleeve insert is pressed into the mating tube ends with a slight interference fit.

B66-10239

HAND TOOL PERMITS SHRINK SIZING OF ASSEMBLED
TUBINGMILLET, A. ODOR, M. /N. AM. AVIATION/ DATE-
JUN. 1966

MSC-504

Portable tool sizes tubing ends without disassembling the tubing installation. The shrink sizing tool is clamped to the tubing and operated by a ratchet wrench. A gear train forces the tubing end against an appropriate die or mandrel to effect the sizing.

B66-10240

JIG PROTECTS TRANSISTORS FROM HEAT WHILE
TINNING LEADSPELLETIER, A. J. WILLIS, G. A. /N. AM. AVIATION/
DATE- JUN. 1966

MSC-515

In tinning transistor leads, an aluminum jig is used to dip the leads into the molten tin. The jigs mass shunts excess heat given off by the molten tin before it reaches and damages the transistor body.

B66-10241

BRAZING PROCESS USING AL-SI FILLER ALLOY
RELIABLY BONDS ALUMINUM PARTSBEUYUKIAN, C. S. JOHNSON, W. R. /N. AM.
AVIATION/ DATE- JUN. 1966

MSC-448

Brazing process employs an aluminum-silicon filler alloy for diffusion bonding of aluminum parts in a vacuum or inert gas atmosphere. This process is carried out at temperatures substantially below those required in conventional process and produces bonds of greater strength and reliability.

B66-10242

PORTABLE SANDBLASTER CLEANS SMALL AREAS

SEVERIN, H. J. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-523

Portable sandblasting unit rapidly and effectively cleans localized areas on a metal surface. The unit incorporates a bellows enclosure, masking plate, sand container, and used sand accumulator connected to a vacuum system. The bellows is equipped with an inspection window and light for observation of the sanding operation.

B66-10243

LATHE CHUCK KEY INCORPORATES SAFETY FEATURE

CHRISTMAN, G. L. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-506

Lathe chuck key with spring loaded plunger cannot inadvertently be left in the chuck when the lathe is started. The plunger automatically ejects the key from the chuck when hand pressure is released.

B66-10244

HOLLOW NEEDLE USED TO CUT METAL HONEYCOMB STRUCTURES

GREGG, E. A. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-486

Hollow needle tool cuts metal honeycomb structures without damaging adjacent material. The hollow needle combines an electrostatic discharge and a stream of oxygen at a common point to effect rapid, accurate metal cutting. The tool design can be varied to use the hollow needle principle for cutting a variety of shapes.

B66-10246

MODIFIED SOLDERING IRON SPEEDS CUTTING OF SYNTHETIC MATERIALS

SCHAFER, W. G., JR. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-725

Modified soldering iron cuts large lots of synthetic materials economically without leaving frayed or jagged edges. The soldering iron is modified by machining an axial slot in its heating element tip and mounting a cutting disk in it. An alternate design has an axially threaded bore in the tip to permit the use of various shapes of cutting blades.

B66-10247

PRESSURE-WELDED FLANGE ASSEMBLY PROVIDES LEAKTIGHT SEAL AT REDUCED BOLT LOADS

MARTENSON, A. J. /GE/ DATE- JUN. 1966
M-FS-640

Vibration resistant flange-connector assembly provides a leaktight seal under reduced bolt loads. The assembly consists of ductile metal plates that are pressure welded between dies mounted in recessed flanges.

B66-10248

ELECTRICAL UPSETTING OF METAL SHEET FORMS WELD EDGE

SCHERBA, E. S. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-720

Electric gathering of sheet stock edges forms metal sheets in the shape of gore sections with heavier edge areas that can be welded without loss of strength. The edges are gathered by progressive resistance heating and upsetting, and are formed automatically. This process avoids disturbance of the metals internal structure.

B66-10249

FLUID DAMPING REDUCES BELLWS SEAL FATIGUE FAILURES

SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-565

Service life of a bellows-type seal in the presence of mechanical vibration is increased by a system of interconnected bellows with intervening cavities filled with a fluid which damps the amplitude of periodic deflection of the sealing bellows. Different damping fluids are used according to environmental conditions.

B66-10250

DIFFUSION BONDING MAKES STRONG SEAL AT FLANGED CONNECTOR

GITZENDANNER, L. G. LANIEWSKI, J. P. BATHBUN, F. O., JR. /GE/ DATE- JUN. 1966
M-FS-637

Copper strip seals a high pressure fluid system connector so that it is insensitive to relaxation of the bolt loads. The copper strip is diffusion bonded to the surfaces of the connector flange by application of high pressure and temperature.

B66-10253

TOOL SEPARATES SLEEVE-TYPE UNIONS WITHOUT HEAT

MILLETT, A. U. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-497

Tool that uses conventional milling and cutting techniques separates sleeve type tubing unions and tubes without using heat. A selection of holders, associated bits, and cutting wheels permits preparation of varied diameter unions.

B66-10254

MILL PROFILER MACHINES SOFT MATERIALS ACCURATELY

RAUSCHL, J. A. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-692

Mill profiler machines bevels, slots, and grooves in soft materials, such as styrofoam phenolic-filled cores, to any desired thickness. A single operator can accurately control cutting depths in contour or straight line work.

B66-10255

FLOW RING VALVE IS SIMPLE, QUICK-ACTING

LINDFORS, J. A. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-752

Two porting rings, one within the other, control gas or liquid flow by using seal buttons as the sliding valve closers. Multiporting within the ring allows close control of the flow by the slight rotation of the outer porting ring.

B66-10258

CRITICAL PARTS ARE STORED AND SHIPPED IN ENVIRONMENTALLY CONTROLLED REUSABLE CONTAINER

RUMERFELD, K. R. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-703

Environmentally controlled, hermetically sealed, reusable metal cabinet with storage drawers is used to ship and store sensitive electronic, pneumatic, or hydraulic parts or medical supplies under extreme weather or handling conditions. This container is compatible with on-site and transportation handling facilities.

B66-10262

ALUMINUM/STEEL WIRE COMPOSITE PLATES EXHIBIT HIGH TENSILE STRENGTH

SPON- INNOVATOR NOT GIVEN /HARVEY ALUMINUM CO./ DATE- JUN. 1966
M-FS-401

Composite plate of fine steel wires imbedded in an aluminum alloy matrix results in a lightweight material with high tensile strength. Plates have been prepared having the strength of titanium with only 85 percent of its density.

B66-10265

COMPACT ACTUATOR CONVERTS ROTARY TO LINEAR MOTION

FORD, A. G. DATE- JUN. 1966
JPL-786

Compact motor mounted on a stationary base converts rotary to linear motion. The motor rotates a gear train assembly so that the end of an arm attached to the assembly moves in a linear path.

B66-10266

SEAL SURFACES PROTECTED DURING ASSEMBLY

RICHARDSON, G. L. /AEROJET-GEN. CORP./ DATE- JUN. 1966
NU-0067

Protection device for sealed surfaces is placed over the polished surface entrance of trapped bosses and removed when the seal fitting has been

05 MECHANICAL

engaged with the boss threads. This technique applies to various seal types used in close fitting, spring loaded, threaded fittings.

B66-10267

RADIAL COOLANT CHANNELS FABRICATED BY SIMPLIFIED METHOD

FREEMAN, A. /AEROJET-GEN. CORP./ DATE- JUN. 1966
NU-0070

Radial coolant channels for distributing a coolant over the inner wall of a circular section are fabricated by cold-rolling indentations on the inside circumference of the base section and covering the indentations with a rolled flange.

B66-10269

DIFFERENTIAL EXPANSION PROVIDES PRESSURE FOR DIFFUSION BONDING OF LARGE DIAMETER RINGS
SPON- INNOVATOR NOT GIVEN /BORING CO./ DATE- JUN. 1966
M-FS-588

External pressure band is used to bond aluminum alloy collars to large diameter, stainless steel rings. The band contracts while cooling and exerts pressure on the joint between the silver plated surfaces of the ring and collar which expand toward the band. This diffusion bonding by differential expansion minimizes aluminum deformation.

B66-10275

FASTENER PROVIDES FOR BOLT MISALIGNMENT AND QUICK RELEASE OF FLANGE

ENGLAND, C. /AEROJET-GEN. CORP./ DATE- JUN. 1966
NU-0074

Fastener enables two large flanges to be bolted together without close alignment between the bolt and bolt-hole diameters, and provides for a quick release of one of the flanges under emergency conditions. It contains a nut that is retained by a square head in a recess in one side of the removable flange and by a collar and snap ring on the other side of the flange.

B66-10276

REMOTELY CONTROLLED SYSTEM COUPLES AND DECOUPLES LARGE DIAMETER PIPES

GRIFFIN, P. A. /AEROJET-GEN. CORP./ DATE- JUN. 1966
NU-0062

Remote control, air-motor driven, chain-drive system engages and disengages a flange coupling from large-diameter, high pressure fluid lines.

B66-10277

DEVICE FACILITATES CENTERING OF WORKPIECES IN LATHE CHUCK

PRATER, L. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-685

Spring loaded device used in conjunction with a standard dial indicator facilitates centering a workpiece in an independent four-jaw lathe chuck.

B66-10278

O-RINGS WITH MYLAR BACK-UP PROVIDE HIGH-PRESSURE CRYOGENIC SEAL

FUNK, G. M. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-603

Mylar lip type back-up ring installed in combination with three rubber O-rings seal the junctions between a tube stub and an adapter during high pressure gas flow at cryogenic to room temperatures. Mylar seals should not be used with oxygen under pressure or in the liquid state.

B66-10279

MAGNETIC LATCHES PROVIDE POSITIVE OVERPRESSURE CONTROL

LOY, J. L. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- JUN. 1966
NU-0057

Louvers are used for overpressure safety venting in rooms or chambers where explosion hazards exist. The louvers have individually hinged closures that are held in locked position by commercially available magnets that quickly release them in an overpressure condition.

B66-10283

FIXED VACUUM PLATE CLAMPS STYROFOAM FOR MACHINING

RAUSCHL, J. A. /N. AM. AVIATION/ DATE- JUN. 1966
M-FS-683 M-FS-726

Aluminum plate holds styrofoam securely in place for machining operations. The styrofoam is clamped to rubber or cork pads on the plate surface by vacuum. Foam rubber tape provides the vacuum seal.

B66-10284

EXTENSOMETER AUTOMATICALLY MEASURES ELONGATION IN ELASTOMERS

HOOVER, C. D. DATE- JUN. 1966
M-FS-517

Extensometer, with a calibrated shaft, measures the elongation of elastomers and automatically records this distance on a chart. It is adaptable to almost any tensile testing machine and is fabricated at a relatively low cost.

B66-10285

HIGH PRESSURE TUBE COUPLING REQUIRES NO THREADS OR FLARES

STEIN, J. A. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-600

High pressure tube coupling connects to any straight, unthreaded, and unflared tubing end without deforming or damaging the tubing. The coupling grips the tube wall tightly between an external compression sleeve and an internal hollow mandrel. It is adaptable to standard screw fittings for test stand attachment.

B66-10294

PNEUMATIC SEPARATOR GIVES QUICK RELEASE TO HEAVY LOADS

BUCHANAN, D. C. DAVIS, E. J. PHILLIPS, J. D. DATE- JUL. 1966
KSC-66-10

Pneumatic separator, using applied pressure, quickly releases restraining devices securing heavy loads. With minor modifications this separator can be used as a coupling device.

B66-10297

DIAPHRAGM SPRING GIVES CLUTCH OVER-CENTER TOGGLE EFFECT

ROSENBERG, H. W. /GE/ DATE- AUG. 1966
GSPC-499

Diaphragm spring clutch mechanism is used in testing the relative merits of eddy-current and hysteresis dampers. The dampers are alternately coupled to a single damping boom shaft. The floating clutch mechanism enables the inoperative damper to remain completely isolated from the damping boom shaft during test of the other damper.

B66-10301

TOOL PRE-TENSIONS COVERS PRIOR TO LACING

FORMAN, M. A. VOGEL, R. C. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-631

In securing a bulky object in a storage compartment, a cinching or tightening tool is used to draw two opposing cover halves together at a predetermined tension to permit quick lacing to retain the stored object. This tool is also useful in fabrication industries to draw components together during assembly or treating.

B66-10302

SIMPLE SCALE INTERPOLATOR FACILITATES READING OF GRAPHS

FAZIO, A. HENRY, B. HOOD, D. DATE- JUL. 1966
LEWIS-92 LEWIS-93

Set of cards with scale divisions and a scale finder permits accurate reading of the coordinates of points on linear or logarithmic graphs plotted on rectangular grids. The set contains 34 different scales for linear plotting and 28 single cycle scales for log plots.

B66-10303

BYPASS ROD TRANSFERS HEAT DEVELOPED IN THERMIONIC DIODE

LAZARIDIS, L. J. /THERMO ELECTRON ENG. CORP./

DATE- JUL. 1966

JPL-SC-136

In a thermionic diode, a cesium tube joining the emitter-collector area and the cesium reservoir is fitted with a copper bypass rod held in place by two standoff brackets. The rod transfers heat from the emitter-collector to the reservoir without going through the ceramic seal structure which surrounds the cesium tube and cannot sustain large temperature gradients.

B66-10304

FLEXIBLE FASTENER EFFECTS AIRTIGHT MATERIAL CLOSURE

NAY, D. L. DATE- JUL. 1966

JPL-684

Flexible tube inserted into a 3/4-round strip receptacle inflates to form an airtight material fastener. Inflation is done with a carbon dioxide cartridge and deflation by a manually operated release valve. Device has potential use in space suits, underwater suits, and other protective clothing.

B66-10310

MODIFIED HYDRAULIC BRAKING SYSTEM LIMITS ANGULAR DECELERATION TO SAFE VALUES

BRIGGS, R. S. COUNCIL, M. GREEN, P. M. /COLLINS RADIO CO./ DATE- JUL. 1966

GSFC-476

Conventional spring actuated, hydraulically released, fail-safe disk braking system is modified to control the angular deceleration of a massive antenna. The hydraulic system provides an immediate preset pressure to the spring loaded brake shoes and holds it at this value to decelerate the antenna at the desired rate.

B66-10311

UNION WOULD FACILITATE JOINING OF TUBING, MINIMIZE BRAZE CONTAMINATION

TERRILL, A. E. /N. AM. AVIATION/ DATE- JUL. 1966

MSC-777

Union assembly provides a fluidtight joint between two lengths of tubing and minimizes introduction of braze contaminants into the tubing. The union contains two brazing preforms separated by a metal ring that serves as a dam for the molten brazing alloy.

B66-10317

FLEXIBLE ARMS PROVIDE CONSTANT FORCE FOR PRESSURE SWITCH CALIBRATION

CAIN, D. E. KUNZ, R. W. /GE/ DATE- JUL. 1966

HQ-38

In-place calibration of a pressure switch is provided by a system of radially oriented flexing arms which, when rotated at a known velocity, convert the centrifugal force of the arms to a linear force along the shaft. The linear force, when applied to a pressure switch diaphragm, can then be calculated.

B66-10318

TORUS ELEMENTS USED IN EFFECTIVE SHOCK ABSORBER

CUNNINGHAM, P. PLATUS, D. L. /AEROSPACE RES. ASSOC./ DATE- JUL. 1966

WOO-114

Energy absorbing device forces torus elements to revolve annularly between two concentric tubes when a load is applied to one tube. Interference forces can be varied by using torus elements of different thicknesses. The device operates repeatedly in compression or tension, and under problems of large onset rate tolerance or structural overload.

B66-10319

FIBER LENGTH AND ORIENTATION PREVENT MIGRATION IN FLUID FILTERS

REIMAN, P. A. /ARTHUR D. LITTLE/ DATE- JUL. 1966

M-PS-541

Stainless steel fiber web filter resists fiber migration which causes contamination of filtered fluids. This filter is capable of holding five times more particulate matter before arbitrary cutoff pressure drop and shows excellent retention in fuel flow at high rates.

B66-10321

SWIVELING LATHE JAW CONCEPT FOR HOLDING IRREGULAR PIECES

DAVID, J. /N. AM. AVIATION/ DATE- JUL. 1966

M-PS-783

Clamp holds irregularly shaped pieces in lathe chuck without damage and eliminates excessive time in selecting optimum mounting. Interchangeable jaws ride in standard jaw slots but swivel so that the jaw face bears evenly against the workpiece regardless of contour. The jaws can be used on both engine and turret lathes.

B66-10323

SPECIAL MANDREL PERMITS UNIFORM WELDING OF OUT-OF-ROUND TUBING

DOR, M. E. FUEG, L. B. WHIFFEN, E. L. /N. AM. AVIATION/ DATE- JUL. 1966

M-PS-706

Clamp holds irregularly shaped pieces in lathe chuck without damage and eliminates excessive time in selecting optimum mounting. Interchangeable jaws ride in standard jaw slots but swivel so that the jaw face bears evenly against the workpiece regardless of contour. The jaws can be used on both engine and turret lathes.

B66-10326

EXTERNAL LINKAGE TIE PERMITS REDUCTION IN DUCTING SYSTEM FLANGE THICKNESS

PFLEGER, R. O. /N. AM. AVIATION/ DATE- JUL. 1966

M-PS-823

External linkage tie reduces flange thickness and increases seal efficiency in high pressure ducting and piping systems. The linkage transmits the pressure separating load to the tube wall behind the flange allowing the flange to support only the seal.

B66-10338

LATCHING MECHANISM OPERATES IN LIMITED ACCESS AREA

HOLMAN, E. V. /N. AM. AVIATION/ DATE- JUL. 1966

MSC-230

Latching mechanism that is securely locked by the movement of the operating handle in one direction is used in limited access areas. This mechanism is operated by a force applied to the handle at small angles.

B66-10339

SIMULATOR EFFECTS PARTIAL GRAVITY CONDITIONS

JOHNSON, H. I. TRADER, A. G. DATE- JUL. 1966

MSC-152

Adjustable apparatus which simulates partial to zero gravity partially supports the weight of convalescing patients in rehabilitation exercises. This device is an ideal tool for physical therapy.

B66-10342

GAS DIFFUSER FACILITATES WITHDRAWAL OF CRYOGENIC LIQUIDS FROM TANKS

DUNN, J. D. /N. AM. AVIATION/ DATE- JUL. 1966

M-PS-915

Compact, cylindrical gas diffuser with radial exhaust slots and internal axial flow channels maintains the necessary pressure for the desired withdrawal rate of cryogenic liquids from tanks. The diffuser minimizes pressure loss which results from condensation of nitrogen gas in the liquid and prevents direct impingement of gas jets on liquid surface to reduce turbulence.

B66-10343

CONCEPT FOR PASSIVE SYSTEM TO CONTROL GAS FLOW INDEPENDENTLY OF TEMPERATURE

CHAVEZ, E. S. MILLEMAN, S. E. RICKEMAN, E. C. /N. AM. AVIATION/ DATE- JUL. 1966

M-PS-982

Volumetric flow rate of gas is maintained at a constant value independent of temperature by passing the gas through a parallel or series combination of turbulent flow and laminar flow restrictors. By proper combination of restrictors, the flow rate may be automatically made to vary as an increasing or decreasing function of temperature.

B66-10345

FRICTION LOADING DEVICE ENABLES ACCURATE TESTING OF BRITTLE MATERIALS
 HENGSTENBERG, T. F. ZIBRITOSKY, G. /WESTINGHOUSE
 ASTRONUCL. LAB./ DATE- JUL. 1966
 NU-0051

Friction loading device gives axial symmetry to test specimen of brittle materials during tensile testing. This axial alignment prevents bending stresses which hinder measurement of tensile strength.

B66-10346

TOOL FORMS RIGHT ANGLES IN COMPONENT LEADS
 GLENN, C. G. DATE- JUL. 1966
 M-PS-722

Hand tool forms right angles in electronic component leads so they fit the spaced holes of a printed circuit board. This tool firmly holds the leads at points near the component ends to prevent damage and provide accuracy.

B66-10352

BRAZING PROCESS PROVIDES HIGH-STRENGTH BOND BETWEEN ALUMINUM AND STAINLESS STEEL
 HUSCHKE, E. G., JR. NORD, D. B. /N. AM. AVIATION/ DATE- AUG. 1966
 M-PS-803

Brazing process uses vapor-deposited titanium and an aluminum-zirconium-silicon alloy to prevent formation of brittle intermetallic compounds in stainless steel and aluminum bonding. Joints formed by this process maintain their high strength, corrosion resistance, and hermetic sealing properties.

B66-10354

WELDS CHILLED BY LIQUID COOLANT MANIFOLD
 ODOR, M. E. WHIFFEN, E. E. /N. AM. AVIATION/ DATE- AUG. 1966
 M-PS-679 M-PS-680

Liquid coolant chill tool provides uniform cooling to materials adjacent to weld areas on long or contoured butt welds. This tool incorporates a manifold that clamps to the weld joint by vacuum and circulates liquid in direct contact with adjacent material.

B66-10357

SUPPRESSOR PLATE ELIMINATES UNDESIRABLE ARCING DURING ELECTRON BEAM WELDING
 HANCHEY, K. K. KUBIK, J. MAHON, J. C. /HAYES INTERN. CORP./ DATE- AUG. 1966
 M-PS-1126

Suppressor grid eliminates undesirable arcing during electron beam welding in one of two ways. A grid at ground potential collects secondary emission of ions and electrons produced by the beam as it strikes the workpiece, or a negatively energized grid repels the plasma arc back to the workpiece. This eliminates ground screens used to cover view ports.

B66-10360

ALUMINUM CORE STRUCTURES BRAZED WITHOUT USE OF FLUX
 SPON- INNOVATOR NOT GIVEN /AERONCA MFG. CORP./ DATE- AUG. 1966
 M-PS-659

Aluminum alloy face sheets are brazed to aluminum alloy honeycomb cores without using corrosive flux by means of one or three methods. The completed brazed structure has the high-strength characteristics of heat treated aluminum alloys.

B66-10364

VERSATILE MACHINE MILLS, SAWS LIGHT MATERIALS
 RAUSCHL, J. A. /N. AM. AVIATION/ DATE- AUG. 1966
 M-PS-827

Versatile milling/sawing machine performs angle cuts, flat and profile milling, machining of grooves and slots, and edge trimming of phenolic panels. The machine is mounted on rails above a table equipped with vacuum capability for holding workpieces.

B66-10365

DIAPHRAGM VALVE FOR CORROSIVE AND HIGH TEMPERATURE FLUID FLOW CONTROL HAS UNIQUE

FEATURES

EBIHARA, B. T. VARY, A. DATE- AUG. 1966
 LEWIS-304

Monometallic diaphragm valve is used for corrosive and high temperature fluid flow control. The body, diaphragm, and plug of the valve are welded together to form an integral leakproof unit for containing the fluid as it passes through the valve from inlet to outlet.

B66-10366

HOLLOW SPHERICAL ROTORS FABRICATED BY ELECTROPLATING
 AVERY, H. W. CONROY, T. F. /GE/ DATE- AUG. 1966
 JPL-SC-117

Equatorial bands are fabricated to provide a locating fit for the hemispheres of hollow spherical rotors which are then jointed by electroplating. Several nonmagnetic materials may be used to form the joint, such as aluminum, copper, iron, gold, platinum, and zinc.

B66-10367

DOT PATTERNS PROVIDE REPRODUCIBLE FLAW AREAS FOR STUDY OF ADHESIVE BONDS
 FRANK, L. SCHMITZ, G. /GEN. AM. TRANSPORTATION CORP./ DATE- AUG. 1966
 M-PS-862

Photographic production of a small-dot pattern of known geometry on the surface of a substrate for controlled area degradation enables a study of adhesive bond strengths. These dot patterns may also be applied to force-limiting devices which must depend on the adhesive bonding strength between mating surfaces.

B66-10369

AUTOMATIC PROTECTIVE VENT HAS FAIL-SAFE FEATURE
 DAMERON, C. E. DATE- AUG. 1966
 LANGLEY-218

Delayed vent valve system in a mechanical backing pump in a vacuum system allows the pneumatic foreline valve to seal before the pump vent opens. The system is designed to be fail-safe and operate even though there is loss of electrical power.

B66-10370

PORTABLE LIGHTWEIGHT CELL PROVIDES CONTROLLED ENVIRONMENT
 SHELTON, S. TARR, J. /N. AM. AVIATION/ DATE- AUG. 1966
 MSC-648

Inflatable, lightweight cell provides a separate, secondary environment for a spacesuited man in case of spacesuit damage or malfunction. The cell has a pressure-sealing zipper and is equipped to maintain a livable atmosphere.

B66-10371

BRAZING RETORT MANIFOLD DESIGN CONCEPT MAY MINIMIZE AIR CONTAMINATION AND ENHANCE UNIFORM GAS FLOW
 RUPPE, E. P. /N. AM. AVIATION/ DATE- AUG. 1966
 M-PS-707

Brazing retort manifold minimizes air contamination, prevents gas entrapment during purging, and provides uniform gas flow into the retort bell. The manifold is easily cleaned and turbulence within the bell is minimized because all manifold construction lies outside the main enclosure.

B66-10375

IMPACT AND PUNCTURE RESISTANT MATERIAL PROTECTS PARTS FROM DAMAGE
 SHERIFF, D. D. /N. AM. AVIATION/ DATE- AUG. 1966
 MSC-747

Uniform sized, laminated panels protect delicate parts and equipment from damage during storage and transportation. The panels consist of sheets of steel foil bonded between sheets of elastic foam. They are lightweight, impact and puncture resistant, and, when formed into an enclosure, provide a barrier against moisture and thermal shock.

B66-10378

NONHAZARDOUS ACID ETCHES WELD SAMPLES

ALLEN, B. C. ALLEN, B. C. /N. AM. AVIATION/
DATE- AUG. 1966
M-FS-975

Nonhazardous citric acid solution used with 24 volt dc power supply etches weld samples. This etching method is limited to 300 stainless steel and a small range of other high temperature alloys.

B66-10381

GAS-INJECTION VALVE OPERATES AT HIGH SPEED

HOB, F. C. LOWDER, R. S. /ADVANCED KINETICS,
INC./ DATE- AUG. 1966
HQ-49

Fast acting gas valve is used for injecting a short pulse of gas into a vacuum chamber during plasma acceleration experiments. It contains a lightweight closure disk that is forced away from the valve seat when an electromagnetic coil is momentarily energized and immediately rebounds from a stop back onto the seat.

B66-10383

GEAR DRIVE AUTOMATICALLY INDEXES ROTARY TABLE

JOHNS, M. F. /N. AM. AVIATION/ DATE- AUG. 1966
M-FS-753

Combination indexer and drive unit drills equally spaced circular hole patterns on rotary tables. It automatically rotates the table a distance exactly equal to one hole spacing for each revolution of a special idler gear.

B66-10384

UNIVERSAL TRANSLOADER MOVES DELICATE EQUIPMENT

WITHOUT STRESS

BARBOUR, J. R. KESSLER, P. N. /N. AM. AVIATION/
DATE- AUG. 1966
MSC-654

Transloader moves delicate or heavy items over irregular surfaces without transmitting stress to the load. The loader is supported on three pivot points which produce a wrap free base. The base is supported by an artificial four-wheel frame.

B66-10385

INFLATABLE O-RING SEAL WOULD EASE CLOSING OF

HATCH COVER PLATE

NEARY, K. J. /N. AM. AVIATION/ DATE- AUG. 1966
MSC-740

Inflatable O-ring seal provides positive sealing means that does not require the manual exertion of a large compressive force during opening or closing of a rotary type hatch cover plate. The O-ring is deflated during opening and closing and inflated after closure by a gas pressure source.

B66-10390

ONE-PIECE TRANSPARENT SHELL IMPROVES DESIGN OF

HELMET ASSEMBLY

JONES, R. L. OKANE, J. H. DATE- AUG. 1966
MSC-187

One-piece transparent helmet shell made of polycarbonate is equipped with a helmet protection pad, a visor assembly, a communications skull cap, and an emergency oxygen supply. This design offers improvements over previous designs in weight, visual field, comfort and protection.

B66-10399

EXPANDABLE TAKEUP REEL FACILITATES PAPER TAPE

REMOVAL

WESTERMAN, H. E. /DOUGLAS AIRCRAFT CO./ DATE-
SEP. 1966
WOO-271

Takeup reel receives continuous paper tapes from data recording machines. The roller is recessed to have four longitudinal members about its periphery which can be extended or retracted to change the overall diameter of the assembly to allow easy removal of the tapes.

B66-10402

ROTARY VALVE CONTROLS MULTIPLE HYDRAULIC

LEVELING CYLINDERS

SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- SEP.
1966
M-FS-361

Single rotary valve controls a circular bank of hydraulic leveling cylinders that must maintain large loads within plus or minus three arc minutes of the true vertical. Since the position of the valve spool determines the flow rate of each bank of cylinders and hence cylinder position, different flow rates may be obtained by changing the spool shape.

B66-10403

SPECIAL TOOL KIT AIDS HEAVILY GARMENED WORKERS

HOLMES, A. E. /MARTIN CO./ DATE- SEP. 1966
MSC-163

Triangular aluminum tool kit, filled with polyurethane is constructed to receive various tools and hold them in a snug but quick-release fit as an aid to heavily gloved workers. The kit is designed to allow mounting within easily accessible reach and to provide protection of the tools during storage.

B66-10405

DESIGN RELIABILITY GOAL DEVELOPED FROM SMALL SAMPLE

BURROWS, D. L. HEATHCOCK, R. DATE- SEP. 1966
M-FS-403

Sampling distributions, constructed by Monte Carlo simulation are used in hardware development to establish a design reliability goal, to place a confidence coefficient on reliability estimates, and to determine whether sample stress/strength data demonstrate a specified reliability at a specified confidence level.

B66-10408

CLOSED LOOP OPERATION ELIMINATES NEED FOR

AUXILIARY GAS IN HIGH PRESSURE PUMPING

STATION

LANDY, D. G. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-893

Closed loop system for a liquid nitrogen high pressure pump feeds back gaseous nitrogen generated by heat leak into the reservoir to maintain the pressure in the storage tank. This safer, more efficient system eliminates the need for auxiliary gas to maintain the tank pressure and can be used on relatively high cryogenic pumping systems.

B66-10410

ALIGNMENT TOOL FACILITATES PIN PLACEMENT ON

IRREGULAR HORIZONTAL SURFACES

BOYLE, J. V. DATE- SEP. 1966
LANGLEY-219

Alignment tool facilitates spotting and cementing plastic pins on the true vertical to irregular concave and convex surfaces. The tool consists of a wood tripod with individually adjustable legs, a wood block with a hole for placing the pins and two spirit levels at a 90 degree angle for easy alignment.

B66-10411

HEAVY DUTY PRECISION LEVELING JACKS EXPEDITE

SETUP TIME ON HORIZONTAL BORING MILL

DELLENBAUGH, W. JONES, C. /N. AM. AVIATION/
DATE- SEP. 1966
M-FS-1084

Leveling jack is a precise alignment tool which expedites the setup of components or assemblies up to 2500 pounds on horizontal boring mills. This tool eliminates the necessity of wedges and blocks to shim the components to proper position.

B66-10415

ELECTROPLATING ELIMINATES GAS LEAKAGE IN

BRAZED AREAS

LEIGH, J. D. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-923

Electroplating method seals brazed or welded joints against gas leakage under high pressure. Any conventional electroplating process with many different metal anodes can be used, as well as the build up of layers of different metals to any required thickness.

B66-10416

MATCHING FLOW CHARACTERISTICS OF STANDARD

SHUTOFF VALVES ELIMINATES NEED FOR CUSTOM FABRICATED VALVES

BEVAN, A. P. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-1069

Standard high pressure valves are used in low pressure fluid system testing when a substantial system pressure increase is required. The flow-vs-valve stroke is matched with that of the valves being replaced. Some correction to the plug contour may be necessary.

B66-10417

MODIFIED PLIERS FACILITATE COUPLING OF BAYONET-TYPE CONNECTORS

HARRIS, F. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-1344

Modified single-tube hole punch or grommet-setting pliers couples or uncouples spring-loaded bayonet-type connectors quickly and easily. The anvil and tube or punch of the single-tube hole punch or pliers are removed and an open-end slot is machined in the tips of the jaws.

B66-10418

BEARING PULLER FACILITATES REMOVAL AND REPLACEMENT OF BEARING ASSEMBLIES

SCHAUS, R. B. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-1538

Bearing puller removes ball bearing assemblies, which carry the rotor, from turbine type flowmeters. It matches the bearing configuration to facilitate removal of the bearing assemblies from the support members.

B66-10422

LARGE DIAMETER METAL RING SEAL PREVENTS GAS LEAKAGE AT 5000 PSI

MIDDELKOOP, J. H. /N. AM. AVIATION/ DATE- SEP. 1966

M-FS-1064

Large metal ring seal prevents gas leakage in hydrogen, helium, or nitrogen storage bottles at pressures up to 5,000 psi. The grooved ring seal which contains elastomer O-rings is installed between the mating faces of the access cover and the storage bottle.

B66-10424

LABYRINTH-TYPE VALVE SEAT INCREASES VALVE LIFE BY DECREASING FLUID VELOCITY

HICKS, J. E. /N. AM. AVIATION/ DATE- SEP. 1966
M-FS-1051

Labyrinth-type valve seat and a moving piston with V-notch openings reduce the fluid velocity and thus, the erosion rate of regulator valves.

B66-10425

INTERIOR SERVICING PLATFORM SIMPLIFIES MAINTENANCE OF STORAGE TANKS

RANGER, C. S. /N. AM. AVIATION/ DATE- OCT. 1966
M-FS-1300

Rapid synchronization of phase-locked oscillators is best achieved by the swept-frequency acquisition technique, wherein the Voltage-Controlled Oscillator /VCO/ is linearly swept through the uncertainty band. The theoretically predicted sweep rates of this technique and the observed experimental results differ by less than seven percent.

B66-10428

FLEXIBLE DRIVE ALLOWS BLIND MACHINING AND WELDING IN HARD-TO-REACH AREAS

HARVEY, D. E. ROHRBERG, R. G. /N. AM. AVIATION/ DATE- OCT. 1966

MSC-524

Flexible power and control unit performs welding and machining operations in confined areas. A machine/weld head is connected to the unit by a flexible transmission shaft, and a locking-indexing collar is incorporated onto the head to allow it to be placed and held in position.

B66-10434

ROTATING MAGNETIC POLES USED TO PUMP MERCURY

EBIHARA, E. T. LOWDERMILK, W. H. VARY, A. DATE- OCT. 1966 REAN- SEE ALSO NASA-TN-D-2965

LEWIS-276

Rotating magnetic pump with redesigned pump cell

is used for pumping mercury. The modified pump has better electrical continuity, more efficient heat removal, and good wetting characteristics in the mercury flow channel.

B66-10443

NEW BACKUP-BAR GROOVE CONFIGURATION IMPROVES HELIARC WELDING OF 2014-T6 ALUMINUM

BLACK, F. J. /N. AM. AVIATION/ DATE- OCT. 1966
MSC-806

Backup chill bar with new grooved dimensions improve welding of 2014-T6 aluminum. This groove geometry affords optimum chilling characteristics, reduces shrinkage and the weld bead is narrower and consistently free from impurities or voids.

B66-10446

SEAL-OFF ASSEMBLY PERMITS RAPID EVACUATION OF AIR FROM CONTAINERS

DEMERS, R. R. /RCA/ DATE- OCT. 1966
GSFC-513

Seal-off assembly which permits rapid container evacuation using large diameter tubing has a vacuum valve that permits sealing plate transfer from the vacuum valve stem to the container after evacuation. The sealing plate can be reused repeatedly. This device can repump in case of a small leak without exposing the container to the atmosphere.

B66-10450

METAL TUBE CAN BE FOLDED FOR COMPACT STOWAGE, IS SELF-ERECTING

DATE- OCT. 1966 REAN- SEE ALSO NASA-TM-X-1187

LEWIS-288

Metal tube configuration reduces the section modulus to that of a thin plate, thus permitting the section to be bent into a coil for stowage in limited space without destructive yielding of the material. It is readily released to serve as a rigid fluid transportation conduit or structural member.

B66-10455

MYLAR FILM ELIMINATES SILK SCREENING OF EQUIPMENT PANELS

CONGER, D. R. /N. AM. AVIATION/ DATE- OCT. 1966
MSC-798

Equipment panel designs and nomenclature are photographed on clear Mylar film to permit fast and inexpensive panel redesigns and revisions and to eliminate the silk screen process. The film is coated with an adhesive and impressed on the panel. For revisions, the film is easily peeled off and replaced.

B66-10457

LOGIC SYSTEM AIDS IN EVALUATION OF PROJECT READINESS

MARIS, S. J. CBRIEN, T. J. /N. AM. AVIATION/ DATE- OCT. 1966

MSC-753

Measurement Operational Readiness Requirements /MORR/ assignments logic is used for determining the readiness of a complex project to go forward as planned. The system used logic network which assigns qualities to all important criteria in a project and establishes a logical sequence of measurements to determine what the conditions are.

B66-10459

IMPROVED METHOD FACILITATES DEBULKING AND CURING OF PHENOLIC IMPREGNATED ASBESTOS

GAINES, P. /N. AM. AVIATION/ DATE- OCT. 1966
MSC-949

Workpieces covered with phenolic impregnated asbestos tape and then wrapped with a specified thickness of nylon yarn under pressure, are debulked and cured in a standard oven. This method of debulking and curing is used in the fabrication of ablative chambers for the Gemini and Apollo attitude control engines.

B66-10460

CHART SYSTEM SIMPLIFIES IDENTIFICATION OF COMPLEX DESIGN ASSEMBLIES

MORIN, H. P. /N. AM. AVIATION/ DATE- OCT. 1966
MSC-752

Identification breakdown chart that lists the component parts required for any specific end item is used to identify rapidly and accurately, from numerous drawings, all the component parts of a complex design assembly. Cylindrical and complex configurations are depicted as continuous flat surfaces for ready identification.

B66-10463
MICROMINIATURE THERMOCOUPLE MONITORS OWN
INSTALLATION

GARRETT, A. J. SELLERS, J. P., JR. /N. AM. AVIATION/
 DATE- OCT. 1966
 M-PS-1111

Microminiature thermocouple makes precision gas sidewall temperature readings inside large thrust chambers. It is installed by a technique whereby the sensor monitors its own installation to insure against thermal damage to the thermocouple and ensure minimum disturbance to chamber surfaces.

B66-10464
LARGE SEALS FABRICATED FROM SMALL SEGMENTS
REDUCE PROCUREMENT LEAD TIME

DANIELS, C. M. HANES, V. D. /N. AM. AVIATION/
 DATE- OCT. 1966
 M-PS-1117

Large diameter seals are fabricated from narrow strip stock welded in segments to form a complete ring. This technique could be used to reduce the cost of critical, large diameter seals in the heating and ventilating industry, petrochemical industry, and marine fabrication industry.

B66-10470
INDICATOR SYSTEM PROVIDES COMPLETE DATA OF
ENGINE CYLINDER PRESSURE VARIATION

MC JONES, R. W. MORGAN, N. E. /VICKERS, INC./
 DATE- DEC. 1966
 LEWIS-291

Varying reference pressure used together with a balanced pressure pickup /a diaphragm switch/ to switch the electric output of the pressure transducer in a reference pressure line obtains precise engine cylinder pressure data from a high speed internal combustion engine.

B66-10471
COPPER-ACRYLIC ENAMEL SERVES AS LUBRICANT
FOR COLD DRAWING OF REFRACTORY METALS

BEANE, C. KARASEK, F. DATE- NOV. 1966
 ARG-54

Acrylic enamel spray containing metallic copper pigment lubricates refractory metal tubing during cold drawing operations so that the tubing surface remains free from scratches and nicks and does not seize in the die. Zirconium alloys, zirconium, tantalum alloys, niobium alloys, vanadium alloys and titanium alloys have been drawn using this lubricant.

B66-10472
RUBBER AND ALUMINA GASKETS RETAIN VACUUM
SEAL IN HIGH TEMPERATURE EMF CELL

HESSON, J. C. DATE- NOV. 1966
 ARG-17

Silicone rubber gasket and an alumina gasket retain a vacuum inside a high temperature EMF cell in which higher and lower density liquid metal electrodes are separated by an intermediate density fused salt electrolyte. This innovation is in use on a sodium bismuth regenerable EMF cell in which the fused salts and metals are at about 500 deg to 600 deg C.

B66-10473
MINIATURE VALVE ACCURATELY CONTROLS SMALL
VOLUME FLUID FLOW

GRUNWALD, A. DATE- NOV. 1966
 ARG-66

Hydraulic or pneumatic actuated valve accurately controls small volume flow of liquids or gases by expanding or relaxing an O-ring within an annular flow space. In one application, 2 such valves were used to accurately meter small volumes of helium under a pressure of 1000 psi.

B66-10477
CONCEPT OF PLANETARY GEAR SYSTEM TO CONTROL

FLUID MIXTURE RATIO

MC GROARTY, J. D. /N. AM. AVIATION/ DATE- DEC. 1966

M-PS-1785

Mechanical device senses and corrects for fluid flow departures from the selected flow ratio of two fluids. This system has been considered for control of rocket engine propellant mixture control but could find use wherever control of the flow ratio of any two fluids is desired.

B66-10484
BRAKING MECHANISM IS SELF ACTUATING AND
BIDIRECTIONAL

PIZZO, J. /N. AM. AVIATION/ DATE- OCT. 1966
 M-PS-1299

Mechanism automatically applies a braking action on a moving item, in either direction of motion, immediately upon removal of the driving force and with no human operator involvement. This device would be useful wherever free movement is undesirable after an object has been guided into a precise position.

B66-10485
COMBINATION SPACER AND GASKET PROVIDES
EFFECTIVE STATIC SEAL

JONES, F. B. /N. AM. AVIATION/ DATE- OCT. 1966
 M-PS-1397

Closely machined steel ring having narrow sealing lands on both faces and a thin coating of a commercially available halocarbon polymer combines the functions of a spacer and static seal ring or gasket having a minimum of potential leak paths. The device is effective over a wide range of temperatures down to minus 423 deg F and at pressure up to 180 psig.

B66-10489
PLUG REPLACES WELD FILLER AS SEAL IN COMPLEX
CASTING

GROUNDREY, R. L. HARRIS, C. L. /AEROJET-GEN. CORP./ DATE- OCT. 1966
 NU-0049

Expandable metal plug is inserted to provide a seal to support the mold core with small blocks, referred to as chaplets, during the casting of a complex volute. Weld-warpage and multiple X ray inspection are eliminated by use of this technique.

B66-10495
SPOOL VALVE CYCLES AT CONTROLLED FREQUENCY
CHARLTON, R. W. VAN ARMAN, D. E. /BECKMAN
INSTR./ DATE- NOV. 1966
MSC-143

Spool valve accurately controls the cycle of a pneumatically-actuated system over long periods. Regulation of pressure from the external source, positioning of the adjusting plugs, and magnet selection, together afford wide variation in cyclic timing and speed of closure in either direction.

B66-10498
QUICK-RESPONSE SERVO AMPLIFIES SMALL
HYDRAULIC PRESSURE DIFFERENCES

WIEGARD, D. E. DATE- NOV. 1966
 ARG-99

Hydraulic servo, which quickly diverts fluid to either of two actuators, controls the flow rates and pressures within a hydraulic system so that the output force of the servo system is independent of the velocity of the mechanism which the system actuates. This servo is a dynamic feedback control device.

B66-10513
OPPOSED ARCS PERMIT DEEP WELD PENETRATION
WITH ONLY ONE PASS

BUDDS, L. E. /N. AM. AVIATION/ DATE- NOV. 1966
 M-PS-1696

Arc welding technique uses opposed electrodes on either side of the workpiece, operated in right angles, out-of-phase, pulsating direct current. Complete penetration has been obtained with this technique in metals ranging from 0.062 to 1.0 inch thickness.

05 MECHANICAL

B66-10514

IN-TANK SHUTOFF VALVE IS PROVIDED WITH
MAXIMUM BLAST PROTECTION

HOLDEN, C. F. /N. AM. AVIATION/ DATE- NOV. 1966
M-PS-1529

In-tank shutoff valve is installed with the valve poppet and actuator inside the tank to provide maximum blast protection during rocket engine test operation. This valve design is applicable wherever explosive fuels are used and is currently being used in lox and liquid hydrogen tanks at a rocket engine test site.

B66-10522

SELF-ACTUATING GRAPPLE AUTOMATICALLY
ENGAGES AND RELEASES LOADS FROM OVERHEAD
CRANES

PROEHLICH, J. A. KARASTAS, G. A. DATE- NOV. 1966
ARG-81

Two-piece grapple mechanism consisting of a lift knob secured to the load and a grapple member connected to the crane or lift automatically disengages the load from the overhead lifting device when the load contacts the ground. The key feature is the sliding collar under the lift knob which enables the grapple latch to be stripped off over the lift knob.

B66-10523

HYDRAULIC FLUID SERVES AS MANDREL FOR SMALL
DIAMETER REFRACTORY TUBE DRAWING

MAYFIELD, R. M. DATE- DEC. 1966

ARG-44

Sealing hydraulic fluid within a tube and passing the tube through a reducing die produces high quality small diameter refractory metal tubing. The encased fluid eliminates the need for mandrel or ductile core removal and drawing can proceed with less handling operations.

B66-10530

PERFORATIONS IN JET ENGINE SUPERSONIC INLET
INCREASE SHOCK STABILITY

KEPPLER, C. R. /UNITED AIRCRAFT CORP./ DATE-
NOV. 1966
NEO-8

Modification of a conventional jet engine internal compression supersonic inlet results in increased shock stability and thus, engine instantaneous response to changes in inlet air properties. This technique provides a large amount of bleed near the maximum pressure recovery at the expense of minor bleed flow during critical operation.

B66-10537

GAGE TESTS TUBE FLARES QUICKLY AND
ACCURATELY

GRIFFIN, F. D. DATE- NOV. 1966
KSC-66-19

Flared tube gage with a test cone that is precisely made with a tapering surface to complement the tube flare is capable of determining the accuracy of a tube flare efficiently and economically. This device should improve the speed, efficiency, and accuracy of tube flare inspections.

B66-10545

HOIST IS AUTOMATICALLY STOPPED AT LOW
DECELERATION RATE

GEORGE, T. R. HESS, H. C. /N. AM. AVIATION/
DATE- DEC. 1966

M-PS-1639

In operating a hoist to transport delicate or fragile components, an automatic stopping device is adjusted to impose a predetermined deceleration rate during stopping.

B66-10546

INTERNAL MACHINING ACCOMPLISHED AT CONSTANT
RADII

GOLLIHUGH, T. E. /N. AM. AVIATION/ DATE- DEC.
1966

M-PS-1573

Device machines fluid passages in workpieces at constant radii through two adjacent surfaces that are at included angles up to approximately 120 degrees. This technique has been used extensively in fabricating engine parts where

close control of fluid flow is a requirement.

B66-10550

DAMPER REDUCES EFFECTS OF RESONANCE ON
FORCE TRANSDUCER

POSTMA, R. W. /N. AM. AVIATION/ DATE- NOV. 1966
WSO-321

Viscous-film damper eliminates response lag of resonance generated noise when inserted into the thrust measuring system. This technique can be applied to automated devices when pulsed force or low order impact is involved, and where signal noise is produced by stopping or reversal of mechanical travel or by water hammer.

B66-10562

METALLOGRAPHIC HOLDING FIXTURE PERMITS
POLISHING OF SOFT METALS ON VIBRATORY
LAPPING MACHINE

MATRAS, S. DATE- DEC. 1966

ARG-42

Circular fixture which mounts several specimens within a single turret prevents specimen smearing during grinding and polishing operations performed on a vibratory lapping machine. Each specimen is loaded individually with a weight small enough to prevent smearing but large enough to promote polishing.

B66-10567

HEAT EXCHANGER TUBES SUPPORTED IN HIGH
VIBRATION ENVIRONMENT

URQUIDI, R. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1401

Cantilevered structure supports heat exchanger coils against vibration loading while allowing freedom for differential thermal growth. The support channels will accept a variety of coil angles with the same coil pitch, thus reducing the number of parts required. This design, with slight modification, could be used to support parallel rows of straight piping.

B66-10570

STATIONARY DEVICE PRODUCES HOMOGENEOUS
MIXTURE OF FLUIDS

BAKER, D. I. CALLISON, M. P. /N. AM. AVIATION/
DATE- DEC. 1966

M-PS-525

Stationary device produces a homogeneous mixture of two or more one-phase or two-phase fluids. The device contains two concentric flow guides with helical passageways through which the fluids are forced into turbulent flow by the system pressure differential.

B66-10571

DUCTILE MANDREL AND PARTING COMPOUND
FACILITATE TUBE DRAWING

BURT, W. R., JR. MAYFIELD, R. M. POLAKOWSKI, N.
H. DATE- DEC. 1966

ARG-43

Refractory tubing is warm drawn over a solid ductile mandrel with a powder parting compound packed between mandrel and the tubes inner surface. This method applies also to the coextrusion of a billet and a ductile mandrel.

B66-10573

ORTHOPEDIC STRETCHER WITH AVERAGE-SIZED
PERSON CAN PASS THROUGH 18-INCH OPENING

LOTHSCHUETZ, F. X. /MASON-RUST CO./ DATE- DEC.
1966

M-PS-811

Modified Robinson stretcher for vertical lifting and carrying, will pass through an opening 18 inches in diameter, while containing a person of average height and weight. A subject 6 feet tall and weighing 200 pounds was lowered and raised out of an 18 inch diameter opening in a tank to test the stretcher.

B66-10575

EMERGENCY ESCAPE SYSTEM USES SELF-BRAKING
MECHANISM ON FIXED CABLE

BILLINGS, C. R. MC DARIS, R. A. MC GOUGH, J. T.
NEAL, P. F. DATE- DEC. 1966

KSC-66-44

Slide-wire system with a twist level slide device

incorporates automatic descent and braking for the safe and rapid evacuation of personnel from tall structures. This device is used on any tall structure that might require emergency evacuation. It is also used to transfer materials and equipment.

B66-10582
COMPOSITE BULKHEAD FABRICATION DEVELOPMENT
ORR, J. DATE- DEC. 1966
M-PS-1264

Composite bulkhead is produced by a fabrication concept utilizing vacuum and/or autoclave pressure to hold preformed welded sandwich elements in place during bonding and aging.

B66-10585
ROTATIONAL FLUID COUPLING ELIMINATES HOSE ENTANGLEMENTS
AUBOL, P. B. /TRW/ DATE- DEC. 1966
MSC-312

Rotational fluid coupling mechanism circulates a temperature controlled fluid between a stationary heat exchanger and a coolant plate on a rotating platform. The mechanism consists of two concentric cylinders containing one or more flexible tubes which are controlled and positioned in such a way that it eliminates tubing entanglement.

B66-10587
QUALITY CONTROL CRITERIA FOR ACCEPTANCE TESTING OF CROSS-WIRE WELDS
BRYANT, R. D. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-627

Visual inspection criteria assure the metallurgical integrity of spot welds joining nickel leads and nickel ribbon in a 90 degree cross-wire configuration.

B66-10588
PLASTIC TUBING PROTECTS FLEXIBLE COPPER HOSE
MELLEGREN, B. E. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-772

Flexible copper purge and coolant hoses is covered with a high-temperature shrinkable plastic for protection against severe vibration during rocket engine tests. This type of tubing is being used on all flexible water tubes used in F-1 engine tests.

B66-10589
POSITIVE DISPLACEMENT CYLINDER MEASURES CORROSIVE LIQUID VOLUME
MARIMAN, R. A. VENDI, C. J. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-1038

Positive displacement cylinder accurately measures volumetric flow rates of corrosive liquids. The cylinder is compatible with corrosive liquids and handles flow rates from zero to 75 gpm at pressures to 900 psig with an accuracy of 0.25 per cent.

B66-10593
FLUID LOGIC CONTROL CIRCUIT OPERATES ROTATOR ACTUATOR MOTOR
SPON- INNOVATOR NOT GIVEN /BENDIX CORP./ DATE- DEC. 1966 REAN- SEE ALSO NASA-CR-54788
LEWIS-294

Fluid logic control circuit operates a pneumatic rotator actuator motor. It has no moving parts and consists of connected fluid interaction devices. The operation of this circuit demonstrates the ability of fluid interaction devices to operate in a complex combination of series and parallel logic sequence.

B66-10595
TREATMENT INCREASES STRESS-CORROSION RESISTANCE OF ALUMINUM ALLOYS
JACOBS, A. J. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1840

Overaging during heat treatment of the aluminum alloys immediately followed by moderate plastic deformation, preferably by shock loading achieves near optimum values of both yield strength and resistance to stress corrosion. Similar results

may be obtained by substituting a conventional deformation process for the shock loading step.

B66-10597
GRIT BLASTING NOZZLE FABRICATED FROM MILD TOOL STEEL PROVES SATISFACTORY
MC FARLAND, J. E. TURBITT, B. DATE- DEC. 1966
M-PS-1420

Dry blasting with glass beads through a nozzle assembly descales both the outside and inside surfaces of tubes of Inconel 718 used for the distribution of gaseous oxygen. The inside of the nozzle is coated with polyurethane and the deflector with a commercially available liquid urethane rubber.

B66-10601
EQUATIONS PROVIDE TUBULAR INFORMATION ON EFFECTS OF UNIFORM AND VARIABLE LOADS ON THIN, FLAT, CIRCULAR PLATES
HEAP, J. C. DATE- DEC. 1966
ARG-151 ARG-152

Unit-mass system of derivation of equations determines the deflection, slope, and moments for thin, flat, circular plates subjected to either a uniform or a symmetrical variable load. The derived equations are computed, organized in tabular form, and graphically depicted.

B66-10604
HOLE SAW DRILL ATTACHMENT HAS ZERO FORCE REACTION
HOLMES, A. E. RILEY, R. H., JR. /BLACK AND DECKER MFG. CO./ DATE- DEC. 1966 HOLMES, A. E. /MARTIN CO./
MSC-543

Zero reaction tools require no force application by workers in space. The tool accomplishes hole cutting by holding the workpiece and feeding the cutting blade into and through it by forces entirely absorbed within the tool.

B66-10608
FRICTION BRAKE CUSHIONS ACCELERATION AND VIBRATION LOADS
FRASER, G. F. ZAWADSKI, G. Z. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-715

Friction brake cushions an object in a vehicle from axially applied vibration and steady-state acceleration forces. The brake incorporates a doubly tapered piston that applies a controlled radial force to friction brake segments bearing against the walls of a cylinder.

B66-10610
SELECTIVE TUBE ROUGHENING INCREASES HEAT TRANSFER CAPABILITY
CARLSON, L. W. DATE- DEC. 1966
M-PS-599

Selectively roughening inside surfaces of tubes increases the heat transfer capabilities, but minimizes the pressure drop. This technique is used to construct roughened test sections for hydrogen heat transfer studies.

B66-10611
MULTILAYER REFRACTORY NOZZLES PRODUCED BY PLASMA-SPRAY PROCESS
BLITON, J. L. RAUSCH, J. L. /IIT RES. INST./ DATE- DEC. 1966
WOO-318

Multilayer rocket nozzles formed by plasma spraying have good thermal shock resistance and can be reheated in an oxidizing environment without loss of coating adherence. Suggested application of this process are for the production of refractory components, which can be formed as surfaces of revolution.

B66-10613
NEW WELDABLE HIGH STRENGTH ALUMINUM ALLOY DEVELOPED FOR CRYOGENIC SERVICE
SPON- INNOVATOR NOT GIVEN /ALUMINUM CO. OF AM./ DATE- DEC. 1966
M-PS-737

Wrought aluminum alloy has improved low temperature notch toughness and weldability. This alloy can be mill-fabricated to plate and sheet

05 MECHANICAL

without difficulty. Post-weld aging improves weld ductility and strength properties. A typical treatment is 8 hours at 225 deg F plus 16 hours at 300 deg F.

B66-10618

A DESIGN PROCEDURE FOR THE WEIGHT OPTIMIZATION OF STRAIGHT FINNED RADIATORS
BURIAN, R. J. HARRIS, D. W. KETCHMAN, J. J.
/BATTELLE MEM. INST./ DATE- DEC. 1966 REAN- SEE
ALSO NASA-TN-D-3489
GSFC-547

Design technique evaluates optimum weight of space radiator consisting of finned, right circular cylinder.

B66-10620

TURBINE BLADE ROOT DESIGN CONCEPT PROMISES SUPERIOR ALIGNMENT
KING, O. D. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1685

Blade-to-hub mounting concept assures excellent alignment integrity and results in elimination of some welding problems associated with designs. With this design, if rework is required, blade removal and replacement may be readily accomplished without damage to blade positioning media on the wheel hub.

B66-10626

HYDRAULICALLY CONTROLLED FLEXIBLE ARM CAN BEND IN ANY DIRECTION
GRIFFIN, F. D. DATE- DEC. 1966
KSC-66-20

Arm assembly consisting of four flexible tubes controlled by a four-way hydraulic or pneumatic valve can bend in any direction. The flexible arm could be used for probing areas that cannot be reached by ordinary tools, handling hazardous materials, and for graph recording.

B66-10627

QUICK ATTACH AND RELEASE FLUID COUPLING ASSEMBLY IS SELF-ALIGNING, SELF-SEALING
HEROLD, C. P. STAHLEY, S. D. DATE- DEC. 1966
KSC-66-8

Fluid coupling assembly that is self-aligning, self-sealing and contains a bellow ball and socket coupling for quick attach and release is highly reliable and can handle cryogenic fluids where icing is encountered. The fluid coupling assembly is used in many fluid systems but is particularly applicable to cryogenic systems.

B66-10628

CONTROLLED RELEASE DEVICE PREVENTS DAMAGE FROM DYNAMIC STRESSES
BURCHAM, T. W. DATE- DEC. 1966
KSC-66-14

Controlled release device that retards motion by extruding or drawing a tapered ductile pin through a die will control launch vehicle motion at liftoff. The device prevents the damaging dynamic stresses that are imposed on the vehicle when it is instantaneously released at full thrust.

B66-10633

PREDICTING SURFACE HEATING RATES AND PRESSURES RESULTING FROM HOT EXHAUST GASES
PIESKI, E. T. SIMKIN, D. J. /N. AM. AVIATION/
DATE- DEC. 1966
MSC-971

Structural tests determine experimentally the amount of thermal protection required on the Apollo service module because of plume impingement heating. Exhaust flow field analysis correlates with flat plate heating rate and surface pressure in a vacuum.

B66-10634

EMERGENCY ESCAPE SYSTEM PROTECTS PERSONNEL FROM EXPLOSION AND FIRE
OFFIK, W. G. /MARTIN CO./ DATE- DEC. 1966
KSC-66-12

Elevator-type emergency escape system evacuates personnel from tall structures, especially when the possibility of explosion or fire exists. The system consists of a spike shaped rescue cabin

which descends along a vertical guide cable, penetrates the dome shaped roof of an underground blast shelter and stops in a deceleration bed of granular material.

B66-10635

LIGHTWEIGHT, ALL-METAL HOSE ASSEMBLY HAS HIGH FLEXIBILITY AND STRENGTH OVER WIDE RANGE OF TEMPERATURE AND PRESSURE
BESSING, L. L. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1831

Lightweight flexible, metal braid reinforced hose assembly is used in high and low pressure oxygen, helium, and hydrogen systems. These hose assemblies have been successfully used on the Saturn-2 stage to provide joints of sufficient flexibility to absorb movement resulting from temperature variations.

B66-10641

POWER ARC WELDER TOUCH-STARTED WITH CONSUMABLE ELECTRODE
JEANNETTE, J. C. /AIR REDUCTION CO./ DATE- DEC. 1966
M-PS-1485

Power arc welder formed as a hand-held welding gun touch-starts, retracts a consumable electrode to create the desired arc, and then commences feeding of the consumable electrode at the rate required to form the intended bead or spot. This device achieves uniform spot welds repeatedly.

B66-10642

DEVICE MEASURES REACTION ENGINE THRUST VECTOR DEVIATIONS
LEONARD, K. SHIEBER, H. /TRW SPACE TECHNOL. LABS./ DATE- DEC. 1966
JPL-SC-163

Gimbal mounted test device measures thrust vector deviation of reaction engines in terms of angular displacement and thus precludes force interaction.

B66-10648

FUEL AND OXIDIZER VALVE ASSEMBLY EMPLOYS SINGLE SOLENOID ACTUATOR
SPON- INNOVATOR NOT GIVEN /PARKER AIRCRAFT CO./ DATE- DEC. 1966
MSC-1046

Valve assembly simultaneously starts or stops the flow of oxidizer and fuel from separate inlet channels to reaction control motors. The assembly combines an oxidizer shutoff valve and a fuel shutoff valve which are mechanically linked and operated by a single high-speed solenoid actuator.

B66-10655

CHECK VALVE INSTALLATION IN PILOT OPERATED RELIEF VALVE PREVENTS REVERSE PRESSURIZATION
OSWALT, L. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1925

Two check valves prevent reverse flow through pilot-operated relief valves of differential area piston design. Title valves control pressure flow to ensure that the piston dome pressure is always at least as great as the main relief valve discharge pressure.

B66-10656

MECHANICAL GAUGE ACCURATELY CHECKS TUBING FLARE, ROUNDNESS, AND CONCENTRICITY
CLARK, L. K. /IBM/ DATE- DEC. 1966
M-PS-1822

Mechanical gage checks flare roundness and concentricity of metal tubing. The gage, which is available from off-the-shelf standard toolmaking supplies, provides the needed accuracy and is easily operated.

B66-10662

METHOD FOR PREDICTING FRICTIONAL LOSS IN METAL BELLOWS AND FLEXIBLE HOSE
CLEVELAND, J. R. DANIELS, C. M. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-883

Test data obtained concerning the frictional pressure loss to fluids flowing in unsleeved bellows and flexible hose. This data should be useful in the design of fluid systems where high

delivery velocities are involved and flexible hose or bellows must be employed.

B66-10663

LATERAL RING METAL ELASTIC WHEEL ABSORBS SHOCK LOADING
GALAN, L. /BENDIX CORP./ DATE- DEC. 1966
M-FS-1312

Lateral ring metal elastic wheel absorbs practically all shock loading when operated over extremely rough terrain and delivers only a negligible shock residue to associated suspension components. The wheel consists of a rigid aluminum assembly to which lateral titanium ring flexible elements with treads are attached.

B66-10665

SPHERICAL PIPE JOINT DELIVERS LOADS EQUALLY TO MATING FLANGE
PFLEGER, R. O. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-807

Oxidizer inlet duct with a ball joint pipe fitting incorporating two spherical bearing races and balls in contact with centering cage springs transmits an evenly distributed load to the mating flange. This design should find application in piping systems where unequal load distributions exist.

B66-10667

SILAZANE ELASTOMER REMAINS RESILIENT AT 400 DEG C
SPON- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DATE- DEC. 1966
M-FS-1144

Smooth, unfoamed elastomer is unaffected by common acids, alkalis, and organic solvents. Its thermal stability, chemical resistance, and physical properties make it of interest for various applications.

B66-10672

RESONANT FREQUENCY CAN BE ADJUSTED ON VIBRATION MOUNT
HODGES, F. /RYAN AERON./ DATE- DEC. 1966
JPL-SC-134

Vibration mount allows adjustment of its resonant frequency and is insensitive to wide temperature variation. The concept is essentially a multidirectional, frictionally damped spring with an adjustable cap. The mount provides vibration isolation in both compression and shear and may be applicable to space use.

B66-10674

ELIMINATION OF ROCKET ENGINE ASYMMETRIC LOADS DURING TESTS AT SEA LEVEL
JOHNSON, J. R. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1730

Secondary injection concept eliminates asymmetric loads and may increase thrust rocket engine loads during sea level tests. The concept uses either a tubular manifold with evenly spaced injection ports or secondary fluid injected at the turbine exhaust inlet to the thrust chamber.

B66-10676

STUDY MADE OF DESTRUCTIVE SECTIONING OF COMPLEX STRUCTURES FOR EXAMINATION
RILEY, T. DATE- DEC. 1966
LEWIS-341

Advances in destructive sectioning of very small or complex structures are discussed. Examination is made by filling the structure in a vacuum with a low viscosity potting compound and then cutting without danger of spatial disorientation.

B66-10677

STUDY MADE TO CONTROL DEPTH OF POTTING COMPOUND FOR HONEYCOMB SANDWICH FASTENERS
CUSHMAN, J. /GEN. DYN./CONVAIR/ DATE- DEC. 1966
LEWIS-370

Study determines optimum fastener insert size and shape, type of embedding cement, diameter, undercut and depth control by fiber glass plug in a honeycomb structure for maximum tensile strength. The best potting compound is 5-5-1 weight mixture of epoxy resin, curing agent, and milled glass fibers.

B66-10678

IMPROVED ROLLING ELEMENT BEARINGS PROVIDE LOW TORQUE AND SMALL TEMPERATURE RISE IN ULTRAHIGH VACUUM ENVIRONMENT
GLENN, D. C. DATE- DEC. 1966
LEWIS-359

Rolling element bearing with stainless steel races and rolling elements and a porous bronze cage successfully operates in ultrahigh vacuum environments at a low torque and with small temperature rise. All components are burnished in molybdenum disulfide.

B66-10683

VALVE EFFECTIVELY CONTROLS AMOUNT OF CONTAMINANT IN FLOW STREAM
SCHNITZER, T. E. DATE- DEC. 1966
M-FS-1771

Contaminant valve with a coaxial groove rotor uniformly deposits contaminant into a flow stream under full pressure and flow conditions. The valve tests filters and filter elements of hydraulic oil, fuel, or lubricant systems without any detrimental effect on the performance.

B66-10686

ACTUATOR DEVICE SCHEDULES RATE OF VALVE CLOSURE
SPON- INNOVATOR NOT GIVEN /WHITTAKER CORP./ DATE- DEC. 1966
M-FS-1556

Prevalve actuator schedules the closure rate of a valve. The actuator is spring loaded to produce a normally open valve and pneumatically powered to close the valve. The closure rate is controlled by means of pneumatic snubber and booster circuitry.

B66-10688

PREFORMED STIFFENERS USED TO FABRICATE STRUCTURAL COMPONENTS FOR PRESSURIZED TANKS
LEWIS, J. C. SHERBA, E. S. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1796

Process of fabricating stiffened section components of pressurized tanks for aerospace use was developed. A potential use of the fabrication process is the production of gore and quarter-panel sections of hydrogen and oxygen tanks for space vehicle boosters.

B66-10694

MECHANICAL DEVICE ACCURATELY MEASURES RF PHASE DIFFERENCES IN VHF OR UHF RANGES
HOPE, L. A. /N. AM. AVIATION/ DATE- DEC. 1966
M-FS-1738

Dual range linear measurement device accurately measures RF phase differences in either VHF or UHF ranges. The device has a capability consisting of a coarse range extending to 30 cm readable to 1 mm and any fine range portion of 2.5 cm readable to .01 mm.

B66-10695

MOTION DRIVE SYSTEM IS ACCURATELY CONTROLLED IN THE 1-MICRON RANGE
MORECROFT, J. H. DATE- DEC. 1966
JPL-864

Motion drive system has been developed for use with interferometers where accurate control of minuscule distance in the 1-micron range is of prime importance. The drive system is applicable to any device that requires extremely accurate positioning control.

B66-10697

COMBINATION DOUBLE DOOR HIGH-VACUUM VALVE PROVIDES ACCESS TO VACUUM CHAMBER
YAGER, S. P. DATE- DEC. 1966
JPL-849

Double door provides an extreme high vacuum seal as well as access to a vacuum chamber for insertion of test devices into the vacuum environment. This arrangement is applicable to any vacuum chamber and could be of value in cryopumping or mechanically pumped chambers.

05 MECHANICAL

B66-10698

MECHANISM FACILITATES COATING OF INNER SURFACES OF METAL CYLINDERS

BILLINGSLEY, J. M. TAFT, A. R. DATE- DEC. 1966 GSFC-515

Cylinder is rotated about shielded hot filament to vapor deposit thin coatings of aluminum or other metallic substances on the inner surface of a cylinder while avoiding heat-producing high-density current flow which causes outgassing of the coating surface. This method is acceptable for glass or metal.

B66-10702

TEFLON SHEET PERMITS VALVE AND VALVE OPERATOR TO MOVE AS A SINGLE UNIT IN A CRYOGENIC PIPE LINE

KINDER, S. K. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966 NU-0077

Free floating support system in cryogenic pipe lines maintains the valve and valve operator in alignment. A Teflon sheet that is placed between the slide support plate and the base permits the valve and valve operator to move freely, as a unit, when the pipe line moves.

B66-10703

SILVER PLATING TECHNIQUE SEALS LEAKS IN THIN WALL TUBING JOINTS

BLENDERMAN, W. H. /N. AM. AVIATION/ DATE- DEC. 1966 NU-0090

Leaks in thin wall tubing joints are sealed by cleaning and silver plating the hot gas side of the joint in the leakage area. The pressure differential across the silver during hydrostatic test and subsequent use forces the ductile silver into the leak area and seals it.

B66-10704

METAL BOOT PERMITS FABRICATION OF HERMETICALLY SEALED SPLICES IN METAL SHEATHED INSTRUMENTATION CABLES

CHAMBERS, G. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966 REAN- SEE ALSO B66-10705 NU-0083

Metal boot splices hard sheathed instrumentation cables used with high temperature strain gages and thermocouples. Silver brazing the conductors together, hermetically seals the splice. This boot is a highly reliable sealed splice which is equally effective at cryogenic temperatures, high temperatures, nuclear environments, and combinations of the above.

B66-10707

PNEUMATIC WRENCH RETAINS OR DISCHARGES NUTS OR BOLTS AS DESIRED

BOUILLE, J. R. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966 NU-0085

Pneumatic wrench grips, screws or unscrews, and discharges a nut or bolt as desired. The device consists of a standard pneumatic wrench modified with a special hex bolt head socket assembly and a diaphragm air cylinder.

B66-10708

AIR BEARING PROVIDES FRICTION-FREE SUPPORT FOR SHAKER SYSTEM SLIP TABLE

SKOFF, R. W. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- DEC. 1966 NU-0086

Air bearing system supports a shaker system slip table with minimum friction. At each corner of a square of grooves made on the table, a hole is drilled through the table and fitted with air connections. Air pressure is simultaneously fed to the four fittings forming an air bearing.

B66-10711

CARRIAGE SYSTEM REMOTELY MOVES DRAWER OVER EXTENDED DISTANCE

SALZANO, G. H. /PARSONS-JURDEN CORP./ DATE- DEC. 1966 NU-0092

In the transferring of material remotely through thick radiation shielding walls, a drawer is

mounted on rollers which operate on rails carried on a slide carriage to eliminate the feature of the slide hardware projecting beyond the drawer when the drawer is extended its full distance.

B66-10712

SIMPLE MOTOR DRIVE SYSTEM OPERATES HEAVY HINGED DOOR

PITKIN, R. G. /PARSONS-JURDEN CORP./ DATE- DEC. 1966 NU-0093

Motor drive system remotely operates heavy steel radiation shielding doors. The drive consists of a standard motor reducer unit which is mounted on the door. This reducer drives a sprocket which is linked by chain to a fixed sprocket of the same size on the door jamb.

B66-10713

SWING-OUT RAIL SYSTEM SEPARATES OVERHEAD CRANE RAILS

PITKIN, R. G. /PARSONS-JURDEN CORP./ DATE- DEC. 1966 NU-0094

Swing-out rail system separates and reconnects the overhead traveling crane rails of a building to provide for the passage of a thick concrete radiation shield sliding door through the rails. In the swing-out position, the rail cantilevered from an axial shaft.

B67-10004

MICROMANIPULATION TOOL IS EASILY ADAPTED TO MANY USES

SHLICHTA, P. J. DATE- JAN. 1967 JPL-129

A special micromanipulation tool equipped with a plunger mounted in a small tube can be easily adapted to such work operations as cutting, precision clamping, and spot welding of microscopic filaments or other parts. This tool is valuable where extreme steadiness of high magnification is required.

B67-10006

COMPLEX SURFACES PLATED BY THIN-FILM DEPOSITION IN ONE OPERATION

BUCKLEY, D. H. PRZYBYSEWSKI, J. S. SPALVINS, T. DATE- JAN. 1967 LEWIS-292

Ion plating deposits thin film on complex surface in one operation. The ionized materials follow electric lines of force to all points on the objects, uniformly plating the surface from all sides simultaneously.

B67-10010

PROCESS SEQUENCE PRODUCES STRONG, LIGHTWEIGHT REFLECTORS OF EXCELLENT QUALITY

READER, A. F. RUSSELL, W. E. WERNER, E. A. DATE- FEB. 1967 LEWIS-331

Large compound curved surfaces for collecting and concentrating radiation are fabricated by the use of several common machining and forming processes. Lightweight sectors are assembled into large reflectors. With this concept of fabrication, integrally stiffened reflective sectors up to 25 square feet in area have been produced.

B67-10011

ELASTIC GUIDES REDUCE HYSTERESIS EFFECT IN BELLEVILLE SPRING PACKAGE

MC GLASHAN, W. F., TOTI, L. R. DATE- JAN. 1967 JPL-910

Peripheral support guides that elastically flex with the slight breathing on radial displacement during actuation can greatly reduce the hysteresis present in a Belleville spring package. This technique provides a control device that enhances the precision of pressure regulating valves, pressure switches, and vacuum actuators.

B67-10018

TECHNIQUE CUTS TIME AND COST OF BENDING JACKETED PIPING

GARDNER, J. N. /N. AM. AVIATION/ DATE- FEB. 1967 WSO-333

Technique uses a stiff medium in the annular space between inner and outer pipes of jacketed piping in transfer lines. The process eliminates splitting and welding and makes possible the use of standard pipe-bending tools.

B67-10019

ORBITAL TUBE FLARING SYSTEM PRODUCES TUBING CONNECTORS WITH ZERO LEAKAGE

WILLIAMS, J. R. /DATE- FEB. 1967
M-PS-2016

An orbital tube flaring system produces tubing connectors with a zero-leak potential needed in high pressure hydraulic and pneumatic systems. The flaring system incorporates a rolling cone and rolling die to closely control flare characteristics.

B67-10023

TESTS SHOW THAT ALUMINUM WELDS ARE IMPROVED BY BEAD REMOVAL

HOOD, D. W. /BOEING CO./ DATE- FEB. 1967
M-PS-1817

Tests with 2218-T87 aluminum alloy plate indicate improvements in strength, ductility, fatigue properties, and burst pressure result when one or both of the top and bottom weld beads are removed. There is, however, a drop in yield strength. The consistency of test data is considerably improved by weld bead removal.

B67-10039

SIMPLE PUMP MAINTAINS LIQUID HELIUM LEVEL IN CRYOSTAT

BUCHHOLD, T. A. /GE/ DATE- MAR. 1967
M-PS-1763

Reciprocating pump maintains a precise level of liquid helium in a cryostat. The pump contains a niobium solenoid armature that is maintained in a superconductive state by the liquid helium.

B67-10043

HIGH SPEED BLOWDOWN SYSTEM PROVIDES RAPID PRESSURE LOSS

BRITTAN, H. C. /GEN. DYN./CONVAIR/ DATE- MAR. 1967

LEWIS-375

High speed blowdown takes advantage of discretely maintained differential pressures to vent a test chamber from high to ambient pressure with minimum time lag. This technique is advantageous where the use of pyrotechnics is undesirable.

B67-10045

RESISTANCE HEATING RELEASES STRUCTURAL ADHESIVE

GLEMSEY, N. N. /BOEING CO./ DATE- MAR. 1967
M-PS-1607

Composite adhesive package bonds components together for testing and enables separation when testing is completed. The composite of adhesives, insulation and a heating element separate easily when an electrical current is applied.

B67-10047

VISCO SEAL DESIGN OFFERS ZERO-LEAKAGE AND WEAR-FREE CHARACTERISTICS

KETOLA, H. N. MC GREW, J. M. /GE/ DATE- MAR. 1967 REAN- SEE ALSO NASA-TM-X-52245
WSO-329

Study provides specific design criteria in sealing applications for continuous duty pumps used in bulk liquid transfer. A basic sealing equation predicts visco seal performance in the turbulent regime.

B67-10048

TECHNIQUE FOR STRIPPING TEFLON INSULATED WIRE

BABB, B. D. /HAYES INTERN. CORP./ DATE- MAR. 1967

M-PS-1774

Cryogenic stripping of Teflon insulated wire leaves no residue and produces no physical damage. After the wire is immersed in liquid nitrogen, bent slightly, and returned to room temperature, the Teflon is removed by fingernails or flat-nosed pliers.

B67-10052

LABORATORY ARC FURNACE FEATURES INTERCHANGEABLE HEARTHES

ARMSTRONG, J. L. KRUGER, O. L. DATE- MAR. 1967
ARG-125

Laboratory arc furnace using rapidly interchangeable hearths gains considerable versatility in casting so that buttons or special shaped castings can be produced. It features a sight glass for observation.

B67-10059

VACUUM CHAMBER IS REMOTELY SEALED BY EUTECTIC METAL

CORDOVA, R. SAGOANE, G. H. /AEROJET-GEN. CORP./ DATE- APR. 1967

NU-0091

Vacuum chamber is remotely sealed by a design using metal seal blades which are inserted into a molten eutectic metal by pressurizing an expansion bellows. The process increases allowable manipulations by improving working space and safety factors.

B67-10063

FLUIDIC OSCILLATOR USED AS HUMIDITY SENSOR

PROKOPIUS, P. R. DATE- MAR. 1967

LEWIS-340

Fluidic oscillator measures the humidity of the hydrogen stream leaving a hydrogen-oxygen fuel cell. The instrument provides continuous readings with a certain speed of response.

B67-10064

NEGATIVE FEEDBACK SYSTEM REDUCES PUMP OSCILLATIONS

ROSENMAN, W. /N. AM. AVIATION/ DATE- MAR. 1967
M-PS-1852

External negative feedback system counteracts low frequency oscillations in rocket engine propellant pumps. The system uses a control piston to sense pump discharge fluid on one side and a gas pocket on the other.

B67-10066

HOLDING FIXTURE FACILITATES PIPE THREAD GAGE MEASUREMENTS

CUPPS, B. HILL, J. /N. AM. AVIATION/ DATE- MAR. 1967

M-PS-2009

Holding fixture that holds the thread gage and three wires in the proper relationship facilitates the measurement of the pitch diameter of the tapered threads of a pipe thread gage. Modified, this device can be used to hold involute spur gears.

B67-10067

ADJUSTABLE, SELF-LOCKING LADDER INCLUDES OPTIONAL WORK PLATFORM

WEBSTER, R. E. /N. AM. AVIATION/ DATE- APR. 1967
M-PS-1922

Height-adjustable ladder with a self-locking platform at its top makes elevated locations more accessible, increases the quantity and size of tools handled there, and decreases the risk of disturbance or damage to components. The retractable platform adapts the ladder to normal use.

B67-10073

COLDPLATE OF PIN FIN DESIGN MAKES EFFICIENT HEAT EXCHANGER

DYER, W. F. /N. AM. AVIATION/ DATE- APR. 1967
MSC-1093

Flat, hollow coldplate that permits the flow of coolant liquid removes heat from heat-generating electronic equipment. This coldplate solves usual problems of bulk, weight, and excessive pumping requirements.

B67-10081

RIGID-BODY MOTION EXTRACTED FROM TOTAL MOTION OF A FLEXIBLE BODY

HOWARD, J. C. DATE- APR. 1967
ARC-63

Control system eliminates or reduces flexibility effects on the manual and automatic control of large flexible vehicles. It extracts rigid-body

05 MECHANICAL

and flexible-body motion and adapts well when a flexible-body frequency coincides or nearly coincides with the control mode frequency.

B67-10094

ULTRASONICS PERMITS BRAZING COMPLEX STAINLESS STEEL ASSEMBLY WITHOUT FLUX

BAKER, W. H. /WESTINGHOUSE ASTRONUCL. LAB./

DATE- APR. 1967

NU-0115

Ultrasonic vibration of an assembly of stainless steel instrumentation tubes ensures brazing without flux. Vibration with an ultrasonic transducer permits the brazing material to flow down each tube in contact with a seal plug installed in a pressure vessel wall.

B67-10096

UNDERCOAT PREVENTS BLISTERING OF SILVER

PLATING AT ELEVATED TEMPERATURES

KUSTER, C. A. /N. AM. AVIATION/ DATE- APR. 1967

M-FS-2049

Gold undercoat prevents blistering in the silver plating of Inconel 718 seals from steam at high temperatures. The undercoat is diffused into the surface of the parent metal by baking prior to silver plating.

B67-10098

TOROIDAL RING PREVENTS GAS IGNITION AT

VENT STACK OUTLET

SPRING, T. R. /N. AM. AVIATION/ DATE- APR. 1967

M-FS-2042

Toroidal ring welded to the vent stack outlet prevents static discharges which ignite combustible gases in a venting system. The ring inhibits the flow of current by removing the cause of turbulence characteristics of a sharply defined vent exit.

B67-10105

TOOL FACILITATES INSTALLATION OF MARMON

CLAMPS

PETERS, G. A. WARMING, K. /N. AM. AVIATION/

DATE- MAY 1967

M-FS-2039

Adjustable tool facilitates the installation of Marmon clamps. It provides sufficient mechanical advantage to force the clamps into place, permitting one man operation. Two handles provide the major leverage, and a pivoting arm with a slot enables snap-out action.

B67-10107

COMPOSITE WELD ROD CORRECTS INDIVIDUAL

FILLER WEAKNESSES

GRIMALDO, S. /N. AM. AVIATION/ DATE- MAY 1967

M-FS-1923

Composite filler wire welds together an assembly made from components of Rene 41 nickel base alloy. Using equal parts of Rene 41 and Hastelloy W weld wire in the filler reduces the cracking and weaknesses of the individual parent metals.

B67-10117

INVESTIGATION OF PRESSURIZED TOROIDAL SHELLS

SPON- INNOVATOR NOT GIVEN /MARTIN CO./ DATE- MAY

1967 REAN- SEE ALSO NASA-CR-261

HQ-27

The effect of internal pressure and external load on thin-walled toroidal shells was investigated. The result of the analysis agreed with experimental results on a 54-inch-diameter toroidal shell subjected to both pressurization and axial loading.

B67-10123

LOCK-DISCONNECT MECHANISM GIVES POSITIVE

RELEASE TO JOINED BODIES

BEAVER, C. E. /BORING CO./ DATE- MAY 1967

M-FS-2147

Umbilical system mechanism locks and unlocks through an internal collet device that is controlled by a single reciprocating shaft. The reduction in the number of operational parts results in higher reliability.

B67-10154

ASPIRATOR INCREASES RELIEF VALVE POPPET

STROKE

BIDDLE, M. E. /N. AM. AVIATION/ DATE- MAY 1967

HQ-77

Addition of an aspirator to a relief valve increases the valve poppet stroke under dynamic flow conditions. The aspirator allows poppet inlet dynamic forces to overcome relief valve spring force. It reduces the fluid pressure in the skirt cavity by providing a low pressure sense probe.

B67-10158

SINGLE WRENCH SEPARATES NUTS FROM

FREE-FLOATING BOLTS

THOMPSON, C. /WESTINGHOUSE ASTRONUCL. LAB./

DATE- MAY 1967

NUC-10013

Pneumatic impact wrench removes the nuts from freely turning bolts when the heads cannot be reached or the shafts anchored. It uses a fixed screwdriver blade that fits a slot cut into the threaded end of the bolt shaft.

B67-10167

HYDROSTATIC FORCE USED TO HANDLE OUTSIZED,

HEAVY OBJECTS

CRAFT, G. W. STARKEY, A. W. /BELLCOMM. INC./

DATE- JUN. 1967

HQ-90

Specially fitted barge is used to load and transport large, heavy objects to a dock side site. There the barge itself can lift, rotate, and position the objects. Typical functions are economically accomplished by water buoyancy.

B67-10174

SCANNING MEANS FOR CASSEGRAINIAN ANTENNA

GIANDOMENICO, A. RUSCH, W. V. T. DATE- JUN. 1967

JPL-946

Mechanical antenna beam switching device detects weak signals over atmospheric and equipment noise sources in microwave antennas. It periodically nutates the paraboloidal subdish in a Cassegrainian reflector system.

B67-10177

EFFECT OF WELDING POSITION ON POROSITY

FORMATION IN ALUMINUM ALLOY WELDS

HARYUNG, J. WROTH, R. S. /DOUGLAS AIRCRAFT/

DATE- JUN. 1967

M-FS-2318

Program investigates the effects of varied welding positions on weld qualities. Progressive changes in bead geometry occur as the weld plane angle is varied from upslope to downslope. The gravitational effect on the weld puddle varies greatly with welding position.

B67-10178

FIXTURE FACILITATES HELIUM LEAK TESTING OF

PIPE WELDS

RONEY, J. A. /HAYES INTERN. CORP./ DATE- JUN.

1967

M-FS-2167

Fixture facilitates inspection testing of circumferential pipe welds for vacuum tightness, using helium gas as a leakage tracer in conjunction with a mass spectrometer. It consists of a split rubber torus and a mating clamping ring with a vacuum hose fitting.

B67-10180

WORK PLATFORM IS SUPPORTED BY SELF-LOCKING

BLADES

RUDDEROW, T. /N. AM. AVIATION/ DATE- JUN. 1967

M-FS-2297

Work platform has a supporting plate to engage the deck edge of the supporting structure when lowered into place. The plate is attached to blades hinged to the platform, rigidly supporting the platform when latched, and allowing the platform to be moved away when unlatched.

B67-10183

CONTINUOUS INTERNAL CHANNELS FORMED IN

ALUMINUM FUSION WELDS

GAULT, J. SABO, W. /N. AM. AVIATION/ DATE- JUN.

1967

M-FS-2399

Process produces continuous internal channel systems on a repeatable basis in 2014-T6 aluminum. Standard machining forms the initial channel, which is filled with tungsten carbide powder. TIG machine fusion welding completes formation of the channel. Chem-mill techniques enlarge it to the desired size.

B67-10195

WELD PROCEDURE PRODUCES QUALITY WELDS FOR THICK SECTIONS OF HASTELLOY-X

FLENS, F. J. FLETCHER, C. W. GLASIER, L. F., JR. /AEROJET GEN./ DATE- JUN. 1967

NUC-10048

Welding program produces premium quality, multipass welds in heavy tube sections of Hastelloy-X. It develops semiautomatic tungsten/inert gas procedures, weld wire procurement specifications material weld properties, welder-operator training, and nondestructive testing inspection techniques and procedures.

B67-10198

GLASS BEAD SHOT PEENING RETARDS STRESS CORROSION FAILURE OF TITANIUM TANKS

BALES, T. T. LISAGOR, W. B. MANNING, C. R. SEYFORTH, M. B. DATE- JUN. 1967

LANGLEY-319

Rigidly controlled shot peening retards the incompatibility between titanium alloys and nitrogen tetroxide in rocket-propellant storage tanks. This sets up a residual compressive stress in the surface of a material which reduces tensile stresses in the material fibers, alleviating stress corrosion.

B67-10200

WORKMANSHIP STANDARDS FOR FUSION WELDING

PHILLIPS, M. D. /AEROJET GEN./ DATE- JUN. 1967

NUC-10050

Workmanship standards manual defines practices, that adhere to rigid codes and specifications, for fusion welding of component piping, assemblies, and systems. With written and pictorial presentations, it is part of the operating procedure for fusion welding.

B67-10202

APPARATUS FOR FABRICATION OF AMERICIUM-BERYLLIUM NEUTRON SOURCES PREVENTS CAPSULE CONTAMINATION

MOHR, W. C. VAN LOON, J. A. DATE- JUN. 1967

ARG-184

Modified gloved enclosure is used to fill a capsule with a mixture of americium and beryllium radioactive powders to seal weld the opening, and to test it for leaks. It contains a horizontal partition, vortex mixer, mounting press, welder, test vessel, and radiation shielding to prevent surface contamination.

B67-10210

ENVIRONMENTAL STUDY OF MINIATURE SLIP RINGS

RADNIK, J. L. /IIT RES. INST./ DATE- JUN. 1967

M-FS-2443

Investigation studied the long term operation of miniature slip ring assemblies in high vacuum of space and included the influence of ring, brush, and insulator materials on electrical noise and mechanical wear. Results show that soft metal vapor plating and niobium diselenide miniature slip rings are beneficial.

B67-10211

HIGH-STRENGTH BRAZE JOINTS BETWEEN COPPER AND STEEL

KUHN, R. F. /N. AM. AVIATION/ DATE- JUN. 1967

M-FS-2519

High-strength braze joints between copper and steel are produced by plating the facing surface of the copper with a layer of gold. This reduces porosity in the braze area and strengthens the resultant joint.

B67-10212

DESIGN CONCEPT TO DECREASE RELATIVE SPEED

OF BALL BEARINGS

JESMAN, S. /N. AM. AVIATION/ DATE- MAY 1967

M-FS-2003

Intermediate ring decreases the rolling speed of a ball bearing relative to the rotational speed of the shaft. It has raceways on its inner and outer peripheries and an additional row of balls. The modification permits operation at much higher shaft speeds than usual.

B67-10214

SYSTEM ENABLES DIMENSIONAL INSPECTION OF VERY LARGE STRUCTURES

SIMPSON, R. R. /BOEING CO./ DATE- JUN. 1967

M-FS-2477

Precision rotary table with an integrated optical tooling bar system enables accurate and rapid measurement of linear and angular dimensions on very large structures of any configuration. The structure is mounted on the turntable, which can be rotated to expose any desired surface.

B67-10219

SOLENOID VALVE DESIGN HAS ONE MOVING PART

ANDERSON, J. W. DATE- JUL. 1967

NPO-10039

Solenoid valve structure has only one moving part, a ball and spring assembly. This eliminates wear caused by sliding motion contact between stationary and moving parts or between moving parts.

B67-10225

TEMPERATURE RESPONSIVE VALVE WITHSTANDS HIGH IMPACT LOADING

GRAM, M. B. DATE- JUL. 1967

NPO-10186

Valve regulates the flow of a reactant to a chemical heater used in a space application and withstands extreme impact loading. The valve has an upper and a lower housing, the lower containing an inlet and an outlet port, and upper containing a cavity.

B67-10237

POST-STRESSED CONCRETE FOUNDATION MAY REDUCE MACHINERY VIBRATION

FISTEDIS, S. H. DATE- JUL. 1967

ARG-130

Post-stressing concrete mat foundation reduces excessive vibrations in machinery. The mat is stressed in compression after the machinery is mounted, thus closing any cracks in it, altering the distribution of the soil subgrade reaction on the mat, and changing the mat-subgrade natural frequency.

B67-10238

TRAVELING WIRE ELECTRODE INCREASES PRODUCTIVITY OF ELECTRICAL DISCHARGE

MACHINING /EDM/ EQUIPMENT

KOTORA, J., JR. SMITH, S. V. DATE- AUG. 1967

ARG-136

Traveling wire electrode on electrical discharge machining /EDM/ equipment reduces the time requirements for precision cutting. This device enables cutting with a minimum of lost material and without inducing stress beyond that inherent in the material. The use of wire increases accuracy and enables tighter tolerances to be maintained.

B67-10241

A SIMPLIFIED PERT SYSTEM

DUNCAN, J. G. MEYER, H. I. WHITE, G. R. /DOUGLAS AIRCRAFT CO./ DATE- JUL. 1967

M-FS-2267

Modified PERT technique processes the input data and arranges it in familiar graphic form in a booklet which is issued at periodic intervals. The tabulated data provides readily available information to management personnel concerned with monitoring the progress of a program.

B67-10244

CABLE CLAMP BOLT FIXTURE FACILITATES ASSEMBLY IN CLOSE QUARTERS

SUNDERLAND, G. H. /BOEING CO./ DATE- JUL. 1967

KSC-67-80

05MECHANICAL

Cable clamp bolt holding fixture facilitates forming of electrical cable runs in limited equipment space. The fixture engages the threads of the short clamp bolt through the clamp and maintains tension against clamp tendency to open while the operator installs the nut without difficulty.

B67-10256

LINE ADAPTER PROVIDES QUICK DISCONNECT UNDER MODERATE SIDE LOADING

WOLFRAM, E. A. /N. AM. AVIATION/ DATE- JUL. 1967
M-FS-2159

Line adapter acts as quick and simple disconnect system. It quickly separates upon the application of a side load of 15 pounds with standing line pressure at 100 psig.

B67-10271

PIPE JOINTS REINFORCED IN PLACE WITH FITTED ALUMINUM SLEEVES

CORTEZ, I., JR. SIEGFRIED, J. WOBIG, O. DATE- AUG. 1967
MSC-11109

Installation of an aluminum sleeve, using specially designed tools, reinforces solder-sealed ferrule joints in installed small-diameter aluminum tubing. Tubing joints reinforced by this method withstand considerable torsional, tensional, and vibrational stresses at moderately elevated temperatures.

B67-10272

PORTABLE MACHINE WELDING HEAD AUTOMATICALLY CONTROLS ARC

OLEKSIAK, C. E. ROBB, M. A. /N. AM. AVIATION/ DATE- AUG. 1967
M-FS-12763

Portable weld tool makes weld repairs out-of-station and on the side opposite the original weld. It provides full automatic control of the arc voltage, current, wire feed, and electrode travel speed in all welding attitudes. The device is readily adaptable to commercially available straight polarity dc weld packs.

B67-10273

SPHERICAL JOINT CONNECTS AXIALLY MISALIGNED FLANGES

MC GROARTY, J. D. /N. AM. AVIATION/ DATE- AUG. 1967
M-FS-2238

Interconnecting straight tube connects axially misaligned flanges in a duct assembly. It adjusts to accommodate variations in relative location of the flanges by pivoting. Adjustment is by spherical mating faces and a spherical-faced indexing swivel flange for bolting backup.

B67-10283

CONCEPT FOR MODIFYING DRAFTING INSTRUMENTS TO MINIMIZE SHEARING

RENNIE, T. A. /BCEING CO./ DATE- AUG. 1967
KSC-10056

Ball bearing standoffs added to drafting instruments enable the instruments to be moved about, with their surfaces out of contact with the drawing paper. This provides a safeguard against smearing of the lines.

B67-10285

STATIC SEAL CONCEPT TO ACCOMMODATE SEAT TOLERANCES

HARDY, J. F., III /N. AM. AVIATION/ DATE- AUG. 1967
M-FS-1854

Static seal permits compensation for flange separation and flange-groove tolerances without large seal-leg deflections.

B67-10291

REMOTELY OPERATED HIGH PRESSURE VALVE PROTECTS TEST PERSONNEL

HOWLAND, B. T. /N. AM. AVIATION/ DATE- AUG. 1967
MSC-11010

High pressure valve used in testing certain spacecraft systems is safely opened and closed by a remotely stationed operator. The valve is

self-regulating in that if the incoming pressure drops below a desired value the valve will automatically close, warning the operator that the testing pressure has dropped to an undesired level.

B67-10292

WELDING OF AM350 AND AM355 STEEL

DAVIS, R. J. WROTH, R. S. /DOUGLAS AIRCRAFT CO./ DATE- AUG. 1967
M-FS-2314

A series of tests was conducted to establish optimum procedures for TIG welding and heat treating of AM350 and AM355 steel sheet in thicknesses ranging from 0.010 inch to 0.125 inch. Statistical analysis of the test data was performed to determine the anticipated minimum strength of the welded joints.

B67-10293

SQUARE TUBING REDUCES COST OF TELESCOPING BRIDGE CRANE HOIST

BERNSTEIN, G. GRAAE, J. SCHRAIDT, J. DATE- AUG. 1967
ARG-13

Using standard square tubing in a telescoping arrangement reduces the cost of a bridge crane hoist. Because surface tolerances of square tubing need not be as accurate as the tubing used previously and because no spline is necessary, the square tubing is significantly less expensive than splined telescoping tubes.

B67-10308

JACKETED CRYOGENIC PIPING IS STRESS RELIEVED

BOWERS, W. M. /N. AM. AVIATION/ DATE- AUG. 1967
M-FS-985

Jacketed design of piping used to transfer cryogenic fluids, relieves severe stresses associated with the temperature gradients that occur during transfer cycles and ambient periods. The inner /transfer/ pipe is preloaded in such a way that stress relief takes place automatically as cycling occurs.

B67-10321

APPLICATION OF DISTORTED MODELS IN DEVELOPING SCALED STRUCTURAL MODELS

WHITE, R. W. /WYLE LABS./ DATE- SEP. 1967
M-FS-2540

In the design and development of dynamically similar structural models a distorted model of the panel is used. The panel thickness is made larger than that dictated by geometric scaling, and the mass of the panel is decreased by adding mass to the surface of the panel to counteract the additional stiffness obtained by the thickness increase.

B67-10325

SEGMENTED, ARCH-BOUND CARBON SEAL IS PRESSURE LOADED

BURCHAM, R. E. /N. AM. AVIATION/ DATE- SEP. 1967
M-FS-12777

Conventional segmented carbon seal has a low leakage rate and minimum loading requirements for a high pressure, large diameter fluid impeller shaft with large axial and radial movements. Modifications in the segments allow part of the load to be carried in hoop stress.

B67-10341

DEVELOPMENT OF TECHNOLOGY FOR HOT-DRAPE FORMING OF LARGE TORUS SECTIONS

SPON- INNOVATOR NOT GIVEN /FAIRCHILD HILLER CORP./ DATE- OCT. 1967
M-FS-12141

Compound-contoured sheet metal structure development is aided by hot-drape forming, a method combining hot-stretch forming, die quenching, and age forming. It permits in-process control of material gage thin-out through a flexible process of heat zone control.

B67-10353

ULTRASONIC WRENCH PRODUCES LEAKTIGHT CONNECTIONS

BLAISE, H. T. MAROPIS, N. /TECHNIDYNE/ DATE-

OCT. 1967
M-FS-12561

Ultrasonic wrench system produces leaktight seals in flared tubing connections. It induces a flexural vibration mode in the coupling nut. The system consists of a frequency converter, a junction box, and wrench assembly.

B67-10355

EXTRUSION OF SMALL-DIAMETER, THIN-WALL
TUNGSTEN TUBING

BLANKENSHIP, C. P. GYORGAK, C. A. DATE- AUG.
1967 REAN- SEE ALSO NASA-TN-D-3772
LEWIS-90335

Small-diameter, thin-wall seamless tubing of tungsten has been fabricated in lengths of up to 10 feet by hot extrusion over a floating mandrel. Extrusion of 0.50-inch-diameter tubing over 0.4-inch-diameter mandrels was accomplished at temperatures ranging from 3000 degrees to 4000 degrees F.

B67-10358

STEEL TEST PANEL HELPS CONTROL ADDITIVES IN
PYROPHOSPHATE COPPER PLATING

HOLLAR, W. T. /GEN. DYN./CONVAIR/ DATE- OCT.
1967

LEWIS-10101

Test panel helps control maximum tolerance level for plating solution contaminants. It provides low, medium, and high current density areas such as exist in production plating, and plating is examined for uniformity of texture and ductility.

B67-10360

PRESSURE LEVELS AND PULSATION FREQUENCIES
CAN BE VARIED ON HIGH PRESSURE/FREQUENCY
TESTING DEVICE

ROUTSON, J. W. /GEN. DYN./CONVAIR/ DATE- OCT.
1967

LEWIS-10205

Hydraulic system components test device obtains a pulsating pressure from a hydraulic actuator that is being driven by a vibration exciter of sufficient force and displacement. Input to the exciter controls the frequency of pressure variation.

B67-10364

RESILIENT BEARING SUPPORTS ARE GAS
CONTROLLED

SIX, L. D. /GARRETT CORP./ DATE- OCT. 1967
REAN- SEE ALSO NASA-CR-706

LEWIS-10109

Self-acting, partial-arc, pivoted-pad bearings in which the bearing-to-journal applied load is pneumatically controlled are used in the operation of a radial flow gas generator where shaft speeds are on the order of 38,500 rpm.

B67-10373

ECCENTRIC DRIVE MECHANISM IS ADJUSTABLE
DURING OPERATION

DENISON, O. J., JR. KUEHNE, B. J. DENISON, O. J.
/GE/ DATE- OCT. 1967
M-FS-2576

Eccentric drive mechanism can be adjusted throughout its off-center range while in the operating mode to change the width of a weld weaving pattern. No associated tooling need be removed.

B67-10377

STABILIZING STAINLESS STEEL COMPONENTS FOR
CRYOGENIC SERVICE

HOLDEN, C. F. /N. AM. AVIATION/ DATE- OCT. 1967
M-FS-13127

Warpage and creep in stainless steel valve components are decreased by a procedure in which components are machined to a semifinish and then cold soaked in a bath of cryogenic liquid. After the treatment they are returned to ambient temperature and machine finished to the final drawing dimensions.

B67-10379

MACHINE TESTS SLOW-SPEED SLIDING FRICTION IN
HIGH VACUUM

SKYRUS, J. /DOUGLAS AIRCRAFT/ WILKINSON, C.

DATE- OCT. 1967
M-FS-12341

Testing machine that operates without any lubrication of the machine elements within the vacuum chamber measures static friction and sliding friction at very low speeds. Moving parts are held to a minimum to simplify operation in the vacuum chamber.

B67-10380

SINGLE-SOURCE MECHANICAL LOADING SYSTEM
PRODUCES BIAXIAL STRESSES IN CYLINDERS

FLOWER, J. P. /DOUGLAS AIRCRAFT CO./ STAFFORD,
R. L. DATE- OCT. 1967
M-FS-12530

Single-source mechanical loading system proportions axial-to-hoop tension loads applied to cylindrical specimens. The system consists of hydraulic, pneumatic, and lever arrangements which produce biaxial loading ratios.

B67-10385

WELDING TORCH AND WIRE FEED MANIPULATOR

WILLIAMS, R. T. /N. AM. AVIATION/ DATE- OCT.
1967

M-FS-13102

Welding torch and wire feed manipulator increase capability for performing automatic welding operations. The manipulator rotates on its horizontal axis to avoid obstacles as they approach the torch. The initial individual attitudes of the torch and wire guide are set with respect to the general configuration of the part.

B67-10393

STUDY MADE TO ESTABLISH PARAMETERS AND
LIMITATIONS OF EXPLOSIVE WELDING

POLHEMUS, F. C. /PRATT AND WHITNEY AIRCRAFT/
DATE- OCT. 1967

M-FS-13006

It is theorized that metal jetting must be present for welding to occur, therefore an explosive weld interface may indicate the relation between the metal jet velocity and shock wave velocity in welding. Parameters for effecting explosive welding in patches of 3 or 4 inches in diameter were established, and found applicable to explosive welding of patches of various sizes.

B67-10400

STANDARD SURFACE GRINDER FOR PRECISION
MACHINING OF THIN-WALL TUBING

JONES, A. KOTCRA, J., JR. REIN, J. SMITH, S. V.
STRACK, D. STUCKEY, D. DATE- OCT. 1967
ARG-10014

Standard surface grinder performs precision machining of thin-wall stainless steel tubing by electrical discharge grinding. A related adaptation, a traveling wire electrode fixture, is used for machining slots in thin-walled tubing.

B67-10401

METAL TUBE REDUCER IS INEXPENSIVE AND
SIMPLE TO OPERATE

MAYFIELD, R. M. DATE- OCT. 1967 REAN- SEE ALSO
ANL-7127, ANL-7176

ARG-49

Low-cost metal tube reducer accepts tubing up to 1 inch outer diameter and can reduce this diameter to less than 1/2 inch with controlled wall thickness. This device can reduce all of the tube without waste. It produces extremely good surface finishes.

B67-10403

WEAR STUDIES MADE OF SLIP RINGS AND GAS
BEARING COMPONENTS

FURR, A. K. /VIRGINIA POLYTECH. INST./ DATE-
NOV. 1967

M-FS-12882

Neutron activation analysis techniques were employed for the study of the wear and performance characteristics of slip ring and rotor assemblies and of the problems arising from environmental conditions with special reference to surface contamination. Results showed that the techniques could be successfully applied to measurement of wear parameters.

05MECHANICAL

B67-10418

HYDRAULIC SYSTEM PROVIDES SMOOTH CONTROL OF
LARGE TRACKING AND ANTENNA DRIVE SYSTEMS
AT VERY LOW TRACKING RATES

PARKER, G. L. DATE- NOV. 1967

NPO-10316

Hydraulic system provides smooth control of large tracking and antenna drive systems at very low tracking rates. This configuration modifies a series connection of the drive motors with compensating orifices to offset the effects of drain line loss. Linearization of response by eliminating cogging or cyclic operation is thus obtained.

B67-10419

COAXIAL CABLE STRIPPING DEVICE FACILITATES
RF CABLE FABRICATION

HUGHES, R. S. TOBIAS, R. A. DATE- NOV. 1967

NPO-10315

Coaxial cable stripping device assures clean, right angled shoulder for RF cable connector fabrication. This method requires minimal skill and creates a low voltage standing wave ratio and mechanical stability in the interconnecting RF cables.

B67-10423

PRECISION METAL MOLDING

TOWNHILL, A. /N. AM. AVIATION/ DATE- OCT. 1967

M-FS-13305

Method provides precise alignment for metal-forming dies while permitting minimal thermal expansion without die warpage or cavity space restriction. The interfacing dowel bars and die side facings are arranged so the dies are restrained in one orthogonal angle and permitted to thermally expand in the opposite orthogonal angle.

B67-10427

HEAVY-GAGE BONDED HONEYCOMB SANDWICH AS
PRIMARY LOAD-BEARING STRUCTURE

SPON- INNOVATOR NOT GIVEN /GEN. DYN./ DATE- OCT. 1967

M-FS-12060

Heavy-gage bonded honeycomb sandwich is used as a primary load-bearing structural material in large-diameter boosters. Theoretical investigations based on a small deflection theory for prediction of stress fields and buckling loads, and structural testing were made. This structure is a potential weight saver for compression load-critical components.

B67-10445

SAFETY YOKE WOULD PROTECT CONSTRUCTION
WORKERS FROM FALLING

GOPFORTH, O. H. /TRANS WORLD AIRLINES/ DATE- NOV. 1967

KSC-10075

Simple dismountable yoke protects construction workers on narrow steel I beams at high levels. The yoke engages the upper flat of the I beam and slides freely along it to permit freedom of movement to the worker while limiting his ability to fall by a harness attached to the yoke.

B67-10453

PUMP SIMULATOR PROVIDES VARIABLE
PRESSURE-FLOW CHARACTERISTICS

PACKE, D. R. /PRATT AND WHITNEY AIRCRAFT/ DATE- NOV. 1967

LEWIS-10122

Pump simulator with variable pressure flow characteristics permits ready experimental determination of optimum pump-load matching. It has been successfully used to investigate the effect of feed pump characteristics on the stability of a Rankine system boiler.

B67-10464

TUBE-TO-HEADER JOINT FOR BIMETALLIC
CONSTRUCTION

LESSMANN, G. G. STONER, D. R. /WESTINGHOUSE CORP./ DATE- NOV. 1967

LEWIS-10282

Design advantages of bimetallic construction enables an all-welded bimetallic joint to be made

from the accessible header side of the tube-to-header joint. In the two-piece header design the weld joints completely seal the tube-header plate crevice and prevent crevice and stringer corrosion.

B67-10466

HAND-OPERATED PLUG INSERTION VALVE

JONES, R. G. HONEY, J. A. /HAYES INTERN. CORP./ DATE- NOV. 1967

M-FS-12019

Hand-operated plug insertion valve seals an evacuated insulation system for upper stage liquid hydrogen tanks on the launch pad. It is light in weight, demountable, and permits evacuation of the system plus sealing after evacuation.

B67-10472

ALUMINUM AND STAINLESS STEEL TUBES JOINED
BY SIMPLE RING AND WELDING PROCESS

TOWNHILL, A. /N. AM. AVIATION/ DATE- NOV. 1967

M-FS-13120

Duranel ring is used to join aluminum and stainless steel tubing. Duranel is a bimetal made up of roll-bonded aluminum and stainless steel. This method of joining the tubing requires only two welding operations.

B67-10473

TOOL SAMPLES SUBSURFACE SOIL FREE OF
SURFACE CONTAMINANTS

KEMMERER, W. W. WOOLEY, B. C. DATE- NOV. 1967

MSC-10988

Sampling device obtains pure subsurface soil that is free of any foreign substance that may exist on the surface. It is introduced through a contaminated surface area in a closed condition, opened, and a subsurface sample collected, sealed while in the subsurface position, and then withdrawn.

B67-10483

CONCEPT FOR DESIGN OF VARIABLE STIFFNESS
DAMPER

LOHR, J. J. DATE- DEC. 1967

ARC-11225

Damping mechanism, containing polymeric-like materials is applicable to a wide range of shock and vibration. The polymeric-like material changes from a relatively stiff material to a relatively soft, rubbery material in the region of their glass transition temperatures. The energy absorption characteristics and stiffness are controllable with temperature.

B67-10488

COMBINED ACTUATOR AND LATCH FOR
CARTRIDGE POWERED ACTUATOR

MURPHY, D. W. /N. AM. AVIATION/ DATE- DEC. 1967

MSC-11242

Combined attenuator and latch stops and latches in place a given mass which is to be moved a discrete distance to effect a desired condition. This device is used in a retraction actuator driven by a pyrotechnic thruster, and can be tailored to meet specific design requirements.

B67-10498

ROCK ANCHORS RESTORE BROKEN SWAMP ANCHORS
ECONOMICALLY

MC ALLISTER, J. W. DATE- DEC. 1967

WLF-10004

Swamp anchors, used to convey power lines across marshes, are restored economically by installing a rock anchor in the upper portion of the pipe that remains attached to the original swamp anchor.

B67-10512

FLOW LINER EXTENDS OPERATING LIFE OF
HIGH-ANGULATION BELLONS

RUMPH, D. G. /BOEING CO./ DATE- DEC. 1967

M-FS-12023

Liner extends the service life of high-angulation /26-degree/ bellows used as ducts for high-velocity fluid flow in a liquid oxygen fill and drain system. It consists of a conical frustum or nozzle on the upstream side and a cylindrical section or catcher on the down-stream

side.

B67-10518

STUDY MADE OF THIN-WALLED PIPE RESPONSE TO
TURBULENT FLUIDS
CLINCH, J. M. /IIT RES. INST./ DATE- DEC. 1967
M-FS-1321

Report summarizes the experimental and theoretical data on the vibrational response of thin-walled pipe sections to the wall pressure field applied within them by a fully developed turbulent fluid flow. The predicted responses were in good agreement with previous data obtained.

B67-10525

VARIABLE-SPEED, PORTABLE ROUTING SKATE
PESCH, W. A. /HAYES INTERN. CORP./ DATE- DEC. 1967
M-FS-13772

Lightweight, portable, variable-speed routing skate is used on heavy metal subassemblies which are impractical to move to a stationary machine. The assembly, consisting of the housing with rollers, router, and driving mechanism with transmission, weighs about forty pounds. Both speed and depth of cut are adjustable.

B67-10526

DYNAMIC VALVE SEAL IS RELIABLE AT CRYOGENIC
TEMPERATURES
MOXLEY, H. E. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-12987

C-shaped PTFE /polytetrafluorethylene/ seal ring provides a reliable seal in cryogenic fluids over a fluid pressure range of 0 to 2000 psig. It is interference-fitted internally with a metal expander ring and a metal compressor ring.

B67-10528

ACCUMULATOR ISOLATOR PREVENTS
MALFUNCTIONING OF FAULTY HYDRAULIC SYSTEM
WALSH, G. D. /BOEING CO./ DATE- DEC. 1967
M-FS-1415

Special isolator valve prevents malfunction of a closed hydraulic system by converting the initial accumulator-reservoir to a reservoir function only when the system loses oil, or gaseous nitrogen precharge, or has a jammed piston. This permits near-normal operation until the defect is corrected.

B67-10529

DEVELOPMENT OF LUNAR DRILL TO TAKE CORE
SAMPLES TO 100-FOOT DEPTHS
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE DEFENSE
AND SPACE CENTER/ DATE- DEC. 1967
M-FS-13015

Lunar drill takes lunar surface cores to depths of 100 feet and is being developed to the samples at greater depths. The wireline drill system has been adapted to operate in the lunar environment by providing a sealed dc motor and solid metallic base lubricants.

B67-10539

LEAD PLATED ALUMINUM RING PROVIDES STATIC
HIGH PRESSURE SEAL FOR LARGE DIAMETER
PRESSURE VESSEL
LOCKE, J. N. /AEROJET-GEN. CORP./ DATE- DEC. 1967

NUC-10008

Lead plated aluminum ring provides a positive static seal for a large diameter pressure vessel for use in a hazardous environment at cryogenic temperatures with high pressure fluid flow. This design can be used in high and low pressure lines of any diameter for any fluid, with appropriate material modification.

B67-10541

PRECISION TRIMMER AIDS IN PREPARING
BIOMEDICAL SPECIMEN BLOCKS FOR ULTRATHIN
SECTIONING
TAHMISIAN, T. N. DATE- DEC. 1967
ARG-242

Precision trimmer, which neatly trims biomedical specimen blocks for ultrathin sectioning, eliminates the risk of human error. Four inches in diameter and 3 inches in height, it supports

the block and serves as a support for a cutting tool and can be adjusted in three dimensions.

B67-10547

POWER TORQUE WRENCH CONCEPT FOR PRECISION
TORQUE APPLICATION
PETERS, G. A. /N. AM. AVIATION/ WARNING, K.
DATE- DEC. 1967
M-FS-13546

Precision electromechanical power wrench applies a given amount of torque to a series of fasteners. It uses a commercially available dc permanent magnet torque motor with a current-controllable torque output and torque value indicator designed to the principles of human engineering.

B67-10555

STUDY MADE OF HEAT TRANSFER AND PRESSURE
DROP THROUGH TUBES WITH INTERNAL
INTERRUPTED FINS
NAMKOONG, D., JR. DATE- DEC. 1967 REAN- SEE ALSO
NASA-TN-X-1428
LEWIS-10280

Argon gas flow through an internal interrupted finned tube was investigated to obtain heat transfer and frictional pressure drop data. The results were plotted against the same data for corresponding louvered plate-finned surfaces.

B67-10563

INSTRUMENT ACCURATELY MEASURES WELD ANGLE
AND OFFSET
BOYD, W. G. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-12849

Weld angle is measured to the nearest arc minute and offset to one thousandth of an inch by an instrument designed to use a reference plane at two locations on a test coupon. A special table for computation has been prepared for use with the instrument.

B67-10567

BUTTERFLY VALVE WITH METAL SEALS CONTROLS
FLOW OF HYDROGEN FROM CRYOGENIC THROUGH
HIGH TEMPERATURES
JOHNSON, L. D. /AEROJET-GEN. CORP./ DATE- DEC. 1967
NUC-10034

Butterfly valve with metal seals operates over a temperature range of minus 423 degrees to plus 440 degrees F with hydrogen as a medium and in a radiation environment. Media flow is controlled by an internal butterfly disk which is rotated by an actuation shaft.

B67-10581

FLAT CABLE INSULATION STRIPPING MACHINE
SCHAEFER, J. H. /VIKING IND./ DATE- DEC. 1967
M-FS-13776

Flat cable insulation stripping machine operates on a principle of variable parameters of abrasive wheel speed, wheel pressure on the flat cable, and flat cable feed speed into the abrasive wheel. Application of connectors is handled efficiently with this flat terminal termination technique.

B67-10588

HIGH ENERGY FORMING FACILITY
CIURLIONIS, B. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-14026

Watertight, high-explosive forming facility, 25 feet in diameter and 15 feet deep, withstands repeated explosions of 10 pounds of TNT equivalent. The shell is fabricated of high strength steel and allows various structural elements to deform or move elastically and independently while retaining structural integrity.

B67-10591

FLUOROCARBON SEAL REPLACES METAL PISTON RING
IN LOW DENSITY GAS ENVIRONMENT
MORATH, W. D. /VICKERS, INC./ MORGAN, N. E.
DATE- DEC. 1967
LEWIS-10277

Reinforced fluorocarbon cupseal, which provides an integral lip-type seal, replaces the metal piston rings in piston-cylinder configurations used in the compression of low density gases. The

05 MECHANICAL

fluorocarbon seal may be used as cryogenic compressor piston seals.

B67-10594

SELF-ALIGNING ROD PREVENTS ECCENTRIC LOADING OF TENSILE SPECIMENS
VANDERGRIFF, E. F. /WESTINGHOUSE ASTRONUCI.
LAB./ DATE- DEC. 1967
NUC-10525

Tensile specimens can be tested in liquid nitrogen without subjecting the cryostat to tilting during assembly of the specimen in the liquid nitrogen-filled cryostat. A universal joint with a semielliptical head and socket reduces misalignment and permits only limited side travel.

B67-10607

HONEYCOMB SEAL BACKING RING INCREASES TURBOPUMP DISK LIFE
BROOKS, W. S. /N. AM. AVIATION/ LARSON, E. W.
DATE- DEC. 1967
M-FS-13303

Turbopump disk life increased by thin, relatively rigid metal backing ring installed to the honeycomb seal. The aerodynamic and friction damping provided by this modification eliminates first-stage disk cracking.

B67-10611

ROLAMITE - A NEW MECHANICAL DESIGN CONCEPT
WILKES, D. F. DATE- DEC. 1967
SAM-10001

Rolamite, a mechanical suspension system, provides substantial reductions in friction in the realm of extremely low bearing pressures. In addition, rolamite devices are easily microminiaturized, are extremely tolerant of production variations and are inherently capable of virtually all functions to construct most electromechanical devices.

B67-10619

FEED-THRU CONDUIT MINIMIZES HEAT PICKUP
YAGER, S. P. DATE- DEC. 1967
JPL-847

Insulated feed-thru conduit minimizes heat pickup by a cryogenic fluid passing through the walls of a double high-vacuum chamber, and is capable of expansion and contraction with the walls of the chamber. It uses a bellows and rigid cylinder to provide a low-loss feed-thru for the cryogenic liquid.

B67-10622

FIRE EXTINGUISHER CONTROL SYSTEM PROVIDES RELIABLE COLD WEATHER OPERATION
BRANUN, J. C. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-13031

Fast acting, pneumatically and centrally controlled, fire extinguisher /firex/ system is effective in freezing climates. The easy-to-operate system provides a fail-dry function which is activated by an electrical power failure.

B67-10623

FERROMAGNETIC CORE VALVE GIVES RAPID ACTION ON MINIMUM ENERGY
LARSON, A. V. /GEN. DYN./CONVAIR/ TINKHAM, J. P.
DATE- DEC. 1967
LEWIS-10135

Miniature solenoid valve controls propellant flow during tests on a coaxial plasma accelerator. It uses an advanced ferromagnetic core design which meets all the rapid-acting requirements with a minimum of input energy.

B67-10628

TENSILE TESTING GRIPS ARE EASILY ASSEMBLED UNDER LIQUID NITROGEN
SKALKA, R. J. /WESTINGHOUSE ASTRONUCI. LAB./
VANDERGRIFF, E. F. DATE- DEC. 1967
NUC-10524

Split-screw grips for tensile testing provide uniform loading on the specimen shoulders. Holes in the heads enable the screws and specimen to be threaded as an assembly into a grip body, closely controlled guides and seats afford positive seating, and precision machining of mating surfaces minimizes misalignment effects.

B67-10638

EDDY CURRENT DISK VALVE
LARSON, A. V. /GEN. DYN./CONVAIR/ TINKHAM, J. P.
DATE- DEC. 1967
LEWIS-10123

Quick-opening, intermittent flow valve requires a small amount of electrical energy to open and which closes by the restoring action of a rubber stop. This eddy current disk valve opens in less than 100 microseconds and takes only 10 joules of energy.

B67-10639

SOLENOID HAMMER VALVE DEVELOPED FOR QUICK-OPENING REQUIREMENTS
WRENCH, E. H. /GEN. DYN./CONVAIR/ DATE- DEC. 1967
LEWIS-10134

Quick-opening lightweight solenoid hammer valve requires a low amount of electrical energy to open, and closes by the restoring action of the mechanical springs. This design should be applicable to many quick-opening requirements in fluid systems.

B67-10655

DEVELOPMENT OF HELICAL SEAL FOR HIGH TEMPERATURE /2000 DEGREES F/ APPLICATION
HELD, C. /N. AM. AVIATION/ DATE- JAN. 1968
M-FS-13304

Helical seal is used to seal bolted flange joints in a high temperature environment. The seal design incorporates a new cross-sectional shape, a metal strip with a slight radius, and the use of premolded asbestos. It provides equal load distribution under compression loads, allows for minimum loss and recovery values, and increases the temperature range.

B67-10664

PNEUMATIC PRESSURE WAVE GENERATOR PROVIDES ECONOMICAL, SIMPLE TESTING OF PRESSURE TRANSDUCERS
GAAL, A. E. /WESTINGHOUSE ASTRONUCI. LAB./
WELDON, T. P. DATE- DEC. 1967
NUC-10024

Testing device utilizes the change in pressure about a bias or reference pressure level produced by displacement of a center-driven piston in a closed cylinder. Closely controlled pneumatic pressure waves allow testing under dynamic conditions.

B67-10667

SOLENOID VALVE DESIGN MINIMIZES VIBRATION AND SLIDING WEAR PROBLEM
GILLON, W. A., JR. /N. AM. AVIATION/ DATE- JAN. 1968
M-FS-14079

Two-way cryogenic solenoid valve resists damage from vibration and metallic interfacial sliding. The new system features a flat-faced armature guided by a flexure disk which eliminates sliding surfaces and is less subject to contamination and wear.

B67-10670

RECONNECT MECHANISM
MOORE, D. L. /BOEING CO./ DATE- JAN. 1968
M-FS-12968

Mechanism remotely controls de-mating of two bodies by unlock and withdrawal of one body from the other and, upon command, extends, locates, remates and relocks the two bodies. The system is designed to transfer fluids from a dispensing body to a receiving body.

B67-10673

CRYOGENIC SEAL CONCEPT FOR STATIC AND DYNAMIC CONDITIONS
DE GAETANO, E. A. /N. AM. AVIATION/ DATE- JAN. 1968
M-FS-12986

Seal rings reduce cryogenic pump seal leakage under static and dynamic conditions. The rings are fitted into annular diaphragms, which are affected by cryogenic pressure and temperature, to move against a mating ring, to increase seal-bearing loads under static conditions.

B67-10677

IMPROVED CONTROL SYSTEM POWER UNIT FOR
LARGE PARACHUTESCHANDLER, J. A. GRUBBS, T. M. DATE- JAN. 1968
MSC-12052

Improved control system power unit drives the control surfaces of very large controllable parachutes. The design features subassemblies for determining control surface position and cable loading, and protection of the load sensor against the possibility of damage during manipulation.

B68-10004

DEVELOPMENT OF MECHANIZED ULTRASONIC
SCANNING SYSTEMEVANS, R. MAC DONALD, J. A. DATE- JAN. 1968
REAN- SEE ALSO NASA-TM-X-53598

M-FS-13638

Mechanized ultrasonic scanning system inspects the flaw content in the welds of space vehicle booster stages and propellant tanks. It is capable of scanning welds at speeds greater than 1 inch per second.

B68-10011

PNEUMATIC RAFT AUTOMATICALLY REFORMS AFTER
RUPTURE OF BUOYANT MEMBERRADNOSKY, M. I. SHERMAKE, G. A. DATE- JAN. 1968
MSC-11562

Unique, inflated, expandable socks are attached within the inflated chamber of a raft or a float in such a way that collapse of the chamber wall through damage, causes the adjacent sock to expand and restore the original configuration.

B68-10014

VENT AND RELIEF VALVE MAINTAINS LOW
LEAKAGE RATE OVER BROAD TEMPERATURE RANGE

WEITENBECK, R. G. /PARKER AIRCRAFT CO./ DATE- JAN. 1968

M-FS-12807

Low leakage rate, large diameter vent and relief valve operates satisfactorily over a large temperature range by a design that accommodates waviness and distortions due to thermal gradients. It is based on a fixed sealing member having an inclined lapped surface to which a flexible flow gate conforms.

B68-10022

MECHANICAL SHIELDING REDUCES WELD SURFACE
CRACKING IN 6061 T6 ALUMINUMHILL, J. E. /N. AM. AVIATION/ DATE- FEB. 1968
MSC-11494

Mechanical shield of high melting point material protects 6061-T6 aluminum welded with high frequency ac tungsten arc equipment. It is held in place around the weld bead area and eliminates heat check cracks.

B68-10024

LOCATING AND SEALING AIR LEAKS IN
MULTIROOMED BUILDINGS

BRITTON, J. M. /AEROJET-GEN. CORP./ DATE- FEB. 1968

NUC-10304

Industrial, nontoxic smoke bombs are used in multiroomed buildings to locate and fill discovered leak areas with polyurethane foam. All obvious air escape routes are sealed and the room is then pressurized to a minimum of 0.1 inch water above the pressure of adjoining rooms.

B68-10026

PREDICTING FATIGUE LIFE OF METAL BELLOWS

DANIELS, C. M. /N. AM. AVIATION/ DATE- FEB. 1968
M-FS-14096

Classical method of presenting fatigue data in plots of alternating stress vs number of deflection cycles is applied to bellows formed of various metals, including corrosion-resistant steel, nickel alloys, and aluminum alloys. The expected life of a new bellows design can then be determined before fabrication and testing.

B68-10035

COMPUTER MAGNETIC TAPE REHABILITATION STUDY

BYRD, V. H. DATE- FEB. 1968
GSFC-10283

Study determines the most efficient method for magnetic tapes rehabilitation and storage for reuse. Investigated were the physical changes taking place in the tape during the rehabilitation process, measure of quality of the processed tapes, and the level of quality required to achieve sufficient yield.

B68-10036

TUBE DIMPLING TOOL ASSURES ACCURATE
DIP-BRAZED JOINTSBEUYUKIAN, C. S. HEISHAN, R. M. /N. AM. AVIATION/ DATE- FEB. 1968
MSC-533

Portable, hand-held dimpling tool assures accurate brazed joints between tubes of different diameters. Prior to brazing, the tool performs precise dimpling and nipple forming and also provides control and accurate measuring of the height of nipples and depth of dimples so formed.

B68-10037

SWING ARM CARRIER PROTECTS FLEXIBLE LINES
DURING TEST ITEM ROTATIONWARD, D. P. /N. AM. AVIATION/ DATE- FEB. 1968
MSC-11464

Swing arm carrier provides protection for flexible lines /fluid, electrical, RF/ connected to a test item that must be rotated through 360 degrees during test. It uses five gates riding on pivots to permit rotation of flexible lines through arcs of plus 180 degrees and minus 180 degrees.

B68-10038

CONCEPT TO STANDARDIZE SPACE VEHICLE
PIGGYBACK EXPERIMENT MODULES

CUMMINGS, A. DOWDY, W. MORITA, W. H. /N. AM. AVIATION/ DATE- APR. 1968

M-FS-1697

Study investigates the use of spent launch vehicle stages and modules to support earth orbital operations and functions after successful completion of the primary mission. Emphasis is placed primarily on determination of those uses that afford the greatest utility with minimum possibility of degradation to the primary mission.

B68-10039

FUEL TRANSFER SYSTEM PERMITS RAPID
COUPLING

WEST, A. M. /LOCKHEED MISSILES AND SPACE CO./ DATE- FEB. 1968

M-FS-91326

Docking and fuel transfer system provides an efficient method for transferring fuel from a tanker to another vehicle. With this system, no triggering operation is required prior to docking, the support system can be rigidized by simply locking the rams of shock absorbers, and no separate fuel line coupling action is required.

B68-10040

HEAT-SHRINK PLASTIC TUBING SEALS JOINTS IN
GLASS TUBINGDEL DUCA, B. DOWNEY, A. DATE- FEB. 1968
LEWIS-10329

Small units of standard glass apparatus held together by short lengths of transparent heat-shrinkable polyolefin tubing. The tubing is shrunk over glass O-ring type connectors having O-rings but no lubricant.

B68-10041

IMPROVED TORCH INCREASES WELD QUALITY IN
REFRACTORY METALS

LESSMAN, G. G. SPRECKACE, R. /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1968

LEWIS-324

Specially designed torch welds refractory metals in a vacuum purged, inert gas backfilled welding chamber /weld box/ with practically zero contamination resulting from its use. Included in the torch design is a radiation shield to protect the operators hands when welding at high amperages.

B68-10042

SUSPENDED CHAINS DAMP WIND-INDUCED
OSCILLATIONS OF TALL FLEXIBLE STRUCTURES

05MECHANICAL

REED, W. H., III DATE- FEB. 1968
LANGLEY-10193

Hanging-chain system, which is a form of impact damper, suppresses wind-induced bending oscillations of tall cylindrical antenna masts. A cluster of chains enclosed in a neoprene shroud is suspended inside the tip of the antenna mast, forming a simple method of damping structural vibrations.

B68-10047
FAST METHOD FOR OBTAINING SCALE DIMENSIONS
ON TAPE-CONTROLLED MILLING MACHINE
THOMPSON, L. J. /N. AM. AVIATION/ DATE- MAY 1968
MSC-11609

Calculator obtains the Rail and Z Scale dimensions on the tape-controlled Sundstrand milling machine. It provides computer with depth information required to process numerical control programs which, in turn, provide the tapes for operation of M/C milling machines.

B68-10052
MULTICHANNEL WIREWAY ADAPTER BOX
BLAKE, W. /N. AM. AVIATION/ DATE- MAR. 1968
MSC-90645

Adapter box provides continuous separation of different electrical leads at points where their runs must intersect. Thus, multichannel conduits of standard commercial design may be used in a manner that prevents crossing of wire leads carrying different currents where the runs intersect and change direction.

B68-10053
REMOVELY INSTALLED PIPE PLUG PROVIDES
EFFECTIVE SEAL IN HAZARDOUS ENVIRONMENT
CLIFTON, R. P. /AEROJET-GEN. CORP./ DATE- MAR. 1968
NUC-10303

Pipe plug for remote installation in an open-ended pipe used in a hazardous environment provides a gastight seal by expanding a rubber seal against the inside surface of the pipe opening, with mechanical clamps contacting the pipe flange for positive retention of the plug.

B68-10057
SYNCHRONIZED CIRCUIT IMPROVES ACCURACY OF
FLUID TRANSFER MEASUREMENTS
VENDL, C. J. /N. AM. AVIATION/ DATE- MAR. 1968
MSC-11167

Shut-off valve at the destination of a transferred fluid, improves the accuracy of measurements determining the quantity of liquid transferred from a storage source to a remote location. By synchronizing this valve with the measuring device /totalizer/, the inaccuracies resulting from unfilled transfer lines can be reduced.

B68-10064
FLEXIBLE RING BAFFLES FOR DAMPING LIQUID
SLOSH
BROOKS, G. W. STEPHENS, D. G. DATE- FEB. 1968
REAN- SEE ALSO NASA-TN-D-3878
LANGLEY-90194

Slosh damping, obtained through the use of small, less massive, flexible baffles, provides a relatively lightweight system for damping the motions of liquid propellants in launch vehicles, missiles, and other tankage systems.

B68-10072
CLAMP FOR DETONATING FUZE
HOLDERMAN, E. J. /DOUGLAS AIRCRAFT CO./ DATE- MAR. 1968
M-FS-13399

Quick acting clamp provides physical support for a closely confined detonating fuse in an application requiring removal and replacement at frequent intervals during test. It can be designed with a base of any required strength and configuration to permit the insertion of an object.

B68-10075
MAINTAINABILITY METHODOLOGY AND
MAINTENANCE ANALYSES
BEACH, R. E. ELLIS, G. F. GRALOW, F. H.
HORSEMAN, J. J. KOZLOWSKI, F. J. /BOEING CO./

DATE- MAR. 1968
M-FS-14134 M-FS-14221

Initial approach in performing maintainability studies involves detailed description of methodology used. Maintenance analyses are formulated for system, subsystem, and component levels. These are performed to ensure that complete, integrated, logistics system support elements are identified.

B68-10078
DEVICE DAMPS FLUID PRESSURE OSCILLATIONS IN
VENT VALVE
NEIN, H. J. DATE- MAY 1968
M-FS-13290

Device, containing a tuned series arrangement of two plenum chambers and two orifices, damps high pressure fluid oscillations in a vent valve. Used in conjunction with vent valves, it relieves gas pressure that develops in liquid hydrogen and liquid oxygen tanks used on a space vehicle.

B68-10080
NUMERICAL CONTROL MACHINE DATA MANUAL
MACKAY, R. T., SR. /N. AM. ROCKWELL CORP./
DATE- MAY 1968
M-FS-14342

Numerical Control Machine Data Manual provides programmers with specific information for various types and sizes of numerical control machine tools and auxiliary equipment.

B68-10082
DEPLOYABLE LATTICE COLUMN
MAUCH, H. R. /ASTRO RES. CORP./ DATE- MAY 1968
NPO-10228

Lattice column, made up of many individually collapsible sections connected in tandem, rapidly raises measuring instruments to a level appreciably above that where data is to be recorded and evaluated. The column may be collapsed by collapsing each section in sequence and is deployed by extending each section in sequence.

B68-10099
SYSTEM FOR MEASURING ROUNDNESS AND
CONCENTRICITY OF LARGE TANKS
MELTON, R. E. /SPACO/ DATE- MAY 1968 REAN- SEE
ALSO B67-10214
M-FS-13362

Equipment measures the roundness and concentricity of large, massive tanks. The equipment includes a 34-foot rotary table, a variable reluctance displacement transducer, an electronics console, a digital computer, and a 5-foot plotter used for final data display.

B68-10107
ELECTROFORMED SCREENS WITH UNIFORM HOLE
SIZE
SCHAER, G. R. /BATTELLE MEM. INST./ DATE- APR. 1968
LEWIS-10117

Efficient method electroforms fine-mesh nickel screens, or plaques, with uniform hole size and accurate spacing between holes. An electroformed nickel mandrel has nonconducting silicone rubber projections that duplicate the desired hole size and shape in the finished nickel screen.

B68-10110
VISCOS DAMPER
DEAN, W. C. /UNITED AIRCRAFT CORP./ DATE- APR. 1968
MSC-12072

Damping device exhibiting no hysteresis effect and capable of preload is used in place of a preload spring in an aneroid bellows to provide viscous damping. It operates about the action of a pressure sensing outer bellows attached to an active header above and a static header below.

B68-10111
SLEEVED DAMPER LIMITS SPRING SURGING
DEAN, W. C. /UNITED AIRCRAFT CORP./ DATE- APR. 1968
MSC-12071

Damping device limits spring surging in delicate

instrumentation subjected to shock loading to tolerable limits. The device consists of a spiral formed plastic member interleaved between the spring coils in the same helix configuration.

B68-10115

METHOD FOR REINFORCING TUBING JOINTS

KINZLER, J. LEE, W. S. DATE- APR. 1968

MSC-11108

Joint repair technique uses a longitudinally split aluminum shield over the joint ferrule and immediately adjacent tubing to reseal or reinforce leaking or weak joints in small tubing. Epoxy resin coating on inside surfaces of the two shield halves provides a tightly sealed bond between shield and tubing.

B68-10117

TOGGLE OPERATED DOUBLE LATCH

BARBOUR, R. T. NECKER, D. E. /N. AM. AVIATION/ DATE- APR. 1968

MSC-11377

Double hook latch provides preloading and support capability up to 80,000 pounds and opens self-energizingly when restraint linkage is released. It incorporates a double hook latch held closed by a toggle linkage attached to a flexible cable rigged in tension.

B68-10120

PRESSURE VARIABLE ORIFICE FOR HYDRAULIC CONTROL VALVE

AMHERMAN, R. L. /N. AM. AVIATION/ DATE- APR. 1968

MSC-11323

Hydraulic valve absorbs impact energy generated in docking or joining of two large bodies by controlling energy release to avoid jarring shock. The area of exit porting presented to the hydraulic control fluid is directly proportional to the pressure acting on the fluid.

B68-10122

MEASURING THERMAL EXPANSION OF MULTIPLE SPECIMENS AT HIGH TEMPERATURE

GAAL, P. S. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- MAY 1968

NUC-10153

Furnace capable of heating 10 specimens to a uniform temperature simultaneously, aids in the measuring of the thermal expansion of each specimen. The specimens are measured with a telescope unit consisting of two microtelescopes. Overall accuracy of the system is estimated to be plus or minus 2 percent at 2000 degrees C.

B68-10123

IMPROVED ACTIVE VIBRATION ISOLATOR

DIXON, G. V. LEATHERWOOD, J. D. STEPHENS, D. G. DATE- APR. 1968

LANGLEY-10106

Active vibration isolator simultaneously isolates a flexible structure or payload from disturbances, attenuates the response of a flexible structure to transient disturbances, and maintains the equilibrium position of the payload within predetermined limits over a wide range of steady loads and accelerators.

B68-10125

VACUUM-JACKETED TRANSFER LINE INSTALLATION TECHNIQUE

BOWERS, W. M. /N. AM. ROCKWELL CORP./ DATE- APR. 1968

M-FS-14496

Rolling-type spacers in the form of steel balls retained in appropriate sleeves affixed at intervals to the exterior of the transfer line facilitate the installation of a vacuum-jacketed line. They act as standoffs to position the transfer line concentrically within the vacuum jacket line.

B68-10132

IMPROVED MOLDING PROCESS ENSURES PLASTIC PARTS OF HIGHER TENSILE STRENGTH

HEIER, W. C. DATE- APR. 1968

LANGLEY-10033

Single molding process ensures that plastic parts

/of a given mechanical design/ produced from a conventional thermosetting molding compound will have a maximum tensile strength. The process can also be used for other thermosetting compounds to produce parts with improved physical properties.

B68-10134

SHALLOW GROOVES IN JOURNAL IMPROVE AIR

BEARING PERFORMANCE

ANDERSON, W. J. CUNNINGHAM, R. E. FLEMING, D. P. DATE- APR. 1968

LEWIS-10396

Bearing designs, which shape the surface to create artificial fluid-film wedges in the absence of any applied radial load, generate radial restoring forces to keep journals from whirling. Helical- or herringbone-grooved journals or rotors show most promise of stable operation, with no sacrifice in load capacity.

B68-10161

ROLL DIFFUSION BONDING OF TITANIUM ALLOY

PANELS

BENNETT, J. DE WITT, T. E. JONES, A. G.

KOLLER, F. MUSER, C. /N. AM. ROCKWELL CORP./

DATE- MAY 1968

M-FS-14743

Roll diffusion bonding technique is used for fabricating T-stiffened panel assemblies from titanium alloy. The single unit fabrication exhibits excellent strength characteristics under tensile and compressive loads. This program is applied to structures in which weight/strength ratio and integral construction are important considerations.

B68-10162

ASBESTOS AND INCONEL COMBINED TO FORM

HOT-GAS SEAL

WOOSTER, C. W., JR. /N. AM. AVIATION/ DATE- MAY 1968

M-FS-14004

Hot-gas seal prevents warpage tendencies in large flange joints exposed to high temperatures, such as those present in large space vehicle engine exhausts. Two Inconel wire mesh cores are held in place by an asbestos cloth cover that acts as a spacer to form the seal.

B68-10165

BEARINGS USE DRY SELF-LUBRICATING CAGE

MATERIALS

ANDERSON, W. J. GLENN, D. C. SCRIBBE, H. W.

DATE- MAY 1968

LEWIS-10432

Rolling element bearings in spacecraft mechanical systems use solid lubricant composites of polytetrafluoroethylene in the bearing cage which functions as the lubricant reservoir. The cage spaces the rolling elements equally and provides the lubricant at the bearing load-carrying surface.

B68-10168

BALLAST BARGE CONCEPT FOR UNDERWATER

STRUCTURES

PAYNE, V. E. DATE- JUN. 1968

KSC-10196

Ballast barge for underwater structure consists of a reinforced concrete structure partitioned into watertight compartments. The barge structure includes a 3-way venting valve, a compressed air manifold, a master valve for connecting the manifold to an air line, and an open port in each compartment for admitting and expelling sea water.

B68-10176

HIGH-TEMPERATURE BEARING-CAGE MATERIALS

ANDERSON, W. J. ZARETSKY, E. V. DATE- JUN. 1968

LEWIS-10403

Evaluation tests conducted at temperatures of 500 and 700 degrees F reveal that S-Monel and AISI M-1 steel are suitable as high temperature cage materials for precision bearings. The area of the wear scar in the cage pocket that developed during the test was used as the measure of wear.

B68-10180

SQUEEZE-FILM GAS BEARING TECHNOLOGY

05 MECHANICAL

PAN, C. H. T. /MECH. TECHNOL./ DATE- JUN. 1968
 REAN- SEE ALSO B66-10226
 M-FS-14821

Squeeze-film bearing is studied to develop a low-friction suspension for the output-axis gimbal of a single-degree-of-freedom gyroscope. Included are a review of pertinent literature, the theory of squeeze-film lubrication, and design elements.

B68-10209
 MAGNETICALLY CONTROLLED TORQUE WRENCH
 PREVENTS OVERTORQUING
 ROHRER, J. A. DATE- JUN. 1968
 SAN-10002

Magnetically controlled torque wrench produces the required torque values accurately, and prevents overtightening. The force between a magnet and a soft iron bar on the arms of the wrench constitutes a predetermined maximum torque that cannot be exceeded. So long as the magnetic flux remains constant, the torque remains the same.

B68-10211
 PROPOSED GAS GENERATION ASSEMBLY WOULD
 RECOVER DEEPLY SUBMERGED OBJECTS
 SPRAGUE, C. W. DATE- JUN. 1968
 SAN-10007

Gas generation system, used for recovery of submerged objects, generates hydrogen gas by the reaction of sodium with sea water. The assembly consists of flooded flotation tanks cabled together, equipped with relief valves to equalize pressure as the array ascends and hydrostatic pressure diminishes, and carrying remotely activated welding units.

B68-10219
 PACKAGING CRITERIA FOR TRANSPORTATION AND
 HANDLING SHOCK AND VIBRATION
 SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- JUN. 1968
 M-FS-13007

Information compiled on the shock and vibration environment encountered by items and equipment during shipment shows the distribution of drop heights for particular packages, distribution systems, and handling operations. Applications of the data to typical package design problems are discussed.

B68-10222
 ASSEMBLY, CHECKOUT, AND OPERATION
 OPTIMIZATION ANALYSIS TECHNIQUE FOR
 COMPLEX SYSTEMS
 SPON- INNOVATOR NOT GIVEN /MARSHALL/ DATE- JUN. 1968
 M-FS-14105 M-FS-14132 M-FS-14137

Computerized simulation model of a launch vehicle/ground support equipment system optimizes assembly, checkout, and operation of the system. The model is used to determine performance parameters in three phases or modes - /1/ systems optimization techniques, /2/ operation analysis methodology, and /3/ systems effectiveness analysis technique.

B68-10225
 LASER SYSTEM USED FOR DYNAMIC BALANCING OF
 GYROSCOPES
 POPICK, H. ROBERTS, D. L. /KORAD CORP./ DATE-
 JUN. 1968
 M-FS-12218

System using a pulsed ruby laser balances or trims gyro rotors spinning at speeds of up to 24,000 rpm. It is designed to detect high spots on the spinning rotor and to focus a precisely timed laser beam on these detected spots.

B68-10229
 EFFECT OF SURFACE IRREGULARITIES ON BELLOWS
 FATIGUE LIFE
 SCHMIDT, E. H. SHEAFFER, E. P. TURNER, J. D.
 ZEIMER, R. I. /N. AM. ROCKWELL CORP./ DATE- JUL.
 1968
 M-FS-14480

Report presents test data on the bending fatigue life of notched sheet specimens. The influence of a surface irregularity on the fatigue life of a metal bellows is evaluated, with emphasis on accidental defects in ducting bellows which are impossible to avoid short of completely

eliminating human contact.

B68-10235
 TUBE SWAGING DEVICE USES EXPLOSIVE FORCE
 MC SMITH, D. G. DATE- JUL. 1968
 LANGLEY-10092

Tool joins a sleeve to a tube by explosive swaging, thus providing a leakproof, lightweight, and strong assembly. No new or different material is used in this method and therefore the thermal and galvanic properties are maintained.

B68-10237
 DUAL RATE PRESSURE RELIEF VALVE
 STEENEKEN, J. /GARRETT CORP./ DATE- JUL. 1968
 MSC-11606

Pressure relief valve vents at a slow bleed rate at one pressure level and at a higher bleed rate at a higher pressure level. The valve housing contains a sleeve, inlet port, outlet port, an orifice, a ball and seat arrangement, and a Belleville spring diaphragm.

B68-10239
 MANUAL OF INDUSTRIAL DIAMONDS PLUS DRESSING
 AND GRINDING CRITERIA FOR MACHINING
 SUPERALLOYS
 CARR, W. L. /N. AM. ROCKWELL CORP./ DATE- JUL.
 1968
 M-FS-14582

Manual combines the important and controlling factors for the proper selection and use of diamond stones for cutting and dressing grinding wheels. This manual is a compilation of empirical data and incorporates an original companion treatise on the physical descriptions of the diamond stones, their grading, and their applications.

B68-10247
 DYNAMICALLY STABLE CHECK VALVE CONCEPT FOR
 WIDE FLOW RANGE
 ABSALOM, J. G. /N. AM. ROCKWELL CORP./ DATE-
 JUL. 1968
 M-FS-14579

Poppet-type check valve design accommodates a wide flow range without the usual chatter problem at low flow conditions. This pressure isolation check valve is proposed for the J-2 rocket pneumatic package.

B68-10248
 TENSILE TESTING GRIPS ENSURE UNIFORM LOADING
 OF BIMETAL TUBING SPECIMENS
 DRISCOLL, S. D. HUNT, V. /AEROJET-GEN. CORP./
 DATE- SEP. 1968
 LEWIS-10267

Tensile testing grip uniformly distributes stresses to the internal and external tube of bimetal tubing specimens. The grip is comprised of a slotted external tube grip, a slotted internal tube grip, a machine bolt and nut, an internal grip expansion cone, and an external grip compression nut.

B68-10249
 HIGH-TEMPERATURE BEARING LUBRICANTS
 ANDERSON, W. J. PARKER, R. J. ZARETSKY, E. V.
 DATE- SEP. 1968
 LEWIS-10408

Synthetic paraffinic oil lubricates ball bearings at temperatures in the 600 degrees F range. The lubricant contains antiwear and antifoam additives, is thermally stable in the high temperature range, but requires protection from oxygen.

B68-10250
 QUICK-ATTACH CLAMP
 VANO, A. E. DATE- JUL. 1968
 XFR-05421

Clamp of the slideable jaw type can be applied to moving lines such as cables or ropes. The clamp has a trigger-operated jaw that can be attached to a redrop parachute on a moving tow cable. The trigger mechanism maintains the jaws retracted in the housing until they are released for clamping.

B68-10257

INSPECTION CRITERIA ENSURE QUALITY CONTROL
OF PARALLEL GAP SOLDERING
BURKA, J. A. /SPACO, INC./ DATE- JUL. 1968
M-FS-14530

Investigation of parallel gap soldering of electrical leads resulted in recommendation on material preparation, equipment, process control, and visual inspection criteria to ensure reliable solder joints. The recommendations will minimize problems in heat-dwell time, amount of solder, bridging conductors, and damage of circuitry.

B68-10261

DYNAMIC-RESERVOIR LUBRICATING DEVICE
PICKEN, W. H. SCHULIEN, H. E. /BENDIX CORP./
DATE- JUL. 1968
M-FS-14652

Dynamic-reservoir lubricating device supplies controlled amounts of lubricating oil to ball bearings during operation of the bearings. The dynamic reservoir lubricating device includes a rotating reservoir nut, a hollow cylinder filled with lubricating oil, flow restrictors and a ball bearing retainer.

B68-10266

SHOCK-ABSORBING CASTER WHEEL IS SIMPLE AND
COMPACT
KINDLEY, R. J. DATE- JUL. 1968
SAN-10019

Compact shock-absorbing caster wheel mitigates or absorbs shock by a compressible tire which deforms into a cavity between its inner edge and the wheel hub. A tee-shaped annular ring embedded in the tire distributes loads more uniformly throughout both wheel and tire.

B68-10270

SPIRAL-GROOVED SHAFT SEALS SUBSTANTIALLY
REDUCE LEAKAGE AND WEAR
ALLEN, G. P. JOHNSON, R. L. LUDWIG, L. P.
STROM, T. N. DATE- JUL. 1968
LEWIS-10397

Rotating shaft seals used in space power systems have spiral grooves in one or both of the opposing seal faces. These grooves induce a pumping action which displaces the intervening fluid radially inward toward the shaft and counters the centrifugal forces which tend to displace the fluid outward.

B68-10277

THERMAL PROTECTIVE VISOR FOR ENTERING
HIGH TEMPERATURE AREAS
BURGETT, F. A. DATE- AUG. 1968
MSC-10285

Chamber observer suit visor protects the eyes and ears of the wearer while he is performing rescue operations during a fire. The visor is a simple curved sandwich of selected glass plates, gold coated polyester plastic film, and a dead air space, all mounted in an aluminum frame.

B68-10284

FABRICATION TECHNIQUES DEVELOPED FOR SMALL-
DIAMETER, THIN-WALL TUNGSTEN AND TUNGSTEN
ALLOY TUBING
BRILLHART, D. C. BURT, W. R. KARASEK, F. J.
MAYFIELD, R. M. DATE- AUG. 1968 REAN- SEE ALSO
ANL-7151
ARG-10100

Report describes methods for the fabrication of tungsten and tungsten alloys into small-diameter, thin-wall tubing of nuclear quality. The tungsten, or tungsten alloy tube blanks are produced by double extrusion. Plug-drawing has emerged as an excellent secondary fabrication technique for the reduction of the overall tube dimensions.

B68-10286

BETWEEN-BEARING SHAFT SEAL, A CONCEPT
FURST, R. B. /N. AM. ROCKWELL CORP./ DATE- AUG.
1968
M-FS-18179

Placing the shaft seals, in an oxidizer pump, between the pump bearings, reduces the shaft overhang length and overall turbopump length.

This arrangement of the components in the pump removes the seals from the hot turbine region.

B68-10288

ADVANCES IN LIGHT-GAS GUN TECHNOLOGY
COWAN, P. L. MURPHY, J. R. /COMPUTING DEVICES OF
CANADA/ DATE- AUG. 1968
M-FS-14270

Constant-area accelerator used with light-gas guns increases the velocity of accelerating projectiles. A disposable accelerator on the muzzle of the gun uses the energy and momentum of a primary projectile, launched by the gun, to achieve high velocities of a light secondary projectile accelerated from rest in the accelerator.

B68-10295

VENTURI METER WITH SEPARABLE DIFFUSER
DUDZINSKI, T. J. JOHNSON, R. C. KRAUSE, L. N.
DATE- AUG. 1968
LEWIS-10483

The diffuser and nozzle of venturi meters are made as separate pieces for easier fabrication. Venturi meter efficiency is affected by the diffuser inlet diameter being greater than two percent larger than the throat diameter, by Reynolds number and by Mach number.

B68-10297

PREPARING ROCK POWDER SPECIMENS OF
CONTROLLED SIZE DISTRIBUTION
BLUM, P. /NORTON RES. CORP./ DATE- AUG. 1968
NPO-10007

Apparatus produces rock powder specimens of the size distribution needed in geological sampling. By cutting grooves in the surface of the rock sample and then by milling these shallow, parallel ridges, the powder specimen is produced. Particle size distribution is controlled by changing the height and width of ridges.

B68-10299

HIGH-TORQUE POWER WRENCH, A CONCEPT
COX, E. F. /N. AM. ROCKWELL CORP./ DATE- AUG.
1968
M-FS-18194

High-torque power wrench is small enough to be handled by one or two men yet has sufficient torque to remove 1-1/2- to 4-inch nuts from high-pressure tanks and valves. The action can be made automatic by use of solenoid-operated valves and suitable switches.

B68-10300

CONCEPTUAL HERMETICALLY SEALED ELBOW
ACTUATOR
WUENSCHER, H. F. DATE- AUG. 1968
M-FS-14710

Electrically or hydraulically powered, hermetically sealed angular or rotary actuator deflects mechanical members over a range of plus or minus 180 degrees. The actuator design provides incremental flexures which keep the local deflection rate within elastic limits.

B68-10318

COMPRESSIBLE SLEEVE PROVIDES AUTOMATIC
CENTERING FOR GRINDING OR TURNING OF
CYLINDERS
ROHRER, J. A. DATE- AUG. 1968
SAN-10021

Elastomeric sleeve supported on a threaded mandrel automatically centers cylindrical castings for grinding or turning. By expanding the diameter of the sleeve with pressure against the ends, the casting becomes rigidly supported and the surfacing operation can be completed.

B68-10331

ELECTRON BEAM SELECTIVELY SEALS POROUS METAL
FILTERS
SNYDER, J. A. /HUGHES AIRCRAFT CO./ TULISIAK, G.
DATE- SEP. 1968
LEWIS-10162

Electron beam welding selectively seals the outer surfaces of porous metal filters and impedances used in fluid flow systems. The outer surface can be sealed by melting a thin outer layer of the

05MECHANICAL

porous material with an electron beam so that the melted material fills all surface pores.

B68-10332

DUAL WIRE WELD FEED PROPORTIONER

NUGENT, R. E. /N. AM. ROCKWELL CORP./ DATE- SEP. 1968

M-FS-18037

Dual feed mechanism enables proportioning of two different weld feed wires during automated TIG welding to produce a weld alloy deposit of the desired composition. The wires are fed into the weld simultaneously. The relative feed rates of the wires and the wire diameters determine the weld deposit composition.

B68-10338

TWO-FLUID, IMPINGING-SHEET INJECTOR

RIEBLING, R. W. DATE- SEP. 1968

NPO-10547

Two-fluid, impinging-sheet propellant injector reduces the severe erosion found to occur when ejector elements are directly exposed during throttling without the benefits of a cooling flow of the propellant liquids. It greatly improves combustion efficiency by venting the secondary stream of combustion gases generated by backspray reaction.

B68-10343

X-RAY FILM HOLDER PERMITS SINGLE

CONTINUOUS PICTURE OF TUBING JOINT

DIAMOND, J. W. HUNT, V. MIKESSELL, C.

/AEROJET-GEN. CORP./ DATE- SEP. 1968

LEWIS-10382

X ray technique produces a clear continuous picture of a welded brazed tubing joint on a single film with one exposure. A stationary Xray source located in the plane of the joint to be inspected, a means of rotating the tube, and a unique internal film holder and positioning fixture are used.

B68-10352

MACHINING TECHNIQUE PREVENTS UNDERCUTTING IN TENSILE SPECIMENS

MOSCATER, R. E. ROYSTER, D. M. DATE- SEP. 1968

LANGLEY-10281

Machining technique prevents undercutting at the test section in tensile specimens when machining the four corners of the reduced section. Made with a gradual taper in the test section, the width of the center of the tensile specimen is less than the width at the four corners of the reduced section.

B68-10353

SHOCK AND VIBRATION RESPONSE OF MULTISTAGE STRUCTURE

LEE, S. Y. LIYEOS, J. G. TANG, S. S. /N. AM.

ROCKWELL CORP./ DATE- SEP. 1968

M-FS-14972

Study of the shock and vibration response of a multistage structure employed analytically, lumped-mass, continuous-beam, multimode, and matrix-iteration methods. The study was made on the load paths, transmissibility, and attenuation properties along a longitudinal axis of a long, slender structure with increasing degree of complexity.

B68-10359

REMOTELY OPERATED GRIPPER PROVIDES VERTICAL

CONTROL ROD MOVEMENT

HUTTER, E. KOCH, L. J. DATE- SEP. 1968

ARG-10160

Remote actuation of a gripper shaft affects vertical engagement between a drive shaft and control rod. A secondary function of the gripper is to provide remote indication of positive completion of the gripping or ungripping operation.

B68-10371

VERSATILE IMPACT HAND TOOL

HODIL, E. R. /OLIN WINCHESTER/ DATE- OCT. 1968

M-FS-20140

Improved cartridge-actuated impact hand tool includes a common power head and four attachments

to punch holes, drive forced entry fasteners, hammer, and shear. The attachments are self-contained and easily fitted to the power head assembly.

B68-10372

IMPROVED ELECTROMECHANICAL MASTER--SLAVE MANIPULATOR

FORSTER, G. GOERTZ, R. GRIMSON, J. MINGESZ, D.

POTTS, C. DATE- OCT. 1968

ARG-10027

Electric master-slave manipulator uses force multiplication and allows the operator to remotely control the slave arm. Both the master and slave arms execute seven distinct motions by a specially designed force-reflecting servo having a one to one correspondence between the motion at the master and slave.

B68-10383

EFFECTS OF HIGH FREQUENCY CURRENT IN WELDING ALUMINUM ALLOY 6061

FISH, R. E. /N. AM. ROCKWELL CORP./ DATE- OCT. 1968

M-FS-18337

Uncontrolled high frequency current causes cracking in the heat-affected zone of aluminum alloy 6061 weldments during tungsten inert gas arc welding. Cracking developed when an improperly adjusted superimposed high frequency current was agitating the semimolten metal in the areas of grain boundary.

B68-10387

MINIATURE PAINT-SPRAY GUN FOR RECESSED AREAS

VANASSE, M. A. /N. AM. ROCKWELL CORP./ DATE- OCT. 1968

MSC-13060

Miniature spray gun regulates paints and other liquids to spray at close range, facilitating spraying of remote or recessed areas. Individual valves for regulating air pressure and paint maximizes atomization for low pressure spraying.

B68-10393

DETERMINING GAS LEAKAGE FROM BUBBLE FORMATIONS

DECASTRA, J. E. WELLS, F. E. DATE- OCT. 1968

M-FS-14841

Gas leakage rates are quantitatively estimated using threaded and flanged fittings by standardizing bubble appearance. Three classes of bubble formations have been proposed.

B68-10395

DESIGN OF FLUID-DUCT BENDS WITH LOW PRESSURE LOSS

GERLACH, R. /SOUTHWEST RES. INST./ DATE- OCT. 1968

M-FS-20176

Duct bends are designed in which pressure losses and velocity profile distortions due to centrifugal force gradients are significantly reduced. The correction is achieved by properly changing the cross sectional area through the bend without affecting the shape of the duct at the upstream and downstream sides.

B68-10398

BATTERY-PACKAGE DESIGN PROVIDES FOR CELL COOLING AND CONSTRAINT

GROSS, S. /BOEING CO./ DATE- OCT. 1968

MSC-11839

Lightweight battery-package provides for even cooling of individual alkaline cells, constraint against cell expansion, and convenient placement of cells. The battery package also provides for venting of the cells and includes instrumentation to measure cell temperature, pressure, and voltage.

B68-10401

COMPACT MONITORING AND CONTROL CONSOLE FOR PRESSURIZED GAS BOTTLES

FREEMAN, B. PILICHI, C. A. /N. AM. ROCKWELL

CORP./ DATE- NOV. 1968

M-FS-14874

Compact monitoring and control console dispenses

gas over a range of pressures from conventional compressed-gas cylinders. It incorporates in a single assembly the necessary equipment for a portable pressurization system that can be used in welding and other operations requiring a controlled gas supply.

B68-10407

AN INVESTIGATION OF PARTICLE MIXING IN A GAS-FLUIDIZED BED

CARLSON, R. E. GABOR, J. D. DATE- DEC. 1968
ARG-10182

Mechanism for particle movement in gas-fluidized beds was studied both from the theoretical and experimental points of view. In a two-dimensional fluidized bed particle trajectories were photographed when a bubble passed through.

B68-10417

HAND-TIGHTENED, HIGH-PRESSURE SEAL

MEYER, W. A. /N. AM. ROCKWELL CORP./ DATE- DEC. 1968

M-FS-18416

To provide flared tubing and hose connections for high-pressure hand tightened cryogenic service, a 1/4-inch male AN seal was modified by machining to receive a special, double-truncated-cone-shaped Kel-F washer between it and the flared flex hose connector.

B68-10439

HYDROSTATIC TESTING OF POROUS ASSEMBLIES

BIGELOW, W. L. /N. AM. ROCKWELL CORP./ DATE- DEC. 1968

M-FS-18298

Pores of the material were plugged with dust particles suspended in water. The plugging material used was a standard test dust prepared as a slurry in distilled water. This technique provides a permanent high-integrity seal for porous material without affecting its physical properties, yet permitting pressure testing to verify structural adequacy.

B68-10440

LOW FRICTION SERVO VALVE

DUSTIN, M. O. DATE- NOV. 1968
LEWIS-10574

Valve was developed using air bearings which provide frictionless operation. The servo valve is of the flat plate type with rectangular meter openings. Fluid bearings support the metering plate. The overlap is adjustable by means of a variable hinge block support.

B68-10441

LOW COST TECHNIQUES FOR FABRICATING LOBED BEARINGS

SCHULLER, F. T. DATE- NOV. 1968
LEWIS-10296

New low cost technique utilizes shims to create the lobes in bearing. Conventional methods of manufacture require accurate off-center grinding of the inside diameter of a bearing in a housing at various arc lengths depending on the number of lobes required.

B68-10444

COAXIAL CABLE STRIPPER FOR CONFINED AREAS

BROWN, J. D. LIPSCOMB, W. G. /BOEING CO./ DATE- NOV. 1968

KSC-10167

Manual coaxial cable stripper quickly and accurately prepares a coaxial cable in a confined area. With this tool, preparation time is greatly reduced, and a completely inexperienced technician can perform the operation.

B68-10503

FLUID POWER-TRANSMITTING GAS BEARING

COLLINS, D. DE FURIA, R. EZEKIEL, F. YANG, P. DATE- NOV. 1968

ERC-10097

Fluid power-transmitting gas bearing was designed that is essentially frictionless, stable, and highly efficient. The two basic components of this design are the base assembly and the upper plate. System could be a fluidic control system,

a momentum exchange or reaction jet device.

B68-10507

ELECTRONIC COMPONENT RELIABILITY ANALYSIS BY DATA REDUCTION SYSTEM

DIMM, R. M. HUNT, D. G. /BOEING CO./ DATE- NOV. 1968

NPO-10243

Mechanized data reduction system has been designed to take advantage of the data handling capacity of computers and to reduce voluminous and unrelated test and performance data to a format useful for the rapid analysis of electronic component reliability.

B68-10509

ROTARY-KNIFE STRIPPER FACILITATES REMOVAL OF X-RAY FILM FROM PACK

MITCHELL, D. K. /BOEING CO./ DATE- NOV. 1968
M-FS-14837

Rotary-knife stripper facilitates removal of X-ray film from the daylight pack paper sleeve. The new stripper is rectangular, approximately 4 inches wide, 5 inches high, and 7 inches long.

B68-10512

BOYDBOLT, A POSITIVE-LATCH, SIMPLE-RELEASE FASTENER

BRUEGER, J. FENSKE, T. HAMILL, W. KATZ, M. /BENDIX CORP./ DATE- NOV. 1968

MSC-13061

Fastener /Boydolt/ has recently been designed to furnish positive lock and release characteristics that positively prevent accidental adverse functions of lock or release.

B68-10515

FATIGUE OF REINFORCED CONCRETE BEAMS UNDER DYNAMIC LOADING

CHAN, G. C. /WYLLIE LABS./ DATE- NOV. 1968
M-FS-14980

Study, consisting of a literature survey and experiments, determined the strength properties of reinforced concrete beams subjected to vibrational stresses.

B68-10530

VERTICAL BORING MILL CAPACITY IS INCREASED

YOUNG, R. J. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968

M-FS-16196

Commercially available vertical boring mill with a nominal capacity to 27 feet in diameter of workpiece has been modified in-shop to handle work up to 36 feet in diameter. Capacity was increased by adding extension saddles to the mill support columns on each side.

B68-10531

DESIGN ELIMINATES RADIAL THERMAL EXPANSION IN TURBINE STATOR COMPONENTS

ANDERSON, M. J. DIETRICH, J. A. /N. AM. ROCKWELL CORP./ DATE- NOV. 1968

M-FS-18146

Stress levels created in turbine stator components because of differential thermal expansion was eliminated by incorporation of a semifloating design, in which the stator vanes are retained by the outer ring assembly and radially piloted in the inner ring.

B68-10534

IMPROVED THERMAL TREATMENT OF ALUMINUM ALLOY 7075

COCKS, F. H. /TYCO LABS./ DATE- DEC. 1968
M-FS-20083

Newly developed tempering treatment considerably increases the corrosion resistance of 7075-T6 alloy and concomitantly preserves its yield strength. The results of tests on samples of the alloy subjected to the above treatments show that when the overaging period is 12 hours /at 325 degrees F/, the alloy exhibits a yield strength of 73,000 psi.

B68-10535

PIROTECHNIC-ACTUATED CABLE RELEASE

HANSON, R. W. DATE- DEC. 1968
XNP-10849

05 MECHANICAL

Remote, unattended means has been designed and reduced to practice that retains and then releases an attached load by means of a restrained cable. The cable is released by an electrical impulse on signal.

B68-10537

FLUIDIC TRANSDUCER GIVES PRESSURE OUTPUT AS FUNCTION OF TEMPERATURE

WALL, D. B. /MARTIN CO./ DATE- DEC. 1968 REAN- SEE ALSO B68-10538

ERC-10093

Fluidic transducer gives a pressure output signal that is a direct function of the differential temperature sensed by the device. The transducer is arranged as a bridge.

B68-10538

FLUIDIC ANALOG AMPLIFIER

MC KENZIE, C. P. /MARTIN CO./ DATE- DEC. 1968

REAN- SEE ALSO B68-10537

ERC-10102

Five-stage, high-gain, push-pull fluidic amplifier provides increased range and improved linearity. The fluidic amplifier was designed to operate in conjunction with a fluidic transducer.

B68-10540

TUBE JOINT LEAK REPAIR COUPLING

FERGUSON, W. B. /N. AM. ROCKWELL CORP./ DATE-

DEC. 1968

MSC-15022

Tube joint leak repair coupling consists of 2 split seals, 1 male split nut, 1 female split nut, and two aligning pins. Each split nut consists of 2 half-shell sections which, when engaged, are held together by a dovetail joint and an aligning pin.

B68-10549

HIGH-TORQUE PRECISION STEPPING DRIVE

KASPARACK, W. E. DATE- NOV. 1968

M-FS-14772

Stepping drive has been designed for precise incremental angular positioning of scale models of spacecraft about a horizontal axis in order to accurately measure antenna receiving and transmitting characteristics. Positioning is insured by spring-loaded, self-locking plungers.

B68-10550

CONTACT-SPRING FORMING MACHINE FOR FLAT

CONDUCTOR CABLE RECEPTACLES

ANGELE, W. MARTINECK, H. G. DATE- DEC. 1968

REAN- SEE ALSO NASA-SP-5043

M-FS-20126

Machine tool produces beryllium-copper contact springs for FCC /flat conductor cable/ feed-through receptacles. The springs are heat-treated and plated to impart the required electrical contact properties.

B68-10551

WELD PREPARATION TOOL FOR PIPES AND TUBING

WALLACE, E. D. DATE- DEC. 1968

KSC-09955

Improved scarfing tool consists of a mount-table, roller-guided assembly. It converts a conventional routing machine for relatively precise field preparation of pipes for welding.

B68-10567

RADIAL INFLOW TURBINE DESIGN CHARTS

ROHLIK, H. E. DATE- DEC. 1968

LEWIS-10720

Design charts were prepared for the selection of turbine geometry corresponding to maximum turbine efficiency. Optimum values can be determined as functions of specific speed.

B68-10573

FIXTURE FACILITATES SOLDERING OPERATIONS

WHITE, C. H. /CHRYSLER CORP./ DATE- DEC. 1968

M-FS-14456

Soldering fixture, designed for printed circuit cards, is a basic bench-mounted, self-contained integral unit combining all soldering needs into a compact, readily available work station. All tools, materials, and accessories are available to

provide an ideal station to perform critical soldering.

B68-10575

HOISTING FRAME FACILITATES HANDLING OF LARGE

OBJECTS

COLPEAN, K. V. HOLCOMB, D. F. /N. AM. ROCKWELL

CORP./ DATE- DEC. 1968

M-FS-16166

Hoisting frame can be used with a standard 5-ton forklift to handle the large spreader bars, or other bulky pieces of equipment, much faster and more efficiently than with a boom or gantry crane. In addition forklifts of this type are more readily available.

B69-10008

TAPE READING FIXTURE

SPON- INNOVATOR NOT GIVEN /CHRYSLER CORP./ DATE-

JAN. 1969

M-FS-14146

Commercially available roller type desk pad provides an efficient and orderly manner of handling rolled paper tapes for proofreading. The fixture, which is modified to accept Flex-O-Writer or similar tapes and roll them in either direction, reduces the chance of damaging or soiling the tapes through repeated handling.

B69-10009

GUN FACILITATES ADHESIVE BONDING OF STUDS

TO SURFACES

DAVIS, B. K. SIMPSON, W. G. DATE- JAN. 1969

M-FS-20299

Gun facilitates adhesive bonding of thermoplastic-backed studs to smooth, hard surfaces. Such studs can be used for mounting loads where defacement with drilled holes cannot be tolerated. These studs can be easily removed by softening the plastic bonding with heat from the gun.

B69-10016

SEMITOROIDAL-DIAPHRAGM CAVITATING VALVE

DESIGNED FOR BIPOPELLANT FLOW CONTROL

YOUNG, A. L. /TRW, INC./ DATE- FEB. 1969

XNP-09704

Valve controls the flow of bipropellant liquids in rocket engines. Throttling and cavitation of the liquids are controlled by axial deflections of a semitoroidal metal diaphragm. The valve is highly resistant to corrosion and leakage, and should be useful in food processing and chemical industries.

B69-10018

COMPOUND TAPER MILLING MACHINE

CAMPBELL, N. R. /N. AM. ROCKWELL CORP./ DATE-

FEB. 1969

MSC-15174

Simple, inexpensive milling machine tapers panels from a common apex to a uniform height at panel edge regardless of the panel perimeter configuration. The machine consists of an adjustable angled beam upon which the milling tool moves back and forth above a rotatable table upon which the workpiece is held.

B69-10019

BERYLLIUM FASTENER TECHNOLOGY

GLACKIN, J. J. GOWEN, E. F., JR. GRIES, G. W.

KEENEY, C. J., JR. /SPS LABS./ WOOD, C. M.

DATE- FEB. 1969

M-FS-20306

Program was conducted to develop, produce, and test optimum-configuration, beryllium prestressed and blind fasteners. The program was carried out in four phases - phase 1, feasibility study, phase 2, development, phase 3, evaluation of beryllium alloys, and phase 4, fabrication and testing.

B69-10021

FIFTH-WHEEL FORK TRUCK ADAPTER

SMITH, F. L. /CHRYSLER CORP./ DATE- FEB. 1969

M-FS-14460

Standard fifth wheel mounted on a rectangular steel structure adapted for use with a fork lift truck provides a fast, safe, and economical way of maneuvering semitrailers in close quarters at plants and warehouses. One operator can move and

locate a semitrailer without dismantling from a fork lift truck.

B69-10030

MULTIPLE-ORIFICE THROTTLE VALVE

FITTON, J. S., JR. ROSALES, L. A. /TRW, INC./
DATE- FEB. 1969

KNP-09698

Multiple-orifice throttle valve is not subject to cold welding in a vacuum environment and is compatible with strong oxidizing fluid. The valve is of all metal construction using simple components that do not slide or rotate and excludes static or dynamic seals.

B69-10044

ABRASION AND RESISTANT DISCHARGE VALVE

DEVELOPED

GOTTWALD, W. L. DATE- FEB. 1969

ARG-10219

Discharge valve capable of withstanding intense radiation and high abrasion was developed for use in a fluidized bed reactor. The valve which employs a replaceable Teflon seal, has only one moving part and is designed for remote assembly and disassembly.

B69-10046

HYDRODYNAMICS OF A NEW CONCEPT OF PRIMARY

CONTAINMENT BY ENERGY ABSORPTION

FISTEDIS, S. H. SORESENSEN, H. C. DATE- FEB. 1969

REAN- SEE ALSO ANL-7214

ARG-10242

Fluid dynamical analysis for idealized reactors system with spherical symmetry determines the effect which the destructive component of a nuclear accident produces on primary containment structures. Steel strands surrounding the reactor cavity in the biological shield exhibit plastic deformation to achieve the energy absorption.

B69-10051

WELDED REPAIRS OF PUNCTURED THIN-WALLED

ALUMINUM PRESSURE VESSELS

JONES, D. J. /BOEING CO./ DATE- FEB. 1969

M-FS-14836

Punctures in thin-walled aluminum pressure vessels are repaired by plugging the hole with an interference-fit disc and welding the unit. The repaired vessels withstood test pressures in excess of vessel ultimate design values for 2-, 4-, and 6-inch holes in 0.202-inch-thick aluminum alloy parent material.

B69-10052

HOT-CRACKING STUDIES OF INCONEL 718 WELD-

HEAT-AFFECTED ZONES

THOMPSON, E. G. /N. AM. ROCKWELL CORP./ DATE-

FEB. 1969

M-FS-18211

Hot ductility tests, gas-tungsten-arc fillerless fusion tests, and circle patch-weld-restraint tests were conducted on Inconel 718 to better understand and correlate the weldability /resistance to hot cracking/ of the alloy. A correlation of the test results with composition, heat-treat condition, grain size, and microstructure was made.

B69-10059

REIDENTIFYING HARDWARE AFTER LOSS OF SERIAL

NUMBER

WELLS, E. J. /N. AM. ROCKWELL CORP./ DATE- MAR.

1969

M-FS-18133

System traces fabrication and inspection records of special hardware back to the raw material. Reidentification of hardware, after loss of serial numbers, is established by X raying all parts again and comparing the new film with the original, whose numbers were previously recorded on serialized documents.

B69-10062

TWO-AXIS WINCH INSTALLER FOR HEAVY DUCTS

IN CONFINED SPACE

COX, E. F. /N. AM. ROCKWELL CORP./ DATE- MAR.

1969

M-FS-14254

Two-axis winching and traversing device is used for installing liquid-propellant rocket-engine fuel and liquid oxygen suction ducts between the valves and the rocket engine on a test stand. The device raises and maneuvers the duct into the required position where it can be safely installed by mechanics.

B69-10069

INFLATABLE BLADDER TO FACILITATE HANDLING OF

HEAVY OBJECTS - A CONCEPT

MC GOLDRICK, G. J. /N. AM. ROCKWELL CORP./ DATE-

MAR. 1969

M-FS-14272

Inflatable bladder facilitates the removal of heavy, highly finished metal parts from tote boxes or shipping containers. The proposed concept permits removal without danger of damage to the parts or injury to handling personnel.

B69-10071

FATIGUE FAILURE IN METAL BELLOWS DUE TO

FLOW-INDUCED VIBRATIONS

DANIELS, C. M. FARGO, C. G. /N. AM. ROCKWELL

CORP./ DATE- MAR. 1969

M-FS-18383

To prevent fatigue due to flow-induced vibrations in metal bellows connected to ducts carrying liquid hydrogen, a study was made which shows that the flexure lines are in general a function of the vibration coupling between the fluid and bellows structure, and the nature of the external environment.

B69-10076

NOZZLES FOR SIZE RECLASSIFICATION OF

MICROFOG PARTICLES

LEONARDI, S. J. SHIN, J. /MOBIL RES. AND

DEVELOP. CORP./ DATE- MAR. 1969

LEWIS-10705

Modified reclassifying nozzles, commonly used with mist lubrication systems, creates larger particle sizes in the mist. The concept used involves the wetting out of particles within the nozzle with continuous reatomization of the resulting liquid film by passing gas through the nozzle.

B69-10083

DIRECT INDICATION OF PARTICLE SIZE IN

FLUIDIZED BEDS

KNUDSEN, I. E. OLSEN, W. F. DATE- MAR. 1969

REAN- SEE ALSO ANL-6907

ARG-10130

Differential pressure measurements indicate particle size and particle size distribution in fluidized beds. The technique is based on the relationship between bed particle size and the intensity and frequency of fluctuations. By measuring the fluctuations, an estimate of average particle size of the fluid-bed material can be made.

B69-10085

TUBE WELDING AND BRAZING

POORMAN, R. M. DATE- APR. 1969

M-FS-20348

Brochures outline the tools, equipment, materials, and techniques used for joining tubes by automatic and semiautomatic welding and brazing. A few of the metals being joined are stainless steels of various diameters and thickness. Techniques have been developed for on-site or work-bench repair.

B69-10086

TECHNIQUES FOR CONTROLLING WARPAGE AND

RESIDUAL STRESSES IN WELDED STRUCTURES

COLE, D. Q. /HARVEY ENG. LABS./ DATE- APR. 1969

M-FS-20307

Thermal pattern alteration technique controls both distortion and residual stresses in aluminum weldments. Cryogenic liquids and auxiliary heat sources are used to produce contraction and expansion of metal in the vicinity of the weld in such a manner as to counterbalance expansion and contraction caused by welding.

B69-10100

ELECTROMECHANICAL ROTARY ACTUATOR

05 MECHANICAL

OPERATES OVER WIDE TEMPERATURE RANGE

SULLIVAN, S. P. /N. AM. ROCKWELL CORP./ DATE- APR. 1969

M-FS-18402

Electromechanical rotary actuator, which operates over wide temperature range, contains a spring stop which has been calculated to limit internal deceleration loads to a magnitude equal to stall torque. Cryogenic capability is obtained by using dry lubricant on the gears and no lubrication on the bearings.

B69-10109

CALIBRATED WATER TANK FACILITATES PROOF-LOADING OF CRANES AND DERRICKS

KOPPI, R. K. /BOEING CO./ DATE- APR. 1969

M-FS-15059

Calibrated steel water tank provides the weight loads required for proof-testing of cranes and derricks. The use of the water tank provides a safe, fast, economical method of proof-loading cranes and derricks.

B69-10110

COLD MACHINING OF HIGH DENSITY TUNGSTEN AND OTHER MATERIALS

ZIEGELMEIER, P. DATE- APR. 1969

ARG-10289

Cold machining process, which uses a sub-zero refrigerated cutting fluid, is used for machining refractory or reactive metals and alloys. Special carbide tools for turning and drilling these alloys further improve the cutting performance.

B69-10119

MAGNETRON TUNER HAS LOCKING FEATURE

MARTUCCI, V. J. /NETCOM, INC./ DATE- APR. 1969

XNP-09771

Magnetron tuning arrangement features a means of moving a tuning ring axially within an anode cavity by a system of reduction gears engaging a threaded tuning shaft of lead screw. The shaft positions the tuning ring for the desired magnetron output frequency, and a washer prevents backlash.

B69-10127

BATTERY CASE SHEAR

PATRO, S. DATE- MAY 1969

GSFC-10783

Hand operated shear removes a battery case without disturbing the internal components which are to be tested. It consists of three tool-steel elements, the cutter blade, and a hand lever that provides the mechanical advantage required to cut steel.

B69-10128

SELF-STARTING CIRCUIT FOR SWITCHING REGULATORS

SCHRAUT, E. H. SOHL, G. /ELECTRO-OPT. SYSTEMS/ DATE- MAY 1969

LEWIS-10686

Schematic is provided on a self-starting circuit for a switching regulator which uses a logic circuit to sense a change in output voltage and provides a correction signal for dc power sources. With this device, the total power consumed by the logic circuitry is held to a minimum, and the circuit receives the optimum regulated supply power.

B69-10137

HELICAL TAPE FORMING DEVICE

BUSH, J. E. COLE, P. T. DATE- MAY 1969

GSFC-10830

Using a device that is not limited to a minimum thickness or width-to-thickness ratio, a very thin metal tape or ribbon is formed into a continuous flat wound helical coil. The device imparts the desired circular shape by squeeze rolling it with an unequal force across its width.

B69-10141

MECHANICAL PROPERTIES OF A LAP JOINT UNDER UNIFORM CLAMPING PRESSURE

DILLER, S. V. METHERELL, A. F. /MCDONNELL DOUGLAS CORP./ DATE- MAY 1969

M-FS-14538

Equations were derived for the load deflection relations, the energy dissipation per cycle, and the instantaneous rate of dissipation for a lap joint idealized as two overlapping plates clamped together under a uniform clamping pressure.

B69-10144

ADVANCES IN ALUMINUM ANODIZING

DALE, K. H. /REYNOLDS METALS CO./ DATE- MAY 1969

M-FS-14600

White anodize is applied to aluminum alloy surfaces by specific surface preparation, anodizing, pigmentation, and sealing techniques. The development techniques resulted in alloys, which are used in space vehicles, with good reflectance values and excellent corrosive resistance.

B69-10145

MIXING WELD GASES OFFERS ADVANTAGES

MAY, J. L. MENDENHALL, M. M. /N. AM. ROCKWELL CORP./ DATE- MAY 1969

M-FS-16413

Argon added to helium during gas tungsten arc cover-pass welding in the horizontal position results in a better controlled wider bead width, increased arc stability, and reduction in heat input. Adequate filler material wetness and penetration pass coverage is possible with only one pass.

B69-10150

RENEWAL OF CORROSION PROTECTION OF COATED ALUMINUM AFTER WELDING

HIGGINS, R. H. DATE- MAY 1969

M-FS-20361

Effectiveness of conversion coatings designed to protect aluminum alloys against atmospheric corrosion is reduced after exposure to high temperature or welding. Damaged coating should be manually stripped six inches from the weld and then recoated by sponge or spray with the original solution.

B69-10164

DETACHABLE CASTER ADAPTER

MOHR, R. J. /N. AM. ROCKWELL CORP./ DATE- AUG. 1969

MSC-91215

Detachable caster adapter moves heavy welding tables when fork lift trucks are not practical. A support saddle on the adapter, connected to the caster platform by means of a hinge, fits the leg of the welding table, but can be modified to fit other leg configurations.

B69-10178

DESIGN AND TESTING OF LIQUID HYDROGEN-COOLED, ULTRAHIGH-SPEED BALL BEARINGS

BUTNER, M. F. /ROCKETDYNE/ WAGNER, D. A. DATE- JUN. 1969

M-FS-18453

Large-bore, liquid hydrogen-cooled, ultrahigh-speed, rolling contact bearings of an optimum design allow optimization of large rocket engine turbopumps in which bearing speed is a limiting factor. Optimum design for the bearings resulted from an application of liquid hydrogen used as a coolant.

B69-10180

SPACE-AVING HOIST FOR TANK MANHOLES

EHRHARDT, W. R., JR. /N. AM. ROCKWELL CORP./ DATE- JUL. 1969

M-FS-16508

Working platform and collapsible basket facilitate entry of men with equipment into the overhead manhole of a deep tank. A winch and pulley rigging hold the basket which is suspended in the manhole. The basket is suspended at three points without the rig impinging on the area of the manhole.

B69-10182

JOURNAL GAS BEARING FOR CURVED SURFACES

REDMON, J. W. DATE- JUN. 1969

M-FS-20423

Optimizing bearing length and permissible axis

curvature alleviates distortion of film gap of gas lubricated journal bearing in deployment mechanisms. Required bearing length is divided into two shorter bearings interconnected by links which allow satisfactory conformity with the bent, load-carrying member.

B69-10183

ASTRONAUT'S TOOL FOR WITHDRAWING/REPLACING COMPUTER CARDS

WEST, R. L. /SPERRY RAND CORP./ DATE- JUL. 1969
M-FS-20453

Symmetrical tool allows astronauts to withdraw and replace Apollo Telescope Mount control computer cards. It is easily manipulated by a gloved hand, provides positive locking of a withdrawn card, and has a visible locking device.

B69-10184

ADJUSTABLE WRENCH FOR ELECTRONIC CONNECTORS

JOHNSON, W. C. /ROCKETDYNE/ DATE- JUN. 1969
M-FS-18547

Standard crescent wrench has been modified to provide a means whereby one adjustable tool can be used with all sizes of electronic connectors. The machined wrench jaws provide lugs for engaging the standard size slots on the different connectors.

B69-10190

TOOLS FOR APPLYING LEAD TAPE TO FLAT CONDUCTOR CABLE FOR CHEMICAL STRIPPING

ANGELE, W. DATE- JUN. 1969 REAN- SEE ALSO
NASA-SP-5043, AND NASA-SP-5924 /01/
M-FS-20429

Two tools facilitate chemical stripping of insulation on flat conductor cabling. A tape pressing tool and a taping fixture apply adhesive lead tape with the proper amount of pressure to protect the remaining insulation from the chemical stripping solution.

B69-10199

TOOLS MADE OF ICE FACILITATE FORMING OF SOFT, STICKY MATERIALS

HARRIS, J. E. /BOEING CO./ RAMSEY, J. G., JR.
SCHINBECKLER, K. D. DATE- JUN. 1969
KSC-10262

Tools made of ice facilitate the forming or shaping of materials that are soft and sticky in the uncured state. The low-temperature of the ice slows the curing of the material, extending the working time available before setup. Handling problems are eliminated because the material does not adhere to the tool, and the melting ice serves as a lubricant.

B69-10202

PROPOSED TECHNIQUE FOR VERTICAL ALIGNMENT OF A CRANE'S CABLE

GERA, J., JR. /N. AM. ROCKWELL CORP./ DATE- JUN. 1969
M-FS-16496

Proposed vertical alignment technique senses the attitude of a crane's cable and displays any deviation from the vertical. The system consists of a detector assembly fixed to the boom and a display scope located in the cabin. It has potential application with either fixed-boom cranes or gantries.

B69-10209

DETERMINATION OF THE ABSOLUTE CONTOURS OF OPTICAL FLATS

PRIMAK, W. DATE- JUL. 1969
ARG-10352

Emersons procedure is used to determine true absolute contours of optical flats. Absolute contours of standard flats are determined and a comparison is then made between standard and unknown flats. Contour differences are determined by deviation of Fizeau fringe.

B69-10227

ELECTROCHEMICAL SINTERING PROCESS FOR PRODUCING ELECTRODES FROM CADMIUM FELT AND A NICKEL OR SILVER GRID

COLSTON, E. HENNIGAN, T. J. POTTER, N. STEHMLE,
J. T. WEBSTER, W. DATE- JUL. 1969
GSFC-10764

Electrochemical sintering process produces cadmium felt electrodes. Two pieces of cadmium felt are sandwiched around a nickel screen or silver expanded metal grid, held together by mold compression, and electrochemically sintered by being put through several charge and discharge cycles at low current density.

B69-10229

J-BEVELING OF PIPE ENDS WITH A HAND-HELD TOOL

MATUS, S. T. /BENDIX CORP./ DATE- JUL. 1969
REAN- SEE ALSO B66-10145, B68-10551, AND
B69-10231
KSC-10356

Adapted cutter, driven by a hand-held, variable-speed power drill, is used in the field to cut J-bevels on the ends of stainless-steel or aluminum pipe to be joined by precision welding. With this tool an acceptable bevel is cut within 3 percent of the time required for grinding and filing.

B69-10231

TOOL SIMPLIFIES MACHINING OF PIPE ENDS FOR PRECISION WELDING

MATUS, S. T. /BENDIX CORP./ DATE- JUL. 1969
KSC-10361

Single tool prepares a pipe end for precision welding by simultaneously performing internal machining, end facing, and bevel cutting to specification standards. The machining operation requires only one milling adjustment, can be performed quickly, and produces the high quality pipe-end configurations required to ensure precision-welded joints.

B69-10242

REMOTE BALANCE WEIGHS ACCURATELY AMID HIGH RADIATION

EGGENBERGER, D. N. SHUCK, A. B. DATE- JUL. 1969
ARG-10387

Commercial beam-type balance, modified and outfitted with electronic controls and digital readout, can be remotely controlled for use in high radiation environments. This allows accurate weighing of breeder-reactor fuel pieces when they are radioactively hot.

B69-10245

REPLACEMENT OF FLUID-FILTER ELEMENTS WITHOUT INTERRUPTION OF FLOW

KOTLER, R. A. /N. AM. ROCKWELL CORP./ WARD, J. B. DATE- JUL. 1969
MSC-15499

Gatling-type filter assembly, preloaded with several filter elements enables filter replacement without breaking into the operative fluid system. When the filter element becomes contaminated, a unit inner subassembly is rotated 60 degrees to position a clean filter in the line.

B69-10261

REPAIR OF HONEYCOMB PANELS WITH WELDED BREAKAWAY STUDS

BRUCE, D. F. /N. AM. ROCKWELL CORP./ DATE- AUG. 1969
MSC-15046

Damaged metallic honeycomb panels can be repaired by drilling holes and welding breakaway studs to both facing sheets. Minimal heat required for welding reduces distortion of highly stressed panels. Repairs can be made without the use of doublers and with greater strength when doublers are used.

B69-10263

PREDICTION OF PERFORMANCE OF CENTRIFUGAL PUMPS DURING STARTS UNDER PRESSURE

ROSTAFINSKI, W. DATE- AUG. 1969
LEWIS-10900

Method which calculates start-up characteristics of centrifugal pumps reveals a capacity to predict pressure drop characteristics of pumps with vane diffusers. Calculations are based on pump geometry, design-point flow, speed, and pressure rise, and the pump characteristic within range of approximately ten percent of the design-point flow.

05 MECHANICAL

B69-10264

WELDING, BRAZING, AND SOLDERING HANDBOOK
KILGORE, A. B. /BOEING CO./ KOEHLER, M. L.
METZLER, J. W. STURGES, S. R. DATE- SEP. 1969
M-FS-20504

Handbook gives information on the selection and application of welding, brazing, and soldering techniques for joining various metals. Summary descriptions of processes, criteria for process selection, and advantages of different methods are given.

B69-10278

INSTRUCTION MANUALS FOR LIQUID PENETRANT
NONDESTRUCTIVE TESTING
SPON- INNOVATOR NOT GIVEN /GEN. DYNAMICS/ DATE-
SEP. 1969
M-FS-14010

Manuals provide quality control and test personnel with basic information on liquid penetrant testing. Topics covered include scope of application, equipment and materials used, test procedures, safety precautions, quality control, and comparison of liquid penetrant testing with other nondestructive testing processes.

B69-10279

HANDBOOK FOR DESIGN OF CONTAINERS OF FLUIDS
AND GASES FOR SPACECRAFT
CAMPBELL, R. L. KOEHLER, M. L. /BOEING CO./
DATE- SEP. 1969
M-FS-20502

Handbook guides selection of construction materials for liquids and gases used in rockets and spacecraft. Methods of design, fabrication, post-fabrication treatment, nondestructive testing, and repair are described in detail.

B69-10280

TWO-STEP ROCKET ENGINE BI-PROPELLANT VALVE
CONCEPT
CAPPS, J. E. FERGUSON, R. E. POHL, H. O. DATE-
AUG. 1969
MSC-10951

Initiating combustion of altitude control rocket engines in a precombustion chamber of ductile material reduces high pressure surges generated by hypergolic propellants. Two-step bipropellant valve concepts control initial propellant flow into precombustion chamber and subsequent full flow into main chamber.

B69-10282

COUNTERSUNK HEADSCREW RETAINER
TOTH, R. S. /N. AM. ROCKWELL CORP./ DATE- AUG.
1969
M-FS-16481

Pin locking technique for flush fasteners retains a screw under dynamic conditions when self-locking or lock wiring devices are not practical. Spring pin is countersunk through one side of the screw head into the component to form a flat surface.

B69-10284

LEAKAGE TESTER FOR FLAT CONDUCTOR CABLE
CONNECTOR
ANGELE, W. DATE- AUG. 1969 REAN- SEE ALSO
NASA-SP-5043 AND NASA-SP-5924/01/
M-FS-20427

U-tube containing liquid indicates pressure differences in a leakage tester. This tube, connecting two containers, indicates that the amount of leakage over a set period of time is calculated from the pressure and gas volume.

B69-10288

TFE-FLUOROCARBON LINERS FOR FLEXIBLE HOSES
HIGLEY, D. F. /N. AM. ROCKWELL CORP./ DATE- AUG.
1969
M-FS-16480

Flexible hose handles high rates of flow under high pressures. Short lengths of tubing are overlapped to permit flexibility with much greater parallel offset.

B69-10295

A LABORATORY METHOD FOR PRECISELY
DETERMINING THE MICRO-VOLUME-MAGNITUDES OF
LIQUID EFFLUX

CLOUTIER, R. L. /BERKELEY SCI. LAB./ DATE- AUG.
1969
ARC-10052

Micro-volumetric quantities of ejected liquid are made to produce equal volumetric displacements of a more dense material. Weight measurements are obtained on the displaced heavier liquid and used to calculate volumes based upon the known density of the heavy medium.

B69-10296

ELECTROTHERMAL LINEAR ACTUATOR
DERR, L. J. TOBIAS, R. A. DATE- AUG. 1969
NPO-10637

Converting electric power into powerful linear thrust without generation of magnetic fields is accomplished with an electrothermal linear actuator. When treated by an energized filament, a stack of bimetallic washers expands and drives the end of the shaft upward.

B69-10298

FOUR-BAR LINKAGE FOR THERMAL COMPENSATION
IN TEST MOUNTS FOR STRUCTURES
NORMAN, R. M. DATE- AUG. 1969
NPO-11059

Supporting system compensates automatically for the dimensional changes produced by contraction and expansion of structures undergoing thermal proofing on mounts. Structurally destructive forces would be exerted on a spacecraft in a simulator if this four bar linkage test mount was not used.

B69-10302

PARAMETERS FOR GOOD WELDING OF COPPER TO
NICKEL
HALL, L. G. /MARTIN MARIETTA CORP./ DATE- AUG.
1969
M-FS-20353

Quality in welding copper leads to nickel bus wires is obtained by the mass of nickel exceeding that of copper. Welding range increases proportionately with the increase in the nickel-to-copper mass ratio up to 4-to-1.

B69-10303

QUALITY-WELD PARAMETERS FOR MICROWELDING
TECHNIQUES AND EQUIPMENT
HALL, L. G. /MARTIN MARIETTA CORP./ HUTCHINSON,
W. R. DATE- AUG. 1969
M-FS-20484

Limited-amplitude, controlled-decay process improves the reliability of microwelding. The system consists in building a capacitor-discharge welder for control of the shape of the weld pulse. Standard welders may be modified.

B69-10305

REPAIR OF WELD DEFECTS IN THIN-WALLED
STAINLESS STEEL TUBES
FIORELLI, F. /N. AM. ROCKWELL CORP./ KERN, D. D.
DATE- AUG. 1969
M-FS-16293

Hand-operated tool repairs weld defects in large-diameter, thin-walled stainless steel tubes. Tool consists of a three-roll external planisher and an internal backup mandrel, both hydraulically pressurized by hand pumps, and an external restraining mandrel, which keeps the tube from turning during the planishing operations.

B69-10310

PRECISION MOUNTING FOR INSTRUMENT OPTICAL
ELEMENTS PROVIDED BY POLYIMIDE BONDING
MUELLER, T. F. /BALL BROS. RESEARCH CORP./
DATE- AUG. 1969
M-FS-20293

Epoxy resin-coated polyimide plastic is used for bonding materials with different thermal coefficients in applications requiring precision mounting, especially where vibrations, temperature extremes, and low pressures are encountered. Low vapor pressure of the bonding material precludes outgassing problems.

B69-10320

HERMETICALLY SEALED PUMP
LUDWIG, L. P. STROM, T. N. DATE- AUG. 1969

LEWIS-10837

Mechanically simple, hermetically-sealed pump utilizes pumped fluid for lubrication. The rotor, having helical grooves on the outer surface, functions as both a bearing and pump.

B69-10328

A MECHANICALLY EXTENDIBLE BOOM

BACHLE, W. H. /PHILCO-FORD CORP./ DATE- SEP. 1969

NPO-11118

Series of elements connected by idle rollers and two tapes /one for extension and one for retraction/ are used in the fabrication of a telescoping boom. The boom has high strength and rigidity which will allow a gravity dump at any point in the extension cycle.

B69-10331

SHOCK-ABSORBENT MOUNTINGS FOR BEARINGS

TOPITS, A., JR. DATE- SEP. 1969

NPO-10626

Inner and outer concentric rings are separated by a number of S-shaped rectangular leaf springs. The spring mounting will protect a bearing and its shaft from shock.

B69-10335

MASKING OF ALUMINUM SURFACE AGAINST

ANODIZING

CRAWFORD, G. B. /DOUGLAS AIRCRAFT CO./ THOMPSON, R. E. DATE- SEP. 1969

M-FS-12964

Masking material and a thickening agent preserve limited unanodized areas when aluminum surfaces are anodized with chromic acid. For protection of large areas it combines well with a certain self-adhesive plastic tape.

B69-10342

AUTOMATIC FILTER-BLOWBACK SYSTEMS USED WITH SINTERED-METAL FILTERS

CARLS, E. L. LEVITZ, N. M. DATE- AUG. 1969

REAN- SEE ALSO ANL-7392

ARG-10324

Sintered-metal filters remove entrained particulate solids from the fluid-bed effluent-gas stream. Removal prevents loss of material from the reactor or contamination of the gas stream.

B69-10343

DESIGN OF A STRAIN-GAGE PROBE

KOLBA, V. H. VETTER, D. L. DATE- AUG. 1969

ARG-10338

Strain-gage spacer probe uses the deflection of a leaf spring to measure strain in a long, slender beam nondestructively. The selected gage is of the smallest practical size, as thin as possible and yet of a standard type.

B69-10345

SURFACE PROFILOMETER FOR EXAMINING

GRAIN-BOUNDARY GROOVES

JECH, R. E. READY, D. W. DATE- AUG. 1969

ARG-10290

Surface profilometer, consisting primarily of commercially available components, measures surface topographical features accurately and precisely. It shows improvement over the interferometric technique in measurement of grain-boundary grooves formed during annealing on nickel-oxide bicrystals.

B69-10346

IMPROVED TABLE FOR CUTTING AND WELDING

OLIVER, D. H. /N. AM. ROCKWELL CORP./ RAMIREZ, M. DATE- SEP. 1969

MSC-15537

Welding table covered with parallel inverted steel angles improves metal torch cutting of various types and thicknesses.

B69-10348

VIBRATION DAMPENER FOR NILES VERTICAL

BORING MILL RAM

YOUNG, R. J. /N. AM. ROCKWELL CORP./ DATE- SEP. 1969

MSC-15529

Controlled hydraulic cylinder, which serves as a

vibration dampener, is used as a ram support unit. Constant pressure is exerted, minimizing the cutting tool vibration.

B69-10350

REMOVAL OF RETAINING WASHERS OF THE WAFFLE-SPRING TYPE

MARZULLO, R. A. /N. AM. ROCKWELL CORP./ DATE- SEP. 1969

MSC-15531

Special tool removes quick-locking fasteners incorporating waffle-spring retaining washers without damage.

B69-10355

SEALING A RUBBER BLADDER BETWEEN TWO SECTIONS OF AN ACCUMULATOR

SCHARTAU, G. M. /IBM/ DATE- SEP. 1969

M-FS-20403

Leak-free clamping of a two section accumulator is accomplished by a flat metallic ring molded peripherally to the rubber flange of the bladder, and an inset rubber seal bonded to the face of the flange of each section. Method maintains constant torque on the clamping bolts.

B69-10358

STRESS-TESTING OF THE THROAT OF A ROCKET* S

NOZZLE

ESTES, E. G. /MC DONNELL DOUGLAS CORP./ DATE- SEP. 1969

NPO-10311

Test motor in which high initial pressure can be reduced suddenly provides a method of testing stress effects in the throat of a rockets nozzle. Motors operating pressure is increased to aggravate tensile stresses in a submerged throat. Opposing compression stresses are limited by control of the operating pressure.

B69-10367

STUDY OF HIGH-SPEED ANGULAR-CONTACT BALL BEARINGS UNDER DYNAMIC LOAD

GREER, T. E. KANNEL, J. W. STOCKWELL, R. D. /BATTELLE MEM. INST./ WALTERS, C. T. WILSON, W. R. D. DATE- SEP. 1969

M-FS-20562

Research program studies behavior of specific high-speed, angular-contact ball bearings. Program is aimed at detailed investigation of ball-separator behavior and lubrication surface-finish effects in a specific gyro wheel.

B69-10373

IMPROVED DESIGN OF ITEM IN HIGH SPEED ROTATING MACHINERY

DIETRICH, J. A. /N. AM. ROCKWELL CORP./ DATE- SEP. 1969

M-FS-18441

Greater centrifugal radial growth of the preimpeller hub with respect to the impeller and nut at operating speed alleviates clamping and alignment problems in high speed rotating machinery. Design results in axial tightness and radial piloting of the preimpeller.

B69-10375

CONNECT-DISCONNECT COUPLING FOR PREADJUSTED RIGID SHAFTS

BAJKOWSKI, F. W. /N. AM. ROCKWELL CORP./ HOLMBERG, A. DATE- SEP. 1969

MSC-15470

Coupling device enables a rigid shaft to be connected to or disconnected from a fixed base without disturbing the point of adjustment of the shaft in a socket or causing the shaft to rotate. The coupling consists of an externally threaded, internally slotted boss extending from the fixed base.

B69-10379

TOOL REPAIRS TUBE COMPONENTS IN SITU

RUSH, R. E. /N. AM. ROCKWELL CORP./ TUCKER, P. E. DATE- SEP. 1969

MSC-15348 MSC-15363

Two versions of a portable tool repair the seats of tube fittings and the flared ends of tubing. Each version operates on the principle of lapping to remove imperfections from tube and fitting

interfacing surfaces.

B69-10388

QUICK-RELEASE HOOK-AND-LOOP FASTENER
WHITACRE, H. E. DATE- OCT. 1969
MSC-10950

Joints between two rigid materials lined with velcro fabric can now be broken with ease using any one of several methods. Three such methods are applicable to either hook or loop fabric.

B69-10393

CONVERSION OF CONTINUOUS-DIRECT-CURRENT
TIG WELDER TO PULSE-ARC OPERATION
LIEN, D. R. /N. AM. ROCKWELL CORP./ DATE- OCT.
1969

M-FS-16411

Electronics package converts a continuous-dc tungsten-inert gas welder for pulse-arc operation. Package allows presetting of the pulse rate, duty cycle, and current value, and enables welding of various alloys and thicknesses of materials.

B69-10396

QUICK-ACTING BACKUP TOOL FOR WELDING DUCTS
JOHNSON, L. L. /N. AM. ROCKWELL CORP./ DATE-
SEP. 1969
M-FS-18404

Alignment and backup tool facilitates butt welding of large-diameter ducts. It consists of a circular three-piece segmented hoop, a pneumatic piston, and two shoes.

B69-10398

ONE-HANDED HAMMER-SPANNER FOR CHUCKS
MARTINO, J. A. /N. AM. ROCKWELL CORP./ SEID, S.
DATE- SEP. 1969
M-FS-18581

Modified spanner wrench with a heavy hammer-piece hinged to its handle allows one hand removal of a tool from a chuck.

B69-10399

HYDRAULIC CALIPERS
BENSON, J. A. /N. AM. ROCKWELL CORP./ DATE- SEP.
1969
M-FS-18052

Hydraulic calipers determine area of annular openings in irregular or concealed passages. With modifications the device could be adapted to investigations of cross-sectional changes in heat flow passages, ducts, conduits, and heat exchanger elements.

B69-10400

PNEUMATIC FLOW COMPARATOR
WILSON, A. J. /N. AM. ROCKWELL CORP./ DATE- SEP.
1969
M-FS-18373

Pneumatic flow comparator provides simple go, no-go evaluation of individual tubes. Flow characteristics of tubes used to form the walls of regeneratively cooled combustors must be identical within very close tolerances to ensure equally distributed coolant flow throughout the combustor wall.

B69-10403

PRESSURE-CONTROL PURGE PANEL FOR AUTOMATIC
BUTT WELDING
LANG, E. J. /N. AM. ROCKWELL CORP./ VAN WAGNER,
B. H. DATE- SEP. 1969
M-FS-18465

Modification of a purge panel for use in an automatic butt weld reduces the drop in pressure between the regulators and the weld head and tube purge fitting. The invention affects air regulators for plants, regulating circuits for pneumatic valves, and automatic welding machines.

B69-10404

GENERATION OF SONIC POWER DURING WELDING
MC CAMPBELL, W. M. DATE- SEP. 1969
M-FS-20339

Generation of intense sonic and ultrasonic power in the weld zone, close to the puddle, reduces the porosity and refinement of the grain. The ac induction brazing power supply is modified with long cables for deliberate addition of resistance

to that circuit. The concept is extensible to the molding of metals and plastics.

B69-10408

SELF-LUBRICATING GEAR
DEMOREST, K. E. DATE- SEP. 1969
M-FS-14971

Self-lubricating gear, designed for long term operation in a vacuum at high, low, and ambient temperatures, is constructed of alternating layers of metal and a dry lubricant material, such as polytetrafluoroethylene, with a suitable reinforcing material bonded into a laminated composite unit, which is machined to form a standard gear.

B69-10422

MAGNETOMOTIVE FORMING FOR PRECISION SIZING
AND JOINING OF LARGE-DIAMETER TUBES
BENNIGHT, J. D. SCHWINGHAMER, R. J. DATE- SEP.
1969
M-FS-20481

Portable electromagnetic coil enables high precision expansion or constriction and joining of large diameter metal tubes. A nonconducting mandrel or forming die is used on the side of the tubes wall opposite the coil. The coil is insulated from the tube by a thin plastic sleeve.

B69-10437

CALIBRATABLE SOLID-STATE PRESSURE SWITCH
SPON- INNOVATOR NOT GIVEN /FAIRCHILD HILLER CORP./
DATE- SEP. 1969
M-FS-20474

Pressure switch, incorporating a semiconductor light-detector coupled to an electrically controlled actuating unit, provides accurate and reliable switching over a broad range of pressures and environments.

B69-10448

AIR-CUSHION LIFT PAD
BLAISE, H. T. DANE, D. H. DATE- SEP. 1969 REAN-
SEE ALSO B68-10442
M-FS-14685

Mathematical model is formulated for an air pad which is capable of lifting a structure to a height of 0.125 inch. Design is superior to conventional air cushion devices because it eliminates flutter, vibration, heaving, and pitching.

B69-10450

IMPROVED FIRE RESISTANT RADIO FREQUENCY
ANECHOIC MATERIALS
ROBINSON, D. A. /N. AM. ROCKWELL CORP./ DATE-
SEP. 1969
M-FS-16600

Protective, flameproof foam covering improves the resistance to fire and surface contamination of low-cost radio frequency absorbing and shielding anechoic materials. This promotes safety of operating personnel and equipment being tested in an otherwise combustible anechoic chamber.

B69-10456

CHECKING FLAT CONDUCTOR CABLE SPACING BY
MEANS OF A MOIRE PATTERN
ANGELE, W. DATE- SEP. 1969
M-FS-20426

Moire tester detects small variations in flat conductor cable spacing by a quick, visual inspection. This device compares the cable to be tested with the negative of a very precise standard cable. The moire, consisting of bands of light and dark zones and its irregularities, can be interpreted as errors in spacing.

B69-10458

CALIBRATION STANDARD FOR DYNAMIC EVALUATION
OF A PROFILE-PLOTTER
MOULTON, K. S. /N. AM. ROCKWELL CORP./ DATE-
SEP. 1969
M-FS-16476

Template is used for evaluation of the dynamic characteristics and accuracy of the plotter. It has a profile composed of surfaces parallel to and at known distances from a reference plane, plane, the diverse surfaces being connected by slopes of

known angles and blended by cylindrical developments of known radii.

B69-10459
FLEXIBLE RIVET-SET
HESPEHIDE, W. H. /MC DONNELL DOUGLAS CORP./
DATE- SEP. 1969
M-FS-20317

Tool sets rivets in tight places where the riveting head of the gun cannot be laid on the rivet. Tool may be made in any of many diameters and lengths, and its principle and use are not restricted to riveting.

B69-10463
IMPROVED NICKEL PLATING OF INCONEL X-750
FARMER, M. E. /N. AM. ROCKWELL CORP./ FEENEY, J.
E. KUSTER, C. A. DATE- SEP. 1969
M-FS-18604

Electroplating technique with acid pickling provides a method of applying nickel plating on Inconel X-750 tubing to serve as a wetting agent during brazing. Low-stress nickel-plating bath contains no organic wetting agents that cause the nickel to blister at high temperatures.

B69-10471
A BIAXIAL WELD STRENGTH PREDICTION METHOD
RAWB, R. A. /DOUGLAS AIRCRAFT CO./ DATE- OCT. 1969
M-FS-20019

Method is given for design of structures which are subjected to multi-axial loading due to internal pressure. The biaxial strength of a structure can be predicted by modifying the uniaxial formula.

B69-10483
MULTI-PURPOSE TOOL MITTEN
WILCOB, E. F. /RAFF ANALYTIC STUDY ASSOC., INC./ DATE- SEP. 1969
HQ-10047 HQ-10049

Tool mitten provides a low reaction torque source of power for wrench, screwdriver, or drill activities. The technique employed prevents the attachments from drifting away from the operator. While the tools are specifically designed for space environments, they can be used on steel scaffolding, in high building maintenance, or underwater environments.

B69-10485
FREON, T-B1 CUTTING FLUID
PETERS, R. L. /N. AM. AVIATION, INC./ DATE- SEP. 1969
MSC-11486

Improved cutting fluid completely controls the heat generated from machining operations, thus providing longer tool life. Fluid is especially useful in the working of plastics and replaces less efficient contaminating oils.

B69-10495
HEAT-SHRINKABLE JACKET HOLDS FLUID IN CONTACT WITH TENSILE TEST SPECIMEN
LEGER, L. J. SPIKER, I. K. DATE- OCT. 1969
MSC-13195

Heat-shrinkable plastic tubing can be quickly sealed around a metal tensile test specimen and used as a jacket for any compatible liquid.

B69-10496
IRIS-LEAF CORE RETAINER FOR A SURFACE DRILL
OLIVARI, H. /MARTIN-MARIETTA CORP./ DATE- SEP. 1969
MSC-11402

Iris-leaf core retainer insures retention of a complete sample within the drill string. Individual overlapping leaves will not rupture or tear out when they come in contact with the oncoming core.

B69-10499
TORSIONAL TUBULAR DISCONNECT
CURRY, K. C. STARKY, D. J. DATE- OCT. 1969
NPO-10704

Torque driven disconnect maintains connection on a gas supply line until desired parting occurs at a remote location. It consists of a helical

plastic tube with a disconnect coupling fitted for an interference condition slip joint, and a rotationally constrained support connected to a gas source.

B69-10506
ANALYSIS OF PROBLEMS RELATED TO SLINGSHOT
SHOCK MACHINE HIGH-VELOCITY SHOCK TESTING
SHIPLEY, J. W. DATE- OCT. 1969
NPO-11193

Slingshot device is capable of imparting a square-pulse acceleration greater than 20,000 g with a pulse duration of up to 1.5 milliseconds. A load is applied to the bungee cord and the sled is drawn back to desired length. When released it provides the desired velocity at impact.

B69-10509
BORON FIBER-REINFORCED ALUMINUM ALLOY
TUBING /EXPERIMENTAL/
SCHERBA, E. S. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969
MSC-15633

Prototype of a conceptual boron fiber-reinforced tubing meets requirements for lightweight structural members subjected to high shock loads and bending stresses.

B69-10514
AUTOMATIC LEVELING AND EQUALIZING HOIST
DEVICE
BROWER, J. R. /N. AM. ROCKWELL CORP./ HOLCOMB, D. F. DATE- OCT. 1969
M-FS-16549

Hoist uses six equally spaced support points with the load equalized between pairs to prevent over-stressing of any one point of support. The pickup point is automatically shifted through a motor driven feedback system to level the load throughout the lifting period.

B69-10519
FLARED-TUBE FITTINGS WITH REPLACEABLE SEAT
INSERTS
BALLINGER, V. J. /N. AM. ROCKWELL CORP./ GRANT, L. E. HOWLAND, B. T. DATE- OCT. 1969
MSC-15372 MSC-15373 MSC-15375

Three design modifications of conventional flared-tube fittings provide easily replaceable cone seats for specific applications in fluid flow lines.

B69-10527
TOOL FOR READING PSYCHROMETRIC CHARTS
DE ANGELO, F. T. /BOEING CO./ DATE- OCT. 1969
KSC-10358

Three-legged, clear plastic tool is designed so that the angles of each leg correspond with the angles of psychrometric chart construction for each of the three required scales. The appropriate edges are tapered to the chart surface.

B69-10544
RHODIUM-PLATED BARRIER AGAINST
HIGH-TEMPERATURE FUSION BONDING
JANIS, R. C. /N. AM. ROCKWELL CORP./ KUSTER, C. A. DATE- DEC. 1969
M-FS-92155

Very thin rhodium electro-deposit plating eliminates the need for corrosion-resistant protection on silver surfaces and has no effect on the pliability characteristics of the plated surface.

B69-10545
INTEGRAL VALVE PROVIDES AUTOMATIC RELIEF
AND REMOTE VENTING
GILMORE, R. F. /CHRYSLER CORP./ DATE- OCT. 1969
M-FS-12134

In-line, pilot-operated, differential area, poppet type valve provides both automatic relief of a tank at a precise over-pressure and remote control of tank venting. Relief and vent operations are separate functions incorporated in an integral valve package.

B69-10547
SINGLE-ELEMENT COAXIAL INJECTOR FOR
ROCKET FUEL

05 MECHANICAL

LARSON, L. L. DATE- OCT. 1969
NPO-11095

Improved injector for oxygen difluoride and diborane has better mixing characteristics and is able to project fuel onto the wall of the combustion chamber for better cooling. It produces an essentially conical, diverging, continuous sheet of propellant mixture formed by similarly shaped and continuously impinging sheets of fuel and oxidant.

B69-10573
CONTROL FOR MAINTAINING CONSTANT LEVEL OF A CRYOGENIC LIQUID
LIBEROTTI, J. DATE- OCT. 1969
NPO-11177

Pressure formed as the cryogenic liquid vaporizes is used to pump new cryogenic liquid from a storage reservoir. Changes in volume of a gas resulting from changes in temperature actuate a valve which either replenishes the depleted liquid in the vessel or vents the evolving gas to the atmosphere.

B69-10588
TWO-FUNCTIONAL SEAL FOR HOSE CONNECTION
RICHARDSON, M. B. RICHARDSON, M.B./DOUGLAS AIRCRAFT CO./ DATE- OCT. 1969
M-FS-14062

Seal, machined from a plastic material, prevents liquid hydrogen leakage from hose connectors. It serves as a block-type seal supporting maximum loading of the poppet with slight elastic deflection or as a lip-type seal that is deformed elastically in bending, tension, or compression by the seated poppet.

B69-10590
MONTE CARLO SIMULATION BY COMPUTER FOR LIFE-CYCLE COSTING
GRALOW, F. H. /BOEING CO./ LARSON, W. J. DATE- NOV. 1969
M-FS-14754

Prediction of behavior and support requirements during the entire life cycle of a system enables accurate cost estimates by using the Monte Carlo simulation by computer. The system reduces the ultimate cost to the procuring agency because it takes into consideration the costs of initial procurement, operation, and maintenance.

B69-10609
EXPERIMENTAL PROGRAM TO INVESTIGATE TRANSONIC FLOW AROUND PROTRUSANCES
ROBERTSON, J. E. /WYLE LABS./ DATE- NOV. 1969
M-FS-20037

Transient and steady state aerodynamic flow of turbulent boundary layers are investigated for generalized cylindrical projections and several specific configurations used on the Saturn 5 launch vehicle. A transonic wind tunnel gave generalized information.

B69-10615
DESIGN OF MULTILAYER INSULATION SYSTEMS
CUNNINGTON, G. R., JR. /LOCKHEED MISSILES AND SPACE CO./ STREED, E. R. DATE- NOV. 1969
ABC-10166

Analytical models for insulation system heat transfer studies the types of materials best suited for a near solar environment. This multilayer insulation system for spacecraft can operate at temperatures in the 300 to 700 degree K range.

B69-10634
HERMETICALLY SEALED VIBRATION DAMPER
WHEATLEY, D. G. /GEN. MOTORS CORP./ DATE- NOV. 1969
MSC-10959

Simple fluidic vibration damper for installation at each pivotal mounting between gimbals isolates inertial measuring units from external vibration and other disruptive forces. Installation between each of the three gimbal axes can dampen vibration and shock in any direction while permitting free rotation of the gimbals.

B69-10649
HIGH-PRESSURE SEALS FOR ROTARY SHAFTS
HOLDEN, C. P. /W. AM. ROCKWELL CORP./ DATE- NOV. 1969
M-FS-18548

High pressure seals for rotating shafts are machined from a polyimide resin. It is more durable and cheaper than the older seals of plastic coated metal and works at temperatures between minus 400 degrees and plus 900 degrees F.

B69-10661
FOIL BEARING SUPPORT FOR HIGH-SPEED ROTOR
LAZAR, L. /AMEX CORP./ DATE- NOV. 1969
HQ-10315

High speed rotors are supported initially by flexible metal foil and then on an air film generated by a self-acting hydrodynamic effect. The flexibility of the bearing enables it to conform and deflect locally, wear is less severe, self-alignment and accommodation of thermal distortion is permitted.

B69-10684
A ROTATING, NONCAPILLARY HEAT PIPE
GRAY, V. H. DATE- DEC. 1969
LEWIS-10298

Hollow rotating shaft operates like a heat pipe, with a small, sealed-in inventory of fluid that transfers heat by vaporizing at the hot end and condensing at the cold end. This heat pipe utilizes large centrifugal forces for pumping the condensate, and rotation to enforce liquid-vapor separation.

B69-10696
PRECISELY REPEATABLE ROTARY MECHANISM
JOHNSON, K. G. DATE- DEC. 1969
NPO-10679

Precision-finished lead screw and a fitted mating nut member produce a linear translatable motion. This motion is transformed to a rotary movement of a pivotal platform member. The transformation is achieved by coupling the nut member and the platform member through a pair of opposed, taut, flex bands.

B69-10704
IMPROVED SOLENOID VALVE DESIGN
EVANS, J. DATE- DEC. 1969
GSFC-10607

Modified solenoid valve reduces valve seat loading by eliminating off-center operation of the armature, reducing the poppet size and spring-cushioning its impact, and reducing armature impact with a poppet guide stop.

B69-10785
SHAKER SLIP-PLATE ADAPTER
HOLM, O. S. /MC DONNELL-DOUGLAS CORP./ DATE- DEC. 1969
M-FS-14063

Magnesium adapter ties in all of the attachment bosses on a horizontal slip table and makes a rigid coupling which terminates in a single row of attachment bosses at the edge of the horizontal plate. This eliminates ineffective dissipation of the driving force in vibration tests.

B69-10804
EXPLOSIVE BONDING OF METAL-MATRIX COMPOSITES
REECE, O. Y. DATE- DEC. 1969
M-FS-20657

Explosive bonding process produces sheet composites of aluminum alloy reinforced by high-strength stainless steel wires. The bonds are excellent metallurgically, no external heat is required, various metals can be bonded, and the process is inexpensive.

B69-10816
FLUID SAMPLE COLLECTION AND STORAGE DEVICE
COHEN, D. /WHIRLPOOL CORP./ STONE, S. E. DATE- DEC. 1969
MSC-10962

Fluid sampling device collects a sample from a low-pressure fluid system and stores it for an indefinite period, with little risk of contamination of either the sample or the

surrounding environment. The collector /a plastic bladder/ is separated from the sampler after a sample is collected.

06 COMPUTER PROGRAMS

B67-10169

STUDY OF DYNAMIC RESPONSE OF ELASTIC SPACE STATIONS

KANRATH, P. /N. AM. AVIATION/ DATE- JUN. 1967
NPO-10124

Analytical procedure and the requisite computer programs compute the dynamic responses of two large elastic space stations. The linearized equations of motion are derived from lagranges equations. Then the normal modes of free vibration of the nonrotating space station are used to define the elastic degrees of freedom.

B67-10172

SPACE TRAJECTORIES PROGRAM FOR IBM 7090

HOLDBRIDGE, D. B. DATE- JUN. 1967 REAN- SEE ALSO 32-223

NPO-10125

Space trajectories Program studies the motion of a space probe confined to the solar system and influenced by the nonspherical Earth and Moon, and the point masses defined by the Sun, Venus, Mars, and Jupiter. It is written in the FORTRAN assembly program language.

B67-10173

LINEAR CIRCUIT ANALYSIS PROGRAM FOR IBM 1620 MONITOR II, 1311/1443 DATA PROCESSING SYSTEM /CIRCS/

HATFIELD, J. DATE- JUN. 1967

NPO-10131

CIRCS is modification of IBSNAP Circuit Analysis Program, for use on smaller systems. This data processing system retains the basic dc, transient analysis, and FORTRAN 2 formats. It can be used on the IBM 1620/1311 Monitor I Mod 5 system, and solves a linear network containing 15 nodes and 45 branches.

B67-10193

COMPUTER PROGRAM SIMULATES PHYSICAL SYSTEMS BY SOLVING THE SIMULTANEOUS DIFFERENTIAL EQUATIONS DESCRIBING THE SYSTEMS

HANKOVITZ, R. J. DATE- JUN. 1967

NPO-10019

DIANA, a digital-analog simulation program for IBM 1620 2 computer, simulates physical systems by solving the simultaneous differential equations describing the systems. It expands and optimizes the input-output capabilities, permits additional flexibility in midstream program alternation, and minimizes the computational time.

B67-10217

A MODAL COMBINATION COMPUTER PROGRAM FOR DYNAMIC ANALYSIS OF STRUCTURES

BAMFORD, R. M. DATE- JUN. 1967

NPO-10129

Computer program determines the response of a composite linear structure to sinusoidal base motion of a restrained structure or sinusoidal forces of a free structure. This program is applied to problems of testing practices and closed-loop stability of autopilot controlled space vehicles. It is written for the IBM 7094 in FORTRAN 4 language.

B67-10222

SUBROUTINES GEORGE AND DRABIC SIMPLIFY OPERATION OF AUTOMATIC DIGITAL PLOTTER

ENGLEL, P., III GRAY, W. H. RICHARD, P. J. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- JUL. 1967

NUC-10044

FORTRAN language subroutines enable the production of a tape for a 360-30 tape unit that controls the CALCOMP 566 Digital Incremental Plotter. This provides the plotter with instructions for graphically displaying data points with the proper scaling of axes, numbering, lettering, and tic marking.

B67-10223

CALCULATION OF RESONANCE NEUTRON ABSORPTION IN TWO-REGION PROBLEMS /THE GAROL CODE/

SMITH, C. V. STEVENS, C. A. /GEN. DYN./ DATE- JUL. 1967

NUC-10045

GAROL computer program explicitly takes into account those effects which arise from neutron resonance overlap of an individual resonance absorber and of mixtures of different resonance absorbers. GAROL computes effective group cross-sections for the resolved resonances of a mixture of isotopes in a two-region cell.

B67-10224

COMPUTER PROGRAM CALCULATES STEADY-STATE TEMPERATURE DISTRIBUTION WITHIN PLANE OR AXISYMMETRIC SOLIDS

WILSON, E. L. /AEROJET-GEN. CORP./ DATE- JUL. 1967

NUC-10049

Digital computer program, using the finite element analysis technique, determines the steady-state temperature within plan or axisymmetric solids composed of many different materials of various geometry. Program output is used to plot isotherms and provide data enabling the performance of stress analysis or heat transfer calculations upon the bodies.

B67-10233

LAND LANDING COUCH DYNAMICS COMPUTER PROGRAM

HERTING, D. W. POHLEN, J. C. POLLACK, R. A. /N. AM. AVIATION/ DATE- JUL. 1967

MSC-1210

Computer programs perform landing stability studies of mechanical impact system designs for advanced spacecraft. The programs consider variation in spacecraft vertical and horizontal velocity, attitude and orientation, shock strut load-stroke characteristics, and ground coefficient of friction.

B67-10235

COMPUTER PROGRAM SIMPLIFIES DESIGN OF ROTATING COMPONENTS OF TURBOMACHINERY

LEFEVRE, J. C. /AEROJET-GEN. CORP./ DATE- JUL. 1967

NUC-10046

Digital computer program performs stress analysis and burst speed calculations on rotating axisymmetric turbomachinery components. The computer printout contains the displacement of each nodal point, the stress at the center of each element, the average tangential stress within the component, and the burst speed.

B67-10240

VIS-A-PLAN /VISUALIZE A PLAN/ MANAGEMENT TECHNIQUE PROVIDES PERFORMANCE-TIME SCALE

RAMCK, N. H. /TRANS WORLD AIRLINES/ DATE- JUL. 1967

KSC-10073

Vis-A-Plan is a bar-charting technique for representing and evaluating project activities on a performance-time basis. This rectilinear method presents the logic diagram of a project as a series of horizontal time bars. It may be used supplementary to PERT or independently.

B67-10261

ANALYTICAL TECHNIQUE PERMITS COMPARISON OF RELIABILITY OF ALTERNATE MECHANICAL DESIGNS

HENNING, F. W. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- JUL. 1967

NUC-10065

Failure Rate Index analysis permits comparison of reliability of alternate mechanical designs. All failure modes for a mechanical component are identified, and computed on an index which relates the failure mode to failure of the component. The summation of all failure mode indexes relates the potential reliability of the component.

B67-10278

CINDA - CHRYSLER IMPROVED NUMERICAL DIFFERENCING ANALYZER COMPUTER PROGRAM

GASKI, J. D. LEWIS, D. R. /CHRYSLER CORP./ DATE- AUG. 1967 REAN- SEE ALSO B66-10404

06 COMPUTER PROGRAMS

M-FS-2298

Dimensionless multioption systems compiler computer program constructs and analyzes a mathematical model of any arbitrary one, two, or three dimensional lumped parameter representation of a physical system. It automatically optimizes the utilization of computer core space and is more general and versatile than BETA.

B67-10279

COMPUTER PROGRAM FOR DETERMINATION OF NATURAL FREQUENCIES OF CLOSED SPHERICAL SANDWICH SHELLS

WILKINSON, J. P. D. /N. AM. AVIATION/ DATE- AUG. 1967

MSC-1246

Solutions for the axially symmetric motion of an elastic spherical sandwich shell have been obtained from a theory of shells which includes the effects of transverse shear deformation and rotary inertia. Frequency equations and mode shapes are derived for the full vibrations of a closed spherical shell.

B67-10280

MASTER CONTROL DATA HANDLING PROGRAM USES AUTOMATIC DATA INPUT

ALLISTON, W. DANIEL, J. /BOEING CO./ DATE- AUG. 1967

M-FS-2259

General purpose digital computer program is applicable for use with analysis programs that require basic data and calculated parameters as input. It is designed to automate input data preparation for flight control computer programs, but it is general enough to permit application in other areas.

B67-10281

COMPUTER PROGRAM PREDICTS THERMAL AND FLOW TRANSIENTS EXPERIENCED IN A REACTOR LOSS-OF-FLOW ACCIDENT

HALE, C. J. /GEN. DYNAMICS/ DATE- AUG. 1967

NUC-10054

Program analyzes the consequences of a loss-of-flow accident in the primary cooling system of a heterogeneous light-water moderated and cooled nuclear reactor. It produces a temperature matrix 36 x 41 /x,y/ which includes fuel surface temperatures relative to the time the pump power was lost.

B67-10287

COMPUTER PROGRAM PROVIDES LINEAR SAMPLED-DATA ANALYSIS FOR HIGH ORDER SYSTEMS

BUNN, D. B. KIMBALL, R. B. /N. AM. AVIATION/ DATE- AUG. 1967

M-FS-12821

Computer program performs transformations in the order S-to-W-to-Z to allow arithmetic to be completed in the W-plane. The method is based on a direct transformation from the S-plane to the W-plane. The W-plane poles and zeros are transformed into Z-plane poles and zeros using the bilinear transformation algorithm.

B67-10306

COMPUTER PROGRAM USES MONTE CARLO TECHNIQUES FOR STATISTICAL SYSTEM PERFORMANCE ANALYSIS

WOHL, D. P. /N. AM. AVIATION/ DATE- AUG. 1967

M-FS-2234

Computer program with Monte Carlo sampling techniques determines the effect of a component part of a unit upon the overall system performance. It utilizes the full statistics of the disturbances and misalignments of each component to provide unbiased results through simulated random sampling.

B67-10307

COMPUTER PROGRAM DETERMINES THERMAL ENVIRONMENT AND TEMPERATURE HISTORY OF LUNAR ORBITING SPACE VEHICLES

HEAD, D. E. MITCHELL, K. L. /BOEING CO./ DATE- AUG. 1967

M-FS-12916

Program computes the thermal environment of a spacecraft in a lunar orbit. The quantities determined include the incident flux /solar and

lunar emitted radiation/, total radiation absorbed by a surface, and the resulting surface temperature as a function of time and orbital position.

B67-10309

STUDY OF RANDOM PROCESS THEORY AIDS DIGITAL DATA PROCESSING

BORDNER, G. W. /CORNELL AERON. LAB./ DATE- AUG. 1967

M-FS-1475

Study of techniques for all random process technology, including stationary, nonstationary, and Gaussian bivariate, aids digital data processing. It presents material on digital filtering, correlation function, optimal spectral smoothing, deterministic data processing, and nonstationary spectrum and correlation analyses.

B67-10310

COMPUTER PROGRAM FOR MASS OPTIONAL SOLUTIONS OF SOME ENDPOINT TRAJECTORY PROBLEMS

BENNETT, A. G. ESHRIDGE, C. D. OHAHONY, M. S. /BOEING CO./ DATE- AUG. 1967

M-FS-12976

Optimization of trajectories for propellant consumption is achieved by incorporating a coast arc device into a three-dimensional fixed end-point steepest ascent computer program. It calculates a trajectory between any two points in space defined by initial and final position vectors, without restrictions on thrust or orbit characteristics.

B67-10319

TRANSIENT ANALYSIS GENERATOR /TAG/ SIMULATES BEHAVIOUR OF LARGE CLASS OF ELECTRICAL NETWORKS

THOMAS, W. J. DATE- SEP. 1967

NPO-10031

Transient Analysis Generator program simulates both transient and dc steady-state behavior of a large class of electrical networks. It generates a special analysis program for each circuit described in an easily understood and manipulated programming language. A generator or preprocessor and a simulation system make up the TAG system.

B67-10323

COMPUTER PROGRAM UTILIZES FORTRAN 4 SUBROUTINES FOR CONTOUR PLOTTING

BLOCK, N. GARRET, R. LAWSON, C. DATE- SEP. 1967

NPO-10127

Computer program constructs lists of xy-coordinate pairs that define contour curves for an arbitrary given function of two variables and transmits these lists to plotting equipment to produce contour plots. The principal subroutine, CONTOUR, is independent of any specific system of plotting subroutines and equipment.

B67-10327

MULTIPLE CORRELATION COMPUTER PROGRAM DETERMINES RELATIONSHIPS BETWEEN SEVERAL INDEPENDENT AND DEPENDENT VARIABLES

KASPAR, H. /N. AM. AVIATION/ NEWSBAUM, J. B. DATE- SEP. 1967

M-FS-13024

Relationships between independent and dependent variables are determined by multiple correlation computer program. This is applied to research and experimental design and development of complex hardware and components that require test programs.

B67-10328

COMPUTER OPTIMIZATION PROGRAM FINDS VALUES FOR SEVERAL INDEPENDENT VARIABLES THAT MINIMIZE A DEPENDENT VARIABLE

WARECH, E. J. /N. AM. AVIATION/ DATE- SEP. 1967

M-FS-13030

Computer program finds values of independent variables which minimize the dependent variable. This optimization program has been used on the F-1 and J-2 engine programs to establish minimum film coolant requirements.

B67-10329

COMPUTER PROGRAM RESOLVES RADIATIVE,
CONDUCTIVE, AND CONVECTIVE HEAT TRANSFER
PROBLEMS FOR VARIETY OF GEOMETRIES
ELKIN, R. MC GARRITY, A. L. DATE- SEP. 1967
M-FS-1910

Computer program computes temperature distribution as a function of time in a given body which has been subdivided into a network of nodes. Thermal resistances and capacitances may be computed from nodal geometry.

B67-10330

IMPROVED COMPUTER PROGRAM FOR ELASTIC
ANALYSIS OF HIGHLY REDUNDANT STRUCTURAL
CONFIGURATIONS
HROMJAK, A. J. /N. AM. AVIATION/ DATE- SEP. 1967
M-FS-13087

Computer program provides elastic analysis of highly redundant structural configurations. Punched output of flexibility and stiffness matrices are obtained for use in a natural frequency analysis. Member reaction output in card or tape form is used in conjunction with other programs to perform stress analyses.

B67-10331

GENERAL PURPOSE COMPUTER PROGRAMS FOR
NUMERICALLY ANALYZING LINEAR AC ELECTRICAL
AND ELECTRONIC CIRCUITS FOR STEADY-STATE
CONDITIONS
EGEBRECHT, R. A. /BOEING CO./ THORBJORNSEN, A.
R. DATE- SEP. 1967
M-FS-13094

Digital computer programs determine steady-state performance characteristics of active and passive linear circuits. The ac analysis program solves the basic circuit parameters. The compiler program solves these circuit parameters and in addition provides a more versatile program by allowing the user to perform mathematical and logical operations.

B67-10344

COMPUTER SUPERROUTINE ISUDS ACCURATELY SOLVES
LARGE SYSTEM OF SIMULTANEOUS LINEAR ALGEBRAIC
EQUATIONS
COLLIER, G. /WESTINGHOUSE ASTRONUCL. LAB./ DATE-
SEP. 1967
NUC-10051

Computer program, an Iterative Scheme Using a Direct Solution, obtains double precision accuracy using a single-precision coefficient matrix. ISUDS solves a system of equations written in matrix form as AX equals B , where A is a square non-singular coefficient matrix, X is a vector, and B is a vector.

B67-10345

COMPUTER PROGRAM VARI-QUIR 3 PROVIDES
SOLUTION OF STEADY-STATE, MULTIGROUP,
TWO-DIMENSIONAL NEUTRON DIFFUSION EQUATIONS
COLLIER, G. /WESTINGHOUSE ASTRONUCL. LAB./ DATE-
SEP. 1967
NUC-10052

Computer program VARI-QUIR 3 provides Gauss-Seidel type of solution with inner and outer iterations for steady-state, multigroup, two-dimensional neutron diffusion equations. The program has no restrictions on any of the input parameters such as the number of groups, regions, or materials.

B67-10348

COMPUTERIZED PARTS LIST SYSTEM COORDINATES
ENGINEERING RELEASES, PARTS CONTROL, AND
MANUFACTURING PLANNING
HORTON, W. /WESTINGHOUSE ASTRONUCL. LAB./
KINSEY, M. DATE- SEP. 1967
NUC-10073

Computerized parts list system compiles and summarizes all pertinent and available information on complex new systems. The parts list system consists of three computer subroutines - list of parts, parts numerical sequence list, and specifications list.

B67-10405

SATURN S-2 AUTOMATIC SOFTWARE SYSTEM

/SASS/

PARKER, P. E. /N. AM. AVIATION/ DATE- NOV. 1967
M-FS-1741

SATURN S-2 Automatic Software System /SASS/ was designed and implemented to aid SATURN S-2 program development and to increase the overall operating efficiency within the S-2 data laboratory. This program is written in FORTRAN 2 for SDS 920 computers.

B67-10406

COMPUTER PROGRAM FOR NETWORK SYNTHESIS BY
FREQUENCY RESPONSE FIT
GREEN, S. /IBM/ DATE- NOV. 1967
M-FS-12686

Computer program synthesizes a passive network by minimizing the difference in desired and actual frequency response. The program solves for the critical points of the error function /weighted least squares fit between calculated and desired frequency response/ by the multivariable Newton-Raphson method with components constrained to an admissible region.

B67-10407

EARTH ORBIT RENDEZVOUS EVALUATION PROGRAM
BENNETT, A. G. /BOEING CO./ ESKRIDGE, C. D.
HANAFY, L. M. HOLM, G. L. OMAHONY, M. L.
QUARLES, J. D. DATE- NOV. 1967
M-FS-13016

Study program written in FORTRAN 4 develops an orbital rendezvous guidance scheme for large, constant thrust launch vehicles. It concentrates on /1/ an investigation of the direct extension of the present Saturn Iterative Guidance Mode /IGH/ scheme and /2/ a scheme formulated in a reference frame moving with the target satellite.

B67-10411

COMPUTER PROGRAM GENERATES AVERAGED VALUE
DATA TAPES
WATKINS, F. L. /N. AM. AVIATION/ DATE- NOV. 1967
M-FS-12728

Computer program generates a magnetic output tape containing time and averaged data values of a specified number of major frames over a specified time interval. A decommutation system is used to acquire the raw data, which is then reformatted and averaged.

B67-10414

COMPUTER PROGRAM PROVIDES STEADY STATE
ANALYSIS FOR LIQUID PROPELLANT PROPULSION
SYSTEMS
CLARK, R. L. /N. AM. AVIATION/ DATE- NOV. 1967
MSC-10064

Computer program uses Bernoulli's formula and Newton-Raphson method to provide steady state fluid flow analysis of line pressure drop in a system with six outlets for each of two main storage tanks. Program flexibility arises in the ease with which changes in the fluid line geometry can be made.

B67-10415

COMPUTER PROGRAM ANALYZES GENERALIZED
ENVIRONMENTAL CONTROL AND LIFE SUPPORT
SYSTEMS
VAUGHAN, R. L. /DOUGLAS AIRCRAFT CO./ DATE- NOV.
1967
MSC-1157

Versatile computer program analyzes environmental control and life support systems. The program permits changes of system component arrangements, component design details, and operating modes. It is written in FORTRAN language for use on the IBM 7094 computer.

B67-10450

COMPUTER PROGRAM FPIP-REV CALCULATES
FISSION PRODUCTS INVENTORY FOR U-235
FISSION
BROWN, W. S. /WESTINGHOUSE ASTRONUCL. LAB./
CALL, D. W. DATE- NOV. 1967
NUC-10089

Computer program calculates fission product inventories and source strengths associated with the operation of U-235 fueled nuclear power reactor. It utilizes a fission-product nuclide

06 COMPUTER PROGRAMS

library of 254 nuclides, and calculates the time dependent behavior of the fission product nuclides formed by fissioning of U-235.

B67-10456

COMPUTER MCAP-TOSS CALCULATES STEADY-STATE FLUID DYNAMICS OF COOLANT IN PARALLEL CHANNELS AND TEMPERATURE DISTRIBUTION IN SURROUNDING HEAT-GENERATING SOLID

LEE, A. Y. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- NOV. 1967
NUC-10042

Computer program calculates the steady state fluid distribution, temperature rise, and pressure drop of a coolant, the material temperature distribution of a heat generating solid, and the heat flux distributions at the fluid-solid interfaces. It performs the necessary iterations automatically within the computer, in one machine run.

B67-10457

COMPUTER PROGRAM MCAP PROVIDES FOR STEADY STATE THERMAL AND FLOW ANALYSIS OF MULTIPLE PARALLEL CHANNELS IN HEAT GENERATING SOLID
PIERCE, B. L. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- NOV. 1967
NUC-10043

Computer program /MCAP/ calculates the temperature distribution in a heat generating solid complicated by nonuniform power and flow distributions between multiple channels. It determines the channel diameters coefficients, the effects of tolerances, the pressure drop at a given flowrate, or the flowrate for a specific pressure drop.

B67-10476

COMPUTER PROGRAM CONDUCTS FACILITIES UTILIZATION AND OCCUPANCY SURVEY
MINER, R. R. SPRAGUE, H. R. ZIMMERMAN, J. S. DATE- DEC. 1967
NPO-10326

Computer program identifies the various uses of all facility rooms and provides information on the net area in each room as well as the number and classification of people occupying them. The program, which is easily updated, also provides a means to indicate unsatisfactory work areas.

B67-10478

KOPE /KALENDAR ORIENTED PROGRAM EFFORTS/ PROVIDES DATA FOR MANAGEMENT DECISIONS
KARKAINEN, T. A. /CHRYSLER CORP./ DATE- DEC. 1967
M-FS-12331

KOPE /Kalendar Oriented Program Efforts/ is a computer program that establishes control over project efforts to assure management of meeting a specified completion date. With the appropriate input data, KOPE computes the starting and completion dates, the manning level for each activity, and the composite manning level for the program.

B67-10479

FORTRAN 4 PROGRAM FOR TWO-IMPULSE RENDEZVOUS ANALYSIS
BARLING, W. H., JR. BROTHERS, W. J. /LOCKHEED MISSILES AND SPACE CO./ DATE- DEC. 1967
M-FS-13971

Program determines if rendezvous in near space is possible, and performs an analysis to determine the approximate required values of the magnitude and direction of two thrust applications of the upper stage of a rocket firing. The analysis is performed by using ordinary Keplerian mechanics.

B67-10480

NUMERICAL LEAST-SQUARE METHOD FOR RESOLVING COMPLEX PULSE HEIGHT SPECTRA
SCHMADEBECK, R. /MELPAR/ TROMBKA, J. I. DATE- DEC. 1967
GSFC-10142

Linear least-square method resolves complex pulse height spectra, allowing for calculation of relative intensity, of statistical variance based

on counting statistics of the correlation between library components, and of the goodness-of-fit chi square. Some applications are to gamma-ray, X ray, and charged-particle spectroscopy.

B67-10489

COMPUTER PROGRAM CALCULATES SONIC-BOOM PRESSURE SIGNATURES
CRAIDON, C. B. DATE- DEC. 1967
LANGLEY-10096

Computer programs calculate sonic boom characteristics of airplane configurations for a range of flight conditions. One program provides the area distribution, and another program provides the equivalent area due to lift. Program outputs are the complete near field /or far field/ pressure signature, including shock wave strengths and locations.

B67-10490

COMPUTER PROGRAM USES CHARACTERISTICS METHOD FOR FREE-JET INVESTIGATION
CRAIDON, C. B. DATE- DEC. 1967
LANGLEY-10117

Computer program computes the free-jet boundary contours and other flow properties within the exhaust plume from highly underexpanded nozzles operating in near-vacuum conditions. The calculations are made by the method of characteristics which makes use of three-dimensional irrotational equations of flow.

B67-10492

COMPUTER PROGRAM REDUCES AND PROVIDES PROFILE PLOT OF SURFACE PLATE CALIBRATION DATA
REED, R. W. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-13866

Computer program which yields CRT displays will decrease the time and labor required to reduce and provide a profile plot of surface plate calibration data. The displays depict actual and resolved data points for each individually calibrated line.

B67-10493

ASSEMBLY PROCESSOR PROGRAM CONVERTS SYMBOLIC PROGRAMMING LANGUAGE TO MACHINE LANGUAGE
PELTO, E. V. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-13262

Assembly processor program converts symbolic programming language to machine language. This program translates symbolic codes into computer understandable instructions, assigns locations in storage for successive instructions, and computer locations from symbolic addresses.

B67-10494

COMPUTER PROGRAM PERFORMS AEROTHERMODYNAMIC FLIGHT TEST DATA CORRELATION
SCHMUS, F. /N. AM. AVIATION/ SOWERS, D. A. DATE- DEC. 1967
MSC-10075

Computer program plots flight test data /stored on magnetic tape during the flight/ with comparative data from other tapes /design and post-flight predictions/. Information as to which measurements are on each tape, the order in which they appear, and the exact time span is supplied by the source of the data.

B67-10495

MULTIDIMENSIONAL REACTION KINETIC ABLATION PROGRAM /REKAP/
ASTON, B. /GE/ BINCK, E. COLLINGSWOOD, B. DATE- DEC. 1967
MSC-10079

Multidimensional reaction kinetics ablation program provides an improved capability for analyzing thermal performance of partially penetrated charring ablator heat shields. The capability was provided for determining transient temperature histories in an ablating three-dimensional shape consisting of up to five layers of material.

B67-10504

COMPUTER PROGRAMS FOR ANTENNA FEED SYSTEM

DESIGN AND ANALYSIS

LUDWIG, A. DATE- DEC. 1967

NPO-10359

Fourteen computer programs have been developed for antenna feed system design and analysis. The programs cover a large spectrum of feed design problems, from primary feed pattern synthesis to the farfield pattern of the main reflector, including analyses of structural distortions,

B67-10509

PROGRAM COMPUTES EQUILIBRIUM NORMAL SHOCK AND STAGNATION POINT SOLUTIONS FOR ARBITRARY GAS MIXTURES

CALLIS, L. B. KEMPER, J. T. DATE- DEC. 1967

LANGLEY-10090

Program computes solutions for flow parameters in arbitrary gas mixtures behind a normal and a reflected normal shock, for in-flight and shock-tube stagnation conditions. Equilibrium flow calculations are made by a free-energy minimization technique coupled with the steady-flow conservation equations and a modified Newton-Raphson iterative scheme.

B67-10510

PROBABILISTIC APPROACH TO LONG RANGE

PLANNING OF MANPOWER

LEUK, R. A. /TEX. A AND M UNIV./ DATE- DEC. 1967

MSC-11524

Publication presents a total long range planning model for project oriented organizations. The total model consists of planning systems which originate - /1/ at the project level and consolidate into an overall plan, and /2/ from a budgetary ceiling and allocate to the individual projects. Analysis of /1/ and /2/ is provided for management decision making.

B67-10511

LOGIC REALIZATION OF SIMPLE MAJORITY VOTING CONNECTIVES

ANDERSON, T. O. GOLOMB, S. W. LUSHEAUGH, W. A.

DATE- DEC. 1967

JPL-727

Redundant circuitry is added to computer network to eliminate incorrect output obtained due to a component failure, noise, or some other disturbance. This circuitry provides majority operation. Only NAND gates are employed, and the modules used are among the most popular microelectronic or integrated circuits presently in use.

B67-10520

COMPUTER PROGRAM PERFORMS RECTANGULAR FITTING STRESS ANALYSIS

BERTRAND, A. R. /BOEING CO./ DATE- DEC. 1967

M-FS-13010

Computer program simulates specific bulkhead fittings by subjecting the desired geometry configuration to a membrane force, an external force, an external moment, an external tank pressure, or any combination of the above. This program generates a general model of bulkhead fittings for the Saturn booster.

B67-10521

GENERAL FREQUENCY RESPONSE PROGRAM CALCULATES FREQUENCY RESPONSE OF SYSTEM, OPEN AT ANY SPECIFIED ELEMENT

PROSCH, J. /BOEING CO./ DATE- DEC. 1967

M-FS-12817

The general frequency response program provides the frequency response of any linear feedback control system including the open loop control system. The system characteristic matrix, obtained from the Laplace transformations of the dynamic and control equations, is input to the program. A variety of outputs are available.

B67-10522

COMPUTERIZED SCHEDULE EFFECTIVENESS TECHNIQUE /SET/ DETERMINES PRESENT AND FUTURE SCHEDULE POSITION

BALLARD, D. /BOEING CO./ BIRDSONG, J. CALVA, R.

DATE- DEC. 1967

M-FS-13012

Computerized scheduling system calculates an index

of overall schedule-effectiveness. The schedule-effectiveness index is a measurement of actual overall performance against the existing schedule, and a series of schedule-effectiveness values indicates the trend of actual performance. This computer program is written in FORTRAN 4.

B67-10523

ANALYSIS OF DYNAMIC SYSTEMS WITH DAP4H COMPUTER PROGRAM

ABSALOM, J. G. /N. AM. AVIATION/ DATE- DEC. 1967

M-FS-13999

Dynamic Analysis Program, FORTRAN 4 Level H /DAP4H/, developed from 27 subprograms, features liberal use of the subroutines, subprograms, and skeletonization to minimize programming effort in formulating models of new systems and components. It formulates mathematical models of complex mechanical, pneumatic, and hydraulic dynamic systems.

B67-10524

DYANA - AN ADVANCED PROGRAMMING SYSTEM FOR LARGE CLASSES OF DYNAMIC AND EQUIVALENT SYSTEMS

MC CORMICK, W. J. /BOEING CO./ DATE- NOV. 1967

M-FS-12084

DYANA /dynamic analyzer/ is an advanced programming system which performs automatically the computing of a problem, as well as a major portion of the programming and analysis. The system is divided into time response and frequency response of dynamic and equivalent systems.

B67-10530

PROGRAM COMPUTES ZERO LIFT WAVE DRAG OF ENTIRE AIRCRAFT

CRAIDON, C. B. HARRIS, R. V., JR. DATE- DEC.

1967

LANGLEY-10079

Computer program computes zero lift wave drag of an entire aircraft including any combination of the wing, body, pods, fins, and canard. The program computes the external volume of the wing and the axial area distribution of the wing equivalent body.

B67-10531

COMPUTER PROGRAM PROVIDES IMPROVED LONGITUDINAL RESPONSE ANALYSIS FOR AXISYMMETRIC LAUNCH VEHICLES

SMITH, W. W. WALTON, W. C., JR. DATE- DEC. 1967

LANGLEY-10093

Computer program calculates axisymmetric launch vehicle steady-state response to axisymmetric sinusoidal loads. A finite element technique is utilized to construct the total launch vehicle stiffness matrix and mass matrix by subdividing the prototype structure into a set of axisymmetric shell components, fluid components, and spring-mass components.

B67-10536

N-SAP AND G-SAP NEUTRON AND GAMMA RAY ALBEDO MODEL SCATTER FIELD ANALYSIS PROGRAM

SAPOVCHAK, B. J. /WESTINGHOUSE ASTRONUCL. LAB./

STEPHENSON, L. D. DATE- DEC. 1967

NUC-10126

Computer program calculates neutron or gamma ray first order scattering from a plane or cylindrical surface to a detector point. The SAP Codes, G-SAP and N-SAP, constitute a multiple scatter albedo model shield analysis.

B67-10537

SOC-DS COMPUTER CODE PROVIDES TOOL FOR DESIGN EVALUATION OF HOMOGENEOUS TWO-MATERIAL NUCLEAR SHIELD

DISNEY, R. K. /WESTINGHOUSE ASTRONUCL. LAB./

RICKS, L. O. DATE- DEC. 1967

NUC-10142

SOC-DS Code /Shield Optimization Code-Direct Search/, selects a nuclear shield material of optimum volume, weight, or cost to meet the requirements of a given radiation dose rate or energy transmission constraint. It is applicable to evaluating neutron and gamma ray shields for all nuclear reactors.

06 COMPUTER PROGRAMS

B67-10543

COMPUTER PROGRAM CALCULATES PERIPHERAL
WATER INJECTION COOLING OF AXISYMMETRIC
SUBSONIC DIFFUSER

GREY, J. /GREYRAD CORP./ DATE- JAN. 1968
NUC-10541

Digital computer program calculates the cooling effectiveness and flow characteristics resulting from the mixing of a cool liquid injectant /water/ with a hot sonic or subsonic gas stream /hydrogen/. The output of the program provides pressure, temperature, velocity, density, composition, and Mach number profiles at any location in the mixing duct.

B67-10549

COMPUTER PROGRAM FOR OPTICAL SYSTEMS RAY
TRACING

FERGUSON, T. J. KONN, H. DATE- DEC. 1967
PRC-10017

Program traces rays of light through optical systems consisting of up to 65 different optical surfaces and computes the aberrations. For design purposes, paraxial tracings with astigmatism and third order tracings are provided.

B67-10566

COMPUTER PROGRAM ETC IMPROVES COMPUTATION
OF ELASTIC TRANSFER MATRICES OF LEGENDRE
POLYNOMIALS P/0/ AND P/1/

GIBSON, G. /WESTINGHOUSE ASTRONUCL. LAB./
MILLER, M. DATE- DEC. 1967
NUC-10070

Computer program ETC improves computation of elastic transfer matrices of Legendre polynomials P/0/ and P/1/. Rather than carrying out a double integration numerically, one of the integrations is accomplished analytically and the numerical integration need only be carried out over one variable.

B67-10568

GRAPHIC VISUALIZATION OF PROGRAM PERFORMANCE
AIDS MANAGEMENT REVIEW

EISENHART, G. N. /AEROJET-GEN. CORP./ DATE- DEC.
1967

NUC-10011

Chart technique /PERTREE/ which displays the essential status elements of a PERT system in a vertical flow array, of high graphic quality, enables visual review by management of program performance. Since the display is versatile, it can accommodate any aspect of the program which the presenter wishes to accent.

B67-10612

EQUATION RELATES FLOW AT FREE JET TO FLOW
DOWNSTREAM

FENWICK, J. R. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-13789

Nonlinear equation relates the flowrate at an orifice to that at a station downstream from the orifice. This equation should aid in understanding combustion instabilities and should not be subject to the substantial errors of prior analytical methods.

B67-10625

PROPELLANT TANK PRESSURIZATION ANALYSIS
PROGRAM

EPSTEIN, M. /N. AM. AVIATION/ DATE- DEC. 1967
M-FS-1506

Computer program for the analysis of a single propellant tank pressurization system includes many pertinent physical phenomena previously ignored in other mathematical models. This program can be used for analysis, simulation, and design of propellant pressurization systems.

B67-10626

VERSATILE ANALOG PULSE HEIGHT COMPUTER
PERFORMS REAL-TIME ARITHMETIC OPERATIONS

BRENNER, R. STRAUSS, M. G. DATE- DEC. 1967
ARG-10052

Multipurpose analog pulse height computer performs real-time arithmetic operations on relatively fast pulses. This computer can be used for identification of charged particles, pulse shape discrimination, division of signals from position

sensitive detectors, and other on-line data reduction techniques.

B67-10630

COMPUTER PROGRAM FOR VIDEO DATA PROCESSING
SYSTEM /VDPS/

BILLINGSLEY, F. C. NATHAN, R. DATE- DEC. 1967
NPO-10042

Video data from spacecraft photographic mission telemetry is scanned to generate digital tape computer program which prints out intensity points, cleans noise and telemetry drop-out, enhances contrast, modifies the picture, and calculates contour lines. The output is converted into new photographic film.

B67-10631

DIGITAL COMPUTER PROGRAM PREDICTS EFFECTS
OF LOCAL PRESSURE TRANSIENTS ON DEFORMATION
AND STRESSES IN CYLINDRICAL DUCTS

ECHENOZ, Y. /ELL AEROSYSTEMS CO./ LUBERACKI, W.
PADLOG, J. REISMANN, H. DATE- DEC. 1967
M-FS-13058

Digital computer program determines the dynamic response of circular cylinders subjected to pressure transient forms commonly encountered in propulsion systems. The method can be readily used to obtain solutions for all possible combinations of admissible boundary conditions.

B67-10632

AUTOMATIC DESIGN OF OPTICAL SYSTEMS BY
DIGITAL COMPUTER

CASAD, T. A. SCHMIDT, L. P. DATE- DEC. 1967
NPO-10265

Computer program uses geometrical optical techniques and a least squares optimization method employing computing equipment for the automatic design of optical systems. It evaluates changes in various optical parameters, provides comprehensive ray-tracing, and generally determines the acceptability of the optical system characteristics.

B67-10651

DEVELOPMENT OF RELIABILITY PREDICTION
TECHNIQUE FOR SEMICONDUCTOR DIODES

RYERSON, C. M. /HUGHES AIRCRAFT CO./ DATE- DEC.
1967 REAN- SEE ALSO NASA-CR-702
GSFC-10231

New fundamental technique of reliability prediction for semiconductor diodes based on realistic mathematical models can be applied to component failure rate prediction including mechanical degradation, electrical degradation, environmental stress factors, and electrical load stress factors.

B67-10654

X-Y PLOTTER ADAPTER DEVELOPED FOR SDS-930
COMPUTER

ROBERTSON, J. E. DATE- JAN. 1968
NPO-10220

Graphical Display Adapter provides a real time display for digital computerized experiments. This display uses a memory oscilloscope which records a single trace until erased. It is a small hardware unit which interfaces with the J-box feature of the SDS-930 computer to either an X-Y plotter or a memory oscilloscope.

B67-10665

COMPUTER PROGRAM CALCULATES GAMMA RAY
SOURCE STRENGTHS OF MATERIALS EXPOSED TO
NEUTRON FLUXES

HEISER, P. C. /WESTINGHOUSE ASTRONUCL. LAB./
RICKS, L. O. DATE- JAN. 1968
NUC-10143

Computer program contains an input library of nuclear data for 44 elements and their isotopes to determine the induced radioactivity for gamma emitters. Minimum input requires the irradiation history of the element, a four-energy-group neutron flux, specification of an alloy composition by elements, and selection of the output.

B67-10666

COMPUTER PROGRAM CALCULATES WING AERODYNAMIC

CHARACTERISTICS FOR FIXED WINGS WITH DIHEDRAL
AND VARIABLE-SWEEP WINGS AT SUBSONIC SPEEDS
LAMAR, J. E. MARGASON, R. J. DATE- DEC. 1967
LANGLEY-10191

Vortex lattice is used to describe the lifting surface of an arbitrary wing planform in steady potential subsonic compressible flow in computer program which calculates wing aerodynamic characteristics. Estimates of flow field characteristics in the vicinity of a lifting wing can also be programmed.

B67-10678
COMPUTER PROGRAM /P1-GAS/ CALCULATES THE
P-0 AND P-1 TRANSFER MATRICES FOR NEUTRON
MODERATION IN A MONATOMIC GAS
COLLIER, G. /WESTINGHOUSE ASTRONUC. IAE./
GIBSON, G. DATE- JAN. 1968
NUC-10141

FORTRAN 4 program /P1-GAS/ calculates the P-0 and P-1 transfer matrices for neutron moderation in a monatomic gas. The equations used are based on the conditions that there is isotropic scattering in the center-of-mass coordinate system, the scattering cross section is constant, and the target nuclear velocities satisfy a Maxwellian distribution.

B68-10005
MOP /MATRIX OPERATION PROGRAMS/ SYSTEM
NULLER, P. M. DATE- JAN. 1968
NPO-10429

MOP /Matrix Operation Programs/ system consists of a set of FORTRAN 4 subroutines which are related through a small common allocation. The system accomplishes all matrix algebra operations plus related input-output and housekeeping details.

B68-10006
COMPUTER PROGRAM PERFORMS FREQUENCY
ANALYSIS OF NONUNIFORM TURBINE DISK
SUBJECTED TO TEMPERATURE GRADIENTS
SOO, P. P. /AEROJET-GEN. CORP./ DATE- JAN. 1968
NUC-10301

Computer program determines the natural frequencies of a turbine disk of variable thickness subjected to uniform rotation and radial temperature gradients by using Rayleigh-Ritz procedure. The program involves the potential and kinetic energy expressions for a circular flat plate of variable thickness.

B68-10009
COMPUTER PROGRAM CALCULATES AND PLOTS
SURFACE AREA AND PORE SIZE DISTRIBUTION DATA
HALPERT, G. DATE- MAY 1968
GSFC-10362

Computer program calculates surface area and pore size distribution of powders, metals, ceramics, and catalysts, and prints and plots the desired data directly. Surface area calculations are based on the gas adsorption technique of Brunauer, Emmett, and Teller, and pore size distribution calculations are based on the gas adsorption technique of Pierce.

B68-10025
COMPUTER PROGRAM FOR CALCULATION OF IDEAL
GAS THERMODYNAMIC DATA
GORDON, S. MC BRIDE, B. J. DATE- MAY 1968 REAN-
SEE ALSO NASA-TN-D-4097 AND NASA-TN-D-1454
LEWIS-10254

Computer program calculates ideal gas thermodynamic properties for any species for which molecular constant data is available. Partial functions and derivatives from formulas based on statistical mechanics are provided by the program which is written in FORTRAN 4 and MAP.

B68-10033
COMPUTER PROGRAM FOR INTERPLANETARY CONIC
PATCHING
DAVIS, D. A. GUSSOW, D. G. /BOEING CC./ DATE-
FEB. 1968
M-FS-14296

Computer program enables study of one-way transfers, single and double planet flybys, single and double planet stopovers, or mixed flyby and

stopover trajectories. In each operation it first computes the heliocentric conic which connects the centers of the launch and target planets and requires a given trip time.

B68-10044
GENERAL COMPUTER PROGRAM FOR CALCULATION
OF RADIATION FROM INHOMOGENEOUS, NONISOBARIC,
NONISOTHERMAL ROCKET EXHAUST PLUME
DASH, M. J. HUFFAKER, R. M. DATE- FEB. 1968
M-FS-14314

Computer program evaluates radiation from an axisymmetric gas body with water vapor, carbon dioxide, carbon monoxide, and solid carbon particles as radiating constituents, and hydrogen as a nonradiating constituent. The program provides a convenient method of evaluating a great many problems of radiation from rocket exhaust plumes.

B68-10045
CONCEPT FOR SIMPLIFIED SERIAL DIGITAL
DECODER
GREEN, R. R. DATE- FEB. 1968
NPO-10150

Modular decoder, which lends itself best to special purpose digital equipment using sequential access memories, decodes the first order Reed-Muller codes. It functions as a maximum-likelihood exhaustive-search decoder and is a modular implementation to accommodate codes of any length.

B68-10050
SITE SURVEY FOR OPTIMUM LOCATION OF OPTICAL
COMMUNICATION EXPERIMENTAL FACILITY
SPON- INNOVATOR NOT GIVEN /SYLVANIA ELECTRON.
SYSTEMS-EAST/ DATE- MAR. 1968
M-FS-13155

Site survey was made to determine the optimum location for an Optical Communication Experimental Facility /OCEF/ and to recommend several sites, graded according to preference. A site was desired which could perform two-way laser communication with a spacecraft and laser tracking with a minimum of interruption by weather effects.

B68-10055
THREAD CUTTING WITH 3-AXIS N/C MILLING
MACHINE
SALLEY, G. C. WOOD, C. H., JR. DATE- MAR. 1968
LANGLEY-10017

TAPDIE, a generalized macro written for the APT numerical control system, cuts threads in stock too big for conventional machines or for which conventional methods are unsuitable. TAPDIE computes the machine tool path necessary and the information is passed on to a post-processor which produces a control tape.

B68-10096
COMPUTER PROGRAM PERFORMS STIFFNESS MATRIX
STRUCTURAL ANALYSIS
BAMFORD, R. BATCHELDER, R. SCHMELE, L. WADA, B.
K. DATE- APR. 1968
NPO-10502

Computer program generates the stiffness matrix for a particular type of structure from geometrical data, and performs static and normal mode analyses. It requires the structure to be modeled as a stable framework of uniform, weightless members, and joints at which loads are applied and weights are lumped.

B68-10097
COMPUTER PROGRAM CALCULATES VELOCITIES AND
STREAMLINES IN TURBOMACHINES
KATSANIS, T. DATE- MAY 1968
LEWIS-10252

Computer program calculates the velocity distribution and streamlines over widely separated blades of turbomachines. It gives the solutions of a two dimensional, subsonic, compressible nonviscous flow problem for a rotating or stationary circular cascade of blades on a blade-to-blade surface of revolution.

B68-10127
AUTOMATIC PLANNING CONCEPT - AN ANALYSIS OF

06 COMPUTER PROGRAMS

OPTIMUM SCHEDULING

REBELEIN, P. R. TRUENBELS, P. /HONEYWELL, INC./
DATE- APR. 1968
M-FS-14198

Study considers resource costs, mission constraints, and experiment results as linear functions, insofar as possible, in an effort to develop optimum scheduling by the use of linear programming. It involves a mathematical approach in which a number of constraints are considered operative.

B68-10137

COMPUTER PROGRAM CONDUCTS FACILITIES UTILIZATION AND OCCUPANCY SURVEY

MINER, R. R. SPRAGUE, H. R. ZIMMERMAN, J. S.
DATE- APR. 1968 REAN- SEE ALSO B67-10476
NPO-10438

Computer program identifies the uses of all facilities and provides information on the net area in each room as well as the number and classification of people occupying them. The system also provides a means to indicate unsatisfactory work areas and may be able to be updated each month.

B68-10139

COMPUTER PROGRAM AIDS DUAL REFLECTOR ANTENNA SYSTEM DESIGN

PIRNETT, P. GERRITSEN, R. JARVIE, P.
/INFORMATICS, INC./ LUDWIG, A. DATE- APR. 1968
NPO-10501

Computer program aids in the design of maximum efficiency dual reflector antenna systems. It designs a shaped Cassegrainian antenna which has nearly 100 percent efficiency, and accepts input parameters specifying an existing conventional antenna and produces as output the modifications necessary to conform to a shaped design.

B68-10150

COMPUTER PROGRAMS FOR THERMODYNAMIC AND TRANSPORT PROPERTIES OF HYDROGEN

HALL, W. J. MC CARTY, R. D. RODER, H. M. /NATL. BUREAU OF STD./ DATE- MAY 1968
NUC-10537

Computer program subroutines provide the thermodynamic and transport properties of hydrogen in tabular form. The programs provide 18 combinations of input and output variables. This program is written in FORTRAN 4 for use on the IBM 7044 or CDC 3600 computers.

B68-10158

COMPUTER PROGRAM DETERMINES EXACT TWO-SIDED TOLERANCE LIMITS FOR NORMAL DISTRIBUTIONS

FRIEDMAN, H. A. WEBB, S. R. /N. AM. ROCKWELL CORP./ DATE- MAY 1968
M-FS-18045

Computer program determines by numerical integration the exact statistical two-sided tolerance limits, when the proportion between the limits is at least a specified number. The program is limited to situations in which the underlying probability distribution for the population sampled is the normal distribution with unknown mean and variance.

B68-10159

COMPUTER PROGRAM DETERMINES VIBRATION IN THREE-DIMENSIONAL SPACE OF HYDRAULIC LINES EXCITED BY FORCED DISPLACEMENTS

DODGE, W. G. /N. AM. AVIATION/ DATE- MAY 1968
M-FS-12226

Computer program determines the forced vibration in three dimensional space of a multiple degree of freedom beam type structural system. Provision is made for the longitudinal axis of the analytical model to change orientation at any point along its length. This program is used by industries in which structural design dynamic analyses are performed.

B68-10164

DIGITAL FILTER SYNTHESIS COMPUTER PROGRAM

MOYER, R. A. MUNOZ, R. M. DATE- MAY 1968
ARC-10130

Digital filter synthesis computer program expresses any continuous function of a complex

variable in approximate form as a computational algorithm or difference equation. Once the difference equation has been developed, digital filtering can be performed by the program on any input data list.

B68-10187

ELAS - A GENERAL PURPOSE COMPUTER PROGRAM FOR THE EQUILIBRIUM PROBLEMS OF LINEAR STRUCTURES

AKIYUZ, F. A. UTKU, S. DATE- JUN. 1968
NPO-10598

Digital computer program ELAS handles the equilibrium problems of linear structures of one, two, or three dimensional continua. ELAS generates the governing equations for the unknown deflections of the mesh points that define the stationary point of the total potential energy function associated with the given loading and unknown deflections.

B68-10193

DIGITAL FILTER SUPPRESSES EFFECTS OF NONSTATISTICAL NOISE BURSTS ON MULTICHANNEL SCALAR DIGITAL AVERAGING SYSTEMS

GOODMAN, L. S. SALTER, F. O. DATE- JUN. 1968
ARG-90143

Digital filter suppresses the effects of nonstatistical noise bursts on data averaged over multichannel scalar. Interposed between the sampled channels and the digital averaging system, it uses binary logic circuitry to compare the number of counts per channel with the average number of counts per channel.

B68-10208

JPKWIC - GENERAL KEY WORD IN CONTEXT AND SUBJECT INDEX REPORT GENERATOR

JIRKA, R. KABASHIMA, N. KELLY, D. PLESSET, M.
DATE- JUN. 1968
NPO-10589

JPKWIC computer program is a general key word in context and subject index report generator specifically developed to help nonprogrammers and nontechnical personnel to use the computer to access files, libraries and mass documentation. This program is designed to produce a KWIC index, a subject index, an edit report, a summary report, and an exclusion list.

B68-10216

COMPUTER PROGRAM DETERMINES SYSTEM STABILITY /DIGSTA/

LORENZO, C. F. SCALZOTT, L. L. DATE- JUN. 1968
LEWIS-10395

Computer program implements a stability criterion that can be applied directly to the numerical solutions of systems of differential equations. The program accepts as input the time function of the system, a time to view the transient, and an acceptable amplitude boundary for any steady-state oscillation.

B68-10217

COMPUTER PROGRAM OFFERS NEW METHOD FOR CONSTRUCTING PERIODIC ORBITS IN NONLINEAR DYNAMICAL SYSTEMS

BENNETT, A. G. HANAFY, L. M. PALMORE, J. I.
DATE- JUN. 1968
M-FS-14654

Computer program uses an iterative method to construct precisely periodic orbits which dynamically approximate solutions that converge to precise dynamical solutions in the limit of the sequence. The method used is a modification of the generalized Newton-Raphson algorithm used in analyzing two point boundary problems.

B68-10226

COMPUTER PROGRAM ANALYZES BUCKLING OF SHELLS OF REVOLUTION WITH VARIOUS WALL CONSTRUCTIONS, BOSOR

ALMROTH, B. O. BUSHNELL, D. SOBEL, L. H.
/LOCKHEED MISSILES AND SPACE CO./ DATE- JUN. 1968
LANGLEY-10290

Computer program performs stability analyses for a wide class of shells without unduly restrictive approximations. The program uses numerical

integration, finite difference of finite element techniques to solve with reasonable accuracy almost any buckling problem for shells exhibiting orthotropic behavior.

B68-10227
SEAL /SUBNETWORK ENUMERATION AND LISTING/
HAPP, W. W. MC INTOSH, F. J. DATE- JUN. 1968
ERC-10116

SEAL /Subnetwork Enumeration And Listing/
computer program uses combinatorial techniques to generate all of the nonredundant subnetwork configurations derivable from an asymmetrical network or device. This is accomplished by a systematic shorting and opening of accessible terminals to obtain the desired allowable configurations.

B68-10232
HICOV - NEWTON-RAPHSON CALCULUS OF
VARIATION WITH AUTOMATIC TRANSVERSALITIES
HEINTSCHEL, T. J. /GE/ DATE- JUL. 1968
M-FS-14468

Computer program generates trajectories that are optimum with respect to payload placed in an earth orbit. It uses a subroutine package which produces the terminal and transversality conditions and their partial derivatives. This program is written in FORTRAN 4 and FORMAC for the IBM 7094 computer.

B68-10287
DEVELOPMENT OF ELECTRONIC DATA PROCESSING
/EDP/-AUGMENTED MANAGEMENT SYSTEM
SCOTT, J. E. WADDLETON, T. R. /BOEING CO./
DATE- AUG. 1968
M-FS-14715

To tailor the existing Unified Flight Analysis System to management data rather than technical data, a pilot model could be produced in breadboard form, using electronic data processing, in a matter of a few months at very moderate cost. Such a system lends itself to continuous refinement.

B68-10292
LINEAR SYSTEMS OF EQUATIONS SOLVED USING
MATHEMATICAL ALGORITHMS
BAREISS, E. H. DATE- AUG. 1968 REAN- SEE ALSO
ANL-7213
ARG-10146

New mathematical algorithm solves linear systems of equations, $AX = B$, and preserves the integer properties of the coefficients. The algorithms presented can also be used for the efficient evaluation of determinates and their leading minors.

B68-10296
COMPUTER GRAPHICS DATA CONDITIONING
HAGENA, K. H. MC MILLEN, G. C. /BOEING CO./
DATE- AUG. 1968
M-FS-14695

Graphics data conditioning program expedites engineering analysis of flight data and ensures timely correction of measurement errors. By adding interactive computer graphic displays to existing data conditioning programs, computational results are immediately visible, enabling on-line intervention and control of computer processing.

B68-10335
COMPUTER PROGRAM ANALYZES AND DESIGNS
SUPERSONIC WING-BODY COMBINATIONS
WOODWARD, F. A. /BOEING CO./ DATE- SEP. 1968
ARC-10141

Computer program formulates geometric description of the wing body configuration, optimizes wing camber shape, determines wing shape for a given pressure distribution, and calculates pressures, forces, and moments on a given configuration. The program consists of geometry definition, transformation, and paneling, and aerodynamics, and flow visualization.

B68-10354
FORTRAN OPTICAL LENS DESIGN PROGRAM
FIRNETT, P. J. SCHMIDT, L. F. WILSON, L. A.
/INFORMATICS, INC./ DATE- SEP. 1968

NPO-10603

Computer program uses the principles of geometrical optics to design optical systems containing up to 100 planes, conic or polynomial aspheric surfaces, 7 object points, 6 colors, and 200 rays. This program can be used for the automatic design of optical systems or for the evaluation of existing optical systems.

B68-10356
ANALYSIS OF ANNULAR COMBUSTORS
SPON- INNOVATOR NOT GIVEN /NORTHERN RES. ENG.
CORP./ DATE- SEP. 1968 REAN- SEE ALSO
NASA-CR-72374 AND NASA-CR-72375
LEWIS-10399

Computer program is used for analysis and design of gas turbine combustors. The program analyzes fluid flow, combustion, and heat transfer in annular and rectangular combustors with diffusers, making use of currently available analytical methods and correlations.

B68-10361
REAL FLUID PROPERTIES OF NORMAL AND
PARAHYDROGEN
GOLDBERG, F. N. HAFERD, A. M. DATE- SEP. 1968
LEWIS-10458

Computer program calculates the real fluid properties of normal or parahydrogen using a library of single function calls without initial estimates. Accurate transport and thermodynamic properties of molecular hydrogen are needed for advanced propulsion systems.

B68-10374
AXISYMMETRIC TWO-PHASE PERFECT GAS
PERFORMANCE PROGRAM
KLIEGEL, J. R. NICKERSON, G. R. /TRW SYSTEMS/
DATE- OCT. 1968 REAN- SEE ALSO B68-10375,
B68-10376, AND B68-10377
MSC-11774

Computer program calculates the inviscid axisymmetric nozzle expansion of propellant systems having both gaseous and condensed exhaust products. The program uses velocity and thermal lags and will perform calculations for contoured and conical nozzles.

B68-10375
ONE-DIMENSIONAL REACTING GAS NONEQUILIBRIUM
PERFORMANCE PROGRAM
FREY, H. M. KLIEGEL, J. R. /TRW SYSTEMS/ DATE-
OCT. 1968 REAN- SEE ALSO B68-10374, B68-10376,
AND B68-10377
MSC-11777

Computer program calculates the inviscid one-dimensional equilibrium, frozen, and nonequilibrium nozzle expansion of gaseous propellant exhaust mixtures containing the elements - carbon, hydrogen, oxygen, nitrogen, fluorine and chlorine. The program performs calculations for conical nozzles only.

B68-10376
ONE-DIMENSIONAL TWO-PHASE REACTING GAS
NONEQUILIBRIUM PERFORMANCE PROGRAM
CHERRY, S. S. FREY, H. M. KLIEGEL, J. R. QUAN,
V. /TRW SYSTEMS/ DATE- OCT. 1968 REAN- SEE ALSO
B68-10374, B68-10375, AND B68-10377
MSC-11780

Computer program calculates the inviscid one-dimensional equilibrium, frozen, and nonequilibrium nozzle expansion of propellant exhaust mixtures containing carbon, hydrogen, oxygen, nitrogen, fluorine, chlorine and either aluminum, beryllium, boron or lithium. This program performs calculations for conical nozzles only.

B68-10377
AXISYMMETRIC REACTING GAS NONEQUILIBRIUM
PERFORMANCE PROGRAM
KLIEGEL, J. R. MELDE, J. E. NICKERSON, G. R.
QUAN, V. /TRW SYSTEMS/ DATE- OCT. 1968 REAN-
SEE ALSO B68-10374, B68-10375, AND B68-10376
MSC-11781

Computer program calculates the inviscid one-dimensional equilibrium, frozen, and nonequilibrium nozzle expansion of propellant

06 COMPUTER PROGRAMS

exhaust mixtures containing these six elements - carbon, hydrogen, oxygen, nitrogen, fluorine, and chlorine plus either aluminum, beryllium, boron or lithium. This program will perform calculations for contoured and conical nozzles.

B68-10403

INTERNAL VELOCITY FACTORS

CATHCART, J. R. FRANK, A. J. MASSAGLIA, J. L.
/N. AM. ROCKWELL CORP./ DATE- NOV. 1968
MSC-15002

Computer program analyzes the entries and planetary trajectories of space vehicles. It obtains the equivalence of altitude and flight path angle, respectively, to acceleration load factor with respect to velocity for a given inertial velocity.

B68-10405

ANALYSIS OF FILAMENT REINFORCED METAL-SHELL PRESSURE VESSELS

LANDES, R. E. MORRIS, E. E. /AEROJET GEN. CORP./
DATE- NOV. 1968
LEWIS-10352

Computer program analyzes design requirements and computes designs for metal-lined filament-wound pressure vessels with either geodesic/helical/ or in-plane filament winding patterns on the cylindrical portion and over the ends, reinforced by circumferential windings on the cylindrical portion.

B68-10410

DSM SEVEN DAY/TWELVE WEEK SCHEDULE PROGRAM

HOLZMAN, R. E. DATE- DEC. 1968
NPO-10752

Deep Space Network scheduling program allocates resources based on the users requirements. The system reviews and allocates the requests for equipment and resources. Depending upon the program input either the seven day or the twelve week schedule is generated.

B68-10416

CIRCUS--A DIGITAL COMPUTER PROGRAM FOR TRANSIENT ANALYSIS OF ELECTRONIC CIRCUITS

MOORE, W. T. STEINBERG, L. L. /BOEING CO./
DATE- DEC. 1968
M-FS-15002

Computer program simulates the time domain response of an electronic circuit to an arbitrary forcing function. CIRCUS uses a charge-control parameter model to represent each semiconductor device. Given the primary photocurrent, the transient behavior of a circuit in a radiation environment is determined.

B68-10421

COMPUTER PROGRAM FOR MACHINE DESIGN OF CASSEGRAIN FEED SYSTEMS

POTTER, P. D. DATE- NOV. 1968
NPO-10588

Program designs the feed system geometry and the subreflector surface, with the main reflector configuration and frequency of operation as input data. Although the feedhorn is not designed, its required gain, beamwidth, and approximate radiation pattern are specified.

B68-10422

GENERALIZED NEWTON-RAPHSON TRAJECTORY OPTIMIZATION-GENERATOR 1

COPE, D. D. ESKRIDGE, C. D. HANAFY, L. M.
/BOEING CO./ DATE- NOV. 1968
M-FS-15020

Computer program constructs a sequence of optimal solutions to dynamically-approximate linear equations. Specification of the number and type of subarcs in the optimal solution allows simultaneous satisfaction of all switching criteria.

B68-10423

SYMBOLIC REDUCTION OF BLOCK DIAGRAMS

USING FORMAC

LORENZO, C. F. SWIGERT, P. DATE- NOV. 1968
LEWIS-10409

Two computer programs - one written in FORMAC to generate the desired symbolic expressions, the

other in FORTRAN 4 to numerically evaluate the expressions are announced. The FORTRAN program accepts the symbolic punched output from the FORMAC program in either unexpanded or expanded form. It numerically evaluates the expressions.

B68-10435

GERT EXCLUSIVE-OR COMBINING PATHS AND LOOPS OF ELECTRICAL NETWORKS

ALAN, A. PRITSKER, B. /ARIZONA STATE UNIV./
DATE- OCT. 1968
ERC-10206

Program takes a network with multi-parameter branches and reduces it to a network having a single branch connecting source nodes to sink nodes. The program calculates probability, expected time, and variance in the time to go from each source node to each sink node of the GERT network.

B68-10445

ENVIRONMENTAL TEST PLANNING, SELECTION AND STANDARDIZATION AIDS AVAILABLE

COPELAND, E. H. FOLEY, J. T. DATE- DEC. 1968
SAN-10028

Requirements for instrumentation, equipment, and methods to be used in conducting environmental tests on components intended for use by a wide variety of technical personnel of different educational backgrounds, experience, and interests is announced.

B68-10446

MODIFIED MUTHOPP MEAN CAMBER COMPUTER PROGRAM

LAMAR, J. E. DATE- DEC. 1968
LANGLEY-10376

Computer program which determines the mean camber surface required to support a given set of loadings on a composite wing in subsonic compressible flow has been developed.

B68-10447

PLUME RADIATION PROGRAM

DE SOTO, S. VOK, C. A. /N. AM. ROCKWELL CORP./
DATE- OCT. 1968
M-FS-13202

Computer program determines the radiant flux to the base region of a real gas system with an axisymmetric geometry and any axisymmetric property distribution.

B68-10448

PERFORMANCE ANALYSIS OF ELECTRICAL CIRCUITS

/PANE/
JOHNSON, K. L. STEINBERG, L. L. /BOEING CO./
DATE- OCT. 1968
M-FS-15001

Automated statistical and worst case computer program has been designed to perform dc and ac steady circuit analyses. The program determines the worst case circuit performance by solving circuit equations.

B68-10449

SINGLE DEGREE OF FREEDOM ANTENNA POINTING

PROGRAM /ANTENNA/
FLEISHNER, G. E. DATE- NOV. 1968
NPO-10756

Computer program optimizes the accuracy of pointing a radio-frequency antenna at a target whose position is time varying but known with respect to a certain reference frame.

B68-10450

COMPUTER PROGRAM TRACK PERFORMS TRANSIENT AND/OR STEADY STATE THERMAL ANALYSIS WITH COUPLED FLUID FLOW AND HEAT CONDUCTION

LEE, A. Y. WOODS, M. D. WOODS, H. D.
/WESTINGHOUSE ASTRONUC. LAB./ DATE- NOV. 1968
NUC-10189

Computer program called TRACK was developed by combining a transient fluid flow computer code and the existing modified TOSS heat conduction code to perform the computation.

B68-10451

A REQUEST-ORIENTED INFORMATION SELECTION PROGRAM

RYAN, E. DATE- OCT. 1968
LEWIS-10255

General purpose information retrieval program written entirely in FORTRAN 4 was developed and can be used with any file of fixed format documents. This program is easily used by noncomputer personnel and provides flexibility in search requests and output format.

B68-10452
MODIFIED MUTHOPP LIFTING SURFACE LOADING PROGRAM

LAMAR, J. E. DATE- NOV. 1968
LANGLEY-10375

Computer program determines the longitudinal subsonic aerodynamic characteristics of composite wings. The program uses the basic theoretical method of Muthopp in predicting the loading data.

B68-10453
COMPUTER PROGRAM FOR PARAMETER OPTIMIZATION

GLATT, C. R. HAGUE, D. S. /BOEING CO./ DATE- DEC. 1968
ARC-10168

Flexible, large scale digital computer program was designed for the solution of a wide range of multivariable parameter optimization problems. The program has the ability to solve constrained optimization problems involving up to one hundred parameters.

B68-10457
GERT-SIMULATION PROGRAM FOR GERT NETWORK ANALYSIS

ALAN, A. PRITSKER, B. /ARIZONA STATE UNIV./ DATE- OCT. 1968
ERC-10209

GERT Simulation Program simulates GERT networks to obtain statistics on specified nodes of the network. It performs sampling experiments to determine which branches of the network are taken and how long it takes to traverse a branch of the network.

B68-10576
DIGITAL COMPUTER TECHNIQUE FOR SETUP AND CHECKOUT OF AN ANALOG COMPUTER

AMBARUCH, R. /IBM/ DATE- NOV. 1968
M-FS-13969

Computer program technique, called Analog Computer Check-Out Routine Digitally /ACCORD/, generates complete setup and checkout data for an analog computer. In addition, the correctness of the analog program implementation is validated.

B69-10007
PROPELLANT TANK PRESSURIZATION ANALYSIS PROGRAM

EPSTEIN, M. /N. AM. ROCKWELL CORP./ DATE- JAN. 1969
M-FS-12623

Propellant tank pressurization analysis program considers fluid densities related to pressures and temperatures acting on the components, heat transfer between the fluids, the components, the ambient, plus component volumes, materials, and configurations in the formation of a mathematical model. This program is written in FORTRAN H and MAP.

B69-10023
COMPUTER PROGRAM DEVELOPED FOR FLOWSHEET CALCULATIONS AND PROCESS DATA REDUCTION

ALFREDSON, P. G. ANASTASIA, L. J. KNUDSEN, I. E. KOPPEL, L. B. VOGEL, G. J. DATE- FEB. 1969
REAN- SEE ALSO ANI-7197
ARG-10134

Computer program PACER-65, is used for flowsheet calculations and easily adapted to process data reduction. Each unit, vessel, meter, and processing operation in the overall flowsheet is represented by a separate subroutine, which the program calls in the order required to complete an overall flowsheet calculation.

B69-10031
THE COMPATIBLE CONVERSION SYSTEM

HOFFMAN, P. KOTHE, J. MANDY, J. MC VAY, L. WINNINGKOFF, K. YEAGER, E. /BOEING CO./ DATE- FEB. 1969
M-FS-15010

Compatible conversion system centralizes the solution of general problems arising from the use of direct access mass storage. It also provides a simple stable interface for the conversion of production programs to process on third generation computer system.

B69-10034
COMPUTER PROGRAM ANALYZES WHIRL CRITICAL SPEEDS AND BEARING LOADS FOR SHAFTS COUPLED BY NONLINEAR SPRINGS TO MACHINE HOUSING

SEVERUD, L. K. /AEROJET GEN. CORP./ DATE- FEB. 1969
NUC-10308

Computerized method of analysis predicts bearing loads, shaft deflections, and critical speeds for shafts coupled by rolling contact bearings to the machine housing. The bearing nonlinearities, casing as well as rotor dynamics, and rotor-imbalance forcing functions are all included in the system dynamics analysis.

B69-10035
GENERAL SERIES SOLUTION TECHNIQUE FOR BENDING OF IRREGULAR LATERALLY LOADED FLAT PLATES

SWANSON, J. A. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- FEB. 1969
NUC-10170

Computer program calculates the stresses and lateral deflections to a uniform thickness flat plate with a uniform pressure load. The plate to be analyzed may have several different boundary conditions. The program is written in FORTRAN 4 for use on the CDC 6600 computer.

B69-10036
COMPUTER PROGRAM CALCULATES THE EFFECTIVE TEMPERATURE FOR A CRYSTALLINE SOLID /DETS/ JOHNSTON, A. S. SOWDEN, M. M. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- FEB. 1969
NUC-10161

Computer program computes and prints out both the Debye and resulting effective temperatures for each Debye model-dependent average energy per vibrational mode, Debye-Waller factor, and specific heat. The program calculates by the trapezoidal rule and then Simpsons rule.

B69-10038
MONTE CARLO DIRECT VIEW FACTOR AND GENERALIZED RADIATIVE HEAT TRANSFER PROGRAMS

MC WILLIAMS, J. L. SCATES, J. H. /BOEING CO./ DATE- FEB. 1969
M-FS-15051

Computer programs find the direct view factor from one surface segment to another using the Monte carlo technique, and the radioactive-transfer coefficients between surface segments. An advantage of the programs is the great generality of problems treatable and rapidity of solution from problem conception to receipt of results.

B69-10039
SPAN C - TERMINAL STERILIZATION PROCESS ANALYSIS PROGRAM

DATE- FEB. 1969 REAN- SEE ALSO B69-10104
NPO-10805

Computer program, SPAN-C, measures the dry heat thermal sterilization process applied to a planetary capsule and calculates the time required for heat application, steady state conditions, and cooling. The program is based on the logarithmic survival of micro-organisms. Temperature profiles must be input on cards.

B69-10040
RATIO MATCHING OF HALF-BRIDGE WELDABLE STRAIN GAGES, COMPUTER PROGRAM

ANDERSON, K. F. BROWN, G. L. DATE- FEB. 1969
FRC-10032

Computer program reduces the unbalance of weldable half-bridge strain gage installations. The

06 COMPUTER PROGRAMS

program calculates the two resistance ratios of each half-bridge gage, outputting a table of gages ranked according to resistance ratio. The tabulation forms a convenient record of gage characteristics.

B69-10041

WEIGHT CONTROL SYSTEM

DYER, A., JR. FERRARA, P. W. LUKE, H. P.
/BOEING CO./ DATE- FEB. 1969
M-FS-15028

Weight Control System, a set of linked computer programs which provides weight and balance reports from magnetic tape files, provides weight control and reporting on launch vehicle programs. With minor format modifications the program is applicable to aerospace, marine, automotive and other land transportation industries.

B69-10103

ABTRAJ ON-SITE TRACKING PREDICTION PROGRAM

BERMAN, A. L. LEPLA, F. B. DATE- APR. 1969
NPO-10836

Computer program, ABTRAJ, provides Deep Space Network tracking stations with the capability of generating spacecraft predictions with on-site computers. The program is comprised of two major sections - the main prediction portion and a trajectory subroutine which spans the desired predict interval with spacecraft ephemeris data written on magnetic tapes.

B69-10104

SPAN-TERMINAL STERILIZATION PROCESS ANALYSIS PROGRAM

DATE- APR. 1969 REAN- SEE ALSO B69-10039
NPO-10804

Computer program, SPAN, measures the dry heat thermal sterilization process applied to a planetary capsule and calculates the time required for heat application, steady state conditions, and cooling. The program is based on the logarithmic survival of micro-organisms. Temperature profiles must be input on tape.

B69-10105

MIDCOURSE MANEUVER OPERATIONS PROGRAM

GORDON, H. J. HAMBURG, R. L. MITCHELL, R. T.
PASS, D. ROYER, D. R. DATE- APR. 1969
NPO-10735

Midcourse Maneuver Operations Program /MMOP/ computes the required velocity change to correct a spacecraft trajectory. The program establishes the existence of maneuvers which satisfy spacecraft constraints, explores alternate trajectories in the event that some out-of-tolerance condition forces a change in plans, and codes the maneuvers into commands.

B69-10106

LABCON-LABORATORY JOB CONTROL PROGRAM

REAMS, L. T. /N. AM. ROCKWELL CORP./ DATE- APR. 1969
M-FS-18141

Computer program LABCON controls the budget system in a component test laboratory whose workload is made up from many individual budget allocations. A common denominator is applied to an incoming job, to which all effort is charged and accounted for.

B69-10111

GEOMETRY AND DESIGN POINT PERFORMANCE OF AXIAL FLOW TURBINES

CARTER, A. F. PLOTT, M. /NORTHERN RES. AND ENG. CORP./ DATE- APR. 1969
LEWIS-10471

Computer program determines the alternative geometries and associated design point performance of axial-flow turbines capable of satisfying specified design requirements. The program solves the flow field within the turbine without making the simplifying assumptions that result in restrictive designs.

B69-10132

/MAGNIFY/ PROGRAM FOR CALCULATING VELOCITIES IN MAGNIFIED REGION OF TURBOMACHINES

KATSANIS, T. MC NALLY, W. DATE- MAY 1969
LEWIS-10789

Computer program, MAGNIFY, calculates the velocity distribution through the passage between and over blade surfaces of blade rows for turbines and compressors. Using the input of other programs, MAGNIFY obtains velocities on smaller than normal finite difference mesh in any part of the blade-to-blade passage.

B69-10134

MASS SPECTROGRAPH ANALYSIS

SHORES, J. P. DATE- MAY 1969
MSC-13239

Computer program provides a means of rapid data reduction of mass spectrograph data. The methods used are suited to mechanization on a digital computer since they consist of the systematic search of a large amount of tabular data and the unknown.

B69-10139

V ICAR-DIGITAL IMAGE PROCESSING SYSTEM

BILLINGSLEY, F. BRESSLER, S. FRIDEN, H.
MORECROFT, J. NATHAN, R. RINDFLEISCH, T.
SELZER, R. DATE- JUN. 1969
NPO-10770

Computer program corrects various photometric, geometric and frequency response distortions in pictures. The program converts pictures to a number of elements, with each element optical density quantized to a numerical value. The translated picture is recorded on magnetic tape in digital form for subsequent processing and enhancement by computer.

B69-10146

BELL NOZZLE KERNEL ANALYSIS PROGRAM

ELLIOT, J. J. STROMSTRA, R. R. /ROCKETDYNE/
DATE- MAY 1969
M-FS-18456

Bell Nozzle Kernel Analysis Program computes and analyzes the supersonic flowfield in the kernel, or initial expansion region, of a bell or conical nozzle. It analyzes both plane and axisymmetric geometries for specified gas properties, nozzle throat geometry and input line.

B69-10148

MINIATURIZATION OF MAGNETIC LOGIC CIRCUITRY

BABA, P. D. /AMPEX CORP./ DATE- MAY 1969
LANGLEY-19037

Magnetic logic circuit design features two ferrite materials, with different formulation and magnetic characteristics, which are bonded into a continuous structure by preparing the materials as a slurry and using the doctor blade method to form flexible ferrite sheets. After firing, the sintering process was continuous across the bond.

B69-10157

PERFORMANCE STATISTICS OF THE FORTRAN 4 /H/ LIBRARY FOR THE IBM SYSTEM/360

CLARK, N. A. CODY, W. J., JR. HILLSTROM, K. E.
THIELEKER, E. A. DATE- MAY 1969 REAN- SEE ALSO
ANL-7321
ARG-10299

Test procedures and results for accuracy and timing tests of the basic IBM 360/50 FORTRAN 4 /H/ subroutine library are reported. The testing was undertaken to verify performance capability and as a prelude to providing some replacement routines of improved performance.

B69-10158

SYNTHESIS OF CALCULATIONAL METHODS FOR DESIGN AND ANALYSIS OF RADIATION SHIELDS FOR NUCLEAR ROCKET SYSTEMS

CAPO, M. A. /WESTINGHOUSE ASTRONUCLEAR DISNEY,
R. K. JORDAN, T. A. SOLTESZ, R. G. WOODSUM, H.
C. LAB./ DATE- JUN. 1969
M-FS-14447 NUC-10192

Eight computer programs make up a nine volume synthesis containing two design methods for nuclear rocket radiation shields. The first design method is appropriate for parametric and preliminary studies, while the second accomplishes the verification of a final nuclear rocket reactor design.

B69-10159

COMPUTER GRADING OF EXAMINATIONS

FRIGERIO, N. A. DATE- JUN. 1969

ARG-10269

A method, using IBM cards and computer processing, automates examination grading and recording and permits use of computational problems. The student generates his own answers, and the instructor has much greater freedom in writing questions than is possible with multiple choice examinations.

B69-10169

ENCODE/DECODE FACILITY FOR FORTRAN 4

COHN, C. E. DATE- JUN. 1969

ARG-10335

An ENCODE and DECODE facility, a subroutine added to a FORTRAN 4 library, allows alphanumeric data to be transferred to or from an area in memory rather than to or from external input/output devices. A buffer storage array allows the operations on the data prior to writing.

B69-10171

ADVANCED MISSION ANALYSIS PROGRAMS

BJORKMAN, W. S. /PHILCO-FORD CORP./ BROOKS, M.

J. DATE- JUN. 1969

GSFC-10575

Computer programs provide preliminary trajectory and guidance information required for feasibility studies in space mission analysis. The advanced mission analysis computer programs include programs for approximate solutions, programs for targeting and output, and programs for Monte Carlo and linear guidance analysis.

B69-10174

COMPUTER PROGRAMS FOR AXIAL FLOW

COMPRESSOR DESIGN

CARMODY, R. H. CREVELING, H. P. /GENERAL MOTORS

CORP./ DATE- JUN. 1969

LEWIS-10765

Four computer programs examine effects of design parameters and indicate areas for research of multistage axial flow compressors. The programs provide information on velocity diagrams and stage-by-stage performance calculation, radial equilibrium of flow, radial distribution of total pressure, and off-design performance calculation.

B69-10175

SHELL DESIGN COMPUTER PROGRAM

GREENBAUM, G. A. /TRW INC./ DATE- JUN. 1969

LEWIS-10734

Computer program determines the useful strength of a thin-walled shell once it has been wrinkled. It can be used as an analytical tool by designers to determine how much wrinkling or deformation a shell can withstand when subjected to axial compression and bending loads.

B69-10181

INVESTIGATION OF SPACECRAFT COATINGS

SPON- INNOVATOR NOT GIVEN /BATTELLE MEM. INST./

DATE- JUN. 1969

M-PS-20458

Literature review provides compilation of properties of coating materials used for external application on space vehicles. Attention is given to absorbance-emittance data and experimental spectral reference curves.

B69-10187

JFLIP-JPL FORTRAN LANGUAGE WITH INTERVAL

PRE-PROCESSOR

GERMANN, D. A. KNOWLTON, P. H. SMITH, H. L.

DATE- JUN. 1969

NFO-10835

FLIP and TMG are a FORTRAN pre-processor and a Syntax-Directed-Compiler used to describe the language in which the former is written. They provide those who write in FORTRAN 4 with greater language flexibility and power.

B69-10219

FORTRAN 4 PROGRAM CALCULATES VELOCITIES

AND STREAMLINES IN A TANDEM BLADE

TURBOMACHINE

KATSANIS, T. MCNALLY, W. D. DATE- JUL. 1969

LEWIS-10743

Computer program gives blade-to-blade solution of the two-dimensional, subsonic, compressible, nonviscous flow problem for a circular or straight infinite cascade of tandem or slotted turbomachine blades. The method of solution is based on the stream function using iterative solution of nonlinear finite-difference equations.

B69-10222

COMPUTER PROGRAM FOR HIGH PRESSURE REAL

GAS EFFECTS

JOHNSON, R. C. DATE- JUL. 1969

LEWIS-10820

Computer program obtains the real-gas isentropic flow functions and thermodynamic properties of gases for which the equation of state is known. The program uses FORTRAN 4 subroutines which were designed for calculations of nitrogen and helium. These subroutines are easily modified for calculations of other gases.

B69-10232

A COMPUTER PROGRAM FOR A LINE-BY-LINE

CALCULATION OF SPECTRA FROM DIATOMIC

MOLECULES AND ATOMS ASSUMING A VOIGT

LINE PROFILE

ARNOLD, J. O. LYLE, G. C. WHITING, E. E. DATE-

JUL. 1969

ARC-10221

Computer program predicts the spectra resulting from electronic transitions of diatomic molecules and atoms in local thermodynamic equilibrium. The program produces a spectrum by accounting for the contribution of each rotational and atomic line considered.

B69-10238

FINITE ELEMENT ANALYSIS OF COMPRESSIBLE

SOLIDS WITH NONLINEAR MATERIAL PROPERTIES

WILSON, E. L. /AEROJET-GENERAL CORP./ DATE- JUL.

1969

NUC-10342

Finite-element computer program solves for nodal point displacements in an axisymmetric solid. The options in the program include plane stress analysis, axisymmetric solids analysis, nonlinear /plastic/ analysis, and equivalent stress and strain.

B69-10239

THERMAL NETWORK ANALYZER PROGRAM

SAKAKURA, H. D. /AEROJET-GENERAL CORP./ DATE-

JUL. 1969

NUC-10540

Computer program solves transient or steady-state heat flow problems through the concept of lumped parameters expressed as the electrical analog of the heat transfer problem using finite differences techniques.

B69-10243

TIME-SHARED CATHODE RAY TUBE

HERNDON, E. S. /MITRE CORP./ DATE- JUL. 1969

MSC-12238

Time-shared cathode tube provides high quality display at low cost display stations which utilize television monitors. It updates a cluster of graphic displays from a computer and is useful in systems not equipped for graphics time-sharing.

B69-10267

COMPUTER PROGRAM FOR OFF-DESIGN

PERFORMANCE OF RADIAL INFLOW TURBINES

FUTREL, S. M., JR. TODD, C. A. DATE- AUG. 1969

LEWIS-10764

Computer program estimates off-design performance without making actual tests and design point performance. Turbine flow areas, diameters, and blade angles are required input information.

B69-10300

BUCKLING OF SHELLS OF REVOLUTION /BOSOR/

WITH VARIOUS WALL CONSTRUCTIONS

ALMROTH, B. O. /LOCKHEED MISSILES AND SPACE CO./

BUSHNELL, D. SOBEL, L. E. DATE- AUG. 1969

LANGLEY-10441

Computer program, using numerical integration and finite difference techniques, solves almost any

06 COMPUTER PROGRAMS

buckling problem for shells exhibiting orthotropic behavior. Stability analyses can be performed with reasonable accuracy and without unduly restrictive approximations.

B69-10334

ON THE BOUND OF FIRST EXCURSION PROBABILITY

YANG, J. N. DATE- SEP. 1969

NPO-11158

Method has been developed to improve the lower bound of the first excursion probability that can apply to the problem with either constant or time-dependent barriers. The method requires knowledge of the joint density function of the random process at two arbitrary instants.

B69-10337

ANALYSIS OF SPACE VEHICLE STRUCTURES USING

THE TRANSFER-FUNCTION CONCEPT

HEER, E. /CALIF. INST. OF TECHNOL./ TRUBERT, M.

R. DATE- SEP. 1969

NPO-11162

Analysis of large complex systems is accomplished by dividing it into suitable subsystems and determining the individual dynamical and vibrational responses. Frequency transfer functions then determine the vibrational response of the whole system.

B69-10368

COMPUTER SIMULATION OF HIGH-FREQUENCY COMBUSTION INSTABILITY AND ITS SUPPRESSION

BUCHER, R. E. /PRATT AND WHITNEY AIRCRAFT/ DATE-

SEP. 1969

HQ-10391

Program for simulation of gas motion illustrates the effects of some of the variables on the combustion chambers of liquid propellant rocket engines. The program is based on numerically integrating the laws of inviscid fluid dynamics by two-step Lax-Wendroff technique.

B69-10370

LM LOOKANGLE PROGRAM

AGEE, W. E. /LOCKHEED ELECTRON. CO./ DATE- SEP.

1969

MSC-13179

Program computes the spacecraft look angles and the slant range, which define a spherical coordinate system located in the spacecraft body. The program is designed to reduce data from the Lunar Module missions and to output desired information.

B69-10391

SONIC BOOM PROPAGATION IN STRATIFIED

ATMOSPHERE

HAEFELI, R. C. /AERONAUTICAL RES. ASSOCIATES OF

PRINCETON, INC./ HAYES, W. D. KULSRUD, H. E.

DATE- SEP. 1969

LANGLEY-10480

Comprehensive analysis and algorithm, realized in a computer program, provides realistic calculations for sonic boom signatures in the atmosphere. Algorithm includes maneuvering aircraft in a sonic boom pressure calculation, a ray-tube area calculation, and results in the form of complete signatures.

B69-10394

VISUAL TASK ANALYSIS /VISTA/

BURKES, T. /BOEING CO./ KELLY, A. MERRITT, H.,

JR. DATE- SEP. 1969

M-FS-14716

Computer system VISTA, automatically plots selective PERT networks in order to develop accurate, standardized scheduling documentation as an essential element to project planning. This automation of plotting networks generates standardized networks due to a priority scheme adopted for calculating paths between events.

B69-10409

EXACT MINIMAL-STATE SYSTEM RELIABILITY

ANALYSIS

LOCKS, M. O. /N. AM. ROCKWELL CORP./ DATE- SEP.

1969

M-FS-16551

System reliability equation, an exact function of

component reliabilities, for a system with a finite number of points is derived from the minimal states which are found by logical analysis of the configuration. The numerical value is obtained by substituting the component reliabilities or unreliabilities.

B69-10432

STRUCTURE OF THE ISOTROPIC TRANSPORT

OPERATORS IN THREE INDEPENDENT SPACE

VARIABLES

ABU-SHUMAYS, I. K. BAREISS, E. H. DATE- SEP.

1969 REAN- SEP ALSO ANL-7328

ARG-10448

Based on the idea of separation of variables, a spectral theory for the three-dimensional, stationary, isotropic transport operator in a vector space of complex-valued Borel functions results in continuous sets of regular and generalized eigenfunctions.

B69-10433

GAMBIT PROGRAM

COLLIER, G. /WESTINGHOUSE ASTRONUCL. LAB./

GIBSON, G. MORAN, L. I. DATE- SEP. 1969

NUC-10243

GAMBIT computer program provides multigroup flux and current averaged neutron cross sections for input to transport programs. The fast neutron compilation includes P/0 and P/1 elastic scattering transfer matrices, inelastic scattering matrices, $n, 2n$ cross section matrices, absorption and fission cross sections for all isotopes.

B69-10434

FAST FOURIER TRANSFORM SPECTRAL ANALYSIS

PROGRAM

DANIEL, J. A., JR. /BOEING CO./ GRAVES, M. L.

HOVEY, N. M. DATE- SEP. 1969

M-FS-15062

Fast Fourier Transform Spectral Analysis

Program is used in frequency spectrum analysis of postflight, space vehicle telemetered trajectory data. This computer program with a digital algorithm can calculate power spectrum rms amplitudes and cross spectrum of sampled parameters at even time increments.

B69-10435

DETERMINATION OF QUADRIC EQUATION

COEFFICIENTS DESCRIBING THREE-DIMENSIONAL

SURFACES, THEIR CONSTRAINT AND SKEWED PLANES,

AND VIEW POINT AREAS

PAOLETTI, C. J. /BOEING CO./ POND, J. E. VANCE,

J. H. DATE- SEP. 1969

M-FS-15043

Mathematical model and a digital computer BLITZ language programming technique computes coefficients of quadric equations describing cylinders, paraboloids, ellipsoids, or planes with any orientation to a reference system, coordinates of a vector, and coefficients of quadric surfaces which limit the surface of three-dimensional space.

B69-10454

SPECIAL PURPOSE COMPUTER PROVIDES

PROGRAMMABLE DIGITAL FILTER FOR SAMPLED-DATA

CONTROL SYSTEMS

CARROLL, C. C. DATE- DEC. 1969

M-FS-20290

Generalized digital filter is a special purpose computer. The term digital filter is an algorithm which accepts an input sequence of numbers and transforms it into an output number sequence. The organization of the computer, the logical design and synthesis, and experimentation with the computer in two sampled data control systems is discussed.

B69-10524

METHOD REDUCES COMPUTER TIME FOR SMOOTHING

FUNCTIONS AND DERIVATIVES THROUGH NINTH

ORDER POLYNOMIALS

GLAUZ, R. D. /AEROJET-GEN. CORP./ WILGUS, C. A.

DATE- OCT. 1969

NUC-10334

Analysis presented is an efficient technique to adjust previously calculated orthogonal polynomial

coefficients for an odd number of equally spaced data points. The adjusting technique derivation is for a ninth order polynomial. It reduces computer time for smoothing functions.

B69-10566
SYSTEM FOR COMPUTING OPERATIONAL
PROBABILITY EQUATIONS
RYAN, K. E. /N. AM. ROCKWELL CORP./ DATE- OCT.
1969
M-FS-16410

SCOPE system computes an expression relating the probability of system success to the probabilities of success of its components. It is especially designed for complex system reliability studies.

B69-10574
SPACECRAFT THERMAL RADIATION ENVIRONMENT
COMPUTER PROGRAM
PAOLETTI, C. J. /BOEING CO./ SCATES, J. H.
DATE- OCT. 1969
M-FS-15054

Computer program computes the total thermal radiation flux on each of a set of exposed surface elements of a spacecraft in the vicinity of a celestial body. The incident flux consists of solar, both direct and planetary-reflected, and planetary-emitted infrared radiation as functions of time.

B69-10608
AUTOMATIC COMPUTATION OF DATA-SET
DEFINITIONS
REYNOLDS, J. C. DATE- DEC. 1969
ARG-10475

Mathematical method for the construction of a computer program data set description from a computer program contains detailed declarative information. Cartesian products and disjoint-union operators are used to yield a series of recursive group equations.

B69-10656
COGENT PROGRAMMING MANUAL
REYNOLDS, J. C. DATE- NOV. 1969
ARG-10463

COGENT /Compiler and GENeralized Translator/ programming system is a compiler whose input language enables a description of symbolic and linguistic manipulation algorithms. Primarily for use as a compiler-compiler, it is also applicable to algebraic manipulation, mechanical theorem proving, and heuristic programming.

B69-10669
HIGH PRESSURE REAL GAS EFFECTS FOR HELIUM
AND NITROGEN
JOHNSON, R. C. DATE- OCT. 1969
LEWIS-10819

Critical flow factor is calculated that permits the isentropic mass-flow rate of the gases through critical flow nozzles to be calculated from plenum conditions. Results include nozzle throat velocity, compressibility factor, entropy, enthalpy, specific heat, and ratios of throat to plenum pressure, density, and temperature.

B69-10686
ADDING CALCIUM IMPROVES LITHIUM FERRITE CORE
LESSOFF, H. DATE- NOV. 1969
ERC-10036

Adding calcium increases uniformity of grain growth over a wide range of sintering temperatures and reduces porosity within the grain. Ferrite cores containing calcium have square hysteresis loops and high curie temperatures, making them useful in coincident current memories of digital electronic computers.

B69-10720
BIOMEDICAL BULK DATA PROCESSING PROGRAM
SPON- INNOVATOR NOT GIVEN /FLIGHT RES. CENTER/
DATE- NOV. 1969
ERC-10015 FRC-10016

Analog-to-digital computer accepts physiological flight data as three basic analog input signals -

the ECG signal, the flowmeter signal which is a respiration monitor, and the accelerometer signal which measures the normal g-load on the subject.

B69-10760
ENGINEERING THERMAL ANALYZER /BETA 2/
SCATES, J. H. /BOEING CO./ STEINBERG, L. L.
DATE- DEC. 1969
M-FS-15055

Computer program uses numerical methods to provide accurate heat transfer solutions to a wide variety of heat flow problems. This highly versatile program will solve steady state and transient problems in almost any situation that can be presented by a resistance-capacitance network.

B69-10723
OPTIMUM STRUCTURAL DESIGN BASED ON
RELIABILITY AND PROOF-LOAD TESTING
SHINOZUKA, M. YANG, J. N. DATE- DEC. 1969
NPO-11228

Proof-load test eliminates structures with strength less than the proof load and improves the reliability value in analysis. It truncates the distribution function of strength at the proof load, thereby alleviating verification of a fitted distribution function at the lower tail portion where data are usually nonexistent.

SUBJECT INDEX

Cumulative Index to Tech Briefs

Issue 10

Subject Index

The title of each Tech Brief is listed under several selected subject headings to provide the user with a variety of approaches in his search for specific information. The Tech Brief number, e.g., B69-10062, is located under and to the right of the title and is followed by a two-digit number, e.g., 05, which designates the subject category in which the entire entry can be found.

A

ABERRATION

Liquid micrurgy chamber and microsyringe designs allow more efficient micromanipulations
ARG-251 B67-10305 04

Aerial-image enables diagrams and animation to be inserted in motion pictures
ARG-165 B67-10398 02

Improved method of optical design
GSFC-10743 B69-10405 02

ABLATION

Computational procedure for finite difference solution of one-dimensional heat conduction problems reduces computer time
MSC-1120 B66-10566 01

Sensors measure surface ablation rate of reentry vehicle heat shield
LANGLEY-287 B66-10592 01

Multidimensional reaction kinetic ablation program /REKAP/
MSC-10079 B67-10495 06

ABLATIVE MATERIALS

Computer simulation program is adaptable to industrial processes
LEWIS-240 B66-10426 01

Improved method facilitates debulking and curing of phenolic impregnated asbestos
MSC-949 B66-10459 05

High intensity radiation heat source is capable of sustained operation
ARC-61 B66-10547 02

New class of thermosetting plastics has improved strength, thermal and chemical stability
LEWIS-10108 B67-10197 03

Improved compression molding process
LANGLEY-10027 B67-10302 03

Fire retardant foams developed to suppress fuel fires
ARC-10098 B68-10358 03

New rapid-curing, stable polyimide polymers with high-temperature strength and thermal stability
LEWIS-10576 B69-10118 03

ABNORMALITIES

Phase plane displays detect incipient failure in servo system testing
HQ-10018 B67-10662 01

Investigation of temperature dependence of development and aging
ARG-10145 B69-10022 04

Modified cryogenic storage tank subsystem
KSC-10380 B69-10556 02

ABRASION

Epoxy-coated containers easily opened by wire band
M-FS-592 B66-10174 05

Portable sandblaster cleans small areas
MSC-523 B66-10242 05

Grit blasting nozzle fabricated from mild tool steel proves satisfactory
M-FS-1420 B66-10597 05

Abrasion and fracture testing in a high-pressure hydrogen environment
M-FS-18480 B69-10457 03

ABRASION RESISTANCE

Epoxy blanket protects milled part during explosive forming
M-FS-307 B66-10029 03

Polytetrafluoroethylene lubricates ball bearings in vacuum environment
M-FS-379 B66-10081 03

Electrical cabling withstands severe environmental conditions
M-FS-1585 B66-10427 01

Double copper sheath multiconductor instrumentation cable is durable and easily installed in high thermal or nuclear radiation area
NUC-10007 B67-10538 01

Abrasion and resistant discharge valve developed
ARG-10219 B69-10044 05

ABRASIVES

Stringent cleaning technique assures reliable epoxy bond
GSFC-161 B64-10142 03

Device spot-laps spheres to very close tolerances
JPL-SC-119 B66-10175 05

Cracks in glass electrical connector headers removed by dry blasting with fine abrasive
LEWIS-381 B67-10148 03

Improved atmospheric particle analyzer
ERC-33 B67-10231 01

Technique for abrasive cutting of thick-film conductors for hybrid circuits

ACRYLIC ACID			ACTUATORS		
Heparin insolubilized with crosslinking agent NPO-10834	B69-10299	03	Stepping switch with simple actuator provides many contacts in small space JPL-122	B63-10118	01
ACRYLIC RESINS			Blade valve isolates compartment in pipe, opens to allow free flow JPL-585	B64-10188	05
Circular, explosion-proof lamp provides uniform illumination MSC-382	B66-10156	02	Explosives actuate nonmagnetic indexing device GSFC-237	B65-10017	05
Electrically conductive fibers thermally isolate temperature sensor GSFC-456	B66-10349	01	Stepping motor drive circuit designed for low power drain GSFC-198	B65-10026	01
Copper-acrylic enamel serves as lubricant for cold drawing of refractory metals ARG-54	B66-10471	05	Device disconnects several couplings simultaneously JPL-226	B65-10163	05
Scribble coating for plastic films MSC-11194	B67-10409	03	Selenium bond decreases ON resistance of light-activated switch JPL-SC-101	B65-10324	01
ACTINIDE SERIES			Three-position rocker switch actuator has positive centering MSC-261	B65-10376	01
Study of actinide chemistry in saturated potassium fluoride solution ARG-10204	B69-10004	03	Fingertip current control facilitates use of arc welding gun MSC-289	B66-10092	05
ACTINIDE SERIES COMPOUNDS			Quick-closing valve is actuated by explosive discharge ARC-55	B66-10233	05
Nitric acid-organic mixtures surveyed for use in separation by anion exchange methods ARG-10065	B68-10425	03	Flow ring valve is simple, quick-acting M-FS-752	B66-10255	05
ACTINIUM			Compact actuator converts rotary to linear motion JPL-786	B66-10265	05
Daughter growth in freshly separated Ra-226, Ac-227 and U-232 ARG-10226	B69-10003	02	Special mandrel permits uniform welding of out-of-round tubing M-FS-706	B66-10323	05
ACTIVATION			Friction loading device enables accurate testing of brittle materials NU-0051	B66-10345	05
Study made of Raney nickel technology M-FS-2054	B67-10208	03	Pneumatic binary encoder replaces multiple solenoid system M-FS-665	B66-10374	01
Preparation of silver-activated zinc sulfide thin films GSFC-10687	B68-10271	03	Matching flow characteristics of standard shutoff valves eliminates need for custom fabricated valves M-FS-1069	B66-10416	05
Versatile impact hand tool M-FS-20140	B68-10371	05	Quick-response servo amplifies small hydraulic pressure differences ARG-99	B66-10498	05
ACTIVATION ANALYSIS			In-tank shutoff valve is provided with maximum blast protection M-FS-1529	B66-10514	05
Computer program calculates gamma ray source strengths of materials exposed to neutron fluxes NUC-10143	B67-10665	06	Fluid logic control circuit operates nutator actuator motor LEWIS-294	B66-10593	05
ACTIVATION ENERGY			Fuel and oxidizer valve assembly employs single solenoid actuator MSC-1046	B66-10648	05
Solenoid permits remote control of stop watch and assures restarting FRC-17	B63-10024	01	Actuator device schedules rate of valve closure M-FS-1556	B66-10686	05
Electrically controlled optical latch and switch requires less current JPL-SC-111	B66-10414	01	Low speed, long term tracking electric drive system has zero backlash NPO-10173	B67-10220	01
Hydrated multivalent cations are new class of molten salt mixtures ARG-211	B67-10033	03	Pressure levels and pulsation frequencies can be varied on high pressure/frequency		
ACTUATION					
Level of super-cold liquids automatically maintained by levelometer JPL-397	B63-10250	01			
Simple mechanism combines positive locking and quick-release features WOO-4	B63-10420	05			
One-shot valve may be remotely actuated WOO-195	B65-10266	05			
Key-locked guard prevents accidental switch actuation MSC-419	B66-10235	05			
Rugged switch responds to minute pressure differentials M-FS-12704	B67-10389	01			
Simple switch actuated by force applied

ADDING CIRCUITS

SUBJECT INDEX

ADDING CIRCUITS

Improved circuit minimizes generation time of pseudonoise check bits
JPL-698 B65-10275 01

Simple circuit performs binary addition and subtraction
GSFC-399 B65-10355 01

Linear signal noise summer accurately determines and controls S/N ratio
JPL-SC-152 B66-10433 01

Security warning system monitors up to fifteen remote areas simultaneously
KSC-66-39 B66-10548 01

Self-correcting, synchronizing ring counter using integrated circuit devices
M-FS-13901 B68-10067 01

ADDITIVES

Quick-hardening problems are eliminated with spray gun modification which mixes resin and accelerator liquids during application
LANGLEY-6A B63-10318 03

Didysium compound improves nickel-cadmium cell
GSFC-295 B65-10083 03

Run-in with chemical additive protects gear surface
M-FS-548 B66-10069 05

Aluminum doping improves silicon solar cells
LEWIS-206 B66-10181 02

Chromium oxide coatings improve thermal emissivity of alumina
WOO-263 B66-10227 03

Photosensitive filler minimizes internal stresses in epoxy resins
M-FS-1880 B67-10227 03

Process controls introduction of selected impurities into semiconductor wafers
GSFC-523 B67-10303 01

Steel test panel helps control additives in pyrophosphate copper plating
LEWIS-10101 B67-10358 05

High-temperature bearing lubricants
LEWIS-10408 B68-10249 05

Ignition of binary alloys of uranium
ARG-10057 B68-10280 01

Precise doping of metals by small gas flows
LEWIS-10444 B68-10526 03

ADDUCTS

Adhesive for cryogenic temperature applications
LEWIS-10264 B69-10074 03

ADHESION

Refractory thermal insulation for smooth metal surfaces
M-FS-160 B64-10099 03

Multilayer refractory nozzles produced by plasma-spray process
WOO-318 B66-10611 05

Reparable, high-density microelectronic module provides effective heat sink
M-FS-13075 B67-10356 01

Technique for measuring magnetic tape interlayer adhesion
NPO-10011 B67-10417 03

Copper and nickel adherently electroplated on titanium alloy
M-FS-13952 B67-10532 03

Method of disjoining adhesively bonded electronic cordwood modules
MSC-12060 B68-10086 01

Indium adhesion provides quantitative measure of surface cleanliness
SAN-10024 B68-10342 01

Gun facilitates adhesive bonding of studs to surfaces
M-FS-20299 B69-10009 05

Effect of interparticle forces on the fluidization of fine particles
ARG-10264 B69-10195 03

Pulsed high-voltage dc RF sputtering
LEWIS-10920 B69-10699 01

ADHESION TESTS

Ultrasonic emission method enables testing of adhesive bonds
M-FS-799 B66-10341 01

Dot patterns provide reproducible flaw areas for study of adhesive bonds
M-FS-862 B66-10367 05

Nondestructive determination of cohesive strength of adhesive-bonded composites
M-FS-20397 B69-10464 03

ADHESIVES

Portable flooring protects finished surfaces, is easily moved
M-FS-15 B63-10387 05

Improved electrode gives high-quality biological recordings
MSC-17 B64-10025 04

Screening technique makes reliable bond at room temperature
M-FS-227 B65-10004 03

Improved conductive paste secures biomedical electrodes
MSC-107 B65-10015 03

Adhesive for vacuum environments resists shock and vibration
MSC-56 B65-10016 03

Peel resistance of adhesive bonds accurately measured
GSFC-320 B65-10173 03

Electronic modules easily separated from heat sink
MSC-142 B65-10186 02

Fastener distributes stress evenly from sandwich-panel-hung items
MSC-236 B65-10358 05

Adhesive-backed terminal board eliminates mounting screws
MSC-173 B65-10396 01

Polymer film exhibits thermal and radiation stability
LANGLEY-100 B66-10043 03

Improved electrode paste provides reliable measurement of galvanic skin response
MSC-146 B66-10049 04

Calibrated clamp facilitates pressure application
MSC-298 B66-10059 05

Storage-stable foamable polyurethane is activated by heat
LANGLEY-187 B66-10111 03

Integral skin electrode for electrocardiography is expendable
MSC-299 B66-10118 04

SUBJECT INDEX

ADJUSTING

Compound improves thermal interface between thermocouple and sensed surface NU-0028	B66-10121	02	M-FS-2308	B67-10378	01
Insulation for cryogenic tanks has reduced thickness and weight M-FS-326	B66-10183	02	Scribble coating for plastic films MSC-11194	B67-10409	03
Improved adhesive for cryogenic applications cures at room temperature WOO-132	B66-10185	03	Adhesives for laminating polyimide insulated flat conductor cable M-FS-12066	B67-10429	03
Rubber-coated bellows improves vibration damping in vacuum lines LEWIS-273	B66-10187	02	Proposed method of rotary dynamic balancing by laser M-FS-12422	B67-10452	02
Coating permits use of strain gage in water and liquid hydrogen M-FS-594	B66-10192	01	Solvent permits solid curing agents to be used at room temperatures M-FS-13434	B67-10593	03
Tool permits damage-free removal of solar cell GSFC-467	B66-10219	05	Synthesis of pure aromatic glycidyl esters for use as adhesives M-FS-12705	B67-10647	03
Substituted silane-diol polymers have improved thermal stability M-FS-469	B66-10259	03	Miniature pressure transducer for stressed member application MSC-11869	B68-10246	01
Electrolytic etching process provides effective bonding surface on stainless steel GSFC-484	B66-10299	03	Fiber glass reinforced structural materials for aerospace application M-FS-14806	B68-10360	03
Inexpensive insulation is effective for cryogenic transfer lines MSC-618	B66-10348	02	Improved radiographic image amplifier panel M-FS-14522	B68-10363	02
Impact and puncture resistant material protects parts from damage MSC-747	B66-10375	05	High-emittance coatings on metal substrates LEWIS-10325	B68-10381	03
Mylar film eliminates silk screening of equipment panels MSC-798	B66-10455	05	Battery-package design provides for cell cooling and constraint MSC-11839	B68-10398	05
Adhesive for polyester films cures at room temperature, has high initial tack M-FS-938	B66-10487	03	Frangible electrochemical cell and sealing technique XGS-10010	B69-10056	01
Film coating permits low-force scribing MSC-990	B66-10609	03	Adhesive for cryogenic temperature applications LEWIS-10264	B69-10074	03
Silver-palladium braze alloy recovered from masking materials M-FS-1845	B66-10631	03	Tools for applying lead tape to flat conductor cabling for chemical stripping M-FS-20429	B69-10190	05
Gas leak detector is simple and inexpensive M-FS-1206	B66-10669	01	Novel terminal strips for transformers NPO-10842	B69-10246	01
Process sequence produces strong, lightweight reflectors of excellent quality LEWIS-331	B67-10010	05	Instrumentation for nondestructive testing of composite honeycomb materials M-FS-20405	B69-10366	03
Miniature capacitor functions as pressure sensor JPL-903	B67-10020	01	Quick-set temporary bonding clamps NPO-10695	B69-10406	03
Resistance heating releases structural adhesive M-FS-1607	B67-10045	05	Heat-shrinkable jacket holds fluid in contact with tensile test specimen MSC-13195	B69-10495	05
Nonwoven glass fiber mat reinforces polyurethane adhesive M-FS-2309	B67-10113	03	Improved primer for bonding polyurethane adhesives to metals M-FS-90591	B69-10540	03
New class of thermosetting plastics has improved strength, thermal and chemical stability LEWIS-10108	B67-10197	03	ADIABATIC CONDITIONS		
Photosensitive filler minimizes internal stresses in epoxy resins M-FS-1880	B67-10227	03	Computer program NCAP provides for steady state thermal and flow analysis of multiple parallel channels in heat generating solid NUC-10043	B67-10457	06
Inexpensive cryogenic insulation replaces vacuum jacketed line NUC-10061	B67-10264	02	Thermal Network Analyzer Program NUC-10540	B69-10239	06
Flowmeter determines mix ratio for viscous adhesives			ADJUSTING		
			Modified gas bearing is adjustable to optimum stiffness ratio M-FS-145	B64-10050	05

ADSORPTION

SUBJECT INDEX

MSC-298 B66-10059 05

T-handle wrench has torque-limiting action
MSC-280 B66-10065 05

Auxiliary coil controls temperature of RF
induction heater
GSFC-428 B66-10067 01

Fixture aids soldering of electronic
components on circuit board
ARC-56 B66-10162 01

Multisurface fixture permits easy grinding
of tool bit angles
M-FS-586 B66-10171 05

Lifting clamp positively grips structural
shapes
M-FS-593 B66-10176 05

Tool post modification allows easy turret
lathe cutting-tool alignment
M-FS-581 B66-10191 05

Mount enables precision adjustment of
optical-instrumentation mirror
MSC-184 B66-10199 02

Torque wrench allows readings from
inaccessible locations
M-FS-598 B66-10204 05

Automatic reel controls filler wire in
welding machines
MSC-416 B66-10236 05

Adjustable knife cuts honeycomb material to
specified depth
MSC-475 B66-10237 05

Lathe chuck key incorporates safety feature
MSC-506 B66-10243 05

Device facilitates centering of workpieces in
lathe chuck
M-FS-685 B66-10277 05

Concealed hinge permits flush mounting of
doors and hatches
MSC-623 B66-10336 03

Versatile machine mills, saws light materials
M-FS-827 B66-10364 05

Motion drive system is accurately controlled
in the 1-micron range
JPL-864 B66-10695 05

Tool facilitates installation of Marmon
clamps
M-FS-2039 B67-10105 05

A calibration means for spectrum analyzers
MSC-10987 B67-10254 01

Eccentric drive mechanism is adjustable
during operation
M-FS-2576 B67-10373 05

Apparatus makes klystron operating
frequency adjustable from remote point
NPO-09831 B67-10514 01

Electron beam standby absorber system
M-FS-14108 B67-10650 01

Tunable bandpass filter with variable
selectivity
ARC-10191 B69-10130 01

Adjustable wrench for electronic connectors
M-FS-18547 B69-10184 05

Tool simplifies machining of pipe ends for
precision welding
KSC-10361 B69-10231 05

ADSORPTION
Radioactive method enables determination of
surface areas rapidly and accurately
NU-0088 B66-10710 03

Separation of traces of metal ions from
sodium matrices
ARG-10341 B69-10168 03

Detection of molecular infrared spectra
HQ-10377 B69-10172 02

Separation of the rare earths by
anion-exchange in the presence of lactic
acid
ARG-10436 B69-10377 03

Improved cure method for single component
silicone rubber
MSC-12230 B69-10749 03

ADSORPTIVITY
Computer program calculates and plots
surface area and pore size distribution data
GSFC-10362 B68-10009 06

ADVANCED VIDICON CAMERA SYSTEM (AVCS)
Raster linearity of video cameras calibrated
with precision tester
GSFC-200 B64-10209 01

AERATION
Continuous microbial cultures maintained
by electronically-controlled device
ARG-177 B67-10556 04

AERIAL EXPLOSIONS
Instrumentation for nondestructive testing
of composite honeycomb materials
M-FS-20405 B69-10366 03

AERIAL PHOTOGRAPHY
Aerial-image enables diagrams and animation
to be inserted in motion pictures
ARG-165 B67-10398 02

AEROBES
Mass culture of photobacteria to obtain
luciferase
GSFC-10563 B69-10294 04

AERODYNAMIC BALANCE
Device measures fluid drag on test vehicles
LANGLEY-34 B65-10195 01

Laser system used for dynamic balancing of
gyros
M-FS-12218 B68-10225 05

AERODYNAMIC CHARACTERISTICS
Computer program calculates wing aerodynamic
characteristics for fixed wings with dihedral
and variable-sweep wings at subsonic speeds
LANGLEY-10191 B67-10666 06

Modified Multhopp lifting surface loading
program
LANGLEY-10375 B68-10452 06

Experimental program to investigate
transonic flow around protuberances
M-FS-20037 B69-10609 05

Optimum structural design based on
reliability and proof-load testing
NPO-11228 B69-10723 31

AERODYNAMIC COEFFICIENTS
New anemometer has fast response, measures
dynamic pressure directly
LANGLEY-28 B63-10530 05

Computer program analyzes and designs
supersonic wing-body combinations
ARC-10141 B68-10335 06

Modified Multhopp mean camber computer
program
LANGLEY-10376 B68-10446 06

SUBJECT INDEX

AEROSPACE INDUSTRY

AERODYNAMIC CONFIGURATIONS

Averaging probe reduces static-pressure sensing errors
 LANGLEY-36 B65-10114 05

Computer program analyzes and designs supersonic wing-body combinations
 ARC-10141 B68-10335 06

AERODYNAMIC DRAG

Rough surface improves stability of air-sounding balloons
 M-FS-320 B65-10326 05

Simple key locks turbine rotor blades
 WOO-103 B66-10023 05

AERODYNAMIC FORCES

Flexure support system protects thermally and dynamically loaded models
 LANGLEY-39 B65-10042 05

Aerodynamic forces of fluttering cylindrical and/or planar structures
 M-FS-20497 B69-10781 02

AERODYNAMIC HEATING

Insulation for cryogenic tanks has reduced thickness and weight
 M-FS-326 B66-10183 02

Instrument accurately measures small temperature changes on test surface
 LANGLEY-174 B66-10637 01

CINDA - Chrysler Improved Numerical Differencing Analyzer computer program
 M-FS-2298 B67-10278 06

AERODYNAMIC LOADS

Internal cooling increases range of immersion-type temperature probe
 LEWIS-171 B65-10157 02

Computer program calculates wing aerodynamic characteristics for fixed wings with dihedral and variable-sweep wings at subsonic speeds
 LANGLEY-10191 B67-10666 06

AERODYNAMIC NOISE

Study of hot wire techniques in low density flows with high turbulence levels
 M-FS-1269 B66-10687 01

AERODYNAMIC STABILITY

Rough surface improves stability of air-sounding balloons
 M-FS-320 B65-10326 05

AERODYNAMICS

Computer program analyzes and designs supersonic wing-body combinations
 ARC-10141 B68-10335 06

AERONAUTICS

Titanium treatment improves brazed joints
 MSC-127 B65-10153 05

AEROSOLS

Solvent residue content measured by light scattering technique
 M-FS-850 B66-10320 01

Cleanroom air sampler counts, categorizes, and records particle data
 M-FS-2221 B67-10076 01

Improved atmospheric particle analyzer
 ERC-33 B67-10231 01

Nozzles for size reclassification of microfog particles
 LEWIS-10705 B69-10076 05

Health hazards of ultrafine metal and metal oxide powders
 LEWIS-10878 B69-10268 04

Conditioning of pulses from aerosol-particle

detectors
 ERC-10250 B69-10691 01

AEROSPACE ENGINEERING

Pressure transducer system is force-balanced, has digital output
 M-FS-154 B65-10174 05

Improved electro-optical tracking system
 M-FS-14791 B68-10311 01

An overview of electromagnetic interference problems in spacecraft
 NPO-11170 B69-10362 01

System for computing operational probability equations
 M-FS-16410 B69-10566 06

AEROSPACE ENVIRONMENTS

Test device prevents molecular bounce-back
 GSFC-82 B63-10546 03

Modular Porous Plate Sublimator /MPPS/ requires only water supply for coolant
 M-FS-1374 B66-10409 01

Study made of explosive cutting in simulated space environments
 M-FS-1597 B67-10040 01

Study indicates fluid digital computation systems are feasible
 M-FS-520 B67-10181 01

Environmental study of miniature slip rings
 M-FS-2443 B67-10210 05

Materials data handbook, aluminum alloy 7075
 M-FS-2349 B67-10301 03

Standards for compatibility of printed circuit and component lead materials
 M-FS-14531 B68-10310 01

Materials data handbook, aluminum alloy 6061
 M-FS-20381 B69-10065 03

Diffusion bond method of joining steel and a TFE-bronze composite
 M-FS-20482 B69-10237 03

AEROSPACE INDUSTRY

Lightweight magnesium-lithium alloys show promise
 M-FS-17 B63-10389 03

Bench vise adapter grips tubing securely and safely
 MSC-279 B66-10056 05

Study to minimize hydrogen embrittlement of ultrahigh-strength steels
 M-FS-2455 B67-10141 03

Computer program performs rectangular fitting stress analysis
 M-FS-13010 B67-10520 06

Weight Control System
 M-FS-15028 B69-10041 06

Countersunk headscrew retainer
 M-FS-16481 B69-10282 05

Removal of retaining washers of the waffle-spring type
 MSC-15531 B69-10350 05

Tool for reading psychrometric charts
 KSC-10358 B69-10527 05

Silphenylene elastomers have high thermal stability and tensile strength
 M-FS-2025C B69-10580 03

AEROSPACE SYSTEMS

SUBJECT INDEX

AEROSPACE SYSTEMS

An investigation of phase-lock loop swept-frequency synchronization
M-FS-656 B66-10423 01

Fiber glass reinforced structural materials for aerospace application
M-FS-14806 B68-10360 03

Thermal expansion properties of aerospace materials
M-FS-18335 B69-10055 03

Diffusion of trace gases for leak detection - A study
M-FS-20254 B69-10067 03

A new method for the determination of particulate contamination levels for surface cleanliness of fluid systems
KSC-10267 B69-10520 02

AEROSPACE VEHICLES

Study of hydrogen slush-hydrogen gel utilization
M-FS-13068 B67-10413 02

Precise gimballing mechanism
NPO-11057 B69-10270 01

Optimum structural design based on reliability and proof-load testing
NPO-11228 B69-10723 31

AEROZINE

Addition of solid oxidizer increases liquid fuel specific impulse
JPL-861 B67-10058 03

Effects of helium and nitrogen as pressurants in nitrogen tetroxide transfer
MSC-924 B67-10083 03

AFTERBURNING

Ultraviolet photographic pyrometer used in rocket exhaust analysis
M-FS-499 B66-10095 02

Vapor condensation process produces slurry of magnesium particles in liquid hydrocarbons
LEWIS-263 B66-10104 03

AGE FACTOR

Study of radiation effects on mammalian cells in vitro
ARG-10191 B68-10294 02

AGGLOMERATION

Experiments to investigate particulate materials in reduced gravity fields
M-FS-13308 B67-10394 02

AGGREGATES

Aggregation of metallochlorophylls - Examination by spectroscopy
ARG-10273 B69-10163 04

AGING

Development of technology for hot-drape forming of large torus sections
M-FS-12141 B67-10341 05

Magnesium-lithium alloys developed for low temperature use
M-FS-1541 B67-10365 03

Scribable coating for plastic films
MSC-11194 B67-10409 03

AGING (BIOLOGY)

Investigation of temperature dependence of development and aging
ARG-10145 B69-10022 04

Rapid and precise analysis for calcium in blood serum
ARG-10246 B69-10160 04

AGING (METALLURGY)

Thermal stress-relief treatments for 2219 aluminum alloy are evaluated
M-FS-1213 B66-10448 03

Treatment increases stress-corrosion resistance of aluminum alloys
M-FS-1840 B66-10595 05

New weldable high strength aluminum alloy developed for cryogenic service
M-FS-737 B66-10613 05

Heat treatment study of aluminum casting alloy M45
M-FS-2397 B67-10159 03

Excellent spring properties developed in two nickel alloys for use at cryogenic temperatures
NUC-10084 B67-10349 03

Stress-corrosion characteristics of aluminum casting alloy M-45
M-FS-14817 B68-10184 03

Resistivity measurements of neutron-irradiated pure metals and Al-Zn alloys
ARG-10108 B68-10200 03

Strain-age cracking in Rene 41 alloy
M-FS-18650 B69-10605 03

AGITATION

Large volume continuous counterflow dialyzer has high efficiency
HQ-10055 B67-10395 04

Shortened processing time technique for color industrial radiography
ARG-10235 B69-10001 02

AGRICULTURE

Sampling and handling of desert soils
NPO-11171 B69-10304 04

AIR

Rapid helium-air analyzer can measure other binary gas mixtures
LANGLEY-16 B63-10557 03

Sniffer used as portable hydrogen leak detector
M-FS-846 B66-10356 01

Brazing retort manifold design concept may minimize air contamination and enhance uniform gas flow
M-FS-707 B66-10371 05

Air bearing provides friction-free support for shaker system slip table
NU-0086 B66-10708 05

High conductance vapor thermal switch
GSFC-10109 B68-10519 02

Prediction of friction coefficients for gases
LEWIS-10774 B69-10112 02

Plasma-heating by induction
LEWIS-10528 B69-10185 02

Properties of air and combustion products of fuels with air
LEWIS-11030 B69-10711 03

Chromatographic detection and analysis of traces of hydrocarbons
KSC-10388 B69-10716 02

Surface-renewal models for heat-transfer between walls and fluidized beds
ARG-10372 B69-10772 02

AIR CONDITIONING

New nut and sleeve improve flared connections

AIRCRAFT INSTRUMENTS

SUBJECT INDEX

Flexible rivet-set
M-FS-20317 B69-10459 05

Nondestructive determination of cohesive strength of adhesive-bonded composites
M-FS-20397 B69-10464 03

Literature review on pickling inhibitors and cadmium electroplating processes
M-FS-14421 B69-10606 03

Explosive bonding of metal-matrix composites
M-FS-20657 B69-10804 05

AIRCRAFT INSTRUMENTS

FM/CW system measures aircraft attitude
M-FS-276 B65-10290 01

Alternating current electromagnetic servo induction meter
XFR-03838 B68-10100 01

AIRCRAFT LANDING

New anemometer has fast response, measures dynamic pressure directly
LANGLEY-28 B63-10530 05

AIRCRAFT MODELS

Built-in templates speed up process for making accurate models
LANGLEY-23 B63-10526 05

AIRCRAFT STRUCTURES

Drill bit design assures clean holes in laminated materials
WOO-098 B65-10386 05

Program computes zero lift wave drag of entire aircraft
LANGLEY-10079 B67-10530 06

AIRFOILS

Program computes zero lift wave drag of entire aircraft
LANGLEY-10079 B67-10530 06

AIRFRAMES

Material fatigue data obtained by card-programmed hydraulic loading system
LANGLEY-10042 B67-10491 03

AIRPORTS

Scanning photometer system automatically determines atmospheric layer height
MSC-245 B66-10170 01

ALBEDO

N-SAP and G-SAP neutron and gamma ray albedo model scatter shield analysis program
NUC-10126 B67-10536 06

ALCOHOLS

Surfactant for dye-penetrant inspection is insensitive to liquid oxygen
M-FS-475 B66-10131 03

Gas chromatographic column enables analysis of propellant hydrazines
MSC-1161 B66-10586 03

Preparation of silver-activated zinc sulfide thin films
GSFC-10687 B68-10271 03

Measurement of gas flow at extremely low pressures
MSC-13261 B69-10522 03

ALDEHYDES

Microdetermination of urea in urine using p-dimethylaminobenzaldehyde /PDAB/
WFO-10715 B69-10317 04

ALERTNESS

Improved electrode paste provides reliable measurement of galvanic skin response
MSC-146 B66-10049 04

ALGAE

Cytology is advanced by studying effects of deuterium environment
ARG-205 B67-10304 04

The preparation, identification and properties of chlorophyll derivatives
ARG-10205 B68-10409 03

ALGEBRA

Algebraic Monte Carlo procedure reduces statistical analysis time and cost factors
M-FS-1887 B67-10434 01

Technique for predicting temperature distribution in gases
LEWIS-10918 B69-10329 01

Numerical inversion of finite Toeplitz matrices and vector Toeplitz matrices
ARG-10445 B69-10415 02

COGENT programming manual
ARG-10463 B69-10656 06

ALGORITHMS

Binary sequence detector uses minimum number of decision elements
JPL-673 B66-10264 01

Computer program calculates monotonic maximum likelihood estimates using method of reversals
M-FS-1516 B67-10136 01

Computer program provides linear sampled-data analysis for high order systems
M-FS-12821 B67-10287 06

Digital filter synthesis computer program
ARC-10130 B68-10164 06

Linear systems of equations solved using mathematical algorithms
ARG-10146 B68-10292 06

Computer program for parameter optimization
ARC-10168 B68-10453 06

Improved first order interpolator
MSC-11085 B69-10291 02

Sonic boom propagation in stratified atmosphere
LANGLEY-10480 B69-10391 06

Numerical inversion of finite Toeplitz matrices and vector Toeplitz matrices
ARG-10445 B69-10415 02

Fast Fourier Transform Spectral Analysis Program
M-FS-15062 B69-10434 06

Special purpose computer provides programmable digital filter for sampled-data control systems
M-FS-20290 B69-10454 06

ALIGNMENT

Design of valve permits sealing even if the stem is misaligned
LEWIS-38 B63-10341 05

Novel clamps align large rocket cases, eliminate back-up bars
M-FS-1 B63-10376 05

Mirror device aligns machine surface perpendicular to sight lines
WOO-5 B63-10421 02

Tool facilitates sealing of metal fill tubes
MSC-24 B63-10519 05

Guide for extrusion dies eliminates straightening operation
LEWIS-152 B64-10014 05

Microdetermination of urea in urine using p-dimethylaminobenzaldehyde /PDAB/
NFO-10715 B69-10317 04

Inhibition of browning in foodstuffs
HQ-10177 B69-10493 04

ANNETTERS

Braze joint quality tested electromagnetically
M-FS-12795 B67-10333 01

Areas of irregular, discontinuous patterns rapidly and accurately measured
GSFC-10184 B67-10674 01

ANNONIA

Silazane elastomer remains resilient at 400 deg C
M-FS-1144 B66-10667 05

Development of low temperature battery
LEWIS-10326 B67-10546 01

Preparation of silver-activated zinc sulfide thin films
GSFC-10687 B68-10271 03

Laser action from a terbium beta-ketoenolate at room temperature
GSFC-10593 B69-10324 02

AMMONIUM CHLORIDES

Zone purification of potassium chloride
ARG-10377 B69-10241 03

AMMONIUM COMPOUNDS

Ceric and ferrous dosimeters show precision for 50-5000 rad range
ARG-10173 B68-10426 02

Transplutonium elements processed from rock debris of underground detonations
ARG-10222 B69-10054 03

AMMONIUM PERCHLORATES

Addition of solid oxidizer increases liquid fuel specific impulse
JPL-861 B67-10058 03

AMOEBAS

Liquid micrurgy chamber and microsyringe designs allow more efficient micromanipulations
ARG-251 B67-10305 04

Stratification of centrifuged amoeba nuclei investigated by electron microscopy
ARG-10161 B68-10366 04

AMORPHOUS MATERIALS

Selenium bond decreases ON resistance of light-activated switch
JPL-SC-101 B65-10324 01

AMOUNT

Rapid and precise analysis for calcium in blood serum
ARG-10246 B69-10160 04

Substitution of stable isotopes in Chlorella
ARG-10258 B69-10197 04

AMPLIFICATION

Temperature transducer has high output, is time stable
GSFC-446 B65-10362 01

Automatic gain control circuit handles wide input range
MSC-166 B66-10089 01

High-performance RC bandpass filter is adapted to miniaturized construction
ARC-60 B66-10309 01

Neon isotopes cancel errors in gas laser
M-FS-1476 B66-10583 02

Study made of application of stereoscopic display system to analog computer simulation
M-FS-1263 B66-10590 01

Treatment increases stress-corrosion resistance of aluminum alloys
M-FS-1840 B66-10595 05

MOSFET analog memory circuit achieves long duration signal storage
M-FS-860 B66-10603 01

Field effect transistors improve buffer amplifier
M-FS-916 B67-10334 01

Limit circuit prevents overdriving of operational amplifier
NUC-10082 B67-10343 01

Infrared radiometer
M-FS-13373 B67-10422 01

Electrocardiograph transmitted by RF and telephone links in emergency situations
FRC-10031 B68-10233 01

Amplifier improvement circuit
LEWIS-10712 B68-10456 01

Rectangular-bore, high-gain laser plasma tube
HQ-10234 B69-10193 02

Automatic Gaussian random-noise limiter
NFO-10169 B69-10349 01

A positive taper traveling-wave tube
LANGLEY-10263 B69-10407 01

AMPLIFIER DESIGN

Amplifier improvement circuit
LEWIS-10712 B68-10456 01

Active rc filter permits easy trade-off of amplifier gain and sensitivity to gain
ARC-10042 B68-10539 01

AMPLIFIERS

Improved variable-reluctance transducer measures transient pressures
LANGLEY-10 B63-10321 01

Rapid helium-air analyzer can measure other binary gas mixtures
LANGLEY-16 B63-10557 03

Device calibrates vibration transducer at amplitudes up to 20 g

AXISYMMETRIC BODIES

SUBJECT INDEX

Thin plastic sheet eliminates need for expensive plating
M-FS-1896 B66-10681 03

Single-source mechanical loading system produces biaxial stresses in cylinders
M-FS-12530 B67-10380 05

Development of biaxial test fixture includes cryogenic application
M-FS-14185 B68-10070 01

Manual of typical low temperature mechanical properties of several materials
M-FS-18331 B69-10179 03

AXISYMMETRIC BODIES

Semiautomatic device tests components with biaxial leads
MSC-516 B66-10337 03

Computer program simplifies design of rotating components of turbomachinery
NUC-10046 B67-10235 06

Computer program provides improved longitudinal response analysis for axisymmetric launch vehicles
LANGLEY-10093 B67-10531 06

Finite element analysis of compressible solids with nonlinear material properties
NUC-10342 B69-10238 06

AXISYMMETRIC FLOW

Axisymmetric two-phase perfect gas performance program
MSC-11774 B68-10374 06

AZIMUTH

Optical automatic gain channel
M-FS-1550 B66-10596 02

Three-axis attitude and direction reference instrument has only one moving part
M-FS-1819 B66-10644 01

Telescope mount with azimuth-only primary
NPO-10468 B67-10671 02

Improved electromechanical master-slave manipulator
ARG-10027 B68-10372 05

Improved combustion chamber optical probe
MSC-10953 B69-10142 02

Preferred-orientation analysis of polycrystalline materials
NPO-10604 B69-10336 02

LM lookangle program
MSC-13179 B69-10370 06

An interferometer tracking radar system
MSC-10956 B69-10523 01

Measurement technique for the determination of antenna directivity
M-FS-12799 B69-10677 01

B

BACKGROUND NOISE

Point-source light sensor circuit is insensitive to background light
JPL-778 B66-10502 01

New shield for gamma-ray spectrometry
ARG-10388 B69-10344 02

Monopole mass spectrometer with improved sensitivity and reduced background
HQ-10476 B69-10666 01

BACKGROUND RADIATION

Training course for radiation safety technicians
ARG-216 B67-10477 02

BACKSCATTERING

Alpha particle backscattering measurements used for chemical analysis of surfaces
ARG-116 B67-10186 03

BACKUPS

Method of welding joint in closed vessel improves quality of seam
JPL-170 B63-10139 05

New backup-bar groove configuration improves heliarc welding of 2014-T6 aluminum
MSC-806 B66-10443 05

Fuel cell life improved by metallic sinter activation after electrode assembly welding
MSC-10965 B67-10436 03

BACTERIA

Gelatin coated electrodes allow prolonged bioelectronic measurements
MSC-153 B66-10088 01

Microorganisms detected by enzyme-catalyzed reaction
JPL-782 B66-10117 04

Cytology is advanced by studying effects of deuterium environment
ARG-205 B67-10304 04

Bacteriostatic conformal coating for electronic components
GSFC-10007 B67-10599 03

Vacuum probe sampler removes micron-sized particles from surfaces
SAN-10003 B68-10231 04

Electrolytic silver ion cell sterilizes water supply
MSC-11827 B68-10555 01

Internal and ancestral controls of cell-generation times
ARG-10326 B69-10205 04

Sterilization training manual
M-FS-20437 B69-10277 04

Mass culture of photobacteria to obtain luciferase
GSFC-10563 B69-10294 04

BACTERIOLOGY

Radiation effects on bacterial cells
ARG-10064 B68-10169 04

Automated microorganism Sample Collection Module
HQ-10421 B69-10223 04

BAFFLES

Fine-particle filter prevents damage to vacuum pumps
LEWIS-106 B63-10489 05

Test device prevents molecular bounce-back
GSFC-82 B63-10546 03

Uniform reflective films deposited on large surfaces
GSFC-507 B66-10483 02

A method of determining combustion gas flow
M-FS-13757 B67-10455 03

Flexible ring baffles for damping liquid slosh
LANGLEY-90194 B68-10064 05

Antiglare improvement for optical imaging systems
NPO-10337 B68-10090 02

Calibrated water tank facilitates proof-loading of cranes and derricks

BALLOONS

SUBJECT INDEX

BALLOONS

New anemometer has fast response, measures
dynamic pressure directly
LANGLEY-28 B63-10530 0J

Rough surface improves stability of air-
sounding balloons
M-FS-320 B65-10326 05

BALLS

Flexible fastener allows thermal expansion
LANGLEY-40 B64-10145 05

Ball and socket joints provide accurate
biaxial gimbal
JPL-658 B65-10205 05

Polytetrafluoroethylene lubricates ball
bearings in vacuum environment
M-FS-379 B66-10081 03

Segmented ball valve is easy to open and close
WOO-248 B66-10195 05

Torque wrench allows readings from
inaccessible locations
M-FS-598 B66-10204 05

Submicron metal powders produced by ball
milling with grinding aids
LEWIS-188 B66-10221 03

Braking mechanism is self actuating and
bidirectional
M-FS-1299 B66-10484 05

Solenoid valve design has one moving part
NPO-10039 B67-10219 05

Flare angles measured with ball gage
M-FS-14690 B68-10030 01

BALSA

Effects of sterilization on the
energy-dissipating properties of balsa
wood
NPO-11207 B69-10592 03

BAND STRUCTURE OF SOLIDS

Thermodynamic properties of solid
palladium-silver alloys and other alloys are
investigated by torsion-effusion technique
ARG-277 B67-10324 03

BANDPASS FILTERS

Frequency-shift-keyer circuit improves PCM
conversion for radio transmission
GSFC-80 B63-10511 01

Traveling-wave tube circuit simplifies
microwave relay
GSFC-299 B65-10127 01

Auxiliary circuit enables automatic monitoring
of EKG's
MSC-106 B65-10142 01

Device detects unbonded areas in plastic
laminates
WOO-206 B65-10380 01

Thin carbon film serves as UV bandpass filter
ERC-8 B66-10060 02

PM acquisition demodulator achieves automatic
synchronization of a telemetry channel
JPL-612 B66-10271 01

High-performance RC bandpass filter is
adapted to miniaturized construction
ARC-60 B66-10309 01

Infrared television used to detect hydrogen
fires
M-FS-654 B66-10363 01

Composite filter steepens rejection slopes in
microwave application
GSFC-480 B66-10393 01

Monitor assures availability and quality of
communication channels
KSC-66-38 B67-10028 01

Electronic filter discriminates between
true and false reflections
HQ-55 B67-10071 02

TV synchronization system features
stability and noise immunity
JPL-915 B67-10118 01

Infrared radiometer
M-FS-13373 B67-10422 01

Stable ac phase and amplitude comparator
M-FS-13086 B67-10459 01

Analog voicing detector responds to pitch
GSFC-10085 B67-10571 01

Unique frequency-shift-keyed demodulation
system
GSFC-217 B67-10668 01

Improved relay optical element for
spectroradiometer using cryogenically
cooled detector
MSC-11688 B68-10245 02

Thermal protective visor for entering
high temperature areas
MSC-10285 B68-10277 05

Deep space FM system, a concept
MSC-11825 B68-10289 01

Method of reducing time base error in
digital magnetic recorders
GSFC-10108 B68-10317 01

Design of dissipative linear phase filters
M-FS-14698 B68-10572 01

Simple demodulator for telemetry phase-
shift keyed subcarriers
NPO-11000 B69-10095 01

Active frequency control system for
argon FM laser
M-FS-14988 B69-10099 02

Tunable bandpass filter with variable
selectivity
ARC-10191 B69-10130 01

RF noise suppression using the
photodielectric effect in semiconductors
MSC-12259 B69-10225 01

Resonant microwave dichroic surface
GSFC-10658 B69-10274 01

An infrared television system for hydrogen
flame detection
KSC-10368 B69-10354 01

Proposed acousto-optic filter
HQ-10440 B69-10466 02

BANDWIDTH

Bandwidth switching is transient-free, avoids
loss of loop lock
WOO-054 B64-10349 01

Superconductor magnets used for stagger-tuning
traveling-wave maser
GSFC-292 B65-10165 01

Field effect transistor presents high input
impedance in ac amplifier
JPL-500 B65-10232 01

Solid-state laser transmitter is amplitude
modulated
MSC-121 B65-10238 01

Variable word length encoder reduces TV
bandwidth requirements

SUBJECT INDEX

BIOLOGY

BIOASSAY

Combustion method for assay of biological materials labeled with carbon-14 or tritium, or double-labeled
ARG-10331 B69-10208 04

Direct in-vial collection for liquid-scintillation assay of carbon-14 and tritium
ARG-10424 B69-10412 03

BIOCHEMISTRY

Reusable chelating resins concentrate metal ions from highly dilute solutions
JPL-758 B66-10451 03

Self-sealing closure enables access to several fluid containers
NPO-10123 B67-10207 04

Ultraviolet microscopy aids in cytological and biomedical research
ARG-178 B67-10590 04

Study of radiation effects on mammalian cells in vitro
ARG-10191 B68-10294 02

Microscopes and computers combined for analysis of chromosomes
ARG-10256 B69-10088 04

Qualitative and quantitative analysis of mixtures of compounds containing both hydrogen and deuterium
ARG-10312 B69-10177 04

Neutron therapy of cancer
ARG-10310 B69-10203 04

BIODYNAMICS

Integrated mobility measurement and notation system
MSC-726 B67-10114 04

Review of biological mechanisms for application to instrument design
HQ-33 B67-10663 04

BIOELECTRIC POTENTIAL

Gelatin coated electrodes allow prolonged bioelectronic measurements
MSC-153 B66-10088 01

Miniature electrometer preamplifier effectively compensates for input capacitance
ARC-69 B66-10549 01

BIOELECTRICITY

Subminiature biotelemetry unit permits remote physiological investigations
ARC-39 B64-10171 01

BIOINSTRUMENTATION

New low-level a-c amplifier provides adjustable noise cancellation and automatic temperature compensation
ARC-2 B63-10003 04

Improved electrode gives high-quality biological recordings
MSC-17 B64-10025 04

Subminiature biotelemetry unit permits remote physiological investigations
ARC-39 B64-10171 01

Inexpensive, stable circuit measures heart rate
MSC-95 B65-10010 01

Improved conductive paste secures biomedical electrodes
MSC-107 B65-10015 03

Photoelectric sensor output controlled by eyeball movements
M-FS-274 B65-10079 01

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Tiny biomedical amplifier combines high performance, low power drain
ARC-41 B65-10203 01

Rugged pressed disk electrode has low contact potential
MSC-158 B65-10320 01

Direct force-measuring transducer used in blood pressure research
ARC-53 B65-10325 01

Improved electrode paste provides reliable measurement of galvanic skin response
MSC-146 B66-10049 04

Miniature bioelectric device accurately measures and telemeters temperature
ARC-52 B66-10057 01

Gelatin coated electrodes allow prolonged bioelectronic measurements
MSC-153 B66-10088 01

Phonocardiograph system monitors heart sounds
MSC-185 B66-10154 04

Semiconductor forms biomedical radiation probe
MSC-320 B66-10252 04

Plant respirometer enables high resolution of oxygen consumption rates
HQ-47 B66-10406 04

Multidimensional Reaction Kinetic Ablation Program /FEKAP/
MSC-143 B66-10495 05

Spray-on electrodes enable EKG monitoring of physically active subjects
FRC-36 B66-10649 04

Logarithmic current simulator generates electrical currents accurately between 10 to the minus 11 ampere to 10 to the minus 3 ampere
NU-0087 B66-10706 01

Review of biological mechanisms for application to instrument design
HQ-33 B67-10663 04

Ultraminiature manometer-tipped cardiac catheter
ARC-10054 B67-10669 01

Nosepiece respiration monitor
ERC-10136 B68-10438 01

Pressure-sensitive bonded junction transducers
ERC-10087 B68-10563 01

Remotely-actuated biomedical switch
ARC-10105 B69-10117 01

Foot-operated cell-counter
ARG-10315 B69-10351 01

BIOLOGICAL EFFECTS

Cytology is advanced by studying effects of deuterium environment
ARG-205 B67-10304 04

Training course for radiation safety technicians
ARG-216 B67-10477 02

New passive telemetry system
HQ-10214 B69-10312 01

BIOLOGY

Purification and characterization of two fully deuterated enzymes
ARG-10314 B69-10207 04

BIOLUMINESCENCE

SUBJECT INDEX

BIOLUMINESCENCE

Quantitative determination of flavin nucleotide
using the bacterial bioluminescent reaction
GSFC-10565 B69-10715 04

BIONICS

Review of research and development in fluid
logic elements
M-PS-420 B67-10438 01

BIOPHYSICS

Neutron therapy of cancer
ARG-10310 B69-10203 04

Direct determination of lead-210 by
liquid-scintillation counting
ARG-10462 B69-10611 03

BIOSYNTHESIS

Qualitative and quantitative analysis of
mixtures of compounds containing both
hydrogen and deuterium
ARG-10312 B69-10177 04

BIOTELEMETRY

Analog device simulates physiological
waveforms
MSC-51 B64-10109 01

Subminiature biotelemetry unit permits remote
physiological investigations
ARC-39 B64-10171 01

Miniature telemetry system accurately
measures pressure
ARC-74 B66-10624 01

A phonocardiogram simulator
KSC-67-94 B67-10239 01

Automated urinalysis technique determines
concentration of creatine and creatinine by
colorimetry
NFO-10149 B67-10245 04

Multichannel implantable telemetry system
ARC-10083 B68-10065 01

Automated patient monitoring system
M-PS-14552 B68-10131 01

New passive telemetry system
HQ-10214 B69-10312 01

BIRDS

Compound equation developed for postnatal
growth of birds and mammals
ARG-10192 B68-10427 04

BIREFRINGENCE

Servo system facilitates photoelastic strain
measurements on resins
JPL-504 B64-10280 01

Technique developed for measuring
transmittance of optical birefringent
networks
M-PS-14267 B68-10260 02

Synthesis of electro-optic modulators for
amplitude modulation of light
M-PS-14268 B68-10275 02

Correction for losses in optical
birefringent networks, a concept
M-PS-20088 B68-10571 02

BIREFRINGENT COATINGS

Sprayable birefringent coating enables
strain measurements on large surfaces
M-PS-1484 B66-10578 03

BISMUTH

Dry film lubricant is effective at extreme
loads
M-PS-628 B66-10256 03

Development of Curie point switching for
thin film, random access, memory device

NPO-10402 B67-10633 02

Analyses of silicon dioxide, magnesium
oxide, lead fluoride, bismuth as low-pass
velocity filters for neutrons
ARG-10220 B69-10211 02

Induction probe determines levels of
liquid metals
ARG-10348 B69-10256 03

Analysis of secondary cells with
lithium anodes and immobilized
fused-salt electrolytes
ARG-10452 B69-10613 01

BISMUTH ALLOYS

Bismuth alloy potting seals aluminum connector
in cryogenic application
WOO-260 B66-10138 03

Vacuum chamber is remotely sealed by
eutectic metal
NU-0091 B67-10059 05

New bimetallic EMF cell shows promise in
direct energy conversion
ARG-10183 B68-10415 01

Spectrographic analysis of bismuth-tin
eutectic alloys by spark-ignited
low-voltage ac-arc excitation
ARG-10288 B69-10081 03

BISMUTH OXIDES

IR-transmission glasses formed from oxides of
bismuth and tellurium
M-PS-279 B65-10190 03

BISMUTH TELLURIDES

Modular thermoelectric cell is easily packaged
in various arrays
GSFC-339 B65-10199 01

BISTABLE CIRCUITS

Automatic system determines moments of
inertia of asymmetrical objects
M-PS-1769 B66-10636 01

Solid-state time-to-pulse-height converter
developed
ARG-170 B67-10053 01

Random access-random release relay
switching matrix
M-PS-12590 B68-10301 01

BISTATIC REFLECTIVITY

Combination ranging system and mapping
radar
NPO-11001 B69-10325 01

BIT SYNCHRONIZATION

PN acquisition demodulator achieves automatic
synchronization of a telemetry channel
JPL-612 B66-10271 01

Simultaneous message framing and error
detection
MSC-12001 B68-10330 01

BITS

Improved circuit minimizes generation time of
pseudonoise check bits
JPL-698 B65-10275 01

Queuing register uses fluid logic elements
M-PS-317 B66-10100 05

Multisurface fixture permits easy grinding
of tool bit angles
M-PS-586 B66-10171 05

Tool separates sleeve-type unions without heat
MSC-497 B66-10253 05

Binary sequence detector uses minimum number
of decision elements
JPL-673 B66-10264 01

BLOOD PLASMA

SUBJECT INDEX

BLOOD PLASMA

Large volume continuous counterflow
dialyzer has high efficiency
HQ-10055 B67-10395 04

BLOOD PRESSURE

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Direct force-measuring transducer used in
blood pressure research
ARC-53 B65-10325 01

Blood pressure reprogramming adapter
assists signal recording
MSC-265 B67-10475 01

BLOOD VESSELS

Multidimensional Reaction Kinetic Ablation
Program /REKAP/
MSC-143 B66-10495 05

Hand-held instrument should relieve
hematoma pressure
MSC-599 B67-10332 04

BLOWERS

Portable detector set discloses helium
leak rates
M-FS-1733 B67-10065 01

BOATS

Discrimination of fish oil and mineral
oil slicks on sea water
HQ-10412 B69-10673 01

BODIES OF REVOLUTION

Ellipsoidal optical reflectors reproduced by
electroforming
GSFC-92 B63-10547 05

Averaging probe reduces static-pressure
sensing errors
LANGLEY-36 B65-10114 05

Program computes zero lift wave drag of
entire aircraft
LANGLEY-10079 B67-10530 06

Finite element analysis of compressible
solids with nonlinear material properties
NUC-10342 B69-10238 06

BODY FLUIDS

Apparatus enables automatic microanalysis of
body fluids
JPL-962 B66-10515 04

BODY MEASUREMENT (BIOLOGY)

Inexpensive, stable circuit measures heart
rate
MSC-95 B65-10010 01

BODY TEMPERATURE

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Miniature bioelectric device accurately
measures and telemeters temperature
ARC-52 B66-10057 01

BOILERS

Oxygen-hydrogen torch is a small-scale
steam generator
NU-0042 B66-10120 03

Pump simulator provides variable
pressure-flow characteristics
LEWIS-10122 B67-10453 05

Channel-wall limitations in the
magnetohydrodynamic induction generator
ARG-10128 B69-10255 02

BOILING

Control system maintains selected liquid level
M-FS-470 B66-10039 01

Cryogenic liquid transfer system reduces

residual boiloff
LEWIS-274 B66-10157 02

Silazane elastomer remains resilient at
400 deg C

BUFFERS (CHEMISTRY)

SUBJECT INDEX

BUFFERS (CHEMISTRY)

Improved pH buffering agent for sodium hypochlorite
MSC-15443 B69-10084 03

BUILDINGS

Computer program conducts facilities utilization and occupancy survey
NPO-10438 B68-10137 06

BULBS

An improved atomic hydrogen frequency and time standard
GSFC-10706 B69-10341 02

BULKHEADS

Composite bulkhead fabrication development
M-FS-1264 B66-10582 05

Portable fixture facilitates pressure testing of instrumentation fittings
M-FS-2032 B67-10121 03

Computer program performs rectangular fitting stress analysis
M-FS-13010 B67-10520 06

Explosive-train initiated through solid bulkhead by pressure cartridge
MSC-11395 B67-10589 03

BUNDLES

Compact retractor protects cabling loops
M-FS-561 B66-10018 05

BUOYANCY

Compact assembly generates plastic foam, inflates flotation bag
LANGLEY-96 B65-10090 05

Organic reactants rapidly produce plastic foam
LANGLEY-37 B65-10288 03

Device without electrical connections in tank measures liquid level
WOO-235 B66-10198 01

Hydrostatic force used to handle outsized, heavy objects
HQ-90 B67-10167 05

Pneumatic raft automatically reforms after rupture of buoyant member
MSC-11562 B68-10011 05

BUOYS

Oceanborne transponder platform has good stability
M-FS-171 B65-10035 05

BURETTES

Instrument calibrates low gas-rate flowmeters
MSC-134 B65-10137 01

BURNERS

Heated die facilitates tungsten forming
LEWIS-25A B66-10047 05

BURNING RATE

Burn-rate testing apparatus
MSC-10947 B69-10740 03

BURNING TIME

Fortran 4 program for two-impulse rendezvous analysis
M-FS-13971 B67-10479 06

Control jet placement on spacecraft
MSC-13365 B69-10671 01

BURNOUT

Lamp automatically switches to new filament on burnout
M-FS-498 B66-10046 01

BUS CONDUCTORS

Solar cell submodule design facilitates assembly of lightweight arrays
JPL-728 B66-10231 02

Clamp provides efficient connection for high-density currents
M-FS-2417 B67-10140 01

BUSHINGS

Expandable insert serves as screw anchor
MSC-301 B66-10132 05

Mounting facilitates removal and installation of flame-detector rods
M-FS-555 B66-10150 05

Technique for anchoring fasteners to honeycomb panels
LEWIS-10888 B69-10265 03

An improved method for electrical cable terminations
NPO-10694 B69-10327 01

BUTADIENE

Surfactant for dye-penetrant inspection is insensitive to liquid oxygen
M-FS-475 B66-10131 03

Dispensing graduate for butadiene
NPO-10070 B68-10524 03

BUTT JOINTS

Welds chilled by liquid coolant manifold
M-FS-679 B66-10354 05

Quick-acting backup tool for welding ducts
M-FS-18404 B69-10396 05

Pressure-control purge panel for automatic butt welding
M-FS-18465 B69-10403 05

BUTTERFLY VALVES

Electropneumatic transducer automatically limits motor current
LEWIS-253 B66-10160 01

Soft metal plating enables hard metal seal to operate successfully in low temperature, high pressure environment
NUC-10083 B67-10350 03

BUTTONS

Pocket-sized tone-modulated FM transmitter
NPO-11180 B69-10725 01

BY-PRODUCTS

Neutron irradiation of Am-241 effectively produces curium
ARG-10030 B67-10501 03

BYPASSES

Mounting method improves electrical and vibrational characteristics of screen electrodes
M-FS-20165 B69-10097 01

C

C BAND

Low-loss C-band parasitic probe
KSC-09348 B69-10251 01

CABLES

Shrinkable sleeve eliminates shielding gap in RF cable
WOO-207 B65-10387 01

Electrical cabling withstands severe environmental conditions
M-FS-1585 B66-10427 01

Adhesive for polyester films cures at room temperature, has high initial tack
M-FS-938 B66-10487 03

Logic circuitry used to automatically test shielded cables
HQ-60 B66-10659 01

Multipurpose instrumentation cable provides

SUBJECT INDEX

CALCIUM

integral thermocouple circuit
NU-0108 B67-10046 01

Protected, high-temperature connecting cable
LEWIS-10149 B67-10461 01

Experimental prediction of performance
by superconducting cables
ARG-10215 B69-10161 01

Tools for applying lead tape to flat
conductor cabling for chemical stripping
M-FS-20429 B69-10190 05

Simple test indicates degree of cure of
polyimide coatings
MSC-15487 B69-10330 03

Improved ferrous shielding for flat cables
M-FS-14524 B69-10401 01

Generation of sonic power during welding
M-FS-20339 B69-10404 05

Checking flat conductor cable spacing by
means of a moire pattern
M-FS-20426 B69-10456 05

CABLES (ROPES)

Technique simulates effect of reduced gravity
LANGLEY-44 B64-10146 04

Machine tests crease durability of sheet
materials
JPL-604 B64-10178 05

Threading hook facilitates safe recovery of
heavy loads
MSC-46 B64-10185 05

Spring loaded beaded cable makes efficient
wire puller
WOO-108 B65-10031 05

Extendible column can be stowed on drum
JPL-686 B65-10191 05

Mechanism continuously measures static and
dynamic cable loads
MSC-217 B66-10107 05

Tool enables proper mating of accelerometer
and cable connector
M-FS-611 B66-10208 05

Emergency escape system uses self-braking
mechanism on fixed cable
KSC-66-44 B66-10575 05

Carriage system remotely moves drawer over
extended distance
NU-0092 B66-10711 05

Post-stressed concrete foundation may
reduce machinery vibration
ARG-130 B67-10237 05

Improved control system power unit for
large parachutes
MSC-12052 B67-10677 05

Quick-attach clamp
XFR-05421 B68-10250 05

Pyrotechnic-actuated cable release
XNP-10849 B68-10535 05

Proposed technique for vertical alignment
of a crane's cable
M-FS-16496 B69-10202 05

An improved method for electrical
cable terminations
NPO-10694 B69-10327 01

Automatic leveling and equalizing hoist
device
M-FS-16549 B69-10514 05

CADMIUM

Lightweight aluminum casting alloy is useful
at cryogenic temperatures
M-FS-267 B65-10092 03

Weldable aluminum alloy has improved
mechanical properties
M-FS-295 B66-10445 03

Use of steel and tantalum apparatus for
molten Cd-Mg-Zn alloys
ARG-199 B66-10594 03

Abraded cadmium-plated cable connectors
repaired by conversion coating
M-FS-1424 B67-10014 03

Frangible electrochemical cell and sealing
technique
XGS-10010 B69-10056 01

Reduction by monovalent zinc, cadmium, and
nickel cations
ARG-10328 B69-10170 03

Electrochemical sintering process for
producing electrodes from cadmium felt and
a nickel or silver grid
GSFC-10764 B69-10227 05

Induction probe determines levels of
liquid metals
ARG-10348 B69-10256 03

Literature review on pickling inhibitors and
cadmium electroplating processes
M-FS-14421 B69-10606 03

CADMIUM SELENIDES

Photoelectric sensor output controlled by
eyeball movements
M-FS-274 B65-10079 01

Thin-film semiconductor rectifier has improved
properties
MSC-207 B66-10012 01

Improved radiographic image amplifier panel
M-FS-14522 B68-10363 02

CADMIUM SULFIDES

Photocell shadowing technique improves light
source detector
JPL-809 B66-10564 01

Improved radiographic image amplifier panel
M-FS-14522 B68-10363 02

Electron beam recrystallization of amorphous
semiconductor materials
LEWIS-10443 B68-10556 02

Magnetic field mapper
LEWIS-10782 B69-10476 01

CALCITE

Electro-optic modulator for infrared laser
using gallium arsenide crystal
GSFC-10686 B68-10255 02

Technique developed for measuring
transmittance of optical birefringent
networks
M-FS-14267 B68-10260 02

CALCIUM

Oxide film on metal substrate reduced to
form metal-oxide-metal layer structure
ARG-48 B67-10187 03

High-emittance coatings on metal substrates
LEWIS-10325 B68-10381 03

Preparation of thorium magnesium-zinc
reduction
ARG-10245 B69-10079 03

Rapid and precise analysis for calcium in
blood serum

CALCIUM COMPOUNDS

SUBJECT INDEX

ARG-10246	B69-10160	04	Device induces lungs to maintain known constant pressure MSC-50	B64-10108	04
Adding calcium improves lithium ferrite core ERC-10036	B69-10686	06	Attachment converts microscope to point source autocollimator JPL-499	B64-10124	05
CALCIUM COMPOUNDS					
Refractory thermal insulation for smooth metal surfaces M-FS-160	B64-10099	03	Ball bearing used in design of rugged flowmeter LEWIS-159	B64-10170	05
Hydrated multivalent cations are new class of molten salt mixtures ARG-211	B67-10033	03	Raster linearity of video cameras calibrated with precision tester GSFC-200	B64-10209	01
CALCIUM FLUORIDES					
Fluoride coatings make effective lubricants in molten sodium environment LEWIS-229	B66-10005	03	Micromachining produces optical apertures to micron dimensions GSFC-206	B64-10211	05
Solid-film lubricant is effective at high temperatures in vacuum LEWIS-228	B66-10087	03	Explosives actuate nonmagnetic indexing device GSFC-237	B65-10017	05
Evaluation of lubricants for ball bearings at high temperatures LEWIS-10578	B69-10025	03	Seismic transducer measures small horizontal displacements M-FS-81	B65-10029	05
CALCIUM OXIDES					
Isotopically pure magnesium isotope-24 is prepared from magnesium-24 oxide ARG-10154	B68-10293	02	Gage measures electrical connector pin retention force JPL-SC-071	B65-10034	03
CALCULATORS					
Instrument calculates moments of inertia of complex plane figures MSC-628	B66-10306	01	Metal diaphragm used to calibrate miniature transducers M-FS-207	B65-10059	01
Stress calculator speedily converts strain data M-FS-2021	B67-10182	03	Fuel cell serves as oxygen level detector JPL-SC-072	B65-10066	01
Fast method for obtaining scale dimensions on tape-controlled milling machine MSC-11609	B68-10047	05	Instrument calibrates low gas-rate flowmeters MSC-134	B65-10137	01
A method for predicting interfacial freezing of a liquid flowing over a cold surface LEWIS-10813	B69-10321	02	Simple device produces accelerometer calibration pulse M-FS-363	B65-10269	01
CALCULUS OF VARIATIONS					
Computer program for mass optional solutions of some endpoint trajectory problems M-FS-12976	B67-10310	06	Inflatable bladder provides accurate calibration of pressure switch M-FS-367	B65-10279	01
HICOV - Newton-Raphson calculus of variation with automatic transversalities M-FS-14468	B68-10232	06	Volumetric system calibrates meters for large flow rates WOO-130	B65-10323	05
CALENDARS					
KOPE /Kalendar Oriented Program Efforts/ provides data for management decisions M-FS-12331	B67-10478	06	Baking enables McLeod gauge to measure in ultrahigh vacuum range GSFC-440	B65-10329	01
CALIBRATING					
Improved variable-reluctance transducer measures transient pressures LANGLEY-10	B63-10321	01	Noncontacting vibration transducer has constant sensitivity LANGLEY-99	B65-10392	01
Optics used to measure torque at high rotational speeds LEWIS-13	B63-10338	01	PTFE-aluminum films serve as neutral density filters LANGLEY-189	B66-10017	02
Variable light source with a million-to-one intensity ratio JPL-WOO-008	B63-10424	03	Pressure transducers dynamically tested with sinusoidal pressure generator LEWIS-268	B66-10031	01
Fluid-pressure meter can be calibrated without removal from flow line M-FS-98	B63-10502	05	Flowmeter measures low gas-flow rates M-FS-215	B66-10036	01
Device calibrates vibration transducer at amplitudes up to 20 g M-FS-86	B63-10572	01	Calibrated clamp facilitates pressure application MSC-298	B66-10059	05
Ultra-sensitive transducer advances micro-measurement range ARC-26	B64-10004	01	Transmission system isolates pressure transducer from severe environment WOO-239	B66-10064	01
			Hot-wire detector for chemically active materials used in gas chromatography MSC-269	B66-10139	03

CAPACITORS

GSFC-112	B63-10554	01	LEWIS-178	B65-10255	01
Tiny sensor-transmitter can withstand extreme acceleration, gives digital output			Electrostatically driven dynamic capacitor employs capacitive feedback		
ARC-22	B63-10561	01	JPL-771	B65-10293	01
Circuit controls transients in SCR inverters			Coaxial capacitor used to determine fluid density		
GSFC-120	B63-10600	01	LEWIS-232	B65-10296	02
Monostable circuit with tunnel diode has fast recovery			Electronic ampere-hour integrator is accurate to one percent		
GSFC-132	B63-10603	01	GSFC-203	B65-10308	01
Low-power transistorized circuit provides staircase waveform			Electromagnetic hammer removes weld distortions from aluminum tanks		
GSFC-48	B64-10007	01	M-FS-287	B65-10342	05
Efficient circuit triggers high-current, high-voltage pulses			Compact SCR trigger circuit for ignitron switch operates efficiently		
MSC-14	B64-10024	01	M-FS-371	B65-10347	01
Digital logic elements provide additional functions from analog input			Zener diode controls switching of large direct currents		
MSC-64	B64-10064	01	MSC-188	B65-10350	01
Ring counter may be advanced or retarded by command signal			High-intensity flashing beacon powered by mercury cells		
GSFC-101	B64-10144	01	LANGLEY-80	B65-10361	01
High-pass RF coaxial filter rejects dc and low frequency signals			Three-dimensional wire-mesh capacitor system measures fluid density		
GSFC-73	B64-10173	01	WOO-194	B65-10379	01
Circuit converts AM signals to FM for magnetic recording			Variable-capacitance tachometer eliminates troublesome magnetic fields		
GSFC-227	B65-10001	01	GSFC-435	B66-10126	01
Helical coaxial-resonator makes excellent RF filter			Mounting improves heat-sink contact with beryllia washer		
GSFC-243	B65-10012	01	MSC-194	B66-10144	01
Carbon arc ignition improved by simple auxiliary circuit			Large capacitor performs as a distributed parameter pulse line		
MSC-103	B65-10018	01	LEWIS-176	B66-10291	01
Thermistor connector assembly increases accuracy of measurements			Tool forms right angles in component leads		
LANGLEY-62	B65-10045	01	M-FS-722	B66-10346	05
Microparticle impact sensor measures energy directly			Basic suppression techniques are evaluated		
GSFC-252	B65-10048	01	M-FS-867	B66-10449	01
Feedback oscillator functions as low-level pulse stretcher			Pulse generator using transistors and silicon controlled rectifiers produces high current pulses with fast rise and fall times		
GSFC-261	B65-10069	01	MSC-405	B66-10456	01
Synchronized pulse generator needs no external power			Simple, one transistor circuit boosts pulse amplitude		
GSFC-274	B65-10072	01	GSFC-501	B66-10480	01
Simple circuit functions as frequency discriminator for PFM signals			Solid state circuit controls direction, speed, and braking of dc motor		
GSFC-267	B65-10102	01	JPL-757	B66-10486	01
Improved magnetometer uses toroidal gating coil			Electronic circuit delivers pulse of high interval stability		
GSFC-249	B65-10103	01	MSC-673	B66-10501	01
Digital-output cardiometer measures rapid changes in heartbeat rate			Pulse stretcher has improved dynamic range and linearity		
MSC-133	B65-10143	01	ARG-82	B66-10509	01
Circuit reduces distortion of FM modulator			Nonelectrolytic tantalum capacitors developed		
GSFC-257	B65-10152	01	M-FS-1546	B66-10552	01
Voltage variable oscillator has high phase stability			MOSFET analog memory circuit achieves long duration signal storage		
LANGLEY-123	B65-10204	01	M-FS-860	B66-10603	01
Voltage controlled oscillator is easily aligned, has low phase noise			Compact microwave mixer has high conversion efficiency		
JPL-510	B65-10223	01	GSFC-197	B66-10625	01
Electrometer has automatic zero bias control			Power arc welder touch-started with consumable electrode		
GSFC-350	B65-10242	01	M-FS-1485	B66-10641	05
Boron trifluoride nuclear detector preamplifier uses single-cable connection			Thermocouples easily installed in hard-to-

Circuit prevents overcharging of secondary cell batteries	GSFC-454	B66-10492	01			

SUBJECT INDEX

CHEMICAL COMPOSITION

MSC-244 B65-10385 05
Insulator-holder protects transistors in dense electronic assemblies
MSC-214 B65-10389 01
Floating device aligns blind connections
MSC-256 B66-10007 05
Aluminum heat sink enables power transistors to be mounted integrally with printed circuit board
M-FS-13663 B67-10426 01

CHECKOUT
FORTRAN program flow chart is automatically produced
M-FS-369 B66-10062 01
Method permits mechanical and electrical checkout of piezoelectric transducers while installed in a system
ARC-73 B66-10533 01
Gage provides audible signal to facilitate checkout of connector pins
KSC-10335 B69-10173 01

CHELATES
Reusable chelating resins concentrate metal ions from highly dilute solutions
JPL-758 B66-10451 03
Separation of traces of metal ions from sodium matrices
ARG-10341 B69-10168 03
Liquid laser cavities
GSFC-10592 B69-10234 02
Laser action from a terbium beta-ketoenolate at room temperature
GSFC-10593 B69-10324 02

CHEMICAL ANALYSIS
Removable well in reaction flask facilitates carbon dioxide collection
ARC-47 B65-10316 03
Instrument performs nondestructive chemical analysis, data can be telemetered
JPL-SC-078 B65-10317 01
Apparatus enables automatic microanalysis of body fluids
JPL-962 B66-10515 04
Thermoelectric metal comparator determines composition of alloys and metals
ARG-235 B67-10035 01
Status of ultrachemical analysis for semiconductors
M-FS-2254 B67-10138 03
Alpha particle backscattering measurements used for chemical analysis of surfaces
ARG-116 B67-10186 03
Analytical technique characterizes all trace contaminants in water
MSC-11032 B67-10243 03
Automated urinalysis technique determines concentration of creatine and creatinine by colorimetry
NPO-10149 B67-10245 04
Thermodynamic properties of solid palladium-silver alloys and other alloys are investigated by torsion-effusion technique
ARG-277 B67-10324 03
Large volume continuous counterflow dialyzer has high efficiency
HQ-10055 B67-10395 04
Tool samples subsurface soil free of surface contaminants

MSC-10988 B67-10473 05
Simple colorimetric method determines uranium in tissue
ARG-10039 B67-10580 03
Calibration of a resistance thermometer down to 0.04 degrees K
ARG-10318 B69-10149 01
Primary radical yields in pulse irradiated alkaline aqueous solution
ARG-10322 B69-10167 02
Microdetermination of urea in urine using p-dimethylaminobenzaldehyde /PDAB/
NPO-10715 B69-10317 04
Ionene membrane battery separator
NPO-11091 B69-10501 03
Chromatographic detection and analysis of traces of hydrocarbons
KSC-10388 B69-10716 02
Effects of high-pressure hydrogen on storage vessel materials
M-FS-18605 B69-10730 03

CHEMICAL ATTACK
Heat-shrinkable jacket holds fluid in contact with tensile test specimen
MSC-13195 B69-10495 05

CHEMICAL BONDS
Synthesis of various highly halogenated monomers and polymers
M-FS-2143 B67-10100 03
Aggregation of metallochlorophylls - Examination by spectroscopy
ARG-10273 B69-10163 04

CHEMICAL CLEANING
Rotating magnetic poles used to pump mercury
LEWIS-276 B66-10434 05
Effects of surface preparation on quality of aluminum alloy weldments
M-FS-13152 B68-10302 03
Effects of hydrogen on metals
M-FS-20364 B69-10372 03
Improved nickel plating of Inconel X-750
M-FS-18604 B69-10463 05
Technique for ultrasonic cleaning with volatile solvents eliminates need for hoods or condensers
MSC-15611 B69-10552 03
Literature review on pickling inhibitors and cadmium electroplating processes
M-FS-14421 B69-10606 03

CHEMICAL COMPOSITION
Lightweight aluminum casting alloy is useful at cryogenic temperatures
M-FS-267 B65-10092 03
Computer program determines chemical composition of physical system at equilibrium
MSC-1119 B66-10670 01
Controlled ferrite content improves weldability of corrosion-resistant steel
M-FS-568 B67-10069 03
Elementary review of electron microprobe techniques and correction requirements
ARG-10062 B68-10195 03
One-dimensional reacting gas nonequilibrium performance program
MSC-11777 B68-10375 06
One-dimensional two-phase reacting gas

CHEMICAL COMPOUNDS

CHEMICAL COMPOUNDS
Crack detection method is safe in presence of
liquid oxygen M-PS-236 B65-10107 03

Isostatic compression process converts
polyaromatics into structural material
JPL-892 B67-10168 03

Electronic circuitry used to automate paper
chromatography JPL-840 B67-10201 01

Tritiated alumina serves as reagent for
self-labeling analysis ARG-209 B67-10315 03

Product identification techniques used as
training aids for analytical chemists
SAM-10025 B68-10373 03

Advances in aluminum anodizing
M-PS-14600 B69-10144 05

CHEMICAL EFFECTS
Materials physically tested in variable-
environment chamber JPL-789 B66-10130 01

CHEMICAL ELEMENTS
Compilation of detection sensitivities in
thermal-neutron activation ARG-10068 B67-10641 03

Computer program calculates gamma ray
source strengths of materials exposed to
neutron fluxes NUC-10143 B67-10665 06

Ignition of binary alloys of uranium
ARG-10057 B68-10280 01

Detection sensitivities in 3-8 Mev
neutron activation ARG-10210 B68-10298 02

Zone purification of potassium chloride
ARG-10377 B69-10241 03

CHEMICAL ENGINEERING
Materials data handbook, aluminum alloy
7075 M-PS-2349 B67-10301 03

Handbook for design of containers of fluids
and gases for spacecraft M-PS-20502 B69-10279 05

CHEMICAL EQUILIBRIUM
Computer program determines chemical
equilibria in complex systems LEWIS-281 B66-10671 01

CHEMICAL FUELS
Handbook for design of containers of fluids
and gases for spacecraft M-PS-20502 B69-10279 05

CHEMICAL INDICATORS
Test strips detect different CO2
concentrations in closed compartments
MSC-210 B65-10390 03

CHEMICAL MACHINING
Electroless nickel resist used in alkali
etching of aluminum GSFC-284 B65-10162 03

Reusable neoprene jacket protects parts for
chemical milling WOO-071 B65-10179 03

Epoxy blanket protects milled part during
explosive forming M-PS-307 B66-10029 03

Etching process mills PH 14-8 Mo alloy
steel to precise tolerances MSC-270 B66-10110 03

Electrical upsetting of metal sheet forms weld
edge M-PS-720 B66-10248 05

Chemical milling solution produces smooth
surface finish on aluminum MSC-549 B66-10312 03

Gage of 6.5 per cent Si-Fe sheet is
chemically reduced MSC-537 B66-10454 03

Modified thermocouple is effective from
minus 250 deg to 5000 deg F MSC-420 B66-10461 01

Continuous internal channels formed in
aluminum fusion welds M-PS-2399 B67-10183 05

Chemical milling solution reveals stress
corrosion cracks in titanium alloy
LANGLEY-10077 B67-10322 03

Acid spray technique mills aluminum alloy
materials without immersion M-PS-1250C B67-10463 03

CHEMICAL PROPERTIES
Substituted silane-diol polymers have
improved thermal stability M-PS-469 B66-10259 03

Silazane elastomer remains resilient at
400 deg C M-PS-1144 B66-10667 05

New class of thermosetting plastics has
improved strength, thermal and chemical
stability LEWIS-10108 B67-10197 03

High strength nickel-base alloy with
improved oxidation resistance up to 2200
degrees F LEWIS-10115 B68-10094 03

Sintering characteristics and properties
of PuS and PuP are determined ARG-10228 B69-10058 03

Reduction by monovalent zinc, cadmium, and
nickel cations ARG-10328 B69-10170 03

CHEMICAL REACTIONS
Ceramic-coated boat is chemically inert,
provides good heat transfer LANGLEY-9C B65-10063 05

Polymer film exhibits thermal and radiation
stability LANGLEY-100 B66-10043 03

Hot-wire detector for chemically active
materials used in gas chromatography
MSC-269 B66-10139 03

Silazane polymers show promise for high-
temperature application M-PS-466 B66-10194 03

Freon provides heat transfer for solid CO2
calibration standard M-PS-644 B66-10257 02

Chemical regeneration of emitter surface
increases thermionic diode life LEWIS-17 B66-10435 02

Uranyl phthalocyanines show promise in the

performance program
MSC-11781 B68-10377 06

Analysis of secondary cells with
lithium anodes and immobilized
fused-salt electrolytes
ARG-10452 B69-10613 01

CHLORINE COMPOUNDS
Organic reactants rapidly produce plastic foam
LANGLEY-37 B65-10288 03

Surfactant for dye-penetrant inspection is
insensitive to liquid oxygen
M-FS-475 B66-10131 03

New class of compounds have very low vapor
pressures
ARG-115 B67-10184 03

Corrosion of aluminum alloys by chlorinated
hydrocarbon/methanol mixtures
MSC-11365 B67-10442 03

CHLOROAROMATICS
Process produces chlorinated aromatic
isocyanate in high yield
M-FS-1658 B66-10646 03

CHLOROETHYLENE
Solvent residue content measured by light
scattering technique
M-FS-850 B66-10320 01

Degreasing of titanium to minimize stress
corrosion
LEWIS-382 B67-10147 03

Liquid oxygen dicting cleaned by falling
film method
M-FS-11816 B67-10299 03

Cold machining of high density tungsten
and other materials
ARG-10289 B69-10110 05

CHLOROFORM
Corrosion of aluminum alloys by chlorinated
hydrocarbon/methanol mixtures
MSC-11365 B67-10442 03

CHLOROPHYLLS

SUBJECT INDEX

CHLOROPHYLLS

The preparation, identification and properties of chlorophyll derivatives
ARG-10205 B68-10409 03

Aggregation of metallochlorophylls - Examination by spectroscopy
ARG-10273 B69-10163 04

Comparative chromatography of chloroplast pigment
ARG-10415 B69-10425 03

CHLOROPLASTS

Comparative chromatography of chloroplast pigment
ARG-10415 B69-10425 03

CHLOROPRENE RESINS

Chain friction system gives positive, reversible drive
ARC-8 B63-10009 05

Elastomers bonded to metal surfaces seal electrochemical cells
GSFC-168 B64-10113 03

Reusable neoprene jacket protects parts for chemical milling
WOO-071 B65-10179 03

Composite seal reduces alkaline battery leakage
GSFC-337 B65-10271 01

Buoyant stokes litter assembly used for sea rescue operations
MSC-131 B66-10019 05

Self-inflating lifevest stores in small package
MSC-5A B66-10184 04

Fiberglass container shells form contamination-free storage units
WOO-275 B66-10217 05

Isostatic compression process converts polyaromatics into structural material
JPL-892 B67-10168 03

Method prevents secondary radiation in radiographic inspection
M-FS-13383 B67-10391 02

CHLOROSILANES

Substituted silane-diol polymers have improved thermal stability
M-FS-469 B66-10259 03

CHOKES (RESTRICTIONS)

Potassium plasma cell facilitates thermionic energy conversion process
ARG-10010 B67-10399 01

Broadband choke suppresses spurious currents in antenna structure
MSC-10013 B67-10675 01

Improved limiter for turn-on current transient
GSFC-10413 B68-10384 01

CHROMATES

Inexpensive infrared source improvised from flashlight
M-FS-494 B66-10096 02

Corrosion protection of aluminum alloys in contact with other metals
M-FS-18526 B69-10098 03

CHROMATOGRAPHY

Reusable chelating resins concentrate metal ions from highly dilute solutions
JPL-758 B66-10451 03

Tritiated alumina serves as reagent for self-labeling analysis

ARG-209 B67-10315 03

Study of behavior of sterols at interfaces
ARG-10085 B68-10281 03

The preparation, identification and properties of chlorophyll derivatives
ARG-10205 B68-10409 03

Novel multipurpose timer for laboratories
ARG-10147 B69-10410 01

Coordination chemistry in fused-salt solutions
ARG-10469 B69-10423 03

Comparative chromatography of chloroplast pigment
ARG-10415 B69-10425 03

Chromatographic detection and analysis of traces of hydrocarbons
KSC-10388 B69-10716 02

CHROMIC ACID

Corrosion protection of aluminum alloys in contact with other metals
M-FS-18526 B69-10098 03

Masking of aluminum surface against anodizing
M-FS-12964 B69-10335 05

A method for precision anodize stripping
MSC-15040 B69-10581 03

CHROMITES

Electrolytic separation of crystals of transition-metal oxides
ARG-10506 B69-10642 03

CHROMIUM

Lightweight aluminum casting alloy is useful at cryogenic temperatures
M-FS-267 B65-10092 03

Thin-film resistors used in functional electronic blocks
GSFC-380 B65-10305 01

Submicron metal powders produced by ball milling with grinding aids
LEWIS-188 B66-10221 03

New weldable high strength aluminum alloy developed for cryogenic service
M-FS-737 B66-10613 05

Coating protects magnesium-lithium alloys against corrosion
M-FS-2446 B67-10149 03

Method of improving contact bonds in silicon integrated circuits
M-FS-1753 B67-10335 01

Nickel-base superalloy's excellent properties promote its service to 2200 degrees F
LEWIS-10355 B68-10380 03

High temperature coatings for gas bearings
LEWIS-10793 B69-10200 03

High strength, superplastic superalloy
LEWIS-10805 B69-10293 03

Effects of hydrogen on metals
M-FS-20364 B69-10372 03

CHROMIUM ALLOYS

Nickel-base superalloys developed for high-temperature applications
LEWIS-226 B66-10222 03

Composites of porous metal and solid lubricants increase bearing life
LEWIS-307 B67-10007 03

SUBJECT INDEX

CIRCUIT BREAKERS

Application of the solid lubricant molybdenum disulfide by sputtering LEWIS-10544	B68-10340	03	Device serves as hinge and electrical connector for circuit boards M-PS-743	B66-10359	01
Tungsten fiber-reinforced nickel superalloy LEWIS-10424	B68-10369	03	Process produces accurate registry between circuit board prints LANGLEY-288	B66-10660	02
Evaluation of lubricants for ball bearings at high temperatures LEWIS-10578	B69-10025	03	Edge-type connectors evaluated by electrical noise measurement M-PS-2243	B67-10125	01
Improved high-temperature silicide coatings LEWIS-10817	B69-10266	03	Polarized light reveals stress in machined laminated plastics LEWIS-10018	B67-10383	03
CHROMIUM CARBIDES High temperature coatings for gas bearings LEWIS-10793	B69-10200	03	Multiplexer uses insulated gate-field effect transistors M-PS-13096	B67-10396	01
CHROMIUM OXIDES Ceramic-coated boat is chemically inert, provides good heat transfer LANGLEY-90	B65-10063	05	Study made of anodized aluminum circuit boards M-PS-13580	B67-10425	01
Chromium oxide coatings improve thermal emissivity of alumina WOO-263	B66-10227	03	Aluminum heat sink enables power transistors to be mounted integrally with printed circuit board M-PS-13663	B67-10426	01
CHROMOSOMES Study of radiation effects on mammalian cells in vitro ARG-10191	B68-10294	02	Adhesives for laminating polyimide insulated flat conductor cable M-PS-12066	B67-10429	03
Microscopes and computers combined for analysis of chromosomes ARG-10256	B69-10088	04	Warpage eliminated in copper-clad microwave circuit laminates M-PS-13892	B67-10454	03
CHRONOLOGY Concentrations of the naturally occurring radionuclides Pb-210, Po-210, and Ra-226 in aquatic fauna ARG-10345	B69-10258	02	Areas of irregular, discontinuous patterns rapidly and accurately measured GSFC-10184	B67-10674	01
CINEMATOGRAPHY Crack growth measured on flat and curved surfaces at cryogenic temperatures LEWIS-389	B67-10384	01	Inspection criteria ensure quality control of parallel gap soldering M-PS-14530	B68-10257	05
CIRCLES (GEOMETRY) Circular, explosion-proof lamp provides uniform illumination MSC-382	B66-10156	02	Random access-random release relay switching matrix M-PS-12590	B68-10301	01
CIRCUIT BOARDS Modular chassis simplifies packaging and interconnecting of circuit boards JPL-236A	B63-10174	01	Standards for compatibility of printed circuit and component lead materials M-PS-14531	B68-10310	01

Computer programs calculate potential and charge distributions in a plasma M-FS-871	B66-10553	01	in two-region problems /the GAROL code/ NUC-10045	B67-10223	06
Computer program simplifies transient and steady-state temperature prediction for complex body shapes MSC-989	B66-10619	01	Computer program calculates steady-state temperature distribution within plane or axisymmetric solids NUC-10049	B67-10224	06
Computer program determines chemical composition of physical system at equilibrium MSC-1119	B66-10670	01	Land landing couch dynamics computer program MSC-1210	B67-10233	06
Computer program determines chemical equilibria in complex systems LEWIS-281	B66-10671	01	Computer program simplifies design of rotating components of turbomachinery NUC-10046	B67-10235	06
Equivalent circuit for a field effect transistor established for computer simulation M-FS-1752	B66-10690	01	Computer program samples digital data for CRT display MSC-999	B67-10249	01
Program computes single-point failures in critical system designs MSC-603	B67-10001	01	CINDA - Chrysler Improved Numerical Differencing Analyzer computer program M-FS-2298	B67-10278	06
Computer program detects transient malfunctions in switching circuits MSC-604	B67-10002	01	Computer program for determination of natural frequencies of closed spherical sandwich shells MSC-1246	B67-10279	06
Computer/PERT technique monitors actual versus allocated costs LEWIS-260	B67-10025	01	Computer program predicts thermal and flow transients experienced in a reactor loss-of-flow accident NUC-10054	B67-10281	06
Computer program simulates design, test, and analysis phases of sensitivity experiments M-FS-1496	B67-10077	01	Computer program provides linear sampled-data analysis for high order systems M-FS-12821	B67-10287	06
Translator program converts computer printout into braille language M-FS-2061	B67-10087	01	Computer program uses Monte Carlo techniques for statistical system performance analysis M-FS-2234	B67-10306	06
Polynomial manipulator AP-168 MSC-1231	B67-10103	01	Computer program determines thermal environment and temperature history of lunar orbiting space vehicles M-FS-12916	B67-10307	06
Computer program reduces calculation time of normal response functions M-FS-1517	B67-10108	01	Computer program for mass optional solutions of some endpoint trajectory problems M-FS-12976	B67-10310	06
Computer program calculates monotonic maximum likelihood estimates using method of reversals M-FS-1516	B67-10136	01	Computer program utilizes FORTRAN 4 subroutines for contour plotting WFO-10127	B67-10323	06
A power-spectral-density computer program WFO-10126	B67-10160	01	Multiple correlation computer program determines relationships between several independent and dependent variables M-FS-13024	B67-10327	06
Study of dynamic response of elastic space stations WFO-10124	B67-10169	06	Computer optimization program finds values for several independent variables that minimize a dependent variable M-FS-13030	B67-10328	06
Data retrieval system provides unlimited hardware design information MSC-1144	B67-10170	01	Computer program resolves radiative, conductive, and convective heat transfer problems for variety of geometries M-FS-1910	B67-10329	06
Space trajectories program for IBM 7090 WFO-10125	B67-10172	06	Improved computer program for elastic analysis of highly redundant structural configurations M-FS-13087	B67-10330	06
Linear circuit analysis program for IBM 1620 Monitor 2, 1311/1443 data processing system /CIRCS/ WFO-10131	B67-10173	06	General purpose computer programs for numerically analyzing linear ac electrical and electronic circuits for steady-state conditions M-FS-13094	B67-10331	06
Stress calculator speedily converts strain data M-FS-2021	B67-10182	03	Computer subroutine ISUDS accurately solves large system of simultaneous linear algebraic equations NUC-10051	B67-10344	06
Computer program simulates physical systems by solving the simultaneous differential equations describing the systems WFO-10019	B67-10193	06	Computer program VARI-QUIR 3 provides solution of steady-state, multigroup, two-dimensional neutron diffusion equations		
A modal combination computer program for dynamic analysis of structures WFO-10129	B67-10217	06			
Calculation of resonance neutron absorption

Pneumatic separator gives quick release to heavy loads			MSC-158	B65-10320	01
KSC-66-10	B66-10294	05	CONTACT RESISTANCE		
Latching mechanism operates in limited access area			Diffusion technique stabilizes resistor values		
MSC-230	B66-10338	05	MSC-205	B66-10142	01
Design concept for pressure switch calibrator			Reducing contact resistance at semiconductor to metal or aluminum to metal interfaces		
HQ-36	B66-10598	01	ERC-10254	B69-10689	01
Integrated mobility measurement and notation system			CONTAINERS		
MSC-726	B67-10114	04	Miniature oxygen-hydrogen cutting torch constructed from hypodermic needle		
Single wrench separates nuts from free-floating bolts			JPL-545	B63-10517	05
NUC-10013	B67-10158	05	New inflatable liferaft is nontippable		
Self-sealing closure enables access to several fluid containers			MSC-4A	B64-10001	05
NPO-10123	B67-10207	04	Viscous-pendulum damper suppresses structural vibrations		
Cable clamp bolt fixture facilitates assembly in close quarters			LANGLEY-45	B64-10272	05
KSC-67-80	B67-10244	05	Compact assembly generates plastic foam, inflates flotation bag		
Precision metal molding			LANGLEY-96	B65-10090	05
M-FS-13305	B67-10423	05	Multiple test chamber exposes materials to various environments		
Optically exciting a magnetic memory - A feasibility study			MSC-179	B65-10268	01
M-FS-14854	B69-10060	02	Electrically heated diaphragm eliminates use of pyrotechnics		
Midcourse maneuver operations program			MSC-241	B65-10400	01
NPO-10735	B69-10105	06	Large diameter metal ring seal prevents gas leakage at 5000 psi		
CONSTRUCTIONS			M-FS-1064	B66-10422	05
Electrochemical cell has internal resistive heater element			Seal-off assembly permits rapid evacuation of air from containers		
GSFC-10358	B68-10325	01	GSFC-513	B66-10446	05
Magnetomotive forming for precision sizing and joining of large-diameter tubes			Irradiated gases transferred without contamination or dilution		
M-FS-20481	B69-10422	05	LEWIS-278	B67-10044	03
CONSTRUCTION			Method prevents secondary radiation in radiographic inspection		
Improved atomic resonance gas cell for use in frequency standards			M-FS-13383	B67-10391	02
MSC-11666	B68-10230	01	Graphite cloth facilitates vacuum evaporation of silicon monoxide		
Possible correlation between work-hardening and fatigue-failure			M-FS-14764	B68-10256	03
ARG-10371	B69-10414	03	Contact-spring forming machine for flat conductor cable receptacles		
CONSTRUCTION MATERIALS			M-FS-20126	B68-10550	05
Swiveling lathe jaw concept for holding irregular pieces			Inflatable bladder to facilitate handling of heavy objects - A concept		
M-FS-783	B66-10321	05	M-FS-14272	B69-10069	05
Isostatic compression process converts polyaromatics into structural material			CONTAINMENT		
JPL-892	B67-10168	03	Use of steel and tantalum apparatus for molten Cd-Mg-Zn alloys		
Study made of procedures for externally loading and corrosion testing stress corrosion specimens			ARG-199	B66-10594	03
M-FS-12064	B67-10451	03	Hydrodynamics of a new concept of primary containment by energy absorption		
Fiber glass reinforced structural materials for aerospace application			ARG-10242	B69-10046	05
M-FS-14806	B68-10360	03	CONTAMINANTS		
Study of fluoride corrosion of nickel alloys			Sensor detects hydrocarbon oil contaminants in fluid lines		
ARG-10224	B69-10048	03	M-FS-522	B66-10068	01
CONTACT LENSES			Brazing process using Al-Si filler alloy reliably bonds aluminum parts		
Thin transparent films formed from powdered glass			MSC-448	B66-10241	05
GSFC-352	B65-10217	03	Improved rolling element bearings provide low torque and small temperature rise in ultrahigh vacuum environment		
CONTACT POTENTIALS			LEWIS-359	B66-10678	05
Electrometer has automatic zero bias control			Valve effectively controls amount of contaminant in flow stream		
GSFC-350	B65-10242	01			
Rugged pressed disk electrode has low contact					

SUBJECT INDEX

CONTAMINATION

M-FS-1771	B66-10683	05	minimize braze contamination MSC-777	B66-10311	05
Quartz crystals detect gas contaminants during vacuum chamber evacuation NPO-10144	B67-10205	01	Brazing retort manifold design concept may minimize air contamination and enhance uniform gas flow M-FS-707	B66-10371	05
Steel test panel helps control additives in pyrophosphate copper plating LEWIS-10101	B67-10358	05	Tungsten insulated susceptor cup for high temperature induction furnace eliminates contamination LEWIS-283	B66-10538	03
Tool samples subsurface soil free of surface contaminants MSC-10988	B67-10473	05	Apparatus for fabrication of americium-beryllium neutron sources prevents capsule contamination ARG-184	B67-10202	05
Indium adhesion provides quantitative measure of surface cleanliness SAN-10024	B68-10342	01	Improved head-controlled TV system produces high-quality remote image ARG-128	B67-10317	01
Preparation of high purity copper fluoride by fluorinating copper hydroxyfluoride LEWIS-10794	B69-10136	03	Thermodynamic properties of solid palladium-silver alloys and other alloys are investigated by torsion-effusion technique ARG-277	B67-10324	03
Health hazards of ultrafine metal and metal oxide powders LEWIS-10878	B69-10268	04	Wear studies made of slip rings and gas bearing components M-FS-12882	B67-10403	05
Technique for highly efficient recovery of microbiological contaminants MSC-13250	B69-10273	04	Improved sample capsule for determination of oxygen in hemolyzed blood MSC-11017	B67-10408	04
Apparatus automatically measures soluble residue content of volatile solvents SAN-10032	B69-10292	03	Study made of acoustical monitoring for mechanical checkout M-FS-13372	B67-10430	02
Freon, T-B1 cutting fluid MSC-11486	B69-10485	05	Solenoid valve design minimizes vibration and sliding wear problem M-FS-14079	B67-10667	05
Heat-shrinkable jacket holds fluid in contact with tensile test specimen MSC-13195	B69-10495	05	Monitor senses amount of contamination deposited on surfaces GSFC-10212	B68-10089	01
Gamma radiation characteristics of plutonium dioxide fuel NPO-11220	B69-10733	02	Vacuum probe sampler removes micron-sized particles from surfaces SAN-10003	B68-10231	04
Gas chromatograph injection port protective device M-FS-18585	B69-10788	03	Preparation of silver-activated zinc sulfide thin films GSFC-10687	B68-10271	03
CONTAMINATION			Effects of surface preparation on quality of aluminum alloy weldments M-FS-13152	B68-10302	03
Vented piston seal prevents fluid leakage between two chambers JPL-179	B63-10141	05	Contamination control handbook M-FS-20185	B68-10392	03
Quick-acting clutch disengages idle drive motor GSFC-143	B64-10028	05	UV detector monitors organic contamination of optical surfaces M-FS-20246	B68-10413	01
Magnetic field controls carbon arc tail flame MSC-139	B65-10108	01	Levitation-melting technique for metals and alloys ARG-10240	B69-10006	03
Double gloves reduce contamination of dry box atmosphere LEWIS-211	B65-10117	03	Two systems developed for purifying inert atmospheres ARG-10234	B69-10026	03
Multiple test tubes stirred mechanically ARC-42	B65-10120	01	Production of metals and compounds by radiation chemistry LEWIS-10231	B69-10123	03
Radioactive tracer system detects oil contaminants in fluid lines M-FS-512	B66-10090	03	Battery case shear GSFC-10783	B69-10127	05
Tool provides constant purge during tube welding M-FS-547	B66-10093	05	Precision counting for instrument optical elements provided by polyimide bonding M-FS-20293	B69-10310	05
Epoxy-coated containers easily opened by wire band M-FS-592	B66-10174	05	Improved fire resistant radio frequency anechoic materials M-FS-1660C	B69-10450	05
Fiberglass container shells form contamination-free storage units WOO-275	B66-10217	05			
Insert sleeve prevents tube soldering contamination MSC-552	B66-10238	05			
Union would facilitate joining of tubing,

CONVERGENT NOZZLES

SUBJECT INDEX

CONVERGENT NOZZLES

Nozzles for size reclassification of
microfog particles
LEWIS-10705 B69-10076 05

CONVERSION

Treatment increases stress-corrosion
resistance of aluminum alloys
M-PS-1840 B66-10595 05

Transistor h parameter conversion slide
rule
JPL-649 B67-10561 01

Input gate circuit converted for use as
linear amplifier
M-PS-14265 B68-10015 01

System converts slow-scan to standard
fast-scan TV signals
MSC-90534 B69-10748 01

CONVERSION TABLES

GHT/local-time conversion chart
GSFC-10521 B67-10548 01

CONVERTERS

Circuit controls transients in SCR inverters
GSFC-120 B63-10600 01

Transistorized converter provides
nondissipative regulation
GSFC-238 B64-10305 01

Compressed gas system operates semitrailer
brakes during winching operation
JPL-0036 B64-10306 05

Dc to ac converter operates efficiently at
low input voltages
GSFC-130 B65-10178 01

Solid-state time-to-pulse-height converter
developed
ARG-170 B67-10053 01

Converter provides constant electrical
power at various output voltages
GSFC-519 B67-10481 01

Solid state single-ended switching
dc-to-dc converter
M-PS-13598 B67-10558 01

Evaluation of magnetic materials for static
inverters and converters
LEWIS-10343 B69-10306 01

CONVEYITY

Alignment tool facilitates pin placement on
irregular horizontal surfaces
LANGLEY-219 B66-10410 05

Improved method of dicing integrated circuit
wafers into chips
ERC-10138 B69-10441 01

CONVOLUTION INTEGRALS

Numerical inversion of finite Toeplitz
matrices and vector Toeplitz matrices
ARG-10445 B69-10415 02

COOLANTS

Pulsed plasma accelerator operates
repetitively without complex controls
LANGLEY-48 B65-10062 01

Transducer measures temperature differentials in
presence of strong electromagnetic fields
ARC-27 B65-10089 01

Radial coolant channels fabricated by
simplified method
NU-0070 B66-10267 05

Copper-acrylic enamel serves as lubricant
for cold drawing of refractory metals
ARG-54 B66-10471 05

High intensity radiation heat source is
capable of sustained operation
ARC-61 B66-10547 02

A design procedure for the weight
optimization of straight finned radiators
GSFC-547 B66-10618 05

Low rate flow switch can be used for gas or
liquid
JPL-867 B66-10696 01

Coldplate of pin fin design makes efficient
heat exchanger
MSC-1093 B67-10073 05

New class of compounds have very low vapor
pressures
ARG-115 B67-10184 03

Computer optimization program finds values
for several independent variables that
minimize a dependent variable
M-PS-13030 B67-10328 06

Welding torch and wire feed manipulator
M-PS-13102 B67-10385 05

Modified blackbody device emits high-density
radiation
M-PS-12744 B67-10388 02

Standard surface grinder for precision
machining of thin-wall tubing
ARG-10014 B67-10400 05

Concept for cryogenic liquid reclamation
system
NPO-10322 B67-10420 02

Computer program MCAP-TOSS calculates
steady-state fluid dynamics of coolant in
parallel channels and temperature
distribution in surrounding heat-generating
solid
NUC-10042 B67-10456 06

Computer program MCAP provides for steady
state thermal and flow analysis of multiple
parallel channels in heat generating solid
NUC-10043 B67-10457 06

Technique eliminates high voltage arcing
at electrode-insulator contact area
LEWIS-10133 B67-10470 01

High temperature thermocouple design
provides gas cooling without increasing
overall size of unit
NUC-10515 B67-10497 01

Coolants with selective optical filtering
characteristics for ruby laser applications
M-PS-20188 B68-10508 02

Analysis of transient thermal stress in
heat-generating plates and hollow cylinders
caused by sudden environmental temperature
changes
ARG-10274 B69-10047 02

Cold machining of high density tungsten
and other materials
ARG-10289 B69-10110 05

Design and testing of liquid hydrogen-cooled,
ultrahigh-speed ball bearings
M-PS-18453 B69-10178 05

Automatic calorimetry system monitors RF
power
NPO-11033 B69-10384 01

Pneumatic flow comparator
M-PS-18373 B69-10400 05

Rate of heat extraction controller for
environmental control

CORE FLOW

Plasma-heating by induction
LEWIS-10528 B69-10185 02

CORE SAMPLING

Development of lunar drill to take core samples to 100-foot depths
M-FS-13015 B67-10529 05

Iris-leaf core retainer for a surface drill
MSC-11402 B69-10496 05

CORE STORAGE

Multiplexing control device enables handling of wide variations in sampling rates
M-FS-1871 B67-10150 01

CINDA - Chrysler Improved Numerical Differencing Analyzer computer program
M-FS-2298 B67-10278 06

Circuitry selectively limits data storage in general purpose computer
GSFC-10605 B69-10121 01

CORES

Molded elastomer provides compact ferrite-core holder, simplifies assembly
JPL-584 B64-10084 05

Reinforcement core facilitates O-ring installation
WOO-228 B65-10378 05

Improved carbon electrode reduces arc sputtering
MSC-219 B66-10026 01

Mill profiler machines soft materials accurately
M-FS-692 B66-10254 05

Rectilinear accelerometer possesses self-calibration feature
M-FS-1480 B66-10452 01

Current steering commutator offers versatility
JPL-812 B67-10410 01

Development of lunar drill to take core samples to 100-foot depths
M-FS-13015 B67-10529 05

Ferromagnetic core valve gives rapid action on minimum energy
LEWIS-10135 B67-10623 05

Miniaturization of magnetic logic circuitry
LANGLEY-10037 B69-10148 06

Adding calcium improves lithium ferrite core
ERC-10036 B69-10686 06

CORRECTION

Electrometer preamplifier has drift correction feedback
JPL-SC-074 B65-10267 01

Calorimeter accurately measures thermal radiation energy
LANGLEY-173 B66-10058 02

Elementary review of electron microprobe techniques and correction requirements
ARG-10062 B68-10195 03

Variable-mesh method of solving differential equations
NPO-10515 B69-10017 02

Numerical integration of ordinary differential equations of various orders
ARG-10247 B69-10089 02

Wind tower influence study
M-FS-20239 B69-10653 01

CORRELATION

Study of random process theory aids digital data processing
M-FS-1475 B67-10309 06

CORRELATION COEFFICIENTS

Multiple correlation computer program determines relationships between several independent and dependent variables
M-FS-13024 B67-10327 06

The X square statistic and goodness of fit test
GSFC-10547 B68-10136 02

Prediction of friction coefficients for gases
LEWIS-10774 B69-10112 02

CORRELATORS

Phase detector circuit synthesizes own reference signal
M-FS-247 B65-10080 01

Linear signal noise summer accurately determines and controls S/N ratio
JPL-SC-152 B66-10433 01

CORROSION

Self-contained clothing system provides protection against hazardous environments
M-FS-536 B66-10201 05

Apparatus enables accurate determination of alkali oxides in alkali metals
LEWIS-256 B66-10296 03

Diaphragm valve for corrosive and high temperature fluid flow control has unique features
LEWIS-304 B66-10365 05

Trace levels of metallic corrosion in water determined by emission spectrography
MSC-1193 B66-10701 03

Evaluation of high temperature stranded hookup wire
M-FS-2478 B67-10122 03

Xenon fluoride solutions effective as fluorinating agents
ARG-217 B67-10133 03

New class of compounds have very low vapor

CORROSION PREVENTION

COUPLINGS

COUNTING CIRCUITS

Improved sensor counts micrometeoroid penetrations
LEWIS-76 B63-10443 01

Digital cardiometer computes and displays heartbeat rate
MSC-93 B64-10258 01

Simple pulse counting circuit computes sum of squares
GSFC-391 B65-10260 01

Delayed ripple counter simplifies square-root computation
GSFC-398 B65-10343 01

Ring counter circuit switches multiphase motor direction of rotation
JPL-SC-166 B66-10101 01

Low-power ring counter drives high-level loads
GSFC-431 B66-10106 01

Digital system provides superregulation of nanosecond amplifier-discriminator circuit
ARG-61 B66-10500 01

Digital frequency counter permits readout without disturbing counting process
JPL-906 B66-10658 01

Mechanical properties of wire insulation automatically determined
MSC-10983 B67-10370 01

Circuit automatically calibrates flowmeter against liquid-level gage reference
M-FS-2194 B67-10376 01

Linear-log counting-rate meter uses transconductance characteristics of a silicon planar transistor
ARG-10158 B69-10191 01

Simple quasi-exponential slope generator
NPO-11130 B69-10439 01

COUPLERS

Frequency offset in linear FM/CW transponder eliminates clutter
M-FS-249 B65-10146 01

Dielectric prisms would improve performance of quasi-optical microwave components
ERC-10011 B67-10416 01

COUPLES

Segmented SiGe-PbTe couples
GSFC-10746 B69-10233 01

COUPLING

Two-part valve acts as quick coupling
JPL-478 B64-10223 05

Device disconnects several couplings simultaneously
JPL-226 B65-10163 05

Diaphragm spring gives clutch over-center toggle effect
GSFC-499 B66-10297 05

Latching mechanism operates in limited access area
MSC-230 B66-10338 05

Rotational fluid coupling eliminates hose entanglements
MSC-312 B66-10585 05

Ultrasonic wrench produces leaktight connections
M-FS-12561 B67-10353 05

Study of crevice-galvanic corrosion of aluminum
ARG-10013 B67-10583 03

Magnetically coupled emission regulator
GSFC-10056 B69-10213 01

A thirty-six element array antenna system
M-FS-20435 B69-10390 01

COUPLING CIRCUITS

Digital-output cardiometer measures rapid changes in heartbeat rate
MSC-133 B65-10143 01

Strain gage network distinguishes between thermal and mechanical deformations
GSFC-478 B66-10280 01

Minimum permissible leakage resistance established for instrumentation systems
M-FS-848 B66-10397 01

Multichannel analyzers at high rates of input
ARG-10355 B69-10214 02

Automatic frequency control of voltage-controlled oscillators
NPO-11064 B69-10569 01

Cryogenic flux-concentrator
ARG-10494 B69-10654 02

COUPLING COEFFICIENTS

High frequency wide-band transformer uses coax to achieve high turn ratio and flat response
ARG-107 B66-10600 01

High transients suppressed in electromagnetic devices
KSC-66-13 B67-10031 01

COUPLINGS

Stringent cleaning technique assures reliable epoxy bond
GSFC-161 B64-10142 03

Compressed gas system operates semitrailer brakes during winching operation
JPL-0036 B64-10306 05

New coupling compensates for shaft misalignment
NU-0013 B65-10077 05

Quick-disconnect coupling safe transfer of hazardous fluids
LEWIS-125 B65-10202 01

Diaphragm eliminates leakage in cryogenic fluid duct coupling
WOO-142 B65-10227 05

O-ring tube fittings form leakproof seal in hydraulic systems
M-FS-481 B66-10020 05

Single connector provides safety fuses for multiple lines
MSC-199 B66-10050 01

Plugged hollow shaft makes fatigue-resistant shear pin
LANGLEY-195 B66-10077 05

Remotely controlled system couples and decouples large diameter pipes
NU-0062 B66-10276 05

High pressure tube coupling requires no threads or flares
MSC-600 B66-10285 05

Vacuum test fixture improves leakage rate measurements
MSC-271 B66-10286 01

Pneumatic separator gives quick release to heavy loads
KSC-66-10 B66-10294 05

CRITICAL PATH METHOD

KOPE /Kalendar Oriented Program
Efforts/ provides data for management
decisions
M-FS-12331 B67-10478 06

CRITICAL PRESSURE

Cryogenic fluid flow instabilities in heat
exchangers
M-FS-20438 B69-10541 02

CRITICAL TEMPERATURE

PTC thermistor protects multiloaded power
supplies
GSFC-236 B64-10281 01

CRITICAL VELOCITY

Computer program analyzes whirl critical
speeds and bearing loads for shafts coupled
by nonlinear springs to machine housing
NUC-10308 B69-10034 06

CROSS CORRELATION

PM acquisition demodulator achieves automatic
synchronization of a telemetry channel
JPL-612 B66-10271 01

Study of hot wire techniques in low density
flows with high turbulence levels
M-FS-1269 B66-10687 01

Local measurements in turbulent flows
through cross correlation of optical signals
M-FS-1268 B67-10030 01

Acquisition of pseudonoise signals by
sequential estimation
M-FS-13898 B68-10258 01

Improvement in recording and reading
holograms
ERC-10151 B68-10347 02

CROSS COUPLING

Multichip packaging with thermal insulation
M-FS-14076 B68-10119 02

CROSS SECTIONS

Instrument calculates moments of inertia of
complex plane figures
MSC-628 B66-10306 01

Vibrator improves spark erosion cutting
process
NU-0071 B66-10333 01

Preformed stiffeners used to fabricate
structural components for pressurized
tanks
M-FS-1796 B66-10688 05

Machining technique prevents undercutting
in tensile specimens
LANGLEY-10281 B68-10352 05

Rating of electrical wires in vacuum
environments
MSC-15108 B68-10362 01

Design of fluid-duct bends with low
pressure loss
M-FS-20176 B68-10395 05

CROSSED FIELDS

Improved design provides faster response
time in photomultiplier
GSFC-451 B66-10526 01

CROSSLINKING

Irradiation improves properties of an
aromatic polyester
LANGLEY-115 B65-10164 03

Synthesis of pure aromatic glycidyl esters
for use as adhesives
M-FS-12705 B67-10647 03

Heparin insolubilized with crosslinking
agent

NPO-10834 B69-10299 03

CRUCIBLES

Ceramic-coated boat is chemically inert,
provides good heat transfer
LANGLEY-90 B65-10063 05

Fabrication method produces high-grade
alumina crucibles
M-FS-216 B65-10078 05

Crucible cast from beryllium oxide and
refractory cement is impervious to flux
and molten metal
ARG-22 B66-10527 03

Preparation of thorium magnesium-zinc
reduction
ARG-10245 B69-10079 03

Niobium-uranium alloys with voids of
predetermined size and total volume
ARG-10490 B69-10641 03

CRUDE OIL

Measurement of gas flow at extremely low
pressures
MSC-13261 B69-10522 03

CRUSHING

Materials physically tested in variable-
environment chamber
JPL-789 B66-10130 01

Effects of sterilization on the
energy-dissipating properties of balsa
wood
NPO-11207 B69-10592 03

CRYOGENIC EQUIPMENT

Cryogenic filter method produces super-pure
helium and helium isotopes
JPL-374 B63-10235 03

Supercold technique duplicates magnetic field
in second superconductor
JPL-376 B63-10237 05

Automatic thermal switch accelerates
cooling-down of cryogenic system
JPL-655 B65-10068 01

Inert gas spraying device aids in repair of
hazardous systems
LEWIS-8B B65-10115 05

Apparatus permits flexure testing of specimens
at cryogenic temperatures
M-FS-257 B65-10129 02

Insulation accelerates rate of cooling with
cryogenic fluid
MSC-161 B65-10240 02

Superconductor shields test chamber from
ambient magnetic fields
JPL-627 B65-10297 02

Automatic fluid separator supplies own driving
power
WOO-085 B66-10008 02

O-ring tube fittings form leakproof seal in
hydraulic systems
M-FS-481 B66-10020 05

Aluminized fiberglass insulation conforms
to curved surfaces

CRYSTALLOGRAPHY

Spherical model provides visual aid for
cubic crystal study
LEWIS-108 B65-10065 03

Rotating filters permit wide range of optical
pyrometry
LANGLEY-33 B65-10100 02

Neutron diffractometer allows both magnetic
and crystallographic analyses
ARG-191 B67-10131 02

Grain-boundary migration in KCl bicrystals
ARG-10181 B68-10455 03

Preferred-orientation analysis of
polycrystalline materials
NPO-10604 B69-10336 02

CRYSTALS

Increased performance reliability obtained
with dual /redundant/ oscillator system
GSFC-36 B63-10027 01

Cesium iodide crystals fused to vacuum tube
faceplates
GSFC-67 B63-10476 03

Superconductor magnets used for stagger-tuning
traveling-wave maser
GSFC-292 B65-10165 01

Refractory oxides evaluated for
high-temperature use
LANGLEY-121 B65-10167 03

Thin film process forms effective electrical
contacts on semiconductor crystals
M-PS-2343 B67-10142 01

Ultrasonics used to measure residual stress
M-PS-12449 B67-10428 02

Nonreciprocal gain control for ring laser
M-PS-14041 B67-10653 02

Liquid crystal calibrator
M-PS-14151 B68-10221 03

Technique developed for measuring
transmittance of optical birefringent
networks
M-PS-14267 B68-10260 02

Correction for losses in optical
birefringent networks, a concept
M-PS-20088 B68-10571 02

Computer program calculates the effective
temperature for a crystalline solid /DETS/
NUC-10161 B69-10036 06

One hundred MHz voltage-controlled
oscillator
NPO-11004 B69-10133 01

Method for copper staining of germanium
crystals
ARG-10403 B69-10257 03

Multilayer infrared beamsplitter film
system
XGS-11036 B69-10260 02

New shield for gamma-ray spectrometry
ARG-10388 B69-10344 02

Improved camera for better X-ray powder
photographs
HQ-10424 B69-10537 01

Electrolytic separation of crystals of
transition-metal oxides
ARG-10506 B69-10642 03

Deposition monitor and control
NPO-10706 B69-10722 01

Pocket-sized tone-modulated FM
transmitter
NPO-11180 B69-10725 01

CUBES (MATHEMATICS)

Root-cubing and general root-powering
methods for finding the zeros of polynomials
ARG-10444 B69-10424 02

CUBIC LATTICES

Spherical model provides visual aid for
cubic crystal study
LEWIS-108 B65-10065 03

CULTIVATION

Mass culture of photobacteria to obtain
luciferase
GSFC-10563 B69-10294 04

CULTURE TECHNIQUES

Continuous microbial cultures maintained
by electronically-controlled device
ARG-177 B67-10556 04

A microlagoon technique for the culture of
mammalian cells
LANGLEY-10407 B68-10554 04

Imprinting of confining sites for cell
cultures on thermoplastic substrates
LANGLEY-10495 B69-10236 04

Mass culture of photobacteria to obtain
luciferase
GSFC-10563 B69-10294 04

Life detection
NPO-10510 B69-10475 04

CURIE TEMPERATURE

Process yield Co-Fe alloys with superior
high temperature magnetic properties
LEWIS-333 B66-10535 03

Development of Curie point switching for
thin film, random access, memory device
NPO-10402 B67-10633 02

Adding calcium improves lithium ferrite core
ERC-10036 B69-10686 06

CURING

Plastic molds reduce cost of encapsulating
electric cable connectors
M-PS-69 B63-10568 05

Encapsulation process sterilizes and preserves
surgical instruments
JPL-484 B64-10066 05

Refractory thermal insulation for smooth
metal surfaces
M-PS-160 B64-10099 03

Plastic films for reflective surfaces
reproduced from masters
GSFC-188 B64-10151 03

Flexible curtain shields equipment from
intense heat fluxes
M-PS-48 B65-10044 03

Fiber glass parts cured during filament
winding eliminates oven, saves time
M-PS-14 B65-10088 03

Refractory coating protects intricate graphite
elements from high-temperature hydrogen
NU-0027 B66-10084 01

Improved adhesive for cryogenic applications
cures at room temperature
WOO-132 B66-10185 03

Improved method facilitates debulking and
curing of phenolic impregnated asbestos
MSC-949 B66-10459 05

Sprayable birefringent coating enables

CURIUM

Seal allows blind assembly and thermal
expansion of components
NU-0005 B65-10053 05

Low-cost tool minimizes damage to O-rings
during installation
MSC-140 B65-10116 05

Vacuum chamber provides improved insulation
and support for cryostat
M-FS-415 B65-10368 02

Light-intensity modulator withstands high
heat fluxes
MSC-246 B66-10532 02

Positive displacement cylinder measures
corrosive liquid volume
MSC-1038 B66-10589 05

Semitoroidal-diaphragm cavitating valve
designed for bipropellant flow control
XNP-09704 B69-10016 05

Analysis of transient thermal stress in
heat-generating plates and hollow cylinders
caused by sudden environmental temperature
changes
ARG-10274 B69-10047 02

CYLINDRICAL BODIES

Device disconnects several couplings
simultaneously
JPL-226 B65-10163 05

Sheet metal strip unrolls to form circular
boom
GSFC-423 B66-10032 05

Flexible coiled spline securely joins mating
cylinders
WOO-270 B66-10172 05

Cylindrical claw clamp has quick release
feature
M-FS-513 B66-10213 05

Torus elements used in effective shock
absorber
WOO-114 B66-10318 05

Pressure levels and pulsation frequencies
can be varied on high pressure/frequency
testing device
LEWIS-10205 B67-10360 05

Single-source mechanical loading system
produces biaxial stresses in cylinders
M-FS-12530 B67-10380 05

Crack growth measured on flat and curved
surfaces at cryogenic temperatures
LEWIS-389 B67-10384 01

Compressible sleeve provides automatic
centering for grinding or turning of
cylinders
SAN-10021 B68-10318 05

Modified sine bar device measures small
angles with high accuracy
GSFC-438 B68-10322 02

Electron beam selectively seals porous metal
filters
LEWIS-10162 B68-10331 05

Automated measurement of thermal
conductivity
M-FS-20454 B69-10283 03

Automatic leveling and equalizing hoist
device
M-FS-16549 B69-10514 05

Balloon batteries, charged and heated by
solar energy

CYLINDRICAL TANKS

SUBJECT INDEX

Improved retort for cleaning metal powders with hydrogen LEWIS-10718	B69-10468	03	Adapter assembly prevents damage to tubing during high pressure tests MSC-563	B66-10330	02
A rotating, noncapillary heat pipe LEWIS-10298	B69-10684	05	Portable lightweight cell provides controlled environment MSC-648	B66-10370	05
CYLINDRICAL TANKS			Impact and puncture resistant material protects parts from damage MSC-747	B66-10375	05
Rotary valve controls multiple hydraulic leveling cylinders M-FS-361	B66-10402	05	Hermetically sealed cells protected from internal gas pressure GSFC-555	B66-10692	01
Study made of large amplitude fuel sloshing M-FS-12381	B67-10439	03	Design concept to decrease relative speed of ball bearings M-FS-2003	B67-10212	05
CYSTEINE			Study of stress corrosion in aluminum alloys M-FS-13906	B67-10533	03
Inhibition of browning in foodstuffs HQ-10177	B69-10493	04	Prediction of radiation damage effects in transistors GSFC-10021	B67-10606	01
CYTOLOGY			Damages in rolling element bearings may be detected early HQ-10031	B67-10658	01
Cytology is advanced by studying effects of deuterium environment ARG-205	B67-10304	04	Inflatable bladder to facilitate handling of heavy objects - A concept M-FS-14272	B69-10069	05
Effect of preparation procedures on intensity of radioautographic labeling is studied ARG-10032	B67-10500	04	Four-bar linkage for thermal compensation in test mounts for structures NPO-11059	B69-10298	05
Precision trimmer aids in preparing biomedical specimen blocks for ultrathin sectioning ARG-242	B67-10541	05	Improved method of dicing integrated circuit wafers into chips ERC-10138	B69-10441	01
Ultraviolet microscopy aids in cytological and biomedical research ARG-178	B67-10590	04	Cover protects critical electrical connectors against damage during handling MSC-15662	B69-10526	01
A microlagoon technique for the culture of mammalian cells LANGLEY-10407	B68-10554	04	An electrical connector pin protector MSC-15660	B69-10742	01
Microscopes and computers combined for analysis of chromosomes ARG-10256	B69-10088	04	D		
Substitution of stable isotopes in Chlorella ARG-10258	B69-10197	04	D LINES		
D			Self-balancing line-reversal pyrometer automatically measures gas temperatures LEWIS-348	B67-10268	01
D LINES			DAMPERS		
DAMAGE			Diaphragm spring gives clutch over-center toggle effect GSFC-499	B66-10297	05
V-slotted screw head and matching driving tool facilitate insertion and removal of screw fasteners ERC-16	B63-10023	05	Concept for design of variable stiffness damper ARC-11225	B67-10483	05
Low-cost tool minimizes damage to O-rings during installation MSC-140	B65-10116	05	DAMPING		
Improved poppet valve provides positive damageproof seal M-FS-293	B65-10346	05	Frictional wedge shock mount is inexpensive, has good damping characteristics JPL-IT-1001	B63-10289	05
Nylon bit removes cork insulation without damage to substrate MSC-381	B66-10152	05	Seismic transducer measures small horizontal displacements M-FS-81	B65-10029	05
Special tool seals conductors with combination of plastic sleeves M-FS-579	B66-10209	05	Shock absorber operates over wide range MSC-168	B65-10241	05
Tool permits damage-free removal of solar cell GSFC-467	B66-10219	05	Friction device damps linear motion of rotating shaft WOO-214	B66-10030	05
High pressure tube coupling requires no threads or flares MSC-600	B66-10285	05	Rectilinear accelerometer possesses self-calibration feature M-FS-1480	B66-10452	01
Circuit protects regulated power supply against overload current GSFC-453	B66-10292	01	Method permits mechanical and electrical checkout of piezoelectric transducers while installed in a system ARC-73	B66-10533	01
			Friction brake cushions acceleration and vibration loads MSC-715	B66-10608	05

DEUTERIUM COMPOUNDS

SUBJECT INDEX

Hydrogen flash lamps studied ARG-10419	B69-10411	02	Three-axis attitude and direction reference instrument has only one moving part M-FS-1819	B66-10644	01
DEUTERIUM COMPOUNDS					
Purification and characterization of two fully deuterated enzymes ARG-10314	B69-10207	04	Ultrasonic wrench produces leaktight connections M-FS-12561	B67-10353	05
DEUTERONS			DIALYSIS		
Status of ultrachemical analysis for semiconductors M-FS-2254	B67-10138	03	Large volume continuous counterflow dialyzer has high efficiency HQ-10055	B67-10395	04
DEVELOPMENT			DIAMINES		
Investigation of temperature dependence of development and aging ARG-10145	B69-10022	04	Organic reactants rapidly produce plastic foam LANGLEY-37	B65-10288	03
DEVIATION			Silazane polymers show promise for high- temperature application M-FS-466	B66-10194	03
Device measures reaction engine thrust vector deviations JPL-SC-163	B66-10642	05	Adhesives for laminating polyimide insulated flat conductor cable M-FS-12066	B67-10429	03
FM carrier deviation measured by differential probability method M-FS-2166	B67-10213	01	New rapid-curing, stable polyimide polymers with high-temperature strength and thermal stability LEWIS-10576	B69-10118	03
Performance of turbine-type flowmeters in liquid hydrogen LEWIS-10137	B67-10506	01	DIAMONDS		
FORTAN optical lens design program NPO-10603	B68-10354	06	Lathe converted for grinding aspheric surfaces GSFC-115	B63-10556	05
Substitution of stable isotopes in Chlorella ARG-10258	B69-10197	04	Device spot-laps spheres to very close tolerances JPL-SC-119	B66-10175	05
Proposed technique for vertical alignment of a crane's cable M-FS-16496	B69-10202	05	Manual of industrial diamonds plus dressing and grinding criteria for machining superalloys M-FS-14582	B68-10239	05
DIAGNOSIS			One hundred angstrom niobium wire LEWIS-10128	B68-10279	03
Electrocardiograph transmitted by RF and telephone links in emergency situations PRC-10031	B68-10233	01	Preparing rock powder specimens of controlled size distribution NPO-10007	B68-10297	05
DIAGRAMS			DIAPHRAGMS		
Veitch diagram plotter simplifies Boolean functions JPL-385	B63-10241	05	Pneumatic shutoff and time-delay valve operates at controlled rate M-FS-602	B66-10189	05
Automated drafting system uses computer techniques M-FS-788	B66-10362	01	Diaphragm spring gives clutch over-center toggle effect GSFC-499	B66-10297	05
Vis-A-Plan /visualize a plan/ management technique provides performance-time scale KSC-10073	B67-10240	06	Flexible arms provide constant force for pressure switch calibration HQ-38	B66-10317	05
Aerial-image enables diagrams and animation to be inserted in motion pictures ARG-165	B67-10398	02	Acceleration-compensated pressure transducer has fast response LANGLEY-113	B66-10353	01
Magnetic field mapper LEWIS-10782	B69-10476	01	Diaphragm valve for corrosive and high temperature fluid flow control has unique features LEWIS-304	B66-10365	05
Design and sparring techniques to meet specified performance life HQ-10200	B69-10528	02	Pneumatic wrench retains or discharges nuts or bolts as desired NU-0085	B66-10707	05
Long range holographic contour mapping concept HQ-10350	B69-10700	02	High-energy-rate magnetohydraulic metal forming system M-FS-2142	B67-10126	02
DIALYL COMPOUNDS			Iron serves as diffusion barrier in thermally regenerative galvanic cell ARG-29	B67-10189	03
Modular packaging technique for combining integrated circuits and discrete components GSFC-10369	B69-10453	01	Temperature responsive valve withstands high impact loading NPO-10186	B67-10225	05
DIALS			High impact pressure regulator withstands		
Device facilitates centering of workpieces in lathe chuck M-FS-685	B66-10277	05			
Legibility of electroluminescent instrument panels investigated MSC-494	B66-10316	02

DISTILLATION EQUIPMENT

SUBJECT INDEX

400 deg C
M-FS-1144 B66-10667 05

Technique for highly efficient recovery
of microbiological contaminants
MSC-13250 B69-10273 04

DISTILLATION EQUIPMENT
Emergency solar still desalts seawater
MSC-135 B65-10214 03

Liquid trap seals thermocouple leads
M-FS-688 B66-10212 05

Distillation device supplies cesium vapor at
constant pressure
XNP-08124 B68-10020 03

DISTORTION
Circuit reduces distortion of FM modulator
GSFC-257 B65-10152 01

Crystal measures short-term, large-magnitude
forces
JPL-77 B65-10187 01

Cork is used to make tooling patterns and
molds
MSC-425 B66-10328 01

Universal transloader moves delicate equipment
without stress
MSC-654 B66-10384 05

Application of distorted models in
developing scaled structural models
M-FS-2540 B67-10321 05

Current pulse amplifier transmits detector
signals with minimum distortion and
attenuation
NUC-10055 B67-10347 01

Machining heavy plastic sections
M-FS-12720 B67-10381 03

Vibration damping composition has
flush-away feature
M-FS-597 B67-10432 03

Techniques for controlling warpage and
residual stresses in welded structures
M-FS-20307 B69-10086 05

Helical tape forming device
GSFC-10830 B69-10137 05

VICAR-DIGITAL image processing system
NPO-10770 B69-10139 06

Miniaturization of magnetic logic circuitry
LANGLEY-10037 B69-10148 06

Repair of honeycomb panels with welded
breakaway studs
MSC-15046 B69-10261 05

DISTRIBUTING
Controllability of distributed-parameter
systems
M-FS-14929 B68-10346 02

DISTRIBUTION
Grit blasting nozzle fabricated from mild
tool steel proves satisfactory
M-FS-1420 B66-10597 05

DISTRIBUTION (PROPERTY)
Program computes zero lift wave drag of
entire aircraft
LANGLEY-10079 B67-10530 06

Areas of irregular, discontinuous patterns
rapidly and accurately measured
GSFC-10184 B67-10674 01

Wall-thickness changes predicted in
hollow-drawn tubing
ARG-10425 B69-10428 02

DISTRIBUTION FUNCTIONS

Computer program calculates monotonic
maximum likelihood estimates using method
of reversals
M-FS-1516 B67-10136 01

Probabilistic approach to long range
planning of manpower
MSC-11524 B67-10510 06

Solution of differential equations by
application of transformation groups
M-FS-14802 B68-10276 02

DISTRIBUTORS

Gage provides audible signal to facilitate
checkout of connector pins
KSC-10335 B69-10173 01

DISTURBANCES

Accuracy of laser measurements improved by
pulse autocorrelator electronic system
MSC-10033 B67-10338 01

Propagation of density disturbances in
air-water flow
ARG-10260 B69-10043 02

DITHERS

Design concepts using ring lasers for
frequency stabilization
M-FS-2448 B67-10143 01

DIVERGENCE

Speciman holder design improves accuracy
of X-ray powder analysis
JPL-SC-165 B66-10075 02

Electron beam parallel X-ray generator
MSC-11022 B67-10372 02

Deposition monitor and control
NPO-10706 B69-10722 01

DIVERGENT NOZZLES

Nozzles for size reclassification of
microfog particles
LEWIS-10705 B69-10076 05

DIVIDING (MATHEMATICS)

Binary system generates sidereal rate from
standard solar rate
GSFC-190 B64-10200 01

Computer modification reduces time of
performing iterative division
M-FS-166 B65-10005 01

DOCUMENTATION

A request-oriented information selection
program
LEWIS-10255 B68-10451 06

Reidentifying hardware after loss of serial
number
M-FS-18133 B69-10059 05

Improved system for documenting measurement
data
M-FS-18269 B69-10513 01

DOCUMENTS

Library of documents compressed into lap-held
display kit
MSC-125 B65-10030 01

Principles of optical-data processing
techniques
GSFC-10271 B68-10069 01

DOLLIES

Compressed gas system operates semitrailer
brakes during winching operation
JPL-0036 B64-10306 05

DOMAINS

Performance statistics of the FORTRAN 4
/H/ library for the IBM system/360
ARG-10299 B69-10157 06

SUBJECT INDEX

DRAWINGS

DONNELL EQUATIONS

Buckling Of Shells Of Revolution
/BOSOR/ with various wall constructions
LANGLEY-10441 B69-10300 06

DONOR MATERIALS

Primary cells utilize halogen-organic
charge transfer complex
JPL-926 B66-10682 02

Xenon fluoride solutions effective as
fluorinating agents
ARG-217 B67-10133 03

DOORS

Lightweight door seals cryogenic container
against diaphragm type loading
M-FS-476 B65-10402 05

Concealed hinge permits flush mounting of
doors and hatches
MSC-623 B66-10336 03

Combination double door high-vacuum valve
provides access to vacuum chamber
JPL-849 B66-10697 05

Simple motor drive system operates heavy
hinged door
NU-0093 B66-10712 05

Swing-out rail system separates overhead
crane rails
NU-0094 B66-10713 05

DOPPLER EFFECT

Optical superheterodyne receiver uses laser
for local oscillator
M-FS-1605 B66-10584 01

Laser Doppler flowmeter measures gas
velocity
M-FS-1747 B66-10693 02

Design concepts using ring lasers for
frequency stabilization
M-FS-2448 B67-10143 01

Interference effects eliminated in random
oriented space station antenna system
MSC-11004 B67-10435 01

Concept for automatic Doppler compensation
in two-way communication systems
GSFC-10213 B67-10643 01

Communication system features dual mode
range acquisition plus time delay
measurement
M-FS-14323 B68-10306 01

Mossbauer vibration calibration systems
evaluated
M-FS-20014 B69-10125 01

DOPPLER RADAR

Acquisition of pseudonoise signals by
sequential estimation
M-FS-13898 B68-10258 01

Improved gas ring laser
MSC-11584 B68-10304 02

Laser-Doppler gas-velocity instrument
M-FS-20039 B68-10349 02

Combination ranging system and mapping
radar
NPO-11001 B69-10325 01

Prediction of thermal radiation from a
rocket's exhaust plume
M-FS-20414 B69-10371 02

DOSAGE

Training course for radiation safety
technicians
ARG-216 B67-10477 02

Neutron detector simultaneously measures
fluence and dose equivalent
ARG-10071 B67-10597 02

Experimental study and evaluation of
radioprotective drugs
ARG-10196 B68-10320 04

DOSIMETERS

Semiconductor forms biomedical radiation probe
MSC-320 B66-10252 04

Practical new method of measuring
thermal-neutron fluence
NUC-10086 B67-10352 02

Neutron detector simultaneously measures
fluence and dose equivalent
ARG-10071 B67-10597 02

Review of physics, instrumentation and
dosimetry of radioactive isotopes
ARG-10037 B67-10640 02

Electronic gating circuit and ultraviolet
laser excitation permit improved dosimeter
sensitivity
ARG-10109 B68-10077 02

Ceric and ferrous dosimeters show precision
for 50-5000 rad range
ARG-10173 B68-10426 02

Readout system for radiation detector
MSC-90180 B68-10501 01

Beam profiles measured with
thermoluminescent dosimeters
ARG-10229 B69-10024 02

Tungsten thermal neutron dosimeter
LEWIS-10880 B69-10249 02

A simple electrometer for measuring small
photoelectric currents
GSFC-10603 B69-10734 01

DRAFTING (DRAWING)

Concept for modifying drafting instruments
to minimize smearing
KSC-10056 B67-10283 05

Photographic and drafting techniques
simplify method of producing engineering
drawings
MSC-716 B68-10128 02

DRAFTING MACHINES

Automated drafting system uses computer
techniques
M-FS-788 B66-10362 01

DRAG

New anemometer has fast response, measures
dynamic pressure directly
LANGLEY-28 B63-10530 05

DRAG DEVICES

Friction device damps linear motion of
rotating shaft
WOO-214 B66-10030 05

DRAG MEASUREMENT

Device measures fluid drag on test vehicles
LANGLEY-34 B65-10195 01

DRAG REDUCTION

Quick-acting clutch disengages idle drive
motor
GSFC-143 B64-10028 05

DRAWINGS

Front and back printed circuit layouts
presented on single sheet
GSFC-93 B63-10596 01

Instrument transmits vanishing point to
illustration point
MSC-267A B66-10324 01

JPL-686 B65-10191 05

DRY CELLS

Camera lens adapter magnifies image
M-FS-11955 B67-10431 02

DRY HEAT

Technique for highly efficient recovery
of microbiological contaminants
MSC-13250 B69-10273 04

DRYING

Stringent cleaning technique assures reliable
epoxy bond
GSCF-161 B64-10142 03

Minimum permissible leakage resistance
established for instrumentation systems
M-FS-848 B66-10397 01

A method for precision anodize stripping
MSC-15040 B69-10581 03

DRYING APPARATUS

Apparatus automatically measures soluble
residue content of volatile solvents
SAN-10032 B69-10292 03

DUCTED FLOW

Lightweight hinged bellows restraint has
high load capacity
WOO-151 B65-10341 03

DUCTILITY

Lightweight magnesium-lithium alloys show
promise
M-FS-17 B63-10389 03

Low power heating element provides thermal
control during swaging operations
M-FS-457 B66-10206 05

Nickel-base superalloys developed for high-
temperature applications
LEWIS-226 B66-10222 03

Pressure-welded flange assembly provides
leaktight seal at reduced bolt loads
M-FS-640 B66-10247 05

Boron-deoxidized copper withstands brazing
temperatures
M-FS-762 B66-10273 03

Thermal stress-relief treatments for 2219
aluminum alloy are evaluated
M-FS-1213 B66-10448 03

Braze alloy holds bonding strength over wide
temperature range
LEWIS-337 B66-10519 03

Lower-cost tungsten-rhenium alloys
LEWIS-332 B66-10528 03

Silver-base ternary alloy proves superior
for slip ring lead wires
M-FS-1540 B66-10540 03

Tantalum alloys resist creep deformation at
elevated temperatures
LEWIS-350 B66-10558 03

Ductile mandrel and parting compound
facilitate tube drawing
ARG-43 B66-10571 05

Tests show that aluminum welds are improved
by bead removal
M-FS-1817 B67-10023 05

Aluminum-titanium hydride-boron carbide
composite provides lightweight neutron
shield material
NUC-10069 B67-10265 03

High-strength tungsten alloy with improved

ductility
LEWIS-10257 B67-10340 03

Excellent spring properties developed in two
nickel alloys for use at cryogenic
temperatures
NUC-10084 B67-10349 03

Steel test panel helps control additives in
pyrophosphate copper plating
LEWIS-10101 B67-10358 05

Magnesium-lithium alloys developed for low
temperature use
M-FS-1541 B67-10365 03

Study made of ductility limitations of
aluminum-silicon alloys
M-FS-12524 B67-10392 03

Heat treatment procedure to increase
ductility of degraded nickel alloy
M-FS-12410 B68-10029 03

Weld microfissuring in Inconel 718
minimized by minor elements
M-FS-18185 B68-10251 03

High temperature alloy
LEWIS-10377 B68-10253 03

Fabrication techniques developed for small-
diameter, thin-wall tungsten and tungsten
alloy tubing
ARG-10100 B68-10284 05

Pre-weld heat treatment improves welds in
Rene 41
M-FS-18174 B68-10285 03

Nickel base alloy with improved stress
rupture properties
LEWIS-10283 B68-10344 03

Nickel-base superalloy's excellent
properties promote its service to 2200
degrees F
LEWIS-10355 B68-10380 03

Hot-cracking studies of Inconel 718 weld-
heat-affected zones
M-FS-18211 B69-10052 05

Two-step rocket engine bipropellant valve
concept
MSC-10951 B69-10280 05

Effects of hydrogen on metals
M-FS-20364 B69-10372 03

Strain-age cracking in Rene 41 alloy
M-FS-18650 B69-10605 03

Retention of ductility in high-strength
steels
ARG-10497 B69-10616 03

Effects of high-pressure hydrogen on
storage vessel materials
M-FS-18605 B69-10730 03

DUCTS

External linkage tie permits reduction in
ducting system flange thickness
M-FS-823 B66-10326 05

Bellows joint absorbs torsional deflections in
duct system
M-FS-882 B66-10332 04

Brazing retort manifold design concept may
minimize air contamination and enhance
uniform gas flow
M-FS-707 B66-10371 05

Spherical pipe joint delivers loads equally
to mating flange
M-FS-807 B66-10665 05

DUMMIES

SUBJECT INDEX

Spherical joint connects axially misaligned flanges M-FS-2238	B67-10273	05	insensitive to liquid oxygen M-FS-475	B66-10131	03
Liquid oxygen dicting cleaned by falling film method M-FS-11816	B67-10299	03	Sea dye marker provides visibility for 20 hours MSC-714	B66-10313	03
Flow liner extends operating life of high-angulation bellows M-FS-12023	B67-10512	05	Weld microfissuring in Inconel 718 minimized by minor elements M-FS-18185	B68-10251	03
Design of fluid-duct bends with low pressure loss M-FS-20176	B68-10395	05	Neutron therapy of cancer ARG-10310	B69-10203	04
Two-axis winch installer for heavy ducts in confined space M-FS-14254	B69-10062	05	Airborne Fraunhofer Line Discriminator MSC-13146	B69-10594	02
Fatigue failure in metal bellows due to flow-induced vibrations M-FS-18383	B69-10071	05	DYNAMIC CHARACTERISTICS Precision CW laser automatic tracking system investigated M-FS-1606	B66-10629	01
Quick-acting backup tool for welding ducts M-FS-18404	B69-10396	05	Materials data handbook, Inconel alloy 718 M-FS-2348	B67-10282	03
Hydraulic calipers M-FS-18052	B69-10399	05	System automatically provides dynamic launch decision criteria M-FS-13063	B67-10363	01
Multichannel spectroscopy guide HQ-10441	B69-10550	01	Torque meter aids study of hysteresis motor rings M-FS-12219	B67-10412	01
DUMMIES Strain gage network distinguishes between thermal and mechanical deformations GSFC-478	B66-10280	01	Dynamic-reservoir lubricating device M-FS-14652	B68-10261	05
Electronic dummy for acoustical testing MSC-206	B67-10298	01	Dynamic linearity measurement technique KSC-10186	B68-10290	01
DUOPLASHATONS A continuously operating source of vacuum ultraviolet below 500 angstrom GSFC-545	B66-10576	01	Dynamics of moving bubbles in single and binary component systems M-FS-14845	B68-10339	02
DURABILITY Machine tests crease durability of sheet materials JPL-604	B64-10178	05	Analysis of space vehicle structures using the transfer-function concept NPO-11162	B69-10337	06
Spiral-grooved shaft seals substantially reduce leakage and wear LEWIS-10397	B68-10270	05	Study of high-speed angular-contact ball bearings under dynamic load M-FS-20562	B69-10367	05
Compact rotating cup anemometer NPO-10563	B68-10436	01	Dynamic calibration of turbine flowmeters LEWIS-11014	B69-10764	01
DUST Improved atmospheric particle analyzer ERC-33	B67-10231	01	DYNAMIC LOADS New anemometer has fast response, measures dynamic pressure directly LANGLEY-28	B63-10530	05
Vacuum probe sampler removes micron-sized particles from surfaces SAN-10003	B68-10231	04	Apparatus permits flexure testing of specimens at cryogenic temperatures M-FS-257	B65-10129	02
Health hazards of ultrafine metal and metal oxide powders LEWIS-10878	B69-10268	04	Pressure responsive seal handles static and dynamic loads GSFC-441	B65-10327	05
DUST COLLECTORS Air sampler collects and protects minute particles HQ-10037	B67-10661	01	Mechanism continuously measures static and dynamic cable loads MSC-217	B66-10107	05
